## D I C T I O N A R Y .

**TO ABANDON**, *abandonner*, Fr. to leave a place to the mercy of an enemy, by suddenly retiring from it. Hence to abandon a fortress, &c.

**ABATIS**, *Fr.* Trees cut down, and so laid with their branches, &c. turned towards the enemy, as to form a sort of defence for troops stationed behind them. They are made either before redoubts, or other works, to render the attack difficult, or sometimes along the skirts of a wood, to prevent the enemy from getting possession of it. In this case the trunks serve as a breast-work, behind which the troops are posted, and for that reason should be so disposed, that the parts may, if possible, flank each other.

**To ABDICATE**, *abdiquer*, Fr. to give up voluntarily any place of trust, as to abdicate the crown. The French use the word *abdiquer* in the same manner that we do to resign; hence *abdiquer le commandement d'une armée, une compagnie*, to resign the command of an army, of a company.

**ABLECTI**, in military antiquity, a choice or select part of the soldiery in the Roman armies, picked out of those called *extraordinarii*.

**ABOIS**, *Fr.* a term used among the French to signify extreme distress. Thus an army, which is hemmed in on all sides in a fortress or camp, and is in want of provisions, &c. is said to be *aux abois*. The word comes from *aboyer*, to bark; perhaps the term *at bay* is derived from it, as the stag *at bay*.

**ABOLVENTS**, *Fr.* In fortification, small lodgments constructed in a covert-way, or in any other part of a fortified

place, to protect soldiers from the inclemency of the weather.

**ABOLLA**, in military antiquity, a warm kind of garment, generally lined or doubled, used both by the Greeks and Romans, chiefly out of the city, in following the camp.

**ABONNEMENT**, *Fr.* an engagement entered into by a country town, corporation, &c. for the purpose of supplying the exigencies of the state in time of war, or of granting provisions, &c. to an army.

**ABORD**, *Fr.* attack, onset.

**S'ABOUCHER**, *Fr.* to parley.

**ABOUT**, a technical word to express the movement, by which a body of troops changes its front or aspect, by facing according to any given word of command.

**Right-ABOUT**, is when the soldier by placing the toe of the right foot on a line in contact with the heel of the left, makes a pivot of the latter, and completely changes the situation of his person, by a semi-circular movement to the right.

**Left-ABOUT**, is when the soldier by placing the heel of his right foot on a line with the great toe of the left, changes the situation of his person, by a semi-circular movement to the left. When troops are under arms, they are sometimes put to the left-about, in order to prevent the clashing of the branches, which frequently occurs in the semi-circular movement to the right.

**ABBREAST**, a term commonly used to express any number of men in front. At present they are determined by files.

**ABREUVOIR**, *Fr.* a reservoir for water;

water; any spot dug for the purpose of retaining water. This must always be attended to when a regular camp is first formed.

**ABRI**, *Fr.* shelter, cover. *Etre à l'abri*, to be under cover, as of a wood, hillcock, &c.

**ABRIS**, *Fr.* Places of shelter.

**ABSCISSA**, in *military mathematics*, signifies any part of the diameter or axis of a curve, contained between its vertex or some other fixed point, and the intersection of the ordinate.

In the parabola, the *abscissa* is a third proportional to the parameter and the ordinate.

In the ellipsis, the square of the ordinate is equal to the rectangle under the parameter and *abscissa*, lessened by another rectangle under the said *abscissa*, and a fourth proportional to the axis, the parameter, and the *abscissa*.

In the hyperbola, the squares of the ordinates are as the rectangles of the *abscissa* by another line, compounded of the *abscissa* and the transverse axis.

But it must be remembered, that the two proportions relating to the ellipsis and hyperbola, the origin of the *abscissa*, or point from whence they began to be reckoned, is supposed to be the vertex of the curve, or, which amounts to the same thing, the point where the axis meets it, for if the origin of the *abscissa* be taken from the centre, as is often done, the above proportions will not be true.

**ABSENT**, a term used in the British army. It forms a part of regimental reports and general returns, to account for the deficiency of any given number of officers or soldiers; and is usually distinguished under two principal heads, viz.

**ABSENT with leave**, officers with permission, or non-commissioned officers and soldiers on furlough; excused parade or field duty.

**ABSENT without leave**, Men who desert are frequently reported *absent without leave*, for the specific purpose of bringing their crime under regimental cognizance, and to prevent them from being tried capitally for desertion, according to the Mutiny Act.

**ABSOLUTE Gravity**, in philosophy, is the whole force by which a body,

shell, or shot, is impelled toward the center. See **GRAVITY**.

**ABSOLUTE Number**, in Algebra, is the known quantity which possesses entirely one side of the equation. Thus in the equation,  $xx + 10x = 64$ , the number 64, possessing entirely one side of the equation, is called the *absolute number*, and is equal to the square of the unknown root  $x$  added to 10  $x$ , or to 10 times  $x$ .

**ABUTMENT**. See **BRIDGES**.

**ACADEMY**, in antiquity, the name of a villa situated about a mile from the city of Athens, where Plato and his followers assembled for conversation on philosophical subjects; and hence they acquired the name of Academics.

The term *Academy* is frequently used among the moderns for a regular society or company, of learned persons instituted under the protection of a prince, for the cultivation and improvement of arts or sciences. Some authors confound *academy* with university; but though much the same in Latin, they are very different things in English. An university is, properly, a body composed of graduates in the several faculties; of professors, who teach in the public schools; of regents or tutors, and students who learn under them, and aspire likewise to degrees: whereas an *academy* was originally not intended for teaching, or to profess any art, but to improve it; it was not for novices to be instructed in, but for those who were more knowing, for persons of distinguished abilities to confer in, and communicate their lights and discoveries to each other, for their mutual benefit and improvement. The first *academy* we read of, was established by Charlemagne, at the motion of Alcuin; it was composed of the chief wits of the court, the emperor himself being a member.

**Military ACADEMY**. We have in England two royal military academies, one at Woolwich, and one at Portsmouth. The first was established by his late Majesty King George II. by warrants bearing date the 50th day of April, and the 18th day of November 1711, endowed and supported, for the instructing of the people belonging to the military branch of ordnance, in the se-

parts of mathematics necessary to qualify them for the service of the artillery, and the business of engineers. The lectures of the masters in theory were then duly attended by the practitioners—engineers, officers, serjeants, corporals, private men, and cadets. At present the gentlemen educated at this academy are the sons of the nobility and military officers. They are called gentlemen-cadets, and are not admitted under 14, and not above 16 years of age. They are taught writing, arithmetic, algebra, Latin, French, mathematics, mechanics, surveying, levelling, and fortification, together with the attack and defence; gunnery, mining, laboratory-works, geography, perspective, fencing, dancing, &c. The master-general of the ordinance is always captain of the company of gentlemen cadets, and some officer of merit is always captain-lieutenant. There is, besides, a first lieutenant, and two second lieutenants. They are further under the immediate care of a lieutenant-governor, and an inspector, who are officers of great abilities and experience, and the professors and masters are men of known talents and capacity. That at Portsmouth was founded by George I. in 1722, for teaching of the branches of the mathematics which more immediately relate to navigation.

**ACANZI**, in military history, the name of the Turkish light-horse that form the van-guard of the Grand Signior's army on a march.

**ACCELERATED Motion on oblique or inclined planes.** See **MOTION**.

**ACCELERATED Motion of Pendulums.** See **PENDULUMS**.

**ACCELERATED Motion of Projectiles.** See **PROJECTILES**.

**ACCELERER**, *Fr.* to hasten on; to press forward.

**ACCELERER une Siège**, *Fr.* to carry the trench under the main body of a fortified place, in order to take it by a prompt assault.

**ACCELERER une Marche**, *Fr.* to make extraordinary exertions in advancing against an enemy with rapidity; to make a forced march.

**ACCENDONES**, in military antiquity, a kind of gladiators, or supernumeraries, whose office was to excite and

animate the combatants during the engagement.

**ACCENSII**, in antiquity, were officers attending the Roman magistrates; then business was to summon the people to the public games, and to assist the praetor when he sat on the bench.

**ACCENSI**, in military antiquity, was also an appellation given to a kind of adjutants appointed by the tribune to assist each centurion and decurion. According to Festus, they were supernumerary soldiers, whose duty it was to attend their leaders, and supply the places of those who were either killed or wounded. Livy mentions them as irregular troops, but little esteemed. Salmastius tells us, they were taken out of the fifth class of the poor citizens of Rome.

**ACCESSIBLE**, (*accessible*, *Fr.*) that which may be approached. We say, in a military stile, that place, or that fortress, is *accessible* from the sea, or land, i. e. it may be entered on those sides.

**ACCLAMATIONS**, *Fr.* shouts of joy, &c. usually given by troops under arms, amidst the discharge of cannon, &c. on the surrender of a place; or in testimony of some great event: we use the term *cheers*.

**ACCLIVITY**, in a military sense, is the steepness or slope of any work, inclined to the horizon, reckoned upwards. Some writers on fortification use acclivity as synonymous to *talus*; though *talus* is commonly used to denote all manner of slopes, either in its ascendant or descendant state.

**ACCONTIUM**, in ancient military writers, a kind of Grecian dart or javelin, somewhat resembling the Roman *pilum*.

**ACCOUTREMENTS**, in a military sense, signify habits, equipage, or furniture, of a soldier, such as buff, belts, pouches, cartridge-boxes, &c. Accoutrements should be made of stout, smooth buff, as well for the service to be expected from them, as for their superior look above the spongy kind, which is always stretching, and difficult to clean. The buff belts are about 2½ inches broad, with two buckles to fix them to the pouch. Pouches are made of the stoutest blackened calf-skin, especially the out-

side flaps, which are of such a substance as to turn the severest rain. Cartridge-boxes are made as light as possible, with 36 flaps in each, to hold so many cartridges. The bayonet-belt is also 2½ inches broad, and better worn over the shoulder than about the waist.

**ACCULER** *une armée une troupe*, Fr. to drive an army or body of men into such a situation that they must either fight or surrender.

**ACIARNEMENT**, Fr. the rage and frenzy to which soldiers are subjected in the heat of an engagement; a thirst for blood and carnage.

**ACRIDES**, in Roman antiquity, a kind of missive weapon, with a thong fixed to it, whereby it might be drawn back again. Most authors describe the *acrides* as a sort of dart or javelin; but Scaliger makes it somewhat of a round and globular shape, with a wooden stem to poise it by.

**ACOLUTHI**, in military antiquity, was a title in the Grecian empire, given to the captain or commander of the *varangi*, or body guards, appointed for the security of the emperor's palace.

**ACTION** *games*, in antiquity, were games instituted, or at least restored, by Augustus, in memory of the famous victory, at Actium, over Mark Anthony.

**ACTION** *years*, in chronology, a series of years, commencing with the epocha of the battle of Actium, otherwise called the *era* of Augustus.

**ACTION**, *action*, Fr. in the military art, is an engagement between two armies, or any smaller body of troops, or between different bodies belonging thereto. The word is likewise used to signify some memorable act done by an officer, soldier, detachment, or party.

**ACTIVITE**, Fr. See **ACTIVITY**.

**Être en ACTIVITE**, Fr. to be in force, or have existed; as a law, rule, or order. *Cette ordonnance est en activité.*

**ACTIVITY**, in a military sense, denotes laboriousness, attention, labour, diligence, and study.

**ACTS of Hostility**, *Actes d'Hostilités*, Fr. Certain overt acts by sea or land, which tend to a declaration of war between two countries; or to a renewal of it, after a truce had been agreed upon.

**ACUTE** *angle*. See **ANGLE**.

**ADACTED**, applies to stakes or piles, driven into the earth by large mallets shod with iron, as in securing ramparts or pontoons.

**ADDICE**, a sort of axe which cuts horizontally. It is commonly or corruptly called an adze.

**ADDOSSER**, Fr. to place one thing behind another, as a tent, &c. The French also say, *Adossier une compagnie*, to post one company in the rear of another.

**ADIT**, a passage under ground, by which miners approach the part they intend to sap. See **GALLERY**.

**ADJUTANT-GENERAL**, an officer of distinction, who aids and assists the general in his laborious duty: he forms the several details of duty of the army, with the brigade majors, and keeps an exact state of each brigade and regiment, with a roll of the lieutenant-generals, major-generals, colonels, lieutenant-colonels, and majors. He every day at head quarters receives orders from the general officer of the day, and distributes them to the majors of brigades, from whom he receives the number of men they are to furnish for the duty of the army, and informs them of any detail which may concern them. On marching days he accompanies the general to the ground of the camp. He makes a daily report of the situation of all the posts placed for the safety of the army, and of any changes made in their posts. In a day of battle the adjutant-general sees the infantry drawn up, after which he places himself by the general to receive orders. In a siege he visits the several posts and guards of the trenches, and reports their situation, and how circumstanced: he gives and signs all orders for skirmishing parties (if time permits) and has a serjeant from each brigade to carry any orders which he may have to send.

**ADJUTANT**, an officer who eases the major of part of the burthen of his duty, and performs it in his absence. He receives orders from the brigade major, if in camp; and when in garrison from the town major: after he has carried them to his colonel or officer commanding the regiment, he then assembles the serjeant-major, drum-major, and fifth major, with a serjeant and corporal of each company, who write the orders to  
shew

men to their respective officers. If companies, parties, detachments, or guards, are to be furnished, he gives the number which each company is to furnish, and hour and place for the assembling: he must keep an exact roster and roll of duties, and have a perfect knowledge of all manoeuvres, &c.

**ADMINISTRER**, *Fr.* to furnish; to supply.

**ADMINISTRER** *les munitions*, *Fr.* to supply a town or army with the necessary means of attack and defence.

**ADMIRAL**, the commander in chief of a fleet, squadron, &c. When on shore, he is entitled to receive military honours, and ranks with generals in the army.

**ADVANCE**, *See* *Pass* in Advance.

**ADVANCED** signifies some part of an army in front of the rest, as an *advanced guard*, which always precede the line of march or operations of a body of troops; again, as when a battalion, or guns of a second line are brought up in front and before the first line. This term also applies to the promotion of officers and soldiers.

**ADVANCE** } *Posse* } *See* *Fortification*  
                   } *Dutch* }  
**ADVANCEMENT**, *in* *no* *military* *sense*, signifies honour, promotion, or preferment, in an army, regiment, or company.

**ADVANCEMENT**, *in* *no* *military* *sense*, signifies honour, promotion, or preferment, in an army, regiment, or company.

**ADVANTAGE** *Ground*, a ground that gives superiority, or an opportunity of annoyance or resistance.

**ADVICE** *Boat*, a vessel employed for intelligence.

**ADVOCATE** *General*. *See* *Judge*.

**AGNEATORES**, in military antiquity, the musicians in an army; including those who sounded the trumpets, horns, *lutes*, *bagging*, &c.

**AFFAIR**, in the military acceptance of the word, means any action or engagement.

**AFFAIR** of Honour, a duel.

**AFFAIRE** *de* *poste*, *Fr.* any engagement fought by an army for the purpose of securing some object of importance; as the key of a country, &c.

**AFFAISSEMENT** *d'un* *ouvrage* *de* *fortification*, *Fr.* the sinking or lowering of any part of a fortification, either through time, or by pressure, &c.

**AFFAMER** *une* *armée*, *Fr.* to deprive an army from receiving provisions, &c. and thereby starve it out.

**AFFAMER** *une* *place*, *Fr.* to besiege a place so closely as to starve the garrison and inhabitants. *See* *Blockade*.

**AFFIDAVIT**, in military law, signifies an oath taken before some person who is properly authorized to administer it; as first, when a soldier is enlisted, when it is styled an attestation; secondly, by all officers appointed for a court-martial; thirdly, by the commissaries, or muster-masters, &c.

**AFFIDÉ**, *Fr.* a man that is trusted; one in the confidence of another.

**AFFOIBLIR**, *Fr.* to weaken; hence *affoiblir* *un* *ennemi*, to weaken an enemy.

**AFFRONTER** *les* *perils*, *Fr.* to face all dangers; not to be intimidated by the sword, ball, or even death itself.

**S'AFFRONTER**, *Fr.* to engage one another rudely; *les* *deux* *armées* *s'affrontent*, the two armies came to close action, and fought hand to hand.

**AFFRONTER**, *Fr.* to encounter or attack boldly.

**AFFUT**, the French name for a gun carriage, and for which we have no proper name; the only distinction from all other carriages is, that it belongs to a gun. *See* *Carriage*.

**AGA**, in the Turkish army, is the same as a general with us.

**AGE**, a young man must be 14 years old before he can become an officer in the line, or be entered as a cadet at Woolwich.

Persons may be enlisted for soldiers from 17 to 45. After the latter age, every inhabitant is exempted from serving in the British militia.

By a late regulation, growing boys may be enlisted under 16 years of age. These recruits are chiefly intended for the East-India service.

The Romans were obliged to enter themselves in the army at the age of 17 years; at 45 they might demand their dismissal. Amongst the Lombards, the age of entry was between 18, and 19; among the Saxons, at 13.

**AGEMA**, in the ancient military art, a kind of soldiery chiefly in the Macedonian armies. The word is Greek, and literally denotes vehemence, to express the strength and eagerness of the corps.

**corpe.** Some authors will have *agema* to denote a certain number of picked men, answering to a legion among the Romans.

**AGENCY**, a certain proportion of money which is ordered to be subtracted from all the pay and allowances of the British army, for transacting the business of the several regiments composing it.

**AGENDA**, *Fr.* a term used among the French, signifying a minute detail of every thing that is required in the interior economy of a regiment, troop, or company.

**AGENT**, a person in the civil department of the army, between the paymaster-general and the paymaster of the regiment, through whom every regimental concern of a pecuniary nature must be transacted. He gives security to government for all monies which may pass through his hands in the capacity of an Agent—and by the Mutiny Act it is provided, That if an Agent shall withhold the Pay of Officers or Soldiers for the Space of one Month, he shall be dismissed from his Office, and forfeit 100*l.* (39th Geo. III. Sect. 69.)

**AGENT**, *Fr.* the person who is intrusted with the interior economy of a regiment, troop, or company.

**AGGER**, in ancient military writers, denotes the middle part of a military road, raised into a ridge, with a gentle slope on each side, to make a drain for the water, and keep the way dry.

**AGGER** is also used for the whole road, or military way. Where highways were to be made in low grounds, as between two hills, the Romans used to raise them above the adjacent land, so as to make them of a level with the hills. These banks they called *aggeres*. Burgier mentions several in the *Gallia Belgica*, which were thus raised 10, 15, or 20 feet above ground, and 5 or 6 leagues long. They are sometimes called *aggeres calcæi*, or causeways, as with us.

**AGGER**, also, denotes a work of fortification, used both for the defence and the attack of towns, camps, &c. in which sense *agger* is the same with what was otherwise called *vallum*, and in later times, *agestum*; and among the moderns, *lines*; sometimes, *caualiers*, *terasses*, &c.

The *agger* was usually a bank, or elevation of earth, or other matter, behind and supported with timber; having sometimes turrets on the top, wherein the workmen, engineers, and soldiery, were placed. It was also accompanied with a ditch, which served as its chief defence. The height of the *agger* was frequently equal to that of the wall of the place. Caesar tells us of one he made, which was 30 feet high, and 330 feet broad. Besides the use of *aggeres* before towns, they generally used to fortify their camps with the same, for want of which precaution, divers armies have been surprised and ruined.

There were vast *aggeres* made in towns and places on the sea-side, fortified with towers, castles, &c. Those made by Cæsar and Pompey, at Brundisium, are famous. Sometimes *aggeres* were even built across arms of the sea, lakes, and morasses; as was done by Alexander before Tyre, and by M. Antony and Cassius.

The wall of Severus, in the north of England, may be considered as a grand *agger*, to which belong several lesser ones. Besides, the principal *agger* or *vallum*, on the bank of the ditch, Mr. Horsley describes another on the south side of the former, about 5 paces distant from it, which he calls the south *agger*; and another larger one, on the north side of the ditch, called the north *agger*. This latter he conjectures to have served as a military way; the former, probably, was made for the inner defence, in case the enemy should beat them from any part of the principal *vallum*, or to protect the soldiers against any sudden attack from the provincial Britons.

**AGGER** *Tarquini*, was a famous fence built by Tarquinius Superbus, on the east side of Rome, to stop the incursions of the Latins, and other enemies, whereby the city might be invested.

**AGGER** is also used for the earth dug out of a ditch or trench, and thrown up on the bank of it: in which sense, the Chevalier Folard thinks the word to be understood, when used in the plural number, since we can hardly suppose they would raise a number of cavaliers or terrasses.

**AGGER** is also used for a bank or wall, erected against the sea, or some great river, to confine or keep it within bounds;

*ledge*, the king his lawful sovereign. It is also applied to the oath taken by officers and soldiers in pledge of their fidelity to the monarch, prince, or state, under which they serve.

**ALLEGIANCY**, loyal.

**ALLEZER**, *Fr.* to cleanse the mouth of a cannon or other piece of ordnance, and to increase the bore, so as to produce its determined calibre.

**ALLEZOIR**, *Fr.* a frame of timber firmly suspended in the air with strong cordage, on which is placed a piece of ordnance with the muzzle downwards. In this situation the bore is rounded and enlarged by means of an instrument which has a very sharp and strong edge made to traverse the bore by men or horses, and in an horizontal direction.

**ALLEZURES**, *Fr.* the metal taken from the cannon by boring.

**ALLIAGE**, a term used by the French, to denote the composition of metals used for the fabrication of cannon and mortars, &c.

**ALLIANCE**, *Fr.* in a military sense, signifies a treaty entered into by sovereign princes and states, for their mutual safety and defence. In this sense alliances may be divided into such as are offensive, where the contracting parties oblige themselves jointly to attack some other power; and into such as are defensive, whereby the contracting powers bind themselves to stand by, and defend one another, in case of being attacked by any other power.

Alliances are variously distinguished, according to their object, the parties in them, &c. Hence we read of equal, unequal, triple, quadruple, grand, offensive, defensive alliances, &c.

**ALLODIAL**, independent; not feudal. The Allodi of the Romans were bodies of men embodied on any emergency, in a manner similar to our volunteer associations.

**ALLOGNE**, the cordage used with floating bridges, by which they are guided from one side of a river to the other.

**ALLONGE**, *Fr.* a pass or thrust with a rapier or small sword; also a long rein used in the exercising of horses.

**ALLOWANCE**, a sum paid monthly or otherwise, as the case may be, for services rendered, &c. The French use the word *traitement* in this sense.

**ALLOY**, is the mixture of metals that enter into the composition of the metal proper for cannon and mortars.

**ALLY**, in a military sense, implies any nation united to another, under a treaty, either offensive or defensive, or both.

**ALMADIE**, a kind of military canoe, or small vessel, about 21 feet long, made of the bark of a tree, and used by the negroes of Africa.

**ALMADIE**, is also the name of a long-boat used at Calcutta, near 80 feet long, and generally six or seven broad.

**ALTIMETRY**, the taking or measuring altitude, or heights.

**ALTITUDE**, height or distance from the ground, measured upwards, and may be both accessible, and inaccessible.

**ALTITUDE of a figure**, is the distance of its vertex from its base, or the length of a perpendicular let fall from the vertex to the base.

**ALTITUDE of a shot or shell**, is the perpendicular height of the vertex of the curve in which it moves above the horizon. See **GUNNERY** and **PROJECTILES**.

**ALTITUDE, in optics**, is usually considered as the angle subtended between a line drawn through the eye, parallel to the horizon, and a visual ray emitted from an object to the eye.

**ALTITUDE, in cosmography**, is the perpendic. height of an object, or its distance from the horizon upwards.

**ALTITUDES** are divided into *accessible* and *inaccessible*.

**Accessible ALTITUDE of an object**, is that whose base you can have access to, i. e. measure the nearest distance between your station and the foot of the object on the ground.

**Inaccessible ALTITUDE of an object**, is that when the foot or bottom of it cannot be approached, by reason of some impediment; such as water, or the like. The instruments chiefly used in measuring of *altitudes*, are the quadrant, theodolite, geometric quadrant, circle of shadows, &c.

**ALTITUDE of the eye**, in perspective, is a right line let fall from the eye, perpendicular to the geometrical plane.

**ALTITUDE of motion**, a term used by some writers, to express the measure of any

any motion, computed according to the line of direction of the moving force.

**AMATIER**, *sur la culasse d'un canon*, Fr. to tie or lash to the breech of a gun, in order to inflict bodily chastisement.

**AMAS**, Fr. stores.

**AMAZON**, one of those women who inhabited the country so called. They are said to have composed a nation of themselves, exclusive of males, and to have derived their name from their cutting off one of their breasts, that it might not hinder or impede the exercise of their arms. This term has often by modern writers been used to signify a bold daring woman, whom the delicacy of her sex does not hinder from engaging in the most hazardous attempts. The last and former wars with France have furnished us with several instances of females who have undergone the fatigue of a campaign with alacrity, and run the hazards of a battle with the greatest intrepidity.

**AMBIT**, the compass or circuit of any work or place, as of a fortification or encampment, &c.

**AMBITION**, in a military sense, signifies a desire of greater posts, or preferment. Every gentleman in the army or navy ought to have a spirit of ambition to arrive at the very summit of the profession.

**AMBULANT**, Fr. changing situation according to circumstances; hence *Hôpital ambulant*, an hospital which follows the army; *Chirurgien ambulant*, a surgeon who follows the line of action.

**AMBUSCADE**, a snare set for the enemy, either to surprise him when marching without precaution; or by posting yourself advantageously, and drawing him on by different stratagems, to attack him with superior force.

**AMBUSH**, a place of concealment for soldiers to surprise an enemy, by falling suddenly upon him.

**AME**, a French term, similar in its import to the word *chamber*, as applied to cannon, &c.

**AMENDE Honorable**, among the French, signifies an apology for some injury done to another, or satisfaction given for an offence committed against the rules of honour or military etiquette, and was also applied to an ignominious kind of punishment inflicted upon traitors, parricides, or sacrilegious

persons, in the following manner: the offender being delivered into the hands of the hangman, his shirt is stripped off, a rope put about his neck and a taper in his hand; then he is led into court, where he must beg pardon of God, the king, the court, and his country. Sometimes the punishment ends here; but sometimes it is only a prelude to death, or banishment to the galleys.

**AMMUNITION**, implies all sorts of powder and ball, shells, bullets, cartridges, grape-shot, tin and case-shot, carcasses, grenades, &c.

**AMMUNITION**, or *gun-powder*, may be prohibited to be exported at the king's pleasure, by Car. II. cap. 4. sect. 13.

Arms, utensils of war, or *gun-powder*, imported without licence from his majesty, are to be forfeited with treble the value. Such licence obtained, except for the furnishing his majesty's public stores, is to be void, and the offender to incur a premunire, and be disabled to hold any office from the crown.

**AMMUNITION bread**, such as is contracted for by government, and served in camp, garrison, and barracks.

**AMMUNITION shoes, stockings, shirts, stocks**, &c. such of those articles as are served out to the private soldiers by government. See **HAIR MOUNTINGS**.

**AMMUNITION-wagon**, is generally a four-wheel carriage with shafts; the sides are raised in with staves and rives, and lined with wicker work, so as to carry bread and all sorts of tools. It is drawn by four horses, and loaded with 1200 pound weight. See **WAGON**.

**AMMUNITION-cart**, a two-wheel carriage with shafts; the sides of which, as well as the fore and hind parts, are inclosed with boards instead of wicker work.

**AMNESTY**, in a military or political sense, is an act by which two belligerent powers at variance promise to forgive and bury in oblivion all that is past.

**AMNESTY** is either general and unlimited, or particular and restrained, though most commonly universal, without conditions or exceptions; such as that which passed in Germany at the peace of Osnaburg in the year 1648.

**AMNESTY**, in a more limited sense, denotes

boards; in which sense, *agger* amounts to the same with what the ancients called *tunulus* and *moles*; the Dutch *dyke*; and *weg*, *dam*, *sea-wall*, &c.

**AGIADES**, in the Turkish armies, are a kind of pioneers, or rather field engineers, employed in fortifying the camp, &c.

**AGIR**, *Fr.* to act; hence *agir en offensive*; *agir en defensive*; to act offensively; to act defensively, or on the defensive.

**AGITATOR** *Affidé*, *Fr.* a person in the confidence of a superior, who mixes with his fellow subjects or comrades, and discusses various matters for the purpose of discovering their views and principles. This character was first created by Oliver Cromwell; and a similar one exists at this moment among the French, in order to preserve the military ascendancy of Bonaparte.

**AGUERRI**, *Fr.* an officer or soldier experienced in war; a veteran.

**AIDE-DE-CAMP**, an officer appointed to attend a general officer, in the field, in winter quarters, and in garrison; he receives and carries the orders, as occasion requires. He is seldom under the degree of a captain, and all aide-de-camp have 10*s.* a day allowed for their duty. This employment is of greater importance than is generally believed: it is, however, often entrusted to young officers of little experience, and of as little capacity; but in most foreign services they give great attention to this article. Marshal de Puysegur mentions the loss of a battle through the incapacity of an aide-de-camp. The king may appoint for himself as many as he pleases, which appointment gives the rank of colonel in the army. Generals, being field marshals, have four, lieutenant generals two, major generals one, and brigadier generals one *brigade major*.

**AIDE du Parc des Vivres**, *Fr.* an officer in France, acting immediately under the commissary of stores and provisions.

**AID-MAJOR**. See **ADJUTANT**.

**AIGREMORE**, a term used by the artificers in the laboratory, to express the charcoal in a state fitted for the making of powder.

**AIGUILLE**, an instrument used by engineers to pierce a rock for the lodg-

ment of powder, as in a mine; or to mine a rock, so as to excavate and make roads.

**AILE**, *Fr.* a wing or flank of an army or fortification.

**AIM**, the act of bringing the musquet, piece of ordnance, or any other missile weapon, to its proper line of direction with the object intended to be struck.

**AIM-FRONTLET**, a piece of wood hollowed out to fit the muzzle of a gun, to make it of an equal height with the breech, formerly made use of by the gunners, to level and direct their pieces. It is not used at present.

**AIR-GUN**, a pneumatic machine for exploding bullets, &c. with great violence.

The common air-gun is made of brass, and has two barrels: the inside barrel is of a small bore, from whence the bullets are exploded; and a large barrel on the outside of it. There is likewise a syringe fixed in the stock of the gun, by which the air is injected into the cavity between the two barrels through a valve. The ball is put down into its place in the small barrel with the rammer, as in any other gun. Another valve, being opened by the trigger, permits the air to come behind the bullet, so as to drive it out with great force. If this valve be opened and shut suddenly, one charge of condensed air may be sufficient for several discharges of bullets; but if the whole air be discharged on one single bullet, it will drive it out with uncommon force. This discharge is effected by means of a lock placed here, as usual in other guns; for the trigger being pulled, the cock will go down and drive the lever, which will open the valve, and let in the air upon the bullet: but as the expansive power of the condensed air diminishes at each discharge, its force is not determined with sufficient precision for the purposes of war. Hence it has been long out of use among military men.

In the air-gun, and all other cases where the air is required to be condensed to a very great degree, it will be necessary to have the syringe of a small bore, viz. not exceeding half an inch in diameter: because the pressure against every square inch is about 15 pounds, and therefore against every circular inch about

about 12 pounds. If therefore the syringe be one inch in diameter, when one atmosphere is injected, there will be a resistance of 12 pounds against the piston; and when 10 are injected, there will be a force of 120 pounds to be overcome; whereas ten atmospheres act against the circular half-inch piston (whose area is only  $\frac{1}{4}$  part so big) with only a force equal to 30 pounds; or 40 atmospheres may be injected with such a syringe, as well as 10 with the other. In short, the facility of working will be inversely as the squares of the diameter of the syringe.

**AIR-SHAFTS**, in mining. See MINING.

**ALARM**, is a sudden apprehension upon some report, which makes men run to their arms to stand upon their guard; it implies either the apprehension of being suddenly attacked, or the notice given of such an attack, or actually made; generally signified by the ringing of a cannon, the beat of a drum, &c.

**ALARM-Post**, in the field, is the ground appointed by the quarter-master general for each regiment to march to, in case of an alarm.

**ALARM-Post**, in a garrison, is the place allotted by the governor for the troops to draw up in, on any sudden alarm.

**False-ALARMS**, are stratagems of war, frequently made use of to harass an enemy, by keeping them perpetually under arms. They are often conveyed by false reports, occasioned by a feint or negligent sentinel. A vigilant officer will sometimes make a false alarm, to try if his guards are strict upon duty.

**ALARM-Bell**, the bell rung upon any sudden emergency, as a fire, mutiny, approach of an enemy, or the like, called by the French, *Tocsin*.

**ALCANTARA**, knights of a Spanish military order, who gained great honour during the wars with the Moors.

**ALERT**, originally derived from the French word *alerte*, which is formed of *a* and *veille*. The French formerly said *veille* in air; so that *alerte* means something continually in the air, and always ready to be put in action. A general is said to be *alert* when he is particularly vigilant.

*To be kept upon the alert*, is to be in continual apprehension of being sur-

prized. *Alerte*, among the French, is an expression which is used to put soldiers upon their guard. It is likewise used by a post that may be attacked in the night, to give notice to the one that is destined to support it; and by a sentry to give warning when any part of the enemy is approaching. *We have had an alert*, is a military phrase.

**ALGEBRA**, the science of numbers in general, in which, by general marks for numbers, and others for operations with them, the properties of numbers are demonstrated, and questions relative to them are solved in an easy and concise manner. This science has been rendered obscure by an imputation of mystery, and the supposition, that numbers might be less than nothing, and impossible. But as number is definite in itself, and one of the clearest ideas, whenever such a mysterious expression occurs, it must be owing to the negligence of the person using it, not to any fault in the science. The study of this easy branch of knowledge might be recommended to officers in general, from the example set them by Descartes, the great philosopher of France, who when a young man, and employed near an university, solved a difficult problem, which exercised the talents of their deepest students. To officers in the ordnance department the knowledge of Algebra is indispensably necessary. See Mr. Friend's very able publication on this science.

**ALIEN**, in law, implies a person born in a foreign country, not within the king's dominions, in contradistinction to a denizen, or natural-born subject.

**ALIGNEMENT**, implies any thing straight—for instance, the *alignement* of a battalion means the situation of a body of men when drawn up in line. The *alignement* of a camp signifies the relative position of the tents, &c. so as to form a strat line, from given points.

**ALLAY**. See ALLOW.

**ALLÉ**, in the ancient military art, the two wings or extremes of an army ranged in order of battle.

**ALLEGIANCE**, in law, implies the obedience which every subject ought to pay to his lawful sovereign.

*Oath of ALLEGIANCE*, is that taken by the subject, by which he acknowledged.

denotes a pardon granted by a prince to his rebellious subjects, usually with some exceptions; such as was granted by Charles II. at his restoration.

**AMNISTIE**, *Fr.* See AMNISTY.

**AMORCE**, an old military word for fine-grained powder, such as is sometimes used for the priming of great guns, mortars, or howitzers; as also for small arms, on account of its rapid inflammation. A port fire, or quick match.

**AMPLITUDE**, in gunnery, is the range of the shot, or the horizontal right line which measures the distance it has run.

**AMPLITUDE** of the range of a projectile. See PROJECTILE.

**AMPOULETTE**, an old military term used by the French to express the stock of a musket, &c.

**AMUSETTE**, a species of offensive weapon which was invented by the celebrated Marshal Saxe. It is fired off in the same manner as a musquet, but is mounted nearly like a cannon. It has been found of considerable use during the present war, especially among the French, who have armed their horse artillery with it, and have found it superior to the one adopted by the Prussians. The ball with which it is loaded is from one pound and a half to two pounds weight of lead.

**ANABASII**, in antiquity, were expeditious couriers, who carried dispatches of great importance, in the Roman wars.

**ANACLETICUM**, in the ancient art of war, a particular blast of the trumpet, whereby the fearful and flying soldiers were rallied and recalled to the combat.

**ANCIENT**, a term used formerly to express the grand ensign or standard of an army.

**ANCILE**, in antiquity, a kind of shield, which fell, as was pretended, from heaven, in the reign of Numa Pompilius; at which time, likewise, a voice was heard, declaring, that Rome would be mistress of the world as long as she should preserve this holy buckler.

Authors are much divided about its shape: however, it was kept with great care in the temple of Mars, under the direction of twelve priests; and lest any should attempt to steal it, eleven others

were made so like it, as not to be distinguished from the sacred one. These *ancilia* were carried in procession every year round the city of Rome.

**ANDABATLE**, in military antiquity, a kind of gladiators, who fought hood-winked, having a sort of helmet that covered the eyes and face. They fought mounted on horseback, or out of chariots.

**St. ANDREW**, or the *Thistle*, a military order of knighthood in Scotland; the motto *Nemo me impune lacessit*. The occasion of instituting this order is variously related by different authors. John Lesley, bishop of Ross, reports, that the night before the battle betwixt Athelstane, king of England, or rather Northumberland, and Hungus, king of the Picts, a bright cross, in the fashion of that whereon St. Andrew suffered martyrdom, appeared in the air to Hungus; he having gained the victory, bore the figure of that cross at all times after in his ensigns and banners; from which time all succeeding kings of Scotland have religiously observed the same bearing. Others assert, that this extraordinary appearance was not to Hungus, but to the Scots, whom Achaius, king of Scotland, sent to his assistance. This victory is said to have been obtained in the year 819 (though, according to Buchanan, Achaius died nine years before) and that Hungus and Achaius went bare-footed in solemn procession to the kirk of St. Andrew, to return thanks to God and his apostle, promising, that they and their posterity would ever use in their ensigns the cross of St. Andrew, which custom prevailed among the Picts, and continues among the Scots unto this day; and that both these kings instituted an order, which they named the order of St. Andrew.

Others, who allow that Achaius instituted this order, give the following account of its origin, Achaius having formed that famous league, offensive and defensive, with Charlemagne, against all other princes, found himself thereby so strong, that he took for his device the *Thistle* and the *Rue*, which he composed into a collar of his order, and for his motto, *Pour ma defense*, intimating thereby, that he feared not the powers of foreign princes, seeing he leaned on the succour and alliance of the French.

And though from hence may be inferred, that these two plants, the Thistle and the Rue, were the united symbols of one order of knight-hood, yet Menenius divides them into two, making one whose badge was the thistle, whence the knights were so called, and the motto, *Nemo me impune lacessit*; another vulgarly called *Sertum rue*, or the garland of rue; the collar of which was composed of two branches or sprigs thereof, or else of several of its leaves: at both these collars hung one and the same jewel, to wit, the figure of St. Andrew, bearing before him the cross of his martyrdom.

But though the thistle has been acknowledged for the badge and symbol of the kingdom of Scotland, even from the reign of Achans, as the rose was of England, and the lily of France, the pomegranate of Spain, &c. yet there are some who refer the order of the thistle to later times, in the reign of Charles VII. of France, when the league of amity was renewed between that kingdom and Scotland, by which the former received great succour from the latter, at a period of extraordinary distress. Others again place the foundation still later, even as low as the year 1500; but without any degree of certainty.

The chief and principal ensign of this order is a gold collar, composed of thistles, interlinked with annulets of gold, having pendent therefrom the image of St. Andrew with his cross, and thus motto, *Nemo me impune lacessit*.

*Knights of St. Andrew*, is also an order instituted by Peter the Great, of Muscovy, in 1698; the badge of which is a golden medal, on one side whereof is represented St. Andrew's cross; and on the other are these words, *Czar Pierre monarque de toute la Russie*. This medal, being fastened to a blue ribbon, is suspended from the right shoulder.

**ANGARIA**, in ancient military writers, means a guard of soldiers posted in any place for the security of it. Vide Vegetius, lib. i. c. 3. lib. ii. c. 19. lib. iii. c. 8.

**ANGARIA**, in civil law, implies a service by compulsion, as furnishing horses and carriages for conveying corn or other stores for the army.

**ANGE**, a term used by the French to express chain shot.

**ANGEL Shot**. See CHAIN SHOT. **ANGELIOT**, a gold coin, which was struck at Paris when that capital was in the hands of the English; and so called from its representing the figure of an angel, supporting the arms of England and France.

**ANGLE**, in geometry, is the inclination of two lines meeting one another in a point.

The measure of an angle is the arch of a circle whose center is the angular point, and radius any distance in the lines forming the angle, and by which the arc is intercepted. As many degrees, &c. as are contained in that arch, so many degrees, &c. the angle is said to consist of.

**ANGLES** are either *right*, *acute*, or *obtuse*.

A *Right Angle* is when a straight line meeting another straight line has the same inclination on each side, and consequently the arches intercepted either way are equal to 90°, or the quarter of a circle.

An *Acute Angle*, is that which is less than a right angle, or 90°.

An *Obtuse Angle*, is that, which is greater than a right angle.

*Adjacent ANGLES*, are such as have the same vertex, and one common side. The sum of the adjacent angles is always equal to two right angles (13 *Euc.* 1.) and therefore, if one of them be acute, the other will be obtuse; and the contrary: whence, if either of them be given, the other is also given, it being the complement of the former to 180°.

*Homologous ANGLES* in similar figures are such as retain the same order, reckoning from the first in both figures.

*Vertical ANGLES*, are the opposite angles made by two lines cutting or crossing each other. When two lines cut or cross each other, the vertical angles are equal (15 *Euc.* 1.)

*Alternate ANGLES* are the angles formed by a straight line falling on two parallel straight lines, so that each angle shall have a common leg, but the other legs are on opposite sides of this common leg. These alternate angles are always equal (29 *Euc.* 1.)

A *Rectilinear or right-lined Angle*, is made by straight lines, to distinguish it from the spherical or curvilinear angle.

**ANGLES of Contact**, are angles formed

ed by a curve with its tangent, which may be considered as true angles, and should be compared with one another, though not with right lined angles, as being infinitely smaller.

**ANGLE of elevation**, in gunnery, is that which the axis of the hollow cylinder, or barrel of the gun, makes with a horizontal line. See **ELEVATION**.

**ANGLES oblique** are those which are greater than right angles.

**Spherical ANGLE** is an angle formed by the intersection of two great circles of the sphere. A spherical angle is measured by the arc of a great circle, intercepted between the legs, or the arcs produced, whose pole is in the vertex of the angle.

**ANGLE lunular** is an angle formed by the intersection of two curves, the one concave and the other convex.

**Mixed-line ANGLE** is that comprehended between a right line and a curved line.

**Curved line ANGLE** is that intercepted between two curved lines meeting each other in one point, in the same plane.

**ANGLE of a semi-circle** is that which the diameter of a circle makes with the circumference.

**ANGLE of Incidence** is that which the line of direction of a ray of light, &c. makes at the point where it first touches the body it strikes against, with a line erected perpendicular to the surface of that body.

**ANGLE of Interval** between two places is that formed by two lines directed from the eye to those places.

**ANGLE of Reflection** is the angle intercepted between the line of direction of a body rebounding, after it has struck against another body, and a perpendicular erected at the point of contact.

**ANGLE at the Center**, in fortification, is the angle formed at the middle of the polygon, by lines drawn from thence to the points of the two adjacent bastions.

**ANGLE of the Curtain**, } That which  
**ANGLE of the Flank**, } is made by,  
and contained between the curtain and the flank.

**ANGLE of the Polygon**, that which is made by the meeting of the two sides of the polygon, or figure in the center of the bastion. See **FORTIFICATION**.

**ANGLE of the triangle** is half the angle of the polygon.

**ANGLE of the bastion**, or } That which  
**Flanked ANGLE**, } is made by  
the two faces, being the utmost part of the bastion most exposed to the enemy's batteries, frequently called the point of the bastion. See **FORTIFICATION**.

**Diminished ANGLE**, only used by some foreign engineers, and more especially the Dutch, is composed of the face of the bastion, and the exterior side of the polygon.

**ANGLE of the shoulder**, or } Is formed  
**ANGLE of the epaule**, } by one  
face, and one flank of the bastion. See **FORTIFICATION**.

**ANGLE of the tenaille**, } Is made by  
**ANGLE rampant**, } two lines  
sichant, that is, the faces of the two bastions extended till they meet in an angle towards the curtain, and is that which always carries its point towards the out-works. See **FORTIFICATION**.

**ANGLE of the flank exterior**, is that which is before the center of the curtain, formed by the prolongation of the faces of the bastion, or by both the sichant lines of defence, intersecting each other on planning a fortification.

**ANGLE of the flank interior**, is formed by the flanked line of defence and the curtain; being that point where the line of defence falls upon the curtain.

**ANGLE of the line of defence**, is that angle made by the flank, and the line of defence.

**ANGLE of the face**, is formed by the angle of the face and the line of defence produced till they intersect each other.

**ANGLE of the base interior**, is the half of the figure, which the interior polygon makes with the radius, when they join each other in the center; intersecting the center of the gorges of each bastion.

**ANGLE of the base exterior**, is an angle formed by lines drawn from the center of the figure, to the angle of the exterior polygon, cutting the center of the gorges of each bastion.

**ANGLE of the gorge**, is that angle formed by the prolongation of the curtains, intersecting each other, in the center of the gorge, through which the capital line passes.

**ANGLE of the ditch**, is formed before the center of the curtain, by the outward line of the ditch.

**ANGLE of the mole**, is that which is made before the curtain where it is intersected.

**Flanked ANGLE**. See **ANGLE of the bastion**.

**Saliant ANGLE**, } Is that angle which  
**ANGLE sortant**, } points outwards,  
or towards the country. Such is the angle of the counterscarp before the point of a bastion.

**Entering ANGLE**, or } An angle point-  
**ANGLE rentrant**, } ing inwards,  
as the saliant angle points outwards. Such is the angle of the counterscarp before the curtain.

**ANGLE of the counterscarp**, made by two sides of the counterscarp meeting before the center of the curtain.

**ANGLE at the circumference of a circle**, is an angle formed by two chords in the circumference of a circle.

**ANGLE of the circumference**, is the mixed angle formed by an arch, drawn from one gorge to another.

**Re-entering ANGLE**. See **Entering ANGLE**.

**ANGLE of the complement of the line of defence**, is the angle formed by the intersection of the two complements with each other.

**ANGLES of a battalion**, are made by the last men at the extremity of the ranks and files.

**Front ANGLES**, the two last men of the front rank.

**Rear ANGLES**, the two last men of the rear rank.

**Dead ANGLE**, is a re-entering angle, consequently not defended.

**ANGON**, in ancient military history, was a kind of dart of a moderate length, having an iron bearded head and cheeks; in use about the fifth century. This sort of javelin was much used by the French. The iron head of it resembles a fleur-de-lis; and it is the opinion of some writers, that the arms of France are not fleurs-de-lis, but the iron point of the *angon* or javelin of the ancient French.

**ANGULAR**, in a general sense, denotes something relating to, or that hath angles.

**to ANIMATE**, in a military sense, is to encourage, to incite, to add fresh

impulse to any body of men who are advancing against an enemy, or to prevent them from shamefully abandoning their colours in critical situations. Soldiers may be encouraged and incited to gallant actions not only by words, but by the looks and gestures of the officers, particularly of their commanding one. It is by the latter alone, indeed, that any of these artificial means should be resorted to; for silence, steadiness, and calmness are the peculiar requisites in the characters of subordinate officers. Whatever their private feelings may be, a superior sense of duty should always prevent them from discovering the slightest symptom of personal fear or perturbation. The best effects, however, may be sometimes produced by a sort of electrical shock which is communicated to the soldiery: as, when officers, being themselves animated and full of fire, give a sudden and unexpected utterance to their sentiments; make use of some particular expression by which the national ear is captivated, or by a happy waving of the hand, hat, or sword cause the most timid to become careless of danger, and keep up the enthusiasm of the bravest. Many batties, both in ancient and modern times, have taken a sudden turn from the most trivial circumstance of this nature. During last war, a large body of French troops, who landed at St. Lucie, were defeated by a handful of British soldiers who had retired to an eminence called St. Vigie, under the present Sir William Medows. This brave and gallant officer, after having been wounded in his right arm, rallied the 5th regiment of foot in front of the colours, and waving his sword in the left hand, enthusiastically exclaimed, *Soldiers! as long as you have a bayonet left to point against the breasts of your enemies, defend these colours!*

The French are more susceptible of this species of animation than any other nation. The difference indeed, which is manifest, between French and English valour, requires a different application of these artificial means. English soldiers will always advance with cool, deliberate resolution, provided they are well led on. French soldiers, on the contrary, spring as it were into action with a vanity congenial to the country, and as precipitately shrink from it under circum-

circumstances of discomfiture. During the present war, they have furnished several instances of the power of military animation. The success at Arcoli, to which Buonaparté owes more than half his reputation, was the consequence of a bold and individual exertion, when he snatched the standard, and personally led the grenadiers across the bridge. A variety of instances might be enumerated wherein words and gestures have had the most happy result. As far back as the days of Cæsar there are examples that stand fresh upon record; and nothing proves more forcibly the influence which great reputation has upon common minds, than the exclamation which Cæsar used when he was crossing a branch of the sea, between Brundisium and Dyrrachium. He embarked by night in the habit of a slave, and lay on the boards like an ordinary passenger. As they were sailing down the river Amisus, a violent storm arose, which quite overcame the art of the pilot, who gave orders to put back; but thus, Cæsar would not permit, who discovering himself, and taking the astonished pilot by the hand, bade him boldly go on, and fear nothing; *for*, cried he, *thou carriest Cæsar and Cæsar's fortune. "Cæsarem tecum fortunamque ejus."*

**ANNAIS**, a species of military history, wherein events are related in the chronological order they happened. They differ from a perfect history, in being only a mere relation of what passes every year, as a journal is of what passes every day.

**ANNUNCIADA**, an order of military knighthood in Savoy, first instituted by Amadeus I. in the year 1109; their collar was of 15 links, interwoven one with another, and the motto *F. E. R. T.* signifying *fortitudo ejus Rhodum tenet*. Amadeus VIII. changed the nuage of St. Maurice, patron of Savoy, which hung at the collar, for that of the Virgin Mary; and instead of the motto above mentioned, substituted the words of the angel's salutation.

**ANOLYMPIADES**. See **OLYMPIAD**.

**ANSE des Pièces**, a French term for the handles of cannon. Those of brass have two.—Those of iron seldom any.—these handles serve to pass cords, handspikes, or levers, the more easily to move

so heavy a body, and are made to represent dolphins, serpents, &c.

**ANSPESE**. See **LANCECORPORAL**.

**ANTEMURAILLE**, *Fr.* is the ancient military art, denoted what now the moderns generally call the out-works.

**ANTESTATURE**, in ancient fortification, signifies an intrenchment of palisades or sacks of earth thrown up in order to dispute the remainder of a piece of ground.

**ANTHONY**, or *Knights of St. Anthony*, a military order instituted by Albert, duke of Bavaria, Holland, and Zealand, when he designed to make war against the Turks in 1382. The knights wore a collar of gold made in the form of a hermit's girdle, from which hung a stick like a crutch, with a little bell, as they are represented in St. Anthony's pictures.

**APPAREILLES**, *Fr.* are those slopes that lead to the platform of the bastion. See **FORTIFICATION**.

**APPAREILLEUR**, *Fr.* an architect who superintends the workmen in the construction of fortifications, sluices, &c.

**APPEAL**, might formerly have been made, by the prosecutor of prisoner, from the sentence or jurisdiction of a regimental to a general court-martial. At present no soldier has a right to appeal, except in cases where his immediate subsistence is concerned.

**APPEL**, *Fr.* a roll call; a beat of drum for assembling; a challenge.

**APPRI**, in fencing, a smart beat with your blade on that of your antagonist on the contrary side to that you have engaged, generally accompanied with a stamp of the foot, and used for the purpose of procuring an opening.

**APPOINTÉ**. This word was applicable to French soldiers only, during the monarchy of France, and meant a man who for his long service and extraordinary bravery received more than common pay. There were likewise instances in which officers were distinguished by being stiled *officiers appointés*. They were usually rewarded by the king.

The word *appointé* was originally derived from it being said, that a soldier was appointed among those who were to do some singular act of courage, as by going upon a forlorn hope, &c. &c.

**APPOINTMENT**, in a military sense, is the pay of the army; it likewise

applies to warlike habiliments, accoutrements, &c.

**APPREHEND**, in a military sense, implies the seizing or confining of any person. According to the articles of war, every person who apprehends a deserter, and attests the fact duly before a magistrate, is entitled to receive twenty shillings.

**APPROACHES**. All the works are generally so called that are carried on towards a place which is besieged; such as the first, second, and third parallels, the trenches, epaulements with and without trenches, redoubts, places of arms, saps, galleries, and lodgments. See these words more particularly under the head **FORTIFICATION**.

This is the most difficult part of a siege, and where most lives are lost. The ground is disputed inch by inch, and neither gained nor maintained without the loss of men. It is of the utmost importance to make your approaches with great caution, and to secure them as much as possible, that you may not throw away the lives of your soldiers. The besieged neglect nothing to hinder the approaches; the besiegers do every thing to carry them on; and on this depends the taking or defending of the place.

The trenches being carried to their glacis, you attack and make you self master of their covered way, establish a lodgment on the counterscarp, and effect a breach by the sap, or by mines with several chambers, which blow up their intrenchments and souldades, or small mines, if they have any.

You cover yourselves with gabions, fascines, barrels, or sacks; and if these are wanting, you sink a trench.

You open the counterscarp by saps to make yourself master of it; but, before you open it, you must mine the flanks that defend it. The best attack of the place is the fall of the bastion, when by its regularity it permits regular approaches and attacks according to art. If the place be irregular, you must not observe regular approaches, but proceed according to the irregularity of it; observing to humour the ground, which permits you to attack it in such a manner at one place, as would be useless or dangerous at another; so that the engineer who directs the attack ought exactly

to know the part he would attack, its proportions, its force and solidity, in the most geometrical manner.

**APPROACHES**, in a more confined sense, signify attacks.

**Counter-APPROACHES**, are such trenches as are carried on by the besieged, against those of the besiegers.

**APPRENTI**, *Fr.* Apprentice.

In France they had apprentices or soldiers among the artillery, who served for less pay than the regular artillery men, until they became perfect in their profession; when they were admitted to such vacancies as occurred in their respective branches.

**APRON**, in gunnery, a square plate of lead that covers the vent of a cannon, to keep the charge dry, and the vent clean and open.

Their dimensions are as follow, viz. for a 42, 32, and a 24 pounder, 45 inches by 13; for an 18, 12, and a 9 pounder, 12 inches by 10; for a 6, 5½, 3, and 1½ pounder, 10 inches by 8. They are tied fast by two strings of white marline, the length of which, for a 42 to a 12 pounder inclusive, is 18 feet, 9 feet each string; for a 9 to a 1½ pounder, 12 feet, 6 feet for each.

**APPUI**—*Point d'appui*, *Fr.* any particular given point or body, upon which troops are formed, or by which they are marched in line or column.

*Aller à l'Appui*, *Fr.* to go to the assistance of any body, to second, to back.

*Hauteur d'Appui*, *Fr.* breast-height.

**AQUEDUCT**, a channel to convey water from one place to another. Aqueducts, in military architecture, are generally made to bring water from a spring or river to a fortress, &c. they are likewise used to carry canals over low grounds, and over brooks or small rivers: they are built with arches like a bridge, only not so wide, and are covered above by an arch, to prevent dust or dirt from being thrown into the water. See Muller's *Practical Fortification*.

The Romans had aqueducts which extended 100 miles. That of Louis XIV. near Maintenon, which carries the river Bute to Versailles, is 7000 toises long.

**ARAIGNEE**, *Fr.* in fortification. See **GALLERY**.

**ARBALET**, in the ancient art of war, a cross-bow, made of steel, set in a shaft of wood, with a string and trigger, bent with

with a piece of iron fitted for that purpose, and used to throw bullets, large arrows, darts, &c. Also a mathematical instrument called a *Jacob's Staff*, to measure the height of the stars upon the horizon.

**ARBALETE**, *à palet*, Fr. a stone bow.

**ARBALETRIER**, Fr. a cross-bow man.

**ARBALETRIER d'une Galère**, Fr. that part of a galley where the cross-bowmen were placed during an engagement.

**ARBORER**, Fr. to plant. *Arborer l'étendart*, to plant the standard.

**ARCH**, Fr. a bow; an arch in building.

**ARCH**, in military architecture, is a vault or concave building, in form of a curve, erected to support some heavy structure, or passage.

**Triumphal Arch**, in military history, is a stately erection generally of a semicircular form, adorned with sculpture, inscriptions, &c. in honour of those heroes who have deserved a triumph. For a very able Treatise on Arches see Mr. Atwood's late publication; and under PARABOLA see *Parabolic Arches*.

**ARCHERS**, in military history, a kind of militia or soldiery, armed with bows and arrows. They were much used in former times, but are now laid aside, excepting in Turkey, and in some of the eastern countries.

**ARCHERY**, the art of shooting with a bow and arrow. Our ancestors were famous for being the best archers in Europe, and most of our victories in France were the purchase of the long-bow. The statutes made in 33 Hen. VIII. relative to this exercise, are worth perusal. It is forbidden, by statute, to shoot at a standing mark, unless it be for a rover, where the *archer* is to change his mark at every shot. Any person above 24 years old is also forbidden to shoot with any puck-shaft, or flight, at a mark of eleven score yards or under. 33 Hen. VIII. chap. 9. The former was a provision for making good marksmen at sight; the latter for giving strength and sinews.

**ARCHITECTURE**, in a military sense, is the art of erecting all kinds of military edifices or buildings, whether for habitation or defence.

**Military ARCHITECTURE**, instructs us in the method of fortifying cities,

sea-ports, camps, building powder magazines, barracks, &c. Military architecture is divided into *regular* and *irregular* fortification.

**Regular fortification** consists in having all its sides and angles equal among themselves.

**Irregular fortification** is composed of parts where the sides and angles are not equal or uniform among themselves. This species of fortification is permanent or temporary.

The permanent one is constructed for the purpose of remaining a long time, and for the protection of large towns.

The temporary one is that which is erected in cases of emergency. Under this denomination are contained all sorts of works which are thrown up to seize a pass or gain an eminence, or those which are made in circumvallations and counter-vallations, viz. redoubts, trenches, and batteries. See FORTIFICATION.

**Naval ARCHITECTURE**, the art of building the hull or body of the ship, distinct from her machinery and furniture for sailing, and may properly be comprehended in three principal articles. 1. To give the ship such a figure, or outward form, as may be most suitable to the service for which she is intended. 2. To find the exact shape of the pieces of timber necessary to compose such a fabric. 3. To make convenient apartments for the artillery, ammunition, provisions, and cargo, together with suitable accommodations for the officers and men.

**ARCHITRAVE**, the master-beam, or chief supporter, in any part of a subterraneous fortification.

**AREA**, the superficial content of any rampart or other work of a fortification.

**ARIGOT**, Fr. a flue or flute.

**ARM**, in geography, denotes a branch of the sea, or of a river.

**Arm** is also used figuratively, to denote power.

To **Arm**, to take arms, to be provided against an enemy.

**ARMADA**, a Spanish term, signifying a fleet of men of war, applied particularly to that great one fitted out by the Spaniards, with an intention to conquer this island in 1588, and which was defeated by the English fleet, under admirals Lord Howard and Sir Francis Drake.

• **ARMADILLA**, a Spanish term, signifying a small squadron.

• **ARMATURA**, in ancient military history, signifies the fixed and established military exercise of the Romans, nearly in the sense we use the word exercise. Under this word is understood the throwing of the spear, javelin, shooting with bows and arrows, &c.

• **ARMATURA** is also an appellation given to the soldiers who were light-armed. Aquinus seems without reason, to restrain *armatura* to the tyrones, or young soldiers, in it.

• **ARMATURA** is also a denomination given to the soldiers in the emperor's retinue.

• **ARMED**, in a general sense, denotes something provided with, or carrying arms.

• *An ARMED body of men*, denotes a military detachment, provided with arms and ammunition, ready for an engagement.

• **ARMED**, in the sea language. A cross-bar-shot is said to be armed, when some rope-yarn, or the like, is rolled about the end of the iron bar which runneth through the shot.

• **ARMED ship**, is a vessel taken into the government's service, and equipped by them, in time of war, with artillery, ammunition, and warlike instruments: it is commanded by an officer who has the rank of master and commander in the navy, and upon the same establishment with sloop of war, having a lieutenant, master, purser, surgeon, &c.

• **ARME**, *Fr.* This word is used among the French to express a body of armed men.

• **ARME blanche**, *Fr.* This term is used among the French to signify sword or bayonet.

• *Attaquer à l'ARME blanche*, *Fr.* to attack sword in hand, or with fixed bayonet.

• **ARME**, *Fr.* See **ARMY**.

• **ARMEMENT**, *Fr.* a levy of troops, equipage of war, either by land or sea.

• **ARMES à l'Épée**, a French term for armour of polished steel, which was proof against the sword or small arms; but its weight so encumbered the wearer, that modern tacticians have wholly rejected its use.

• **ARMES à la légère**, *Fr.* light-armed troops, who were employed to attack

in small bodies, as opportunity occurred. See **RIFLEMES**, &c.

• **ARMS** *des Pièces de Canon*, the French term for the tools used in practical gunnery, as the scoop, rammer, sponge, &c.

• **ARME**, *Fr.* a casque or helmet.

• **ARMIGER**, an esquire or armour-bearer, who formerly attended his knight or chieftain in war, combat, or tournament, and who carried his lance, shield, or other weapons with which he fought.

• **ARMILUSTRIUM**, in Roman antiquity, a feast observed among the Roman generals, in which they sacrificed, armed, to the sound of trumpets, and other warlike instruments.

• **ARMISTICE**, a temporary truce, or cessation of arms for a very short space of time only.

• **ARMORY**, a warehouse of arms, or a place where the military habiliments are kept, to be ready for use.

• **ARMOUR**, denotes all such habiliments as serve to defend the body from wounds, especially darts, a sword, a lance, &c. A complete suit of armour formerly consisted of a helmet, a shield, a cuirasse, a coat of mail, a gambet, &c. now almost universally laid aside.

• **ARMOUR-BEARER**, he that carries the armour of another.

• **ARMOURER**, a person who makes or deals in armour, or arms; also a person who keeps them clean.

• **ARMS**, (*Armes*, *Fr.*) in a general sense, signify all kinds of weapons, whether used for offence or defence.

• Arms may properly be classed under two specific heads—

• *Arms of offence*, which include musket, bayonet, sword, pistol, &c.

• *Arms of defence*, which are shields, helmets, coats of mail, or any species of repulsive or impenetrable covering, by which the body of a man is protected.

• In a legal sense, arms may extend to any thing that a man wears for his own defence, or takes in his hand, and uses in anger, to strike, throw at, or wound another. It is supposed, that the first artificial arms were of wood, and only employed against beasts; and that Belus, the son of Nimrod, was the first that waged war: whence, according to some, came the appellation *bellum*. Diodorus Siculus

Siennus takes Belus to be the same with Mars, who first trained soldiers up to battle. *Arms* of stone, and even of brass, appear to have been used before they came to iron and steel. Josephus assures us, that the pious Joseph first taught the use of iron arms in Egypt, arming the troops of Pharaoh with a casque and buckler.

The principal *arms* of the ancient Britons were hatchets, scythes, lances, swords, and bucklers. The Saxons, &c. brought in the halberd, bow, arrows, cross-bows, &c. By the ancient laws of England, every man was obliged to bear arms, except the judges and clergy. Under Henry VIII. it was expressly enjoined on all persons to be regularly instructed, even from their tender years, in the exercise of the *arms* then in use, viz. the long bow and arrows, and to be provided with a certain number of them.

By the common law, it is an offence for persons to go or ride armed with dangerous weapons; but gentlemen, both in and out of the army, may wear common armour, according to their quality. The king may prohibit force of *arms*, and punish offenders according to law; and herein every subject is bound to be aiding. Stat. 7. Edward I. No one shall come with force and *arms* before the king's justices, or ride armed in affray of the peace, on pain to forfeit their armour, and to suffer imprisonment, &c. 2 Edward III. c. 3. The transportation of *arms* and ammunition is prohibited by 1 Jac. II. c. 8, and by William and Mary, stat. 2. c. 2. So likewise *arms*, &c. shipped after prohibition, are forfeited, by 29 Geo. I. c. 16. sec. 2.

*Arms of parade*, or *courtesy*, were those used in the ancient jousts and tournaments, which were commonly unshod lances, swords without edge or point, wooden swords, and even canes.

*Bells of Arms*, or *Bell Tents*, a kind of tents in the shape of a cone, where the company's arms are lodged in the field. They are generally painted with the colour of the facing of the regiment, and the king's arms in front.

*Pass of Arms*, a kind of combat, when anciently one or more cavaliers undertook to defend a pass against all attacks.

*Place of Arms*. See FORTIFICATION.

*Stand of Arms*, a complete set of arms for one soldier.

*Arms*, in artillery are the two ends of an axle-tree. See *Axletree*, under the word CARRIAGE.

*Fire-Arms*, are great guns, firelocks, carbines, guns and pistols; or any other machine discharged by inflamed powder.

*ARMY*, a large number of soldiers, consisting of artillery, foot, horse, dragoons, and hussars or light horse, completely armed, and provided with engineers, a train of artillery, ammunition, provisions, commissariat, forage, &c. and under the command of one general, having lieutenant-generals, major-generals, brigadier-generals, colonels, lieutenant-colonels, majors, captains, and subalterns. An army is composed of brigades, regiments, battalions, and squadrons, and is generally divided into three or more corps, and formed into three lines; the first of which is called the front line, a part of which forms the van guard; the second, the main body; and the third, the rear guard, or corps of reserve. The center of each line is generally possessed by the foot; the cavalry form the right and left wings of each line; and sometimes a squadron of horse is posted in the intervals between the battalions. When an army is drawn up in order of battle, the horse are frequently placed at five feet from each other; and the foot at three. In each line the battalions are distant from each other about 180 feet, which is nearly equal to the extent of their front: and the same rule holds good of the squadrons, which have about 300 feet distance, being the extent of their own front. These intervals are left for the squadrons and battalions of the second line to range themselves against the interval of the first, that both may more readily march through those spaces to the enemy. The front line is generally about 300 feet from the center line; and the center line as much from the rear, or corps of reserve, that there may be sufficient room to rally when the squadrons or battalions are broken. Our armies anciently were a sort of militia, composed chiefly of the vassals and tenants of the lords. When each company had served the number of days or months enjoined

by their tenure, or the customs of the fees they held, they returned home.

• Armies in general are distinguished by the following appellations—

*A covering army.*

*A blockading army.*

*An army of observation.*

*An army of reserve.*

*A flying army.*

An army is said to *cover* a place when it lies encamped or in cantonments for the protection of the different passes which lead to a principal object of defence.

An army is said to *blockade* a place, when, being well provided with heavy ordnance and other warlike means, it is employed to invest a town, for the direct and immediate purpose of reducing it by a-sault or famine.

An *ARMY of observation* is so called because by its advanced positions and desultory movements it is constantly employed in watching the enemy.

An *ARMY of reserve* may not improperly be called a general depot of effective service. In cases of emergency the whole or detached parts of an army of reserve are generally employed to recover a lost day or to secure a victory. It is likewise sometimes made use of for the double purpose of secretly increasing the number of active forces, and rendering the aid necessary according to the exigency of the moment, and of deceiving the enemy with respect to its real strength.

*Flying ARMY*, a strong body of horse and foot, commanded for the most part by a lieutenant-general, which is always in motion, both to cover its own garrisons, and to keep the enemy in continual alarm.

A *naval or sea ARMY*, is a number of ships of war, equipped and manned with sailors, mariners, and marines, under the command of an admiral, with the requisite inferior officers under him.

*ARNAUTS*, Turkish light cavalry, whose only weapon was a sabre very much curved. Some are in the Russian service.

*ARQUEBUSE* a *Croc*, an old piece of fire-arm, resembling a musquet, but which is supported on a rest by a hook of iron, fastened to the barrel. It is longer than a musquet, and of larger

calibre, and was formerly used to fire through the loop-holes of antique fortifications.

*ARQUEBUSIER*, a French term, formerly applied to all the soldiery who fought with fire-arms, whether cavalry or infantry.

*ARRAY*, order of battle. See *BATTLE ARRAY*.

*ARREYERS*, officers who anciently had the charge of seeing the soldiers duly appointed in their armour.

*ARREARS*, in the army, were the difference between the full pay and subsistence of each officer, which was directed to be paid once a year by the agent. See *PAY*.

*ARREST*, a French phrase, similar in its import to the Latin word *retinendum*. It consists in a small piece of steel or iron, which was formerly used in the construction of fire-arms, to prevent the piece from going off. *Ce pistolet est en arrest* is a familiar phrase among military men in France. This pistol is in arrest, or is stopped.

*ARREST*, is the exercise of that part of military jurisdiction, by which an officer is noticed for misconduct, or put into a situation to prepare for his trial by a general court-martial.

*ARRESTE* of the glacier, is the junction of the talus which is formed at all the angles.

*ARRIERE*, Fr. the rear.

*ARRIERE Ban*, Fr. See *BAN*.

*ARRIERE-garde*, Fr. the rear-guard.

*En ARRIERE—marche!* Fr. to the rear—march!

*ARRONDISSEMENT*, Fr. district.

*ARROW*, a missive weapon of offence, slender and pointed, made to be shot with a bow.

*ARROW*. See *FORTIFICATION*.

*ARSENAL*, in a large and well fortified town, is a large and spacious building, in which are deposited all kinds of arms, and other warlike implements, such as cannon, mortars, howitzers, small arms, and every other kind of warlike engines and instruments of death.

*ART*. Military art may be divided into two principal branches. The first branch relates to the order and arrangement which must be observed in the management of an army, when it is to fight, to march, or to be encamped.

This

This branch derives its appellation from *tactus*, which signifies *order*.

The same appellation belongs to the other branch of military art, and includes the composition and the application of warlike machines.

ARTICLES OF WAR, are known rules and regulations for the better government of the army in the kingdoms of Great Britain and Ireland, dominions beyond the seas, and foreign parts dependent upon Great Britain. They may be altered and enlarged at the pleasure of the king. And in certain cases extend to civilians—as when by proclamation any places shall be put under martial law; or when people follow a camp or army for the sale of merchandise, or serve in any menial capacity. It is ordained, that the articles of war shall be read in the circle of each regiment belonging to the British army every month, or oftener if the commanding officer thinks proper. A recruit or soldier is not liable to be tried by a military tribunal, unless it can be proved that the articles of war have been duly read to him.

ARTIFICE, among the French, is understood as comprehending every thing which enters the composition of fire-works; as the sulphur, saltpetre, charcoal, &c. See FIRE-WORKS.

ARTIFICER or ARTIFICER, he who makes fire-works, or works in the artillery laboratory, who prepares the fuzes, bombs, grenades, &c. It is also applied to the military smithy, collar-makers, &c. &c. and to a particular corps.

ARTILLERY, in a general sense, signifies all sorts of great guns or cannon, mortars, howitzers, petards, and the like; together with all the apparatus and stores thereto belonging, which are not only taken into the field, but likewise to sieges, and made use of both to attack and defend fortified places. See ORDNANCE.

ARTILLERY, in a particular sense, signifies the science of artillery or gunnery, which art includes a knowledge of surveying, levelling; also that of geometry, trigonometry, conic sections, laws of motion, mechanics, fortification, and projectiles.

The *Train of ARTILLERY* consists in an unlimited number of pieces of ordnance, such as 24 pounders, 18

pounders, 12, 9, 6, and 3 pounders; mortars from 15 to 24 inches diameter; besides ryls and colboms; howitzers of every denomination, mounted on their proper carriages and beds, &c. There is moreover attached to the train a sufficient quantity of horses, spare carriages, spare mortar beds, block carriages, limbers, waggons for ammunition and stores, shells, round and grape shot, bullets, powder, cartridges, port fires, intrenching tools, artificers tools, mat, tools, axes, capstans, forges, small saws, laboratory stores, pontons, pontoon carriages, with their capstans; ambuscades, aprons of lead, *volige* boards, chevrons de filze, patibides, platormes, chandeliers, lund, de-croques, flints, harness, powder measures, fuse engines, fuzes, tents, &c. The train of artillery is, or should be, divided into brigades, to which belong not only the officers of the regiments of artillery, but even the chief list, such as controllers, commissaries of stores, clerks of stores, officers of all denominations, conductors, store-keepers, waggons, &c., drivers, &c. The increase of artillery clearly demonstrates its great utility; for in the year 1800, an army of 50,000 men had only 40 pieces of cannon in the field; and in the year 1757, the same number of troops brought 240 pieces into the field, including mortars and howitzers.

At the battle of Jemappes, which was fought between the French and Austrians on the 6th of November, 1792, the latter had 120 pieces of cannon disposed along the heights of Framery, whilst their effective force in men did not exceed 17000. The French on this occasion brought nearly the same quantity of ordnance, some indeed of extraordinary caliber, but their strength in men was considerably more formidable.

A *Brigade of ARTILLERY* generally consists of 3 or 10 pieces of cannon, with all the machinery, and officers to conduct them, and all the necessary apparatus thereto belonging.

The *Park of ARTILLERY* is that place appointed by the general of an army, to encamp the train of artillery, apparatus, ammunition, as well as the battalions of the artillery, appointed for its service and defence. The figure of the

the park of artillery, is that of a parallelogram, unless the situation of the ground renders another necessary.

The park of artillery is generally placed in the center of the second line of encampment, and sometimes in the rear line, or corps of reserve. In both places the muzzles of the guns are in a line with the fronts of the serjeants' tents of the regiments of artillery and infantry. Some generals choose to place the park about 300 paces before the center of the front line of the army. But let the situation be where it will, the manner of forming the park is almost every where the same, except that some artillery officers differ in the disposition of the carriages; others again divide the equipage as well as the guns into brigades, placing the first in the front line, the second in the next, and so on. However, the best, in our humble opinion, and the most approved method, is to divide the whole into brigades, placing the guns of the first to the right of the front line, and their ammunition behind them, in one or more lines. The different brigades should be all numbered, as well as every wagon belonging to them. Example, 1st brigade, front line, No. 1, 2, &c. 1st brigade, 2d line, No. 1, 2, &c. 2d brigade, front line, No. 1, 2, &c. and so of all the rest. This method will prevent confusion in the forming and breaking up of the park, as also on a march: besides, according to the numbers, the stores therein contained are known.

ARTILLERY, in a military acceptation of the term, signifies every species of light or heavy ordnance. It is classed under specific heads; the most important of which are—

*Field ARTILLERY*, which includes every requisite to forward the operations of an army, or of any part of an army acting offensively or defensively in the field. Field artillery may be divided into two distinct classes—*Field Artillery*, properly so called, and horse artillery.

*Encampment of a Regiment of ARTILLERY.* Regiments of artillery are always encamped, half on the right and half on the left of the park. The company of bombardiers (when they

are formed into companies, which is the case in almost every nation excepting England, always takes the right on the whole, and the lieutenant colonel's company the left: next to the bombardiers, the colonels, the majors, &c. so that the two youngest are next but one to the center or park: the two companies next to the park, are the miners on the right, and the artificers on the left.

In the rear of, and 26 feet from the park, are encamped the civil list, all in one line.

The breadth between the front tent-pole of one company, and that of another, called the streets, is 56 feet to each interval.

Total depth	739

The army guard is in the front of the park, opposite the alarm-guns, in a line with the artillery quarter-guards, that are placed on the right and left of the artillery companies.

The bells of arms front the poles of serjeants tents.

The colours are placed in the center of the front line of guns, in the interval of the two alarm-guns, in a line with the bells of arms of the companies.

The lieutenant colonels and majors tents front the centers of the second streets from the right and left of the regiment.

The colonel's tent is in a line with the colours and guard of the army, facing the same.

The staff-officers front the centers of the second streets, on the right and left of the angles of the park.

The batmen's tents front towards their horses.

The rear guard fronts outwards. The front poles are in a line with the center of the bells of arms, and each is 18 feet distant. The parade of the rear guard is 12 feet from the bells of arms.

In the rear of the rear guard, and 80 feet distant from their parade, the artillery horses and drivers tents are placed, in two or more lines, parallel with the line of guns, extending from the right and left of the whole.

It sometimes happens, that a very large train of artillery is in the field, with two or more regiments: in that case the oldest takes the right of the park; the next oldest the left, and the youngest the center: the center or grand street is 63 feet broad, opposite to which the tent of the commanding officer is placed. In the center of this street, the colours are placed in a line with the bells of arms, and the artillery quarter guard is in the front of the colours at the same distance as before mentioned.

*Regiment of ARTILLERY.* The corps

of artillery, with all its dependencies, is, as it were, the general instrument of the army, and without it nothing can be done. It is impossible to attack fortified places, or to defend them, without artillery; and an army in the field, which wants artillery, can never make head against one that is well provided with it. For this reason it is, that at all times sovereigns have taken great care to provide proper officers of learning and capacity to govern, repair and keep in order, thus as central part of military force.

The strength of a regiment of artillery depends upon the choice of the prince, the quantity of troops he maintains, and more especially on the situation of the country, number of fortifications, and foreign establishments to be defended. It has always been a prevailing custom, to regulate the corps of artillery according to the French method; but, since the celebrated king of Prussia saw his regiments of artillery on another plan, we conceive it proper in this place first to explain our own method, and afterwards that of the king of Prussia; leaving the candid reader to judge for himself, as to the superiority of either.

In 1623, and probably long before, the artillery had sundry privileges, from which the rest of the army were excluded, viz. of having the first rank and the best quarters; neither could any carriage or wagon presume to march before them, except that belonging to the treasurer.

In 1705, we find the first mention made of the royal artillery, before that time it was only called the *train of artillery*. It then consisted only of 4 companies, under the command of General Bizard. From that period it has gradually increased to 6 battalions, each battalion consisting of 10 companies, (exclusive of 1 invalid battalion, which is equal in its establishment with the other battalions, but confined in its duty to the home garrisons, or Jersey, Guernsey, and Bermuda) commanded by a colored commandant, 1 colonel en second, 2 lieutenant colonels, 1 major, who have no companies. Each company in time of war generally consists of 120 men, commanded by 1 captain, 1 captain lieutenant, 2 first, and 1 second

cond lieutenant. In time of peace the companies are reduced to 50 men each.

When Frederick the second, king of Prussia, came to the crown, he found the army in a very good condition, excepting the corps of artillery and engineers, which consisted chiefly of mechanics and artizans, little esteemed by the rest of the army, and the officers without commissions. His majesty, knowing how necessary it was to have a good corps of artillery and engineers, and how impossible it was to secure that important object without having officers learned in every branch of military mathematics, immediately draughted all the illiterate officers into the garrison regiments, supplying their places with gentlemen of examined capacity; and giving them all commissions, with rank equal to that of the officers of the guards, and an extraordinary pay. This method of proceeding soon established the honour and reputation of that noble corps on a very respectable footing, induced the nobility and men of rank (provided they had capacity) to engage in that service sooner than elsewhere, which has brought it to that summit of high renown it has since enjoyed.

The Prussian army consists of 12 battalions, 8 for the field, and 4 for garrison. Each battalion has 12 companies, namely, 1 company of bombardiers, 1 of miners, 1 of artificers, and 9 of artillery. The first, or bombardier companies, are composed of 1 captain, 2 lieutenants, 3 upper and 6 under fire-workers, 2 sergeants, 4 corporals, 2 drummers, and 60 bombardiers. The miners have the same commissioned officers, with 3 sergeants, 6 corporals, 2 drummers, 33 miners, and 33 sappers. The artificers have the same officers and non-commissioned officers as the miners, with 50 artificers and 60 pontooniers. All the artillery companies have 3 commissioned and 6 non-commissioned officers, 2 drummers, and 60 artillerymen. The colonel, lieutenant colonel, and major's companies, have each a captain lieutenant; and each battalion has further, 1 chaplain, 1 auditor, 1 adjutant, 1 quarter-master, 1 doctor, 3 surgeons, 1 sergeant-major, 1 drum-major, 6 musicians, and 1 provost.

*March of the ARTILLERY.* The marches of the artillery are, of all the

operations of war, the most delicate; because they must not only be directed on the object you have in view, but according to the movements the enemy make. Armies generally march in 3 columns, the center column of which is the artillery; should the army march in more columns, the artillery and heavy baggage march nevertheless in one or more of the center columns; the situation of the enemy determines this. If they are far from the enemy, the baggage and ammunition go before or behind, or are sent by a particular road; an army in such a case cannot march in too many columns. But should the march be towards the enemy, the baggage must absolutely be all in the rear, and the whole artillery form the center column, except some brigades, one of which marches at the head of each column, with guns loaded and burning matches, preceded by a detachment for their safety. The French almost invariably place their baggage in the center.

Suppose the enemy's army in a condition to march towards the heads of your columns: the best disposition for the march is in 3 columns only, that of the center for the artillery; for it is then easy to form it in order of battle. Hence it is equally commodious for each brigade of artillery to plant itself at the head of the troops, in the place marked for it, in such a manner, that the whole disposition being understood, and well executed, the line of battle may be quickly formed in an open country, and in the presence of any enemy, without risking a surprise; by which method the artillery will always be in a condition to act as soon as the troops, provided it march in brigades.

If your march should be through a country full of ditches, some diagonals must march at the head of the columns, followed by a detachment of grenadiers, and a brigade of artillery; cannon being absolutely necessary to obstruct the enemy's forming into order of battle.

When you decamp in the face of the enemy, you must give most attention to your rear guard. On such occasions, all the baggage, ammunition, provisions, and artillery, march before the troops; your best grenadiers, best cavalry, some good brigades of infantry, together

together with some brigades of artillery, form the rear guard. Cannon is of infinite use for a rear guard, when you are obliged to pass a defile, or a river, and should be placed at the entry of such defile, on an eminence, if there be one, or on any other place, from whence the ground can be discovered, through which the enemy must march to attack the rear guard.

A detachment of pioneers, with tools, must always march at the head of the artillery, and of each column of equipage or baggage.

If the enemy be encamped on the right flank of the march, the artillery, &c. should march to the left of the troops, and vice versa. Should the enemy appear on motion, the troops front that way, by wheeling to the right or left by divisions; and the artillery, which marches in a line with the columns, passes through their intervals, and draws up at the head of the front line, which is formed of the column that flanked nearest the enemy; taking care at the same time that the baggage be well covered during the action.

Though we have said armies generally march in 3 columns, yet where the country will allow it, it is better to march in a greater number; and let that number be what it will, the artillery must form the center columns.

*Line of March of ARTILLERY.* 1. A guard of the army; the strength of which depends on the commander in chief.

2. The companies of miners (excepting a detachment from each, dispersed in various places, to mend the roads) with tumbrels of tools, drawn by 2 horses, assisted by pioneers.

3. The brigades of artillery's front guard, with four light 6 pounders loaded, and matches burning.

4. The kettle-drums by 4 horses, and 2 trumpeters on horseback.

5. The flag-gun, drawn by 12 horses, and ten 12 pounders more, by 4 horses each.

6. Twenty wagons with stores for the said guns, and 1 spare one, by 4 horses each.

7. All the pontoons, with the wagons thereto belonging.

8. Eight 9 pounders, by 3 horses each.

9. Fifteen wagons with stores for

said guns, drawn by 4 horses each, and 2 spare ones.

10. Guns and capstans, with their proper workmen, 3 wagons, with 2 horses each.

11. A forge on four wheels, and 1 wagon, 4 horses each.

12. Twelve heavy 24 pounders, by 16 horses each.

13. Sixteen wagons with stores for ditto, and 2 spare ones, by 4 horses each.

14. A wagon with tools, and pioneers to mend the roads.

15. Nine light 24 pounders, by 8 horses each.

16. Twelve wagons with stores for ditto, and 2 spare ones, by 4 horses each.

17. A forge and wagon, by 4 horse each.

18. Nine 24 pounders, by 8 horses each.

19. Twelve wagons with stores for ditto, and 2 spare ones.

20. Twelve 12 pounders, by 8 horses each.

21. Sixteen wagons with stores for ditto, and 2 spare ones.

22. Sixteen 5-8 inch mortars, by 4 horses each.

23. Twenty-five wagons with stores for ditto, and 2 spare ones.

24. Ten 3-inch mortars, by 4 horses each.

25. Twenty wagons with stores for ditto, and 2 spare ones.

26. Six 10-inch howitzers, by 6 horses each.

27. Twenty wagons with stores for ditto, and 2 spare ones.

28. A wagon with tools, and men to mend the roads.

29. A forge and wagon, by 4 horses each.

30. Ten 8-inch mortars, by 4 horses each.

31. Twenty wagons with stores for ditto, and a spare one.

32. Sixteen 12-inch mortars, by 8 horses each.

33. Thirty wagons with stores for ditto, and two spare ones.

34. Eight 18-inch stone mortars, by 10 horses each.

35. Sixteen wagons with stores for ditto, and a spare one.

36. Eight 9 pounders, by 8 horses each.

cond lieutenant. In time of peace the companies are reduced to 50 men each.

When Frederick the second, king of Prussia, came to the crown, he found the army in a very good condition, excepting the corps of artillery and engineers, which consisted chiefly of mechanics and artificers, little esteemed by the rest of the army, and the officers without commissions. His majesty, knowing how necessary it was to have a good corps of artillery and engineers, and how impossible it was to secure that important object without having officers learned in every branch of military mathematics, immediately draughted all the illiterate officers into the garrison regiments, supplying their places with gentlemen of examined capacity; and giving them all commissions, with rank equal to that of the officers of the guards, and an extraordinary pay. This method of proceeding soon established the honour and reputation of that noble corps on a very respectable footing, induced the nobility and men of rank (provided they had capacity) to engage in that service sooner than elsewhere, which has brought it to that summit of high renown it has since enjoyed.

The Prussian army consists of 12 battalions, 8 for the field, and 4 for garrison. Each battalion has 12 companies, namely, 1 company of bombardiers, 1 of miners, 1 of artificers, and 9 of artillery. The first, or bombardier companies, are composed of 1 captain, 2 lieutenants, 3 upper and 6 under fire-works, 2 sergeants, 4 corporals, 2 drummers, and 60 bombardiers. The miners have the same commissioned officers, with 3 sergeants, 6 corporals, 2 drummers, 33 miners, and 33 sappers. The artificers have the same officers and non-commissioned officers as the miners, with 30 artificers and 60 pontoneers. All the artillery companies have 3 commissioned and 6 non-commissioned officers, 2 drummers, and 60 artillerymen. The colonel, lieutenant colonel, and major's companies, have each a captain lieutenant; and each battalion has further, 1 chaplain, 1 auditor, 1 adjutant, 1 quartermaster, 1 doctor, 3 surgeons, 1 sergeant-major, 1 drum-major, 6 musicians, and 1 provost.

*March of the ARTILLERY.* The marches of the artillery are, of all the

operations of war, the most delicate; because they must not only be directed on the object you have in view, but according to the movements the enemy make. Armies generally march in 3 columns, the center column of which is the artillery; should the army march in more columns, the artillery and heavy baggage march nevertheless in one or more of the center columns; the situation of the enemy determines this. If they are far from the enemy, the baggage and ammunition go before or behind, or are sent by a particular road; an army in such a case cannot march in too many columns. But should the march be towards the enemy, the baggage must absolutely be all in the rear, and the whole artillery form the center column, except some brigades, one of which marches at the head of each column, with guns loaded and burning matches, preceded by a detachment for their safety. The French almost invariably place their baggage in the center.

Suppose the enemy's army in a condition to march towards the heads of your columns: the best disposition for the march is in 3 columns only, that of the center for the artillery; for it is then easy to form it in order of battle. Hence it is equally commodious for each brigade of artillery to plant itself at the head of the troops, in the place marked for it, in such a manner, that the whole disposition being understood, and well executed, the line of battle may be quickly formed in an open country, and in the presence of any enemy, without risking a surprise; by which method the artillery will always be in a condition to act as soon as the troops, provided it march in brigades.

If your march should be through a country full of ditches, some dragoons must march at the head of the columns, followed by a detachment of grenadiers, and a brigade of artillery; cannon being absolutely necessary to obstruct the enemy's forming into order of battle.

When you decamp in the face of the enemy, you must give most attention to your rear guard. On such occasions, all the baggage, ammunition, provisions, and artillery, march before the troops; your best grenadiers, best cavalry, some good brigades of infantry, together

together with some brigades of artillery, form the rear guard. Cannon is of infinite use for a rear guard, when you are obliged to pass a defile, or a river, and should be placed at the entry of such defile, on an eminence, if there be one, or on any other place, from whence the ground can be discovered, through which the enemy must march to attack the rear guard.

A detachment of pioneers, with tools, must always march at the head of the artillery, and of each column of equipage or baggage.

If the enemy be encamped on the right flank of the march, the artillery, &c. should march to the left of the troops, and vice versa. Should the enemy appear in action, the troops front that way, by wheeling to the right or left by divisions; and the artillery, which marches in a line with the columns, passes through their intervals, and draws up at the head of the front line, which is formed of the column that flanked nearest the enemy; taking care at the same time that the baggage be well covered during the action.

Though we have said armies generally march in 3 columns, yet where the country will allow it, it is better to march in a greater number; and let that number be what it will, the artillery must form the center columns.

*Line of March of ARTILLERY.* 1. A guard of the army; the strength of which depends on the commander in chief.

2. The companies of miners (excepting a detachment from each, dispersed in various places, to mend the roads) with tumbrels of tools, drawn by 2 horses, assisted by pioneers.

3. The brigades of artillery's front guard, with four light 6 pounders loaded, and matches burning.

4. The kettle-drums by 4 horses, and 2 trumpeters on horse back.

5. The flag-gun, drawn by 12 horses, and ten 12 pounders more, by 4 horses each.

6. Twenty wagons with stores for the said guns, and 1 spare one, by 4 horses each.

7. All the pontoons, with the wagons thereto belonging.

8. Eight 9 pounders, by 3 horses each.

9. Fifteen wagons with stores for

said guns, drawn by 4 horses each, and 2 spare ones.

10. Guns and capstans, with their proper workmen, 3 wagons, with 2 horses each.

11. A forge on four wheels, and 1 wagon, 4 horses each.

12. Twelve heavy 21 pounders, by 16 horses each.

13. Sixteen wagons with stores for ditto, and 2 spare ones, by 4 horses each.

14. A wagon with tools, and pioneers to mend the roads.

15. Nine light 24 pounders, by 8 horses each.

16. Twelve wagons with stores for ditto, and 2 spare ones, by 4 horses each.

17. A forge and wagon, by 4 horses each.

18. Nine 24 pounders, by 8 horses each.

19. Twelve wagons with stores for ditto, and 2 spare ones.

20. Twelve 12 pounders, by 3 horses each.

21. Sixteen wagons with stores for ditto, and 2 spare ones.

22. Sixteen 5-8 inch mortars, by 2 horses each.

23. Twenty-five wagons with stores for ditto, and 2 spare ones.

24. Ten 3-inch mortars, by 4 horses each.

25. Twenty wagons with stores for ditto, and 2 spare ones.

26. Six 10-inch howitzers, by 6 horses each.

27. Twenty wagons with stores for ditto, and 2 spare ones.

28. A wagon with tools, and men to mend the roads.

29. A forge and wagon, by 4 horses each.

30. Ten 8-inch mortars, by 4 horses each.

31. Twenty wagons with stores for ditto, and a spare one.

32. Sixteen 12-inch mortars, by 8 horses each.

33. Thirty wagons with stores for ditto, and two spare ones.

34. Eight 18-inch stone mortars, by 10 horses each.

35. Sixteen wagons with stores for ditto, and a spare one.

36. Eight 9 pounders, by 3 horses each.

37. Sixteen wagons with stores for ditto, and a spare one.

38. Twenty 6 pounders, by 2 horses each.

39. Twenty wagons with stores for ditto, and a spare one.

40. Two sling wagons, and 2 truck-carriages, 4 horses each.

41. Twenty 3 pounders, by 1 horse each.

42. Ten wagons with stores for ditto, and a spare one.

43. A wagon with tools, &c.

44. A forge and wagon, by 4 horses each.

45. Twelve 2 and 1 pounders, by 1 horse each.

46. Six wagons with stores for ditto.

47. Sixteen 6 pounders, by 2 horses each.

48. Ten wagons with stores for ditto.

49. Twenty spare carriages, for various calibres.

50. Eighteen ditto.

51. Fifty spare limbers.

52. Ten 18 pounders, by 6 horses each.

53. Twenty wagons with stores for ditto, and 2 spare ones.

54. Twenty wagons, with ammunition and stores.

55. Two 12 pounders, by 4 horses each.

56. Four wagons with stores for ditto.

57. Fifty wagons with stores.

58. A wagon with tools, and men to mend the roads.

59. A forge and wagon, by 1 horse each.

60. A hundred wagons with stores, and 4 spare ones.

61. Four 2 and 1 pounders, by 1 horse each.

62. A hundred wagons with stores, and 3 spare ones.

63. Two hundred wagons, and 2 spare ones.

64. Two hundred and fourteen wagons belonging to the artillery baggage, some with 4, 3, and 2 horses each.

65. The artillery rear guard.

66. The rear guard from the army.

*Officers of ARTILLERY.* The master general of the ordnance, who is commander in chief of the artillery, is entrusted with one of the most laborious employments, both in war and peace, requiring the greatest ability, applica-

tion, and experience. The officers in general should be great mathematicians and engineers, should know all the powers of artillery; the attack and defence of fortified places; in a word, every thing which appertains to that very important corps.

*ARTILLERY Company,* a band of infantry, consisting of 600 men, making part of the militia, or city guard of London.

*ARTILLEUR, Fr.* an officer belonging to the French service, who was formerly appointed by, and acted immediately under the master general of the ordnance.

*ARTILLER, Fr.* a man who works on pieces of ordnance as a founder; or one who serves them in action.

*ARX,* in the ancient military art, a fort, castle, &c. for the defence of a place.

*ARZEGAGES, Fr.* batons or caues with iron at both ends. They were carried by the Estradiots or Albanian cavaliers who served in France under Charles VII. and Louis XI.

*ASAPPES, or AZAPES,* auxiliary troops which are raised among the Christians subject to the Turkish empire. These troops are generally placed in the front to receive the first shock of the enemy.

*ASCENT.* See GUNNERY.

*ASPECT,* is the view or profile of land or coast, and contains the figure or representation of the borders of any particular part of the sea. These figures and representations may be found in all the rutters or directories for the sea coast. The Italians call them *demonstrations*. By means of this knowledge you may ascertain whether the land round the shore be high; if the coast itself be steep or sloping; bent in the form of an arc, or extended in strait lines; round at the top, or rising to a point. Every thing, in a word, is brought in a correct state before the eye, as far as regards harbours, bays, gulphs, adjacent churches, trees, wind-mills, &c. &c.

*A menacing ASPECT.* An army is said to hold a menacing aspect, when by advanced movements or positions it gives the opposing enemy cause to apprehend offensive operations.

*A military ASPECT.* A country is said

to have a military aspect, when its general situation presents appropriate obstacles or facilities for an army acting on the offensive or defensive.

*An imposing ASPECT.* An army is said to have an imposing aspect, when it appears stronger than it really is. This appearance is often assumed for the purpose of deceiving an enemy, and may not improperly be considered as a principal *ruse de guerre*, or feint in war.

*ASPIC, Fr.* a piece of ordnance which carries a 12 pound shot. The piece itself weighs 4250 pounds.

*ASSAILLIR, Fr.* to attack; to assail. This old French term applies equally to bodies of men and to individuals.

*ASSAULT*, a furious effort to carry a fortified post, camp, or fortress, where the assailants do not screen themselves by any works. While an assault during a siege continues, the batteries cease, for fear of killing their own men. An assault is sometimes made by the regiments that guard the trenches of a siege, sustained by detachments from the army.

*To give an ASSAULT,* is to attack any post, &c.

*To repulse an ASSAULT,* to cause the assailants to retreat, to beat them back.

*To carry by ASSAULT,* to gain a post by storm, &c.

*ASSAUT, Fr.* See ASSAULT.

*ASSEMBLEE, Fr.* the assembling together of an army; also a call by beat of drum. See ASSEMBLY.

*ASSEMBLY*, the second beating of the drum before a march; at which the men strike their tents, if encamped, roll them up, and stand to arms. See DRUM.

*ASSESSMENT*, in a military sense, signifies a certain rate which is paid by the county treasurer to the receiver general of the land-tax, to indemnify any place for not having raised the militia; which sum is to be paid by the receiver general into the exchequer. The sum to be assessed is five pounds for each man, where no annual certificate of the state of the militia has been transmitted to the clerk of the peace; if not paid before June yearly it may be levied on the parish officers. Such assessment, where there is no county rate, is to be raised as the poor's rate.

*ASSIEGER, Fr.* to besiege.

*ASSIETTE, Fr.* the immediate site or position of a camp, &c.

*ASSIGNMENT*, according to Dr. Johnson, appropriation of one thing to another thing or person. In a military sense, assignment signifies a public document, by which colonels of regiments become entitled to certain allowances for the clothing of their several corps.

According to the regulation for the clothing and appointments of the British army, dated 22d April, 1803, the period of assignment, extending for two years in the cavalry, and for one year in the infantry, is to commence on the 25th December, 1803; and the future annual and biennial assignments are in like manner to commence on the 25th December in succeeding years.

The right of assigning was directed to be on the 25th of April, upon which day the colonels of corps were to be entitled to make an assignment for the period commencing the 25th December, 1803, and on which they and their representatives were to have a vested interest therein. In future years also, the 25th April preceding the commencement of the new assignment, is to be the day on which the colonel's title to such assignment shall become a vested interest.

This article is well worth the attention of every new appointed colonel of a corps, and equally of his agent; for by supposing himself entitled to the assignment, without a reference to the exact period of the vacancy, the colonel may be led into an imaginary calculation of profits on the off-accounts, and the agent be exposed to much unnecessary trouble. For form of assignment, see Regimental Companion.

*ASSOCIATION*, any number of men embodied in arms for mutual defence in their district, and to preserve the public tranquillity therein, against foreign or domestic enemies.

*ASTRAGAL.* See CANNON.

*To ATTACH*, to place, to appoint. Officers and non-commissioned officers are said to be attached to the respective army, regiment, battalion, troop, or company with which they are instructed to act.

*ATTACHE, Fr.* the seal and signature of the colonel-general in the old French service, which were affixed to

the commissions of officers after they had been duly examined.

• The ratification of military appointments in this manner was attended with a trifling expence to each individual, which became the perquisite of the colonel's secretary.

**ATTACK**, any general assault, or onset, that is given to gain a post, or break a body of troops.

**ATTACK of a siege**, is a furious assault made by the besiegers by means of trenches, galleries, saps, breaches, or mines, &c. by storming any part of the front attack. Sometimes two attacks are carried on at the same time, between which a communication must be made. See **STAGE**.

**False ATTACKS** are never carried on with that vigour and briskness that the others are; the design of them being to favour the true attack, by amusing the enemy, and by obliging the garrison to do a greater duty in dividing their forces, that the true attack may be more successful.

**Regular ATTACK**, is that which is carried on in form, according to the rules of art. See **STAGE**.

To **ATTACK in front or flank**, in fortification, means to attack the salient angle, or both sides of the bastion.

This phrase is familiarly used with respect to bodies of men which attack each other in a military way.

**ATTACK and Defence**. A part of the drill for recruits learning the sword exercise, which is commenced with the recruit stationary on horseback, the teacher riding round him, striking at different parts as openings appear, and instructing the recruit how to ward his several attacks; it is next executed in a walk, and, as the learner becomes more perfect, in speed; in the latter under the idea of a pursuit. The attack and defence in line and in speed form the concluding part of the sword exercise when practised at a review of cavalry. It is to be observed, that although denominated *in speed*, yet when practising, or at a review, the pace of the horse ought not to exceed three quarters speed.

**ATTENTION!** a cautionary word used in the British service as a preparative to any particular exercise or manœuvre. *Garde-a-vous*, which is pro-

nounced *Gar-a-vous*, has the same signification in the French service.

**ATTESTATION**, a certificate made by some justice of the peace within four days after the enlistment of a recruit. This certificate is to bear testimony, that the said recruit has been brought before him in conformity to the 55th clause of the mutiny act, and has declared his *assent* or *dissent* to such enlistment; and, if according to the said act he shall have been, and is duly enlisted, that the proper oaths have been administered to him by the said magistrate, and that the 2d and 6th sections of the articles of war against mutiny and desertion have been read to the said recruit.

**ATILT**, in the attitude of thrusting with a spear, &c. as was formerly the case in tournaments, &c.

**AVANT**, Fr. foremost, most advanced toward the enemy, as

**AVANT-chemin-covert**, Fr. the advanced covert-way which is made at the foot of the glacis to oppose the approaches of an enemy.

**AVANT-duc**, Fr. the pile work which is formed by a number of young trees on the edge or entrance of a river. They are driven into the ground with battering rams or strong pieces of iron, to form a level floor, by means of strong planks being nailed upon it, which serve for the foundation of a bridge. Boats are placed where the *avant-duc* terminates. The *avant-duc* is had recourse to when the river is so broad that there are not boats sufficient to make a bridge across. *Avant-ducs* are made on each side of the river.

**AVANT-fossé**, Fr. the ditch of the counterscarpe next to the country. It is dug at the foot of the glacis. See **FORTIFICATION**.

**AVANT-garde**. See **VAN GUARD**.

**AVANT-train**, Fr. The limbers of a field piece, on which are placed two boxes containing ammunition enough for immediate service.

**AUDITOR**, the person who audits regimental or other military accounts. He is generally a field officer.

**AVENUE**, in fortification, is any kind of opening or inlet into a fort, bastion, or out-work.

**AUGET**, or **AUGETTE**, Fr. a wooden pipe which contains the powder by which a mine is set fire to.

**AULNE** *de Paris*, a French measure, containing 44 inches, used to measure sand-bags.

**AUTHORITY**, in a general acceptation of the term, signifies a right to command, and a consequent right to be obeyed. The King of Great Britain has, by the constitution of the land, a perpetual inherent right to exercise military authority without controul, as far as it regards the army. His Majesty may appoint or dismiss officers at his pleasure.

**AUXILIARY**. Foreign or subsid-

ary troops which are furnished to a beligerent power in consequence of a treaty of alliance, or for pecuniary considerations. Of the latter description may be considered the Swiss soldiers who formerly served in France, and the Hessians who were employed by Great-Britain.

**AWARD**, the sentence or determination of a military court.

**AXLE-TREE**, a transverse beam supporting a carriage, and on the ends of which the wheels revolve.

## B

**BACK-Step**, the retrograde movement of a man or body of men without changing front.

**BACKWARDS**, a technical word made use of in the British service to express the retrograde movement of troops from line into column, and vice versa. See **WHEEL**.

**BAGGAGE**, in military affairs, signifies the clothes, tents, utensils of divers sorts, and provisions, &c. belonging to an army.

**BAGGAGE-Wagons**. See **WAGONS**.

**BAGPIPE**, the name of a well-known warlike instrument, of the wind kind, greatly used by the Scotch regiments, and sometimes by the Irish Bagpipers are supposed to have been introduced by the Danes: but we are of opinion that they are much older, as there is in Rome a most beautiful bas-relievo, a piece of Grecian sculpture of the highest antiquity, which represents a bag-piper playing on his instrument exactly like a modern highlander. The Greeks had also an instrument composed of a *pipe* and *blown-up skin*. The Romans, in all probability, borrowed it from them. The Italians still use it under the names of *piva* and *cornu-musa*. The bagpipe has been a favourite instrument among the Scots, and has two varieties: the one with long pipes, and sounded with the mouth; the other with short pipes, played on with the fingers: the first is the loudest and most ear-piercing of all music, is the genuine highland pipe,

and is well suited to the warlike genius of that people. It formerly roused their courage to battle, alarmed them when secure, and collected them when scattered; soothed them in their long and painful marches, and in times of peace kept up the memory of the gallantry of their ancestors, by tunes composed after signal victories.

**BAGS**, in military employments, are used on many occasions: as,

**Sand-BAGS**, generally 16 inches diameter, and 30 high, filled with earth or sand to repair breaches, and the embrasures of batteries, when damaged by the enemies fire, or by the blast of the guns. Sometimes they are made less, and placed three together, upon the parapets, for the men to fire through.

**Earth-BAGS**, containing about a cubical foot of earth, are used to raise a parapet in haste, or to repair one that is beaten down. They are only used when the ground is rocky, and does not afford earth enough to carry on the approaches.

**BAGUETTES**, *Fr.* drumsticks; they also signify the switches with which soldiers were formerly punished in the French service; as *passer en baguettes*, to run the gamut.

**BALANCE**, *Fr.* a term used in the French artillery to express a machine in which stores and ammunition are weighed.

**BALL**, in the military art, comprehends all sorts of balls and bullets for fire-arms, from the cannon to the pistol.

*Can-*

*Canon-BALLS* are of iron, and musket and pistol balls are of lead. Cannon-balls are always distinguished by their respective calibres, thus,

A 42	pound ball, the diameter of which is	6,681 inches
32		6,105
24		5,517
18		5,010
12		4,403
9		4,000
6		3,498
3		2,775
2		2,123
1		1,923

*Fire-BALLS*, of which there are various sorts, used for various purposes. Their composition is meal powder 2, saltpetre 13, sulphur 1, rosin 1, turpentine 21. Sometimes they are made of an iron shell, sometimes a stone, filled and covered with various coats of the above composition, till it conglomerates to a proper size, the last coat being of grained powder. But the best sort in our opinion, is to take thick brown paper, and make a shell the size of the mortar, and fill it with a composition of an equal quantity of sulphur, pitch, rosin, and meal powder, which being well mixed, and put in warm, will give a clear fire, and burn a considerable time.

When they are intended to set fire to magazines, buildings, &c. the composition must be meal powder 10, saltpetre 2, sulphur 4, and rosin 1; or rather, meal powder 18, saltpetre 32, sulphur 16, rosin 4, steel or iron filings 2, fir-tree saw-dust boiled in saltpetre ley 2, birch-wood charcoal 1, well rammed into a shell for that purpose, having various holes filled with musquet-balls; and lastly, the whole immersed in melted pitch, rosin, and turpentine oil.

*Smoke-BALLS* are prepared as above, with this difference, that they contain 5 to 1 of pitch, rosin, and saw-dust. This composition is put into shells made for that purpose, having 4 holes to let out the smoke. Smoke-balls are thrown out of mortars, and continue to smoke from 25 to 30 minutes.

*Stink-BALLS* are prepared by a composition of meal powder, rosin, saltpetre, pitch, sulphur, and bad horses and asses hoots, burnt in the fire, assa-fetida, serapim-gum or terra, and lung or stinking herbs, made up into balls, as

mentioned in *Light-BALLS*, agreeable to the size of the mortar out of which you intend to throw them.

*Poisoned-BALLS*. We are not sure that they have ever been used in Europe; but the Indians and Africans have always been very ingenious at poisoning several sorts of warlike stores and instruments. Their composition is meal powder 4, pitch 6, rosin 3, sulphur 5, assa-fetida 8, extract of toads poison 12, other poisonous substances 12, made into balls as above directed. At the commencement of the French Revolution poisoned balls were exhibited to the people, pretended to have been fired by the Austrians, particularly at the siege of Lisle. We have seen some of this sort ourselves. They contained glass, small pieces of iron, &c. and were said to be concocted together by means of a greasy composition, which was impregnated with poisonous matter. In 1792 they were deposited in the archives of Paris.

*Red-hot BALLS* are fired out of mortars, howitzers, or cannon. Use which you will, the ball must be made red-hot, which is done upon a large coal fire in a square hole made in the ground, 6 feet every way, and 4 or 5 feet deep. Some make the fire under an iron grate, on which the shell or ball is laid; but the best way is to put the ball into the middle of a clear burning fire, and when red-hot, all the fiery particles must be swept off. Whatever machine you use to throw the red-hot ball out of, it must be elevated according to the distance you intend it shall range, and the charge of powder must be put into a flannel cartridge, and a good wad upon that; then a piece of wood of the exact diameter of the piece, and about  $\frac{3}{4}$  inches thick, to prevent the ball from setting fire to the powder; then place the ball on the edge of the mortar, &c. with an instrument for that purpose, and let it roll off itself against the wood, and instantly fire it off. Should there be a ditch or parallel before such a battery, with soldiers, the wood must not be used, as the blast of powder will break it to pieces, and its own elasticity prevent it from flying far; it would in that case either kill or wound your own people. For this deficiency the wad must be double.

*Chain-*

**Chain-BALLS** are two balls linked together by a chain of 8 or 10 inches long, and some have been made with a chain of 3 or 4 feet long; they are used to destroy the pallsadoes, wooden bridges, and chevaux-de-frieys of a fortification. They are also very destructive to the rigging of a ship.

**Stang-BALLS** are by some called balls of two heads; they are sometimes made of two half-balls joined together by a bar of iron from 8 to 14 inches long; they are likewise made of two entire balls: they are for the same purpose as the before mentioned.

**Anchor-BALLS** are made in the same way as the light-balls, and filled with the same composition, only with this addition, that these are made with an iron bar two-thirds of the ball's diameter in length, and 3 or 4 inches square. One half is fixed within the ball, and the other half remains without; the exterior end is made with a grapple-hook. Very useful to set fire to wooden bridges, or any thing made of wood, or even the rigging of ships, &c. for the pile end being the heaviest, flies foremost, and wherever it touches, fastens, and sets all on fire about it.

**Message-BALLS.** See SHITLS.

**BALLE, Fr.** a round substance, made of lead or iron, which is put into heavy ordnance or fire-arms, for the purpose of killing, wounding, or making a breach.

**BALLE-à-Feu, Fr.** a hollow substance, which is made of iron, in the shape of an egg, and is filled with combustible materials, that are extremely difficult to be extinguished, and give a great light. This composition is generally used in the attack and defence of fortified places. When the balls are large, they are thrown out of mortars; the smaller ones are cast like hand-grenades. In order to prevent their extinction, there are small tubes within loaded with grape-shot, &c. which are continually discharged.

**BALLE-Machée, Fr.** a musquet ball, which the soldier bites and mends in different places before he loads his musquet. It is contrary to the established rules of war to use any thing of the sort.

**BALLIUM,** a term used in ancient military history. In towns the appellation of ballium was given to a work

fenced with pallsades, and sometimes to masonry, covering the suburbs; but in castles it was the space immediately within the outer wall.

**BALLON, Fr.** Balloon.

**BALLON à bombes, Fr.** a bag in which are placed beds of smaller bombs, that are charged and interlaid with gunpowder. This bag is put into another covering, that is pitched and tarred, with the neck closely tied up with pack-thread, in which a fuse is fixed, as in ordinary bombs. These balloons, or bags containing bombs, are thrown out of mortars, and are frequently used in the attack and defence of fortified places. Major Shrapnel's invention of the case-shot is of a superior kind.

**BALLON à cailloux, Fr.** a balloon, or bag filled with stones or pebbles in the same manner as the above mentioned.

**BALLOX à grenades, Fr.** a balloon or bag, impregnated with pitch, containing several beds of grenades, with a fuse attached to each.

**BALLOON,** a hollow vessel of silk, varnished over and filled with inflammable air, by which means it ascends in the atmosphere. It has during the present war been used by the French in reconnoitering.

**BALLOTS, Fr.** sacks or bales of wool, made use of, in cases of great emergency, to form parapets or places of arms. They were likewise adapted for the defence of trenches, to cover the workmen in saps, and in all instances where promptitude is required.

**BAN, or BANX,** a sort of proclamation made at the head of a body of troops, or in the several quarters or cantonments of an army, by sound of trumpet, or beat of drum; either for observing martial discipline, or for declaring a new officer, or punishing a soldier, or the like. At present such kind of proclamations are given out in the written orders of the day.

**BAN and ARRIERE BAN,** a French military phrase, signifying the convocation of vassals under the feudal system. Ménage, a French writer, derives the term from the German word *Ban*, which means publication. Nicod derives it from another German term, which signifies field. Borel from the Greek *nav*, which means all, because the convocation was general. In the reign of Charles VII. the *ban* and *arrière-ban* had

had different significations. Formerly it meant the assembling of the ordinary militia. After the day of Charles VII. it was called the extraordinary militia. The first served more than the latter; and each was distinguished according to the nature of its particular service. The persons belonging to the *arrière-ban* were at one period accoutred and mounted like light horse; but there were occasions on which they served like infantry. Once under Francis I. in 1515, and again under Lewis XIII. who issued out an order in 1637, that the *Arrière-Ban* should serve on foot.

*BAN* likewise signified, during the ancient monarchy of France, a proclamation made by the sound of drums, trumpets, and tambourines, either at the head of a body of troops, or in quarters. Sometimes to prevent the men from quitting camp, at others to enforce the rigour of military discipline; sometimes for the purpose of receiving a new commanding officer, and at others to degrade and punish a military character.

**BANDER**, *Fr.* to bind, to bend, to cock. *Bander les yeux a une trompette*; to cover the eyes of a trumpeter. *Bander une pistolet*; to cock a pistol.

**BANDER** also signifies to unite, to intertwine together for the purposes of interest &c.

**BANDIERE**, *Fr.* in military history, implies the commander in chief of the troops of the canton of Bern, in Switzerland.

**BANDES**, *Fr.* bands, bodies of infantry.

**BANDS *Francoise***, *Fr.* The French militia was anciently so called. The term, however, has of late become less general, and been confined to the *Prévôt des Bandes*, or the Judge or Provost Marshal that tried the men belonging to the French guards.

**BANDS**, *Fr.* iron hoops or rings.

**Sous-BANDES**, *Fr.* flat iron hoops, which are placed in the lower parts of a piece of ordnance, between the trunnions.

**Sus-BANDES**, *Fr.* flat iron hoops, which are placed in the upper parts of a piece of ordnance, to keep the trunnions together.

**BANDIERE**, *Fr.* This term is frequently used in the same sense with *Bannière*, Banner; especially on board a ship.

**BANDIERE**, *Fr.* *Une armée rangée en front de bandière*, signifies an army in battle array. This disposition of the army is opposed to that in which it is cantoned and divided into several bodies.

*Une armée campée front de BANDIERE*, *Fr.* An army which has encamped with the regular stand of colours in front. Hence *la ligne bandière*. The camp-colour line. The sentries should not, on any account, permit persons out of regimentals to pass this line.

**BANDOIERER**, in ancient military history, a large leathern belt worn over the right shoulder, and hanging under the left arm, to carry some kind of warlike weapon.

**BANDOIERERS** are likewise little wooden cases covered with leather, of which every musketeer used to wear 32 hanging on a shoulder-belt; each of them contained the charge of powder for a musket. They are now no more in use, but are still to be seen in the small armour in the Tower.

**BANDROIS**. See *Camp Colours*.

**BANDS**, properly bodies of foot, though almost out of date.

**Train-BANDS**. In England the militia of the City of London were generally so called. The third regiment of foot, or the Old Bills, were originally recruited from the Train Bands, which circumstance has given that corps the exclusive privilege of marching through London with drums beating and colours flying.

**BAND of Pensioners**, a company of gentlemen so called, who attend the King's person upon all solemn occasions. They are 120 in number, and receive a yearly allowance of 100l. The term *band* is also applied to the body of musicians attached to any regiment or battalion.

**BAN** is also the denomination of a military order in Spain, instituted by Alphonsus XI. king of Castile, for the younger sons of the nobility, who, before their admission, must serve 10 years, at least, either in the army or during a war; and are bound to take up arms in defence of the Catholic faith, against the infidels.

**BANERET**, *Fr.* a term derived from *Bannière*. This appellation was attached to any lord of a fief who had vassals suf-

sufficient to unite them under one *banner* or *banner*, and to become chief of the troops or company.

*On Chevalier* **BANLRET**, or a *Knight Banneret*, gave precedence to the troop or company which he commanded over that of a banneret who was not a knight or chevalier; the latter obeyed the former, and the banner of the first was cut into fewer vanes than that of the second.

**BANNER**, the ordnance flag fixed on the fore part of the drum-major's kettle-drum carriage of the royal artillery.

**BANNER**, in the horse equipage, for the kettle-drums and trumpets, must be of the colour of the facing of the regiment. The badge of the regiment, or its rank, to be in the center of the banner of the kettle-drums, as on the second standard. The king's cypher and crown to be on the banner of the trumpets, with the rank of the regiment in figures underneath. The depth of the kettle-drum banners to be 3 feet 6 inches; the length 4 feet 8 inches, excluding the fringe. Those of the trumpets to be 12 inches in depth, and 18 inches in length.

**BANNERET**. *Knights-bannerets*, according to the English acceptance of the term, are persons who for any particular act of valour have been knighted on the field of battle.

The late Sir William Erskine, on his return from the Continent in 1764, was made a knight banneret, in Hyde Park, by his present Majesty, in consequence of his distinguished conduct at the battle of Emsdorff. But he was not acknowledged as such in this country, although he was invested with the order, between the two standards of the 15th regiment of light dragoons, because the ceremony did not take place where the engagement happened. Captain Trollope of the Royal Navy is the last created knight banneret. Knights banneret take precedence next to knights of the Bath.

**BANQUET**. See **BRIDGES**.

**BANQUETTE**, *Fr.* See **FORTIFICATION**.

**BAR**, a long piece of wood or iron, used to keep things together. Bars have various denominations in the construction of artillery carriages, as sweep and

cross bars for trumbrels; fore, hind, and under cross bars, for powder carts; shaft bars for wagons, and dowel bars used in mortar beds.

**BAR-Shot**, two half bullets joined together by an union bar, forming a kind of double-headed shot.

**BARAQUER** *une armée*, *Fr.* to put an army into cantonments.

**BARAQUES**, *Fr.* small huts made with wood and earth for the accommodation of soldiers during a campaign.

**BARB**, the reflected point of the head of an arrow. The armour for horses was so called. See **CAPARISON**.

**BARBACAN**, or **BARBICAN**, a watch-tower, for the purpose of descrying an enemy at a great distance: it also implies an outer defence, or sort of ancient fortification to a city or castle, used especially as a fence to the city or walls; also an aperture made in the walls of a fortress to fire through upon the enemy. It is sometimes used to denote a fort at the entrance of a bridge, or the outlet of a city, having a double wall with towers.

**BARBACANAGE**, money given to the maintenance of a Barbican.

**BARBELS** are peasants subject to the king of Sardinia, who abandon their dwellings when the enemy has taken possession of them. The king forms them into bodies, who defend the Alps, being part of his dominions.

**BARBET-Battery**, in gunnery, is when the breast-work of a battery is only 3 feet high, that the guns may fire over it without being obliged to make embrasures: in such cases, it is said the guns fire *en barbet*. See **BATTERY**.

**BARDEES d'eau**, *Fr.* a measure used in the making of saltpetre, containing three half hogsheads of water, which are poured into tubs for the purpose of refining it. Four half hogsheads are sometimes thrown in.

**BARILLER**, *Fr.* an officer who was formerly employed among the galleys, whose chief duty is to superintend the distribution of bread and water.

**BARILS**, *Fr.* small barrels, containing gunpowder, flints, &c.

**BARILS à feu, ou foudroyants**, *Fr.* barrels filled with gunpowder and grape shot, &c.

**BARM**, or **BERM**. See **BERM**.

**BARRACKS**, or **BARACKS**, are places erected

erected for both officers and men to lodge in; they are built different ways, according to their different situations. When there is sufficient room to make a large square, surrounded with buildings, they are very convenient, because the soldiers are easily confined to their quarters, and the rooms being contiguous, orders are executed with privacy and expedition; and the troops have not the least connection with the inhabitants of the place, which prevents quarrels and riots.

**BARRACK-Allowance**, a specific allowance of bread, beer, coals, &c. to the regiments stationed in barracks.

**BARRACK-Guard**, when a regiment is in barracks, the principal guard is the barrack-guard; the officer being responsible for the regularity of the men in barracks, and for all prisoners duly committed to his charge while on that duty.

**BARRACK-Master General**, a staff officer at the head of the barrack department; he has a number of barrack-masters and deputies under him, who are stationed at the different barracks; he has an office and clerks for the dispatch of business; to this office all reports, &c. respecting the barrack department are made.

**BARRACK-Office**, the office at which all business relating to the barrack department is transacted.

**BARRELS**, in military affairs, are of various kinds.

**Fire-BARRELS** are of different sorts: some are mounted on wheels, filled with composition, and intermixed with loaded grenades, and the outside full of sharp spikes: some are placed under ground, which have the effect of small mines: others are used to roll down a breach, to prevent the enemy's entrance.—Composition, corned powder 30 lb. Swedish pitch 12, saltpetre 6, and tallow 3. Not used now.

**Thundering-BARRELS** are for the same purpose, filled with various kinds of combustibles, intermixed with small shells, grenades, and other fire-works. Not used now.

**Powder-BARRELS** are about 16 inches diameter, and 30 or 32 inches long, holding 100 pounds of powder.

**Budge-BARRELS**, hold from 40 to 60 pounds of powder: at one end is fixed

a leather bag with brass nails; they are used in actual service on the batteries, to keep the powder from firing by accident, for loading the guns and mortars.

**BARRER**, *Fr.* to stop; to obstruct.

**BARRER**, *le chemin d'une troupe ou d'une armée ennemie*, *Fr.* to take possession of any particular road or passage, and to cut it up, or plant it with ordnance, &c. in such a manner that no hostile force could march through.

**BARRICADE**. To barricade is to fortify with trees, or branches of trees, cut down for that purpose, the brushy ends towards the enemy. Carts, wagons, &c. are sometimes made use of for the same purpose, viz. to keep back both horse and foot for some time.

**BARRICADES**, *Fr.* obstructions or obstacles created by means of ditches, temporary abatis, &c.

**BARRIER**, (*Barrière*, *Fr.*) in a general sense, means any fortification, or strong place on the frontiers of a country. It is likewise a kind of fence composed of stakes, and transoms, as overthwart rafters, erected to defend the entrance of a passage, retrenchment, or the like. In the middle of the barrier is a moveable bar of wood, which is opened and shut at pleasure. It also implies a gate made of wooden bars, about 5 feet long, perpendicular to the horizon, and kept together by two long bars going across, and another crossing diagonally. Barriers are used to stop the cut made through the esplanade before the gate of a town.

**BARRIER-Towns**. Before the French Revolution, the barrier-towns in Europe were Menin, Dendermond, Ypres, Tournay, Mons, Namur, and Maastricht. These towns were formerly garrisoned half by French or Imperial, and half by Dutch troops.

**BASCULE**, *Fr.* a counterpoise which serves to lift up the draw bridge of a town. Likewise a term used in fortification to express a door that shuts and opens like a trap door.

**BASE**, or **BASIS**, in fortification, the exterior part or side of a polygon, or that imaginary line which is drawn from the flanked angle of a bastion to the angle opposite to it.

**BASE** signifies also the level line on which any work stands that is even with the ground, or other work on which it

is erected. Hence the base of a parapet is the rampart.

**BASE**, an ancient word for the smallest cannon. See CANNON.

**BASE-line**, the line on which troops in column move. The first division that marches into the alignment forms the base line, which each successive division prolongs.

**BASE-ring**. See CANNON.

**BASILISK**, an ancient name given to a 48 pounder. See CANNON.

**BASIS**. See BASE.

**BASKET-Hilt**, the hilt of a sword, so made as to contain, and guard the whole hand.

**BASKETS**, in military affairs, are simple baskets, frequently used in sieges. They are filled with earth, and placed on the parapet of a trench, or any other part. They are generally about a foot and a half in diameter at the top, and eight inches at the bottom, and a foot and a half in height; so that, being placed on the parapet, a kind of embrasure is formed at the bottom, through which the soldiers fire, without being exposed to the shot of the enemy. See CANNON.

**BAS-OFFICIERS**, *Fr.* non-commissioned officers, *i. e.* serjeants and corporals are so called in the French service. With us the serjeants and lance serjeants only are so called.

**BASSINET**, *Fr.* the pan of a musquet.

**BASSON** or **BASSOON**, a wind instrument blown with a reed, performing the base to all martial music, one or two of which are attached to each regimental band.

**BASTILLE**, *Fr.* any place fortified with towers.

**BASTILLE**, a state prison which stood near the temple in Paris, and was destroyed by the inhabitants of that capital on the 14th of July, 1789.

**BASTINADO**, a punishment among the Turkish soldiers, which is performed by beating them with a cane or the flat side of a sword on the soles of their feet. It is also practised among the French. The culprit is tied upon a bundle of straw, and receives a prescribed number of blows, either upon the shoulders or upon his posteriors.

**BASTION**. See FORTIFICATION.

**BATAGE**, *Fr.* the time employed in

reducing gunpowder to its proper consistency. The French usually consumed 24 hours in pounding the materials to make good gunpowder; supposing the mortar to contain 16 pounds of composition, it would require the application of the pestle 3500 times each hour. The labour required in this process is less in summer than in winter, because the water is softer.

**BATAILLE**, *Fr.* a battle.

• **Cheval de BATAILLE**, *Fr.* a war horse, or charger. This expression is used figuratively as a sheet anchor or last resource.

**BATAILLE rangée**, *Fr.* troops drawn up in a regular line for action.

**BATAILLER**, *Fr.* to engage one another partially or by detachments, without coming to a general engagement; to struggle hard.

**BATAILLON**, *Fr.* a battalion, which see.

**BATAILLON carré**, *Fr.* a battalion which is drawn up in such a manner, that it forms a perfect square, and is equally strong on the four sides.

• **BATARDE**, French 8 pounders are so called. They are used in action.

**BATARDEAU**, in fortification, is a massive perpendicular pile of masonry, whose length is equal to the breadth of the ditch, inundation, or any part of a fortification where the water cannot be kept in without the raising of these sorts of works, which are described either on the capitals prolonged of the bastions or half-moons, or upon their faces. In thickness it is from 15 to 18 feet, that it may be able to withstand the violence of the enemy's batteries. Its height depends upon the depth of the ditch, and upon the elevation of the water that is necessary to be kept up for an inundation; but the top of the building must always be under the cover of the parapet of the covert-way, so as not to be exposed to the enemy's view. In the middle of its length is raised a massive cylindrical turret, whose height exceeds the batardeau 6 feet.

**BAT DE MULET**, a pack-saddle used on service when mules are employed to carry stores, &c.

**BATESME du Tropique**, *Fr.* a christening under the line. This is a prophane and ridiculous ceremony which  
E 2 every

every person is obliged to go through the first time he crosses the Line on his passage to the East Indies. Different methods of performing it are observed by different nations. Englishmen frequently buy themselves off. Among the French, the individual who was to be baptized or christened, swore solemnly by the Evangelists, that he would individually assist in forcing every person hereafter, who should be similarly situated, to go through the same ceremony.

**BAT-Horses,** } are baggage horses

**BAW-Horses,** } belonging to the officers when on actual duty.

**BAT-Men,** } were originally servants

**Baw-Men,** } hired in war time, to take care of the horses belonging to the train of artillery, bakery, baggage, &c. They generally wear the King's livery during their service. Men who are excused regimental duty, for the specific purpose of attending to the horses belonging to their officers, are called *bâtmen*.

• **Knights of the BATH**, an English military order of uncertain original. Some writers say it was instituted in the Saxon times; some will have it to have been founded by Richard II. and others by Henry IV. nor is the occasion that gave rise to their order better known. Some say it arose from the custom which formerly prevailed of bathing before they received the golden spurs. Others say that Henry IV. being in the bath, was told by a knight, that two widows were come to demand justice of him; when leaping out of the bath, he cried, "It was his duty to prefer the doing of justice to his subjects to the pleasures of the bath;" and in memory of this transaction the Knights of the Bath were created. Camden however insists, that this was only the restoration of the order, which was in that prince's reign almost abolished: But however that may be, the order was revived under George I. by a solemn creation of a considerable number of knights. They wear a red ribbon, and their motto is, *Tria juncta in uno*, alluding to the three cardinal virtues which every knight ought to possess.

**BATON**, *Fr.* a staff.

**BATON a deux bouts**, *Fr.* a quarter-staff.

**BATON de commandement**, *Fr.* an instrument of particular distinction which was formerly given to generals in the French army. Henry III. before his ascension to the throne, was made generalissimo of all the armies belonging to his brother Charles the IXth, and publicly received the Baton, as a mark of high command.

**BATON *se ferra et non ferra***, *Fr.* all sorts of weapons.

**Obtenir son objet par le tour du Baton**, *Fr.* to accomplish one's ends by equivocal means.

**Etre bien assuré de son BATON**, *Fr.* to be morally certain of a thing.

**Etre réduit au BATON blanc**, *Fr.* to be reduced to one's last stake.

**Se conduire à BATONS rompus**, *Fr.* to do any thing by fits and starts, to be undecided in your plans of attack, &c.

**BATOON**, a truncheon, or marshal's staff.

**BATTA**, allowances made to troops in India.

**BATTALOUS**, a warlike or military appearance.

**BATTALIA**. Johnson adopts the word from Battaglia, Ital. and calls it the main body of an army, distinguished from its wings. We are of opinion, that it further implies an army or considerable detachment of troops drawn up in order of battle, or in any other proper form to attack the enemy. See **BATTLE**.

**BATTALION** or **BATALION**, an undetermined body of infantry in regard to number, generally from 600 to 1000 men. The royal regiment of artillery consists of 5 battalions. Sometimes regiments consist each of 1 battalion only; but if more numerous, are divided into several battalions, according to their strength; so that every one may come within the numbers mentioned. A battalion in one of our marching regiments consists of 1000 and sometimes of 1200 men, officers and non-commissioned included. When there are companies of several regiments in a garrison to form a battalion, those of the eldest regiment post themselves on the right, those of the second on the left, and so on till the youngest fall into the center. The officers

officers take their posts before their companies, from the right and left, according to seniority. Each battalion is divided into 4 divisions, and each division into two subdivisions, which are again divided into sections. The companies of grenadiers being unequal in all battalions, their post must be regulated by the commanding officer. See REGIMENT.

*Triangular BATTALION*, in ancient military history, a body of troops ranged in the form of a triangle, in which the ranks exceed each other by an equal number of men: if the first rank consists of one man only, and the difference between the ranks is only one, then its form is that of an equilateral triangle; and when the difference between the ranks is more than one, its form may then be an isoscele, having two sides equal, or scalene triangle. This method is now laid aside.

**BATTER**, a cannonade of heavy ordnance, from the 1st or 2d parallel of entrenchment, against any fortress or works.

To **BATTER in breach**, implies a heavy cannonade of many pieces directed to one part of the revetement from the third parallel.

*BATTERIE de Tambour*, a French beat of the drum similar to the general in the British service.

*BATTERIE en rouage*, Fr. a discharge of artillery which is used to dismount the enemy's cannon.

*BATTERIE par camarades*, Fr. the discharge of several pieces of ordnance together, directed at one object or place.

*BATTERIE à barbette*, Fr. pieces of ordnance which are planted above a parapet that is not sufficiently high to admit of embrasures.

*BATTERIE de canons*, Fr. This term among the French signifies not only the park of artillery, or the place where the pieces of ordnance are planted, but also the pieces themselves.

*BATTERIE directe*, Fr. Cannon planted right in front of a work, or of a body of men, and which can play directly upon either.

*BATTERIE d'enfilade*, Fr. Cannon so planted that it can play along the whole extent of a line.

*BATTERIE enterrée*, Fr. Cannon or ordnance sunk into the earth in such a manner, that the shot can graze the whole surface of the ground it goes over.

*BATTERIE de mortier*, Fr. a collection of bombs or shells, generally formed within the circumference of a wall.

*BATTERIE d'obusier*, Fr. a battery formed of howitzers.

*BATTERIE de pierriers*, Fr. a battery consisting of machines, from which stones may be thrown.

*BATTERIE en plein champ*, Fr. a battery consisting of cannon, which are planted in such a manner, that their object of attack is wholly unmasked.

*BATTERIE en redans*, Fr. cannon planted in such a manner, that the several pieces form a species of saw, and are fired from alternate intervals. Cannon thus ranged may be said to stand pointed en echellon.

**BATTERING**, in military affairs, implies the firing with heavy artillery on some fortification or strong post possessed by an enemy, in order to demolish the works.

**BATTERING-Pieces** are large pieces of cannon, used in battering a fortified town or post.

It is judged by all nations, that no less than 24 or 18 pounders are proper for that use. Formerly much larger calibers were used, but as they were so long and heavy, and very troublesome to transport and manage, they were for a long time rejected, till adopted among the French, who during the late war have brought 36 and 42 pounders into the field. At present they use light pieces in the field.

*BATTERIES-Train*, a train of artillery used solely for besieging a strong place, inclusive of mortars, and howitzers: all heavy 24, 18, and 12 pounders, come under this denomination; as likewise the 13, 10, and 8 inch mortars and howitzers.

**BATTERING-Ram**. See the article RAM.

**BATTERY**, in military affairs, implies any place where cannon or mortars are mounted, either to attack the forces of the enemy, or to batter a fortification: hence batteries have various names.

names, agreeable to the purposes they are designed for.

**Gun-BATTERY**, is a defence made of earth faced with green sods or fascines, and sometimes made of gabions filled with earth: it consists of a *breast-work*, *parapet*, or *epaulement*, of 18 or 20 feet thick at top, and of 22 or 24 at the foundation; of a ditch 12 feet broad at the bottom, and 18 at the top, and 7 feet deep. They must be  $7\frac{1}{2}$  feet high. The embrasures are 2 feet wide within, and 9 without, sloping a little downwards, to depress the metal on occasion. The distance from the centre of one embrasure to that of the other is 18 feet; that is, the guns are placed at 18 feet distance from each other; consequently the *merlins* (or that part of solid earth between the embrasures) are 16 feet within, and 7 without. The *genouillères* (or part of the parapet which covers the carriage of the gun) are generally made  $2\frac{1}{2}$  feet high from the platform to the opening of the embrasures; though this height ought to be regulated according to the semi-diameter of the wheels of the carriage, or the nature of the gun. The platforms are a kind of wooden floors, made to prevent the cannon from sinking into the ground, and to render the working of the guns more easy; and are, strictly speaking, a part of the battery. They are composed of 3 sleepers, or joists of wood, laid lengthways, the whole extent of the intended platform; and to keep them firm in their places, stakes must be driven into the ground on each side; these sleepers are then covered with sound thick planks, laid parallel to the parapet; and at the lower end of the platform, next to the parapet, a piece of timber 6 inches square, called a *hurter*, is placed, to prevent the wheels from damaging the parapet. Platforms are generally made 18 feet long, 15 feet broad behind, and 9 before, with a slope of about 9 or 10 inches, to prevent the guns from recoiling too much, and for bringing them more easily forward when loaded. The dimensions of the platforms, sleepers, planks, hurters, and nails, ought to be regulated according to the nature of the pieces that are to be mounted.

The powder magazines, to serve the batteries ought to be at a convenient

distance from the same, as also from each other; the large one, at least 53 feet in the rear of the battery, and the small ones about 25. Sometimes the large magazines are made either to the right or left of the battery, in order to deceive the enemy; they are generally built 5 feet under ground; the sides and roof must be well secured with boards, and covered with earth, clay, or something of a similar substance, to prevent the powder from being fired: they are guarded by centinels. The balls are piled in readiness beside the merlins, between the embrasures.

The officers of the artillery ought always to construct their own batteries and platforms, and not the engineers, as is practised in England; for certainly none can be so good judges of those things as the artillery officers, whose daily practice it is; consequently they are the properest people to direct the situation and to superintend the making of batteries on all occasions.

**Mortar-BATTERY**. These kinds of batteries differ from gun-batteries, only in having no embrasures. They consist in a parapet of 18 or 20 feet thick,  $7\frac{1}{2}$  high in front, and 6 in the rear; of a berm  $2\frac{1}{2}$  or 3 feet broad, according to the quality of the earth; of a ditch 24 feet broad at the top, and 20 at the bottom. The beds must be 9 feet long, 6 broad, 8 from each other, and 5 feet from the parapet: they are not to be sloping like the gun-platforms, but exactly horizontal. The insides of these batteries are sometimes sunk 2 or 3 feet into the ground, by which they are much sooner made than those of cannon. The powder magazines and piles of shells are placed as is mentioned in the article GUN-BATTERY.

**Ricochet-BATTERY**, so called by its inventor M. Vauban, and first used at the siege of Aeth in 1697. It is a method of firing with a very small quantity of powder, and a little elevation, so as just to fire over the parapet; and then the shot will roll along the opposite rampart, dismounting the cannon, and driving or destroying the troops. In a siege they are generally placed at about 300 feet before the first parallel, perpendicular to the faces produced, which they are to enfilade. Ricochet practice is not confined to cannon alone; small

small mortars and howitzers may effectually be used for the same purpose. They are of singular use in action to mislead the enemy's ranks; for when the new receive the shells rolling and bounding about with their fuzes burning, expecting them to burst every moment, the bravest among them will hardly have courage to wait their approach and face the havoc of their explosion.

**Horizontal BATTERIES** are such as have only a parapet and ditch; the platform being only the surface of the horizon made level.

**Breach or Sunk BATTERIES** (*Batterie enterrée*, Fr.) are such as are sunk upon the glacis, with a design to make an accessible breach in the faces or salient angles of the bastion and ravelin.

**Cross BATTERIES** are such as play athwart each other against the same object, forming an angle at the point of contact; whence greater destruction follows, because what one shot shakes, the other beats down.

**Oblique BATTERIES**, or *Batteries en Echarpe*, are those which play on any work obliquely; making an obtuse angle with the line of range, after striking the object.

**Enfilading BATTERIES** are those that sweep or scour the whole length of a strait line, or the face or flank of any work.

**Sweeping BATTERIES.** See *Enfilading-BATTERIES*.

**Redan BATTERIES** (*Batterie en Redans*) are such as flank each other at the salient and reentrant angles of a fortification.

**Direct BATTERIES** are those situated opposite to the place intended to be battered, so that the balls strike the works nearly at right angles.

**Reverse BATTERIES** are those which play on the rear of the troops appointed to defend the place.

**Glancing-BATTERIES** are such whose shot strike the object at an angle of about  $20^\circ$ , after which the ball glances from the object, and recoils to some adjacent parts.

**Joint BATTERIES**, } when several

**Comarade BATTERIES**, } guns fire on the same object at the same time. When 10 guns are fired at once, their effect will be much greater than when fired separately.

**Sunk BATTERIES** (*Batteries enterrées*, Fr.) are those whose platforms are sunk beneath the level of the field; the ground serving for the parapet; and in it the embrasures are made. This often happens in mortar, but seldom in gun-batteries.

**Fascine BATTERIES**, } are batteries  
**Gabion BATTERIES**, } made of those machines, where sods are scarce, and the earth very loose or sandy.

**BATTERY-Planks** are the planks or boards used in making platforms.

**BATTERY-Bones** are square chests or boxes, filled with earth or dung; used in making batteries, where gabions and earth are not to be had. They must not be too large, but of a size that is governable.

**BATTERY-Nails** are wooden pins made of the toughest wood, with which the planks that cover the platforms are nailed. Iron nails might strike fire against the iron-work of the wheels, in recoiling, &c. and be dangerous.

**BATTERY-Master**, the person whose duty formerly it was to raise the batteries. This officer is now suppressed in England.

**BATTEURS d'Estrade**, Fr. See **SCOUTS**.

**BATTLE**, implies an action, where the forces of two armies are engaged; and is of two kinds, *general* and *particular*; general where the whole army is engaged, and particular where only a part is in action; but as they only differ in numbers, the methods are nearly alike.

The most remarkable on English record are the

There

Battle of Chili in India, 1803.

There is no action in war more brilliant than that of battles, the success of which sometimes decides the fate of kingdoms. It is by this action a general acquires his reputation. It is in battle that his valour, his force of genius, and his prudence, appear in their full extent; and where especially he has occasion for that firmness of mind, without which the most able general will hardly succeed.

Battles have ever been the last resource of good generals. A situation where chance and accident often baffle and overcome the most prudent and most able arrangements, and where superiority in numbers by no means ensures success, is such as is never entered into without a clear necessity for so doing. The fighting a battle only because the enemy is near, or from having no other formed plan of offence, is a direful way of making war. Darius lost his crown and life by it; king Harold, of England, did the same; and Francis I. at Pavia, lost the battle and his liberty. King John, of France, fought the battle of Poitiers, though ruin attended his enemy if he had not fought.

The true situation for giving battle is when an army's situation cannot be worse, if defeated, than if it does not fight at all; and when the advantage may be great, and the loss little. Such was the duke of Cumberland's at Hastenbeck, in 1757, and prince Ferdinand's at Vellinghausen, in 1761. The reasons and situations for giving battle are so numerous, that to treat of them all would fill a large volume: we will therefore content ourselves with the following. There may be exigencies of state that require its army to attack the enemy at all events. Such were the causes of the battle of Blenheim, in 1704, or Zorndorf, in 1758, of Cunnersdorf, in 1759, and of Rosbach, in 1757. To raise a siege, to defend or cover a country. An army is also obliged to engage when shut up in a post. An army may give battle to effectuate its junction with another army, &c.

The preparations for battle admit of infinite variety. By a knowledge of the detail of battles, the precept will accompany the example. The main general preparations are, to profit by any

advantage of ground; that the tactical form of the army be in some measure adapted to it; and that such form be, if possible, a form tactically better than the enemy's. In forming the army, a most careful attention should be given to multiply resources, so that the fate of the army may not hang on one or two efforts; to give any particular part of the army, whose quality is superior to such part in the enemy's army, a position that ensures action; and finally, to have a rear by nature, or, if possible, by art, capable of checking the enemy in case of defeat.

The dispositions of battles admit likewise of an infinite variety of cases; for even the difference of ground which happens at almost every step, gives occasion to change the disposition or plan; and a general's experience will teach him to profit by this, and take the advantage the ground offers him. It is an instant, *à coup-d'œil* which decides this: for it is to be feared the enemy may deprive you of those advantages or turn them to his own profit; and for that reason this admits of no precise rule, the whole depending on the time and the occasion.

With regard to battles, there are three things to be considered; what precedes, what accompanies, and what follows the action. As to what precedes the action, you should unite all your force, examine the advantage of the ground, the wind, and the sun, (things not to be neglected) and chuse, if possible, a field of battle proportioned to the number of your troops.

You must post the different kinds of troops advantageously for each; they must be so disposed as to be able to return often to the charge; for he who can charge often with fresh troops, is commonly victorious; witness the uniform practice of the French. Your wings must be covered so as not to be surrounded, and you must observe, that your troops can assist each other without any confusion, the intervals being proportioned to the battalions and squadrons.

Great care must be taken about the regulation of the artillery, which should be disposed so as to be able to act in every place to the greatest advantage; for nothing is more certain than that,

if the artillery be well commanded, properly distributed, and manfully served, it will greatly contribute to gaining the battle; being looked upon as the general instrument of the army, and the most essential part of military force. The artillery must be well supplied with ammunition, and each soldier have a sufficient number of cartridges. The baggage, provisions, and treasure of the army, should, on the day of battle, be sent to a place of safety.

In battle, where the attacks are, there is also the principal defence. If an army attacks, it forms at pleasure; it makes its points at will. If it defends, it will be sometimes difficult to penetrate into the designs of the enemy, but when once found, succour succeeds to the discovery. Ground and numbers must ever lead in the arrangement of battles; impression and resource will ever give them the fairest chance of success.

**BATTLE-Array**, the method and *Line of Battle*, the order of arranging the troops in order or line of battle; the form of drawing up the army for an engagement. This method generally consists of three lines, viz. the front line, the rear line, and the reserve.

The second line should be about 300 paces behind the first, and the reserve at about 5 or 600 paces behind the second. The artillery is likewise distributed along the front of the first line. The front line should be stronger than the rear line, that its shock may be more violent, and that, by being more extensive, it may more easily close on the enemy's flanks. If the first line has the advantage, it should continue to act, and attack the enemy's second line, which must be already terrified by the defeat of their first. The artillery must always accompany the line of battle in the order it was at first distributed, if the ground permit it; and the rest of the army should follow the motions of the first line, when it continues to march on after its first success.

**Main Battery**. See *Battle-Array*.

**BATTLE-Axe**, (*Hache d'Armes*) Fr. an offensive weapon, formerly much used by the Danes, and other northern infantry. It was a kind of halbert, and did great execution when wielded by a strong arm.

**BATTLEMENTS**, in military af-

fairs, are the indentures in the top of old castles or fortified walls, or other buildings, in the form of embasures, for the greater conveniency of firing or looking through.

**BATTRE l'estrade**, Fr. to send out scouts.

**BATTRE la campagne**, Fr. to scour the country or make incursions against an enemy.

**BATTRE**, Fr. to direct one or more pieces of ordnance in such a manner, that any given object may be destroyed or broken into by the continued discharge of cannon ball, or of other war-like materials; it likewise means to silence an enemy's fire.

**BATTRE de front**, Fr. to throw cannon-shot in a perpendicular or almost perpendicular direction against any body or place which becomes an object of attack. This mode of attack is less effectual than any other unless you *batter in breach*.

**BATTRE d'écharpe**, Fr. to direct shot, so that the lines of fire make a manifest acute angle with respect to the line of any particular object against which cannon is discharged.

**BATTRE en flanc**, Fr. is when the shot from a battery runs along the length of the front of any object or place against which it is directed.

**BATTRE à dos**, Fr. to direct the shot from one or several pieces of cannon so as to batter, almost perpendicularly, from behind any body of troops, part of a rampart or intrenchment.

**BATTRE de revers**, Fr. to direct shot in such a manner as to run between the two last mentioned lines of fire. When you batter from behind, the shot fall almost perpendicularly upon the reverse of the parapet. When you batter from the reverse side, the trajectories or lines of fire describe acute angles of forty-five degrees or under, with the prolongation of that reverse.

**BATTRE de bricole**, Fr. This method can only be put in practice at sieges, and against works which have been constructed in front of others that are invested. Every good billiard player will readily comprehend what is meant by *bricole* or back-stroke.

**BATTRE en sape**, Fr. To batter a work at the foot of its revêtement.

**BATTRE en sautoir**, Fr. to make a general

general discharge of heavy ordnance against any spot in which a breach is attempted to be made.

**BATIRE la caisse**, Fr. to beat a drum.

**BATIRE l'assemblée**, Fr. to beat the assembly.

**BATIRE un ban**, Fr. to give notice by sound of drum, when an officer is to be received, orders given out, or any punishment to be publicly inflicted.

**BATIRE la chamade**, Fr. to give intimation by the sound of drum, from a besieged place, of a disposition to capitulate; to beat a parley.

**BATIRE une charge**, Fr. To give notice by beat of drum that a regiment or armed body of men is approaching or marching off. It also signifies the beat which is made when a superior officer comes near a guard, &c.

**BATIRE la charge**, Fr. to beat the charge; or to give notice that a general discharge of musquetry is about to take place, or that the whole line is to charge with bayonets.

**BATIRE la Diane**, Fr. to beat the Reveillé.

**BATIRE les drapeaux**, Fr. to announce by beat of drum that the colours are about to be lodged.

**BATIRE la générale**, Fr. to beat the general; a signal to collect the soldiers together for immediate action, or for quitting camp or quarters.

**BATIRE la marche**, Fr. to give notice by beat of drum for troops to advance or retreat.

**BATIRE la messe**, Fr. to give notice by beat of the drum for soldiers to march to church.

**BATIRE la prière**, Fr. to give notice by beat of drum for soldiers to assemble at any particular place to hear prayers.

**BATIRE la retraite**, Fr. to beat the tattoo.

**BATIRE la retraite**, Fr. to beat the retreat; a notice given by all the drums of a regiment or army, for soldiers to keep to their several colours, and to retire in the best order they can, after a disastrous battle.

**Mener battant**, to overcome.

**Mener quelqu'un au Tambour battant**. To disconcert, to confound, puzzle, and perplex any body.

**BAUDRIER**, Fr. A cross-belt. It also signifies a sword-belt.

**BAVINS**, in military affairs, implies

small faggots, made of brush-wood, of a considerable length, no part of the brush being taken off. See FASCINS.

**BAYARD**, Fr. a provincial term used in Languedoc and Roussillon to signify a wheel-barrow.

**BAYONET**, (*Bayonette*, Fr.) a kind of triangular dagger, made with a hollow handle, and a shoulder, to fix on the muzzle of a firelock or musket, so that neither the charging nor firing is prevented by its being fixed on the piece. It is of infinite service against the horse. At first the bayonet was screwed into the muzzle of the barrel, consequently could not be used during the fire. It is said by some to have been invented by the people of Malacca, and first made use of on quitting the place. According to others, it was first used by the fusiliers in France, who were afterwards made the body of Royal Artillery. At present it is given to every infantry regiment.

A French writer, in a work entitled *l'Essai général de la Tactique*, has proposed a method of exercising the soldiers in a species of fencing or tilting with this weapon. But, as another very sensible author (*Mauvillon* in his *Essai sur l'Influence de la poudre à canon dans l'art de la guerre moderne*) justly asks, how can any man tilt or fence with so cumbersome an instrument, and so difficult to be handled, as the firelock? The utmost that could be done would be to make one thrust, and yet that could not be effected with any degree of ease or certainty.

Experiments have been made in this country, but we are persuaded that no experiments will prove the utility of the practice.

**BEACON**, a signal for the better securing the kingdom from foreign invasions.

On certain eminent places of the country are placed long poles erect, whereon are fastened pitch-barrels to be fired by night, and smoke made by day, to give notice, in a few hours, to the whole kingdom, of an approaching invasion.

**To BEAR**, in gunnery. A piece of ordnance is said to *bear*, or *come to bear*, when pointed directly against the object; that is, pointed to hit the object.

**BEARD**, the reflected points of the

head of an ancient arrow, particularly of such as were jagged.

• To **BEAT**, in a military sense, signifies to gain the day, to win the battle, &c.

To **BEAT** a party. See **CHAMADE**.

To **BEAT** a drum. See **DRUM**.

**BEAVER**, that part of the ancient helmet which covered the face, and which was moveable so as to expose the face without removing the beaver from the helmet.

**BEC de Corbin**, Fr. A battle-axe.

**BECHÉ**, Fr. a spade used by pioneers.

**BEDS**, in the military language, are of various sorts, viz.

**Mortar-BEDS** serve for the same purpose as a carriage does to a cannon: they are made of solid timber, consisting generally of 2 pieces fastened together with strong iron bolts and bars. Their sizes are according to the kind of mortar they carry.

**Royal-BEDS**, } are carriages for a  
**Coehorn-BEDS**, } royal mortar, whose diameter is 5.8 inches: and a coehorn mortar, whose diameter is 4.6 inches. Those beds are made of one solid block only.

**Sea-Mortar-BEDS** are likewise made of solid timber, like the former, but differ in their form, having a hole in the center to receive the pintle or strong iron bolt, about which the bed turns. Sea-mortars are mounted on these beds, on board of the bomb-ketches.

N.B. These beds are placed upon very strong timber frames, fixed into the bomb-ketch, in which the pintle is fixed, so as the bed may turn about it, to fire any way. The fore part of these beds is an arc of a circle described from the same centre as the pintle-hole.

**Stool-BED**, is a piece of wood on which the breech of a gun rests upon a truck-carriage, with another piece fixed to it at the hind end, that rests upon the body of the hind axle-tree; and the fore part is supported by an iron bolt. See **CARRIAGE**.

**BEEF-Eaters**, Buffettiers, yeomen of the guard to the King of Great Britain, so called from being stationed by the sideboard at great royal dinners. They being kept up rather from state, than for any military service to be expected from them. Their arms are a sword and lance.

**BETLES**, in a military sense, are

large wooden hammers for driving down palisades, and for other uses, &c.

**BEEBLESTOCK**, the stock or handle of a beetle.

**BELIER**, Fr. a battering ram.

**BELLIGERENT**, in a state of warfare. Hence any two or more nations at war are called belligerent powers.

**BELTS**, in the army are of different sorts, and for various purposes, viz.

**Sword-BELT**, a leathern strap in which a sword hangs.

**Shoulder-BELT**, a broad leathern belt, which goes over the shoulder, and to which the pouch is fixed. It should be made of stout smooth bull, with two buckles to fix the pouch to the belt. See **POUCH**.

**Waist-BELT**, a leathern strap fixed round the waist, by which a sword or bayonet is suspended.

**BELTS** are known among the ancient and middle-age writers by divers names, as *zona*, *cingulum*, *remniculum*, *ringa*, and *baldrellus*. The belt was an essential piece of the ancient armour, inasmuch that we sometimes find it used to denote the whole armour. In latter ages the belt was given to a person when he was raised to knighthood; whence it has also been used as a badge or mark of the knightly order.

**BENAR**, Fr. A large four-wheeled wagon, which is used to carry stones in the construction of fortified places.

**BENDINGS**, in military and sea matters, are ropes, wood, &c. bent for several purposes. M. Amontons gives several experiments concerning the bending of ropes. The friction of a rope bent, or wound round an unmoveable cylinder, is sufficient, with a very small power, to sustain very great weights. Divers methods have been contrived for bending timber, in order to supply crooked planks and pieces for building ships; such as by sand, boiling water, steam of boiling water, and by fire. See M. Du Hamel, in his book called *Du Transport, de la Conservation, & de la Force des Bois*. M. Delesme ingeniously enough proposed to have the young trees bent, while growing in the forest. The method of bending planks by sand-heat, now used in the king's yards, was invented by Captain Cumberland.

A method has been lately invented and practised for bending pieces of timber, so as to make the wheels of carriages.

riages without joints. The *bending* of boards and other pieces of timber for curved works in joinery, is effected by holding them to the fire, then giving them the figure required, and keeping them in this figure by tools for the purpose.

**BÉNÉDICTION** *de drapeaux*, Fr. the consecration of colours.

**BENEDICTION** *général*, Fr. a religious invocation which is made to God by the principal chaplain belonging to a French army, on the eve of an engagement.

**BENEFICIARIJ**, in ancient military history, denotes soldiers who attend the chief officers of the army, being exempted from all other duty.

**BENEFICIARIJ** were also soldiers discharged from the military service or duty, and provided with *beneficia* to subsist on.

**BERM**, in fortification, is a little space or path, of about 4, 6, or 8 feet broad, according to the height and breadth of the works, between the ditch and the parapet, when made of turf, to prevent the earth from rolling into the ditch; and curves likewise to pass and repass.

To **BESIEGE**, to lay siege to, or invest any place with armed forces.

**BESIEGERS**, the army that lays siege to a fortified place.

**BESIEGED**, the garrison that defends the place against the army that lays siege to it. See **SIERGE**.

To **BETRAY**, to deliver perfidiously any place or body of troops into the hands of the enemy. To discover that which has been entrusted to secrecy.

**BETTY**, a machine used for forcing open gates or doors. See **PETARD**.

**BEY**, (*Beis*, Fr.) An officer of high rank among the Turks, but inferior in command to the Pacha.

**BICOQUE**, Fr. a term used in France to signify a place ill-fortified and incapable of much defence. It is derived from a place on the road between Lodi and Milan, which was originally a gentleman's country-house surrounded by ditches. In the year 1522, a body of Imperial troops were stationed in it, and stood the attack of the whole French army during the reign of Francis I. This engagement was called the battle of *Bicoque*.

**BIDON**, Fr. a sort of oblong ball or shot, which goes farther than a round one.

**BIHOUAC**, *BIOUAC*, *BIOUVAC*, or *BIVOUAQ*, Fr. [from the German *weywacht*, a double watch or guard.] A night-guard, or a detachment of the whole army, which during a siege, or in the presence of an enemy, marches out every night in squadrons or battalions to line the circumvallations or to take post in front of the camp, for the purpose of securing their quarters, preventing surprises, and of obstructing supplies. When an army does not encamp, but lies under arms all night, it is said to *bivouac*.

**BILBO**, a rapier or small sword was formerly so called.

**BILL** or **BILL-HOOK**, a small hatchet, used for cutting wood for fascines, gabions, bavin, &c.

**BILLET**, a well-known ticket for quartering soldiers, which entitles each soldier, by act of parliament, to candles, vinegar, and salt, with the use of fire, and the necessary utensils for dressing and eating their meat. The allowance of small beer has been altered by a late regulation.

**BILLET** *de logement*, Fr. a billet for quarters. This billet or ticket was formerly delivered out to the French troops upon the same general principles that it is issued in England.

**BILLET**, *blanc ou noir*, Fr. a piece of white or black paper which is folded up, and serves to determine various matters by drawing lots.

**BILLET** *de caisse*, Fr. an acknowledgement which is given in writing by the paymaster of a regiment for money in hand.

**BILLET** *d'entrée à l'hôpital*, Fr. a ticket which is given to a sick soldier to entitle him to a birth in the military hospital.

**BILLET** *d'honneur*, Fr. a written acknowledgement which is given by an officer for articles taken on credit; but this more frequently happens in matters of play.

**BILLET** *de logement*, Fr. a billet to entitle an officer or soldier to free quarters at an inn or elsewhere.

**BILLETING**, in the army, implies the quartering soldiers in the houses of any town or village.

• **BINACLE**, a telescope with 2 tubes, so constructed, that a distant object might be seen with both eyes, now rarely used.

• **BIT**,

**BIT**, the bridle of a horse which acts by the assistance of a curb. See CURB and BRIDON.

**BLACK-HOLE**, a place of confinement for soldiers, who may be confined therein by the commanding officer, but not by any inferior officer. In this place they are generally restricted to bread and water.

**BLANKETS**, combustible things made of coarse paper steeped in a solution of saltpetre, which, when dry are again dipped in a composition of tallow, resin, and sulphur. They are used only in fire-ships.

**BLAST**, and **BLASTING**. See MINES and MINING.

**BLINDAGE**, *Fr.* a work which is carried on along a trench, to secure it from the shells, &c. of a besieged garrison.

**BLINDE**, *Fr.* See BLINDS.

**BLINDER**, *Fr.* to make use of blinds.

**BLINDS**, in military affairs, are wooden frames composed of 4 pieces, either flat or round, two of which are 6 feet long, and the others 3 or 4 feet, which serve as spars to fasten the two first together: the longest are pointed at both ends, and the two others are fastened towards the extremities of the former, at about 10 or 12 inches from their points, the whole forming a rectangular parallelogram, the long sides of which project beyond the other about 10 or 12 inches. Their use is to fix them either upright, or in a vertical position, against the sides of the trenches or saps, to sustain the earth. Their points at the bottom serve to fix them in the earth, and those at top to hold the fascines that are placed upon them; so that the sap or trench is formed into a kind of covered gallery, to secure the troops from stones and grenades.

The term *Blind* is also used to express a kind of hedge, made of the branches of trees, behind which the soldiers, miners, or labourers, may carry on their work without being seen. See HEDGE.

**BLINDS** are sometimes only canvas stretched to obstruct the sight of the enemy. Sometimes they are planks set up; for which see MAXILET. Sometimes they are made of a kind of coarse basket-work. See GAMONS. Sometimes of barrels, or sacks filled with earth. In short, they signify any thing that covers the labourers from the enemy.

**BLIND**. See ORILLON and FORTIFICATION.

**BLACKADE**, } in military affairs.

**BLOCKADING**, } implies the surrounding a place with different bodies of troops, who shut up all the avenues on every side, and prevent every thing from going in or out of the place—this is usually effected by means of the cavalry. The design of the blockade is to oblige those who are shut up in the town to consume all their provisions, and by that means to compel them to surrender for want of subsistence.

Hence it appears that a blockade must last a long time, when a place is well supplied with necessaries: for which reason this method of reducing a town is seldom taken, but when there is reason to believe the magazines are unprovided, or sometimes when the nature or situation of the place permits not the approaches to be made, which are necessary to attack it in the usual way.

Maritime towns, which have a port, are in much the same case as other towns, when their port can be blocked up, and the besiegers are masters of the sea, and can prevent succours from being conveyed that way into the place.

To **BLOCKADE**, or to block up a place, is to shut up all the avenues, so that it cannot receive any relief either of men or provisions, &c.

To **raise a BLOCKADE**, is to march from before the place, and leave it free and open as before.

To **turn a siege into a BLOCKADE**, is to desist from a regular method of besieging, and to surround the place with those troops who had formed the siege.

To **form a BLOCKADE**, is to surround the place with troops, and hinder any thing from going in or coming out.

**BLOCUS**, *Fr.* See BLOCKADE.

**BLOCK-battery**, in gunnery, a wooden battery for two or more small pieces, mounted on wheels, and moveable from place to place; very ready to fire *en barbette*, in the galleries and casemates, &c. where room is wanted.

**Block-house**, in the military art, a kind of wooden fort or fortification, sometimes mounted on rollers, or on a flat-bottomed vessel, serving either on the lakes or rivers, or in countercarps and counter-approaches. This name is sometimes given to a brick or stone build-

ing on a bridge, or the brink of a river, serving not only for its defence, but for the command of the river, both above and below.

**BLOQUER**, *Fr.* to blockade.

**BLUNDERBUSS**, a well known fire-arm, consisting of a wide, short, but very large bore, capable of holding a number of musquet or pistol balls, very fit for doing great execution in a crowd, making good a narrow passage, defending the door of a house, stair-case, &c. or repelling an attempt to board a ship.

**BOARD of Ordnance**. See **ORDNANCE**.

**BOARD**, also implies an office under the government, where the affairs of some department are transacted; of which there are several sorts in England.

**BOAT**. See **ADVICE BOAT**, **PUNTOON-BOAT**, &c.

**BODY**, in the art of war, is a number of forces, horse or foot, united under one commander.

**Main Body of an army**, sometimes means the troops encamped in the center between the two wings, and generally consists of infantry. The main body on a march signifies the whole of the army, exclusive of the van and rear-guard.

**BODY of Reserve**. See **RESERVE**.

**BODY of a place**, is, generally speaking, the buildings in a fortified town; yet the inclosure round them is generally understood by it.

**BOETE**, *Fr.* a small short fire-arm, or piece of ordnance, which is used on rejoicing days.

**BOETE ou Coffre**, *Fr.* a wooden box, in which is carried the gun-powder for a mine.

**BOETE-à-pierrier**, *Fr.* a hollow cylinder made of iron or copper, which, when loaded, is placed in a mortar, so that an immediate communication takes place between the fuse of the latter and its touch-hole, and it is propelled to the place of destination.

**BOIS**, *Fr.* wood.

**Aller au BOIS**, *Fr.* to go with a party of men for the purpose of procuring wood, &c.

**Bois de remontage**, *Fr.* every species of timber which is used to new mount cannon, or reit ammunition wagons, &c.

**Bois de chauffage**, *Fr.* the fuel which is distributed among French troops.

**BOIT**, an iron pin used for strengthening a piece of timber, or for fastening two or more articles together. Bolts in gunnery, being of several sorts, admit of various denominations, which arise from the specific application of them, as

- |               |          |
|---------------|----------|
| 1. Eye        | } BOLTS. |
| 2. Joint      |          |
| 3. Trussom    |          |
| 4. Bed        |          |
| 5. Breecching |          |
| 6. Bracket    |          |
| 7. Stool-bed  |          |
| 8. Gannish    |          |
| 9. Ash-tree   |          |
| 10. Bolster   |          |

**BOMB** } See **SHUTTLE**.  
           } **Chest**. See **CASSON**.  
           } **Vessels** } small vessels, made  
           } **Ketches** } very strong with

large beams, particularly calculated for throwing shells into a town, castle, or fortification, from 13 and 10-inch mortars, two of which are placed on board of each ship. They are said to have been invented by one M. Reyneau, a Frenchman, and to have been first put in action at the bombardment of Algiers in 1681: till then it had been judged impracticable to bombard a place from the sea.

**BOMB Tender**, a small vessel of war laden with ammunition for the bomb ketch, and from which the latter is constantly supplied.

**BOMBARD**, (*Bombarde*, *Fr.*) an ancient piece of ordnance, so called, very short, and very thick, with an uncommon large bore. There have been bombards which have thrown a ball or shell of 300 weight: they made use of cranes to load them. The Turks use some of them at present.

**To BOMBARD**, (*Bombarder*, *Fr.*) See **BOMBARDING**.

**BOMBARDING**, } the act of as-  
**BOMBARDMENT**, } saulting a city or fortress, by throwing shells into it, in order to set fire to, and ruin the houses, churches, magazines, &c. and to do other mischief. As one of the effects of the shell results from its weight, it is never discharged as a ball from a cannon, that is, by pointing it at a certain object: but the mortars in England are fixed at an elevation of 45 degrees; that

that is, inclined so many degrees from the horizon, that the shell describes a curve, called the military projectile: hence a mortar, whose trunnions are placed at the breech, can have no point blank range. I am of opinion that mortars should be so contrived, that they may be elevated to any degree required, as much preferable to those fixed at an angle of  $45^{\circ}$ ; because shells should never be thrown at that angle but in one single case only, which seldom happens; that is, when the battery is so far off, that they cannot otherwise reach the works: for when shells are thrown from the trenches into the works of a fortification, or from the town into the trenches, they should have as little elevation as possible, in order to roll along, and not bury themselves; whereby the damage they do, and the terror they cause to the troops, is much greater than if they sink into the ground. On the contrary, when shells are thrown upon magazines, or any other buildings, with an intention to destroy them, the mortar should be elevated as high as possible, that the shells may acquire a greater force in their fall.

Shells should be loaded with no more powder than is requisite to burst them into the greatest number of pieces, and the length of the fuze should be exactly calculated according to the required ranges; for, should the fuze set fire to the powder in the shell before it falls on the place intended, the shell will burst in the air, and probably do more mischief to those who fired the mortar, than to those against whom it was discharged. To prevent this, the fuzes are divided into as many seconds as the greatest range requires, consequently may be cut to any distance, at an elevation of 45 degrees.

Mortars are not to be fired with two fires; for when the fuze is properly fixed, and both fuze and shell dredged with mealed powder, the blast of the powder in the chamber of the mortar, when inflamed by the tube, will likewise set fire to the fuze in the shell.

**BOMBARDIERS**, artillery soldiers, so called because they are always employed in mortar and howitzer duty. They are to load them on all occasions; and in most services they load the shells and grenades, fix the fuzes, prepare the

composition both for fuzes and tubes, and fire both mortars and howitzers on every occasion. In the English service, shells and grenades, composition for the same, fuzes, &c. are prepared in the laboratory by people well skilled in that business.

In most foreign services both officers and soldiers belonging to the companies of bombardiers have an extraordinary pay, as it requires more mathematical learning to throw shells with some degree of exactness, than is requisite for the rest of the artillery. In the British service a specific number is attached to each company of artillery; but they do not form a separate corps as in other countries.

**BOMBELLES**, *Fr.* diminutive bombs or shells, which are used against a besieged fortress, or for the purpose of creating confusion among a body of men.

**BON**, *Fr.* a written document which always precedes the signature of a sovereign or a minister, and by which some appointment is confirmed to one or more persons.

**BONAVOGLIE**, *Fr.* a man that for a certain consideration voluntarily engages to row.

**BONNET**, in fortification, implies a small but useful work, that greatly annoys the enemy in their lodgments. This work consists of two faces, which make a salient angle in the nature of a ravelin, without any ditch, having only a parapet three feet high, and 10 or 12 feet broad. They are made at the salient angles of the glacis, outworks, and body of the place, beyond the counterscarp, and in the faussebray. See **FORTIFICATION**.

**BONNET à Prêtre**, or *Priest's-cap*, in fortification, is an outwork, having three salient and two inward angles, and differs from the double tenaille only in having its sides incline inwards towards the gorge, and those of a double tenaille are parallel to each other. See **FORTIFICATION**.

**BORDER**, in military drawings, implies single or double lines, or any other ornament, round a drawing, &c.

**BORDEREAU**, *Fr.* a sort of diary which is kept in a troop or company, for the purpose of ascertaining what articles have been distributed, and what

what money has been paid to the soldiers.

**BOOKS.** There are different books made use of in the British army, for the specific purposes of general and regimental economy.

The *general orderly book* is kept by the brigade major, from which the leading orders of regiments, conveying the parole and countersign, are always taken.

The *regimental orderly book* contains the peculiar instructions of corps which are given by a colonel or commanding officer to the adjutant—Hence *adjutant's orderly book*.—And from him to the serjeant-major, who delivers the same to the different serjeants of companies assembled in the orderly room for that purpose. Hence the *company's orderly book*.

The *regimental book* is kept by the clerk of the regiment, and contains all the records, &c. belonging to the corps.

The *black book* is a sort of memorandum which is kept in every regiment to describe the character and conduct of non-commissioned officers and soldiers; when and how often they have been reduced or punished, &c.

Every quarter-master belonging to the cavalry and infantry has likewise a book which may not improperly be called a book or inventory of regimental stores, &c.

*Practice book.* A book containing the weight, range, &c. of cannon; and also the manner of exercising with pieces of artillery. Every officer belonging to the royal artillery ought to have a book of practice.

*Description book.* This book is likewise called regimental book.

**BOOM**, in marine fortification, is a long piece of timber, with which rivers or harbours are stopped, to prevent the enemy's coming in: it is sometimes done by a cable or chain, and floated with yards, top-masts, or spars of wood lashed to it.

**BORE**, in gunnery, implies the cavity of the barrel of a gun, mortar, howitzer, or any other piece of ordnance. See **CANNON**.

**BOSSE**, *Fr.* a term used in the French artillery to express a glass bottle which is very thin, contains four or five pounds of powder, and round the neck of which four or five matches are hung under, after it has been well corked. A

cord, two or three feet in length, is tied to the bottle, which serves to throw it. The instant the bottle breaks, the powder catches fire, and every thing within the immediate effects of the explosion is destroyed.

**BOOTS**, a familiar term used in the British service. It means the youngest officer at a regimental mess, and takes its origin, most probably, from what is generally called boots at an inn.

**BORNOYER**, *Fr.* To look along any surface, &c. with one eye, in order to ascertain whether it be straight.

**BOTTES**, *Fr.* boots.

*Grosses Bottes*, *Fr.* jack boots.

**BOTTINE**, *Fr.* half boots worn by the hussars and dragoons in foreign armies.

**BOUCHE**, *Fr.* The aperture or mouth of a piece of ordnance, that of a mortar, of the barrel of a musquet, and of every species of fire-arms from which a ball or bullet is discharged.

**BOUCHES à feu**, *Fr.* This word is generally used to signify pieces of ordnance.

*Grosse Bouche à feu*, *Fr.* a piece of heavy ordnance. A mortar and a howitzer are so called.

*Petite Bouche à feu*, *Fr.* a carbine, musquet, pistol, and every species of small fire arms are so called.

*Bouche d'un canon, d'un mortier*, &c. the mouth or opening of a piece of ordnance, mortar, &c.

*Bouchers d'une armée*, *Fr.* This term is sometimes used among the French, to signify the persons who contract with the quarter-master general's department for a regular supply of meat.

**BOULANGERIE**, *Fr.* A bakery. The spot where bread is baked for an army, or where biscuits are made at a seaport.

**BOULANGERS**, *Fr.* bakers. Persons of this description are generally attached to armies.

**BOULER la matière**, *Fr.* to stir up the different metals which are used in casting canon.

*BOULETS à deux têtes*, *Fr.* chain-shot.

*BOULETS enchaînés*, *Fr.* chain-shot.

*BOULETS rayés*, *Fr.* barred-shot.

*BOULETS rouges*, *Fr.* red-hot shot.

*BOULETS à deux têtes, ou anges*, *Fr.* double-headed shot.

**BOULEVART**, *Fr.* formerly meant a *bustion*. It is no longer used as a military phrase, although it sometimes occurs

curs in the description of works or lines which cover a whole country, and protect it from the incursions of an enemy. Thus Strasburgh and Landau may be called two principal boulevarts or bulwarks, by which France is protected on this side of the Rhine.

The elevated line or rampart which reaches from the Champs Elysées in Paris beyond the spot where the Bastille was destroyed in 1789, is stiled the Boulevard.

In ancient times, when the Romans attacked any place, they raised boulevarts near the circumference of the walls. These boulevarts were 80 feet high, 300 feet broad, upon which wooden towers commanding the ramparts were erected covered on all sides with iron-work, and from which the besiegers threw upon the besieged stones, darts, fire-works, &c. to facilitate the approaches of the archers and battering rams.

**BOULINER**, *Fr.* a French military phrase. *Bouliner dans un camp*, means to steal or pilfer in a camp. *Un soldat boulineur*, signifies a thief.

**BOURGEOIS**, *Fr.* the middle order of people in a town are so called, to distinguish them from the military and nobility.

**BOURGEOISIE**, *Fr.* That class of inhabitants which consists of respectable tradesmen who are united among themselves, and, in moments of danger, learn military movements, and turn out as volunteers for the security of their rights, &c.

**BOURGUIGNOTE**, *Fr.* Is a helmet or morion which is usually worn with a breast-plate. It is proof against pikes and swords. It is also called a Cabosset.

**BOURRADE**, *Fr.* A thrust which is made with the barrel end of the musquet instead of the butt.

**BOURRELET**, *Fr.* the extremity of a piece of ordnance towards its mouth. It is usually cast in the shape of a tulip on account of its aptitude to fit the construction of embrasures. Bourrelet means likewise a pad or collar.

**BOURRER**, *Fr.* to run the wad or any other materials into the barrel of a fire-arm.

**BOURRER une bouche-à-feu**, *Fr.* To force the ball into any species of ordnance by means of a rammer.

**BOURRER un Canon**, *Fr.* To ram down a charge with a ramrod or to load a musquet, &c. or a piece of ordnance.

**BOURRER un Mortier**, *Fr.* To compress the charge of gunpowder by means of a wad of hay, and to fill up the chamber with earth, &c.

**BOURRER une Mine**, *Fr.* To fill up the gallery of a mine with earth, stones, &c.

**BOURRIQUET**, *Fr.* a basket made use of in mining, to draw up the earth, and to let down whatever may be necessary for the miner.

**BOUSSOLE**, *Fr.* a compass which every miner must be in possession of to direct him in his work.

**ROUTE-SELLE**, *Fr.* the signal or word which is given to the cavalry to saddle their horses.

**BOUTON**, *Fr.* the sight of a musket.

**BOW**, an ancient weapon of offence, made of steel, wood, or other elastic matter; which, after being bent by means of a string fastened to its two ends, in returning to its natural state throws out an arrow with prodigious force.

The use of the bow is, without all doubt, of the earliest antiquity. It has likewise been the most universal of all weapons, having obtained amongst the most barbarous and remote people, who had the least communication with the rest of mankind.

The bow is a weapon of offence amongst the inhabitants of Asia, Africa, and America, at this day; and in Europe before the invention of fire-arms, a part of the infantry was armed with bows. Lewis XII. first abolished the use of them in France, introducing, in their stead, the halbert, pike, and broadsword. The long-bow was formerly in great use in England, and many laws were made to encourage the use of it. The parliament under Henry VII. complained of the disuse of long-bows, heretofore the safeguard and defence of this kingdom, and the dread and terror of its enemies.

**Cross-Bow**, is likewise an ancient weapon of offence, of the eleventh century. Philip II. surnamed the Conqueror, introduced cross-bows into France. In this reign Richard I. of England,

England, was killed by a cross-bow at the siege of Chalus.

**BOWMAN.** - See **ARCHER**.

**BOWYER.** The man who made or repaired the military bows was so called.

**BOXES**, in military affairs, are of several sorts, and for various purposes.

*Battery-Boxes.* See **BATTERY**.

*Cartouch-Boxes.* See **CARTOUCH**.

*Nave-Boxes*, are made of iron, and fastened one at each end of the nave, to prevent the arms of the axle-tree, about which the boxes turn, from causing too much friction.

*Tin-Boxes*, such as are filled with small shot for grape, according to the use of the gun they are to be fired out of.

*Wood-Boxes*, with lids, for holding grape-shot, &c. Each calibre has its own distinguished by marks of the calibre on the lid.

**BOYAU**, in fortification, is a particular trench separated from the others, which, in winding about, incloses different spaces of ground, and runs parallel with the works of the place, that it may not be enfiladed. When two attacks are made at once, one near to the other, the boyau makes a communication between the trenches, and serves as a line of contravallation, not only to hinder the sallies of the besieged, but likewise to secure the miners.

**BRACES**, in a military sense, are a kind of armour for the arm: they were formerly a part of a coat of mail. The straps which are worn across the shoulders, in order to suspend the breeches, are also called *Braces*.

**BRACKETS**, in gunnery, are the cheeks of the travelling carriage of a mortar; they are made of strong wooden planks. This name is also given to that part of a large mortar-bed, where the trunnions are placed, for the elevation of the mortar: they are sometimes made of wood, and more frequently of iron, of almost a semicircular figure, well fastened with nails and strong plates.

**BRANCHARD** *ou civière*, Fr. a hand-barrow, or litter. This word literally means shaft. It is sometimes used as a machine to carry sick or wounded soldiers upon.

**BLANCHE**, Fr. Branch. This word

is peculiarly adapted to the covert-way, ditch, horn-works, and to every part of a fortification; and signifies the long sides of the different works which surround a fortified town or camp. See **MINI** and **GALLERY**.

*BRANCHE d'un projet de guerre, offensive ou défensive*, Fr. This term comprehends the various designs and means which are embraced to carry on offensive or defensive measures.

• **BRAND**, an ancient term for a sword; so called by the Saxons.

**BRAQUEMART**, Fr. a broad short sword, which is usually worn on the left side, and is properly a cutlass.

**BRAQUER**, Fr. A word sometimes improperly used to express the movement of a cannon to any particular side. The correct expression is, to point the cannon, *ponter le canon*.

**BRASSAR** *la Matière*, Fr. to mix the different ingredients which are required for the making of gun-powder or other combustible matter.

**BRASSARS**, Fr. thin plates of beaten iron which were anciently used to cover the arms above the coat of mail.

Brassars and cuirasses were worn in the days of St. Louis.

**BRAVOURE**, Fr. According to the author of the French Military Dictionary, this word signifies any act of courage and valour by which the enterprising character of a man is distinguished. This quality is peculiarly manifest among grenadiers.

**BREACH**, *Breche*, Fr. in fortification, a gap, or opening, in any part of the works of a fortified place, made by the artillery or mines of the besiegers, preparatory to the making an assault.

*To repair a BREACH*, is to stop or fill up the gap with gabions, fascines, &c. and prevent the assault.

*To fortify a BREACH*, is to render it inaccessible with *chevaux-de-frise*, crow's-feet, &c.

*To make a lodgment in the BREACH*. After the besieged are driven away, the besiegers secure themselves against any future attack in the breach.

*To clear the BREACH*, that is, to remove the ruins, that it may be the better defended.

**BREAK-off**, a term used when cavalry is ordered to diminish its front—similar to *file-off* in the infantry. It is

also used to signify wheeling from line; as *BREAKING*-off to the left, for *wheeling* to the left.

*To BREAK-Ground.* To make the first opening of the earth to form entrenchments, as at the commencement of a siege. It applies also to the striking of tents and quitting the ground on which any troops had been encamped.

*BREAST-PLATE*, in military antiquity, a piece of defensive armour worn on the breast of both men and horses. They are but seldom used now.

*BREAST-work.* See *PARAPET*.

*BRECH*, *Fr.* Any opening which is made by force. It is also used among the French, to signify a successful charge upon a body of men.

*BREECH* of a gun, the end near the vent. See *CANNON*.

*BREVET rank*, is a rank in the army higher than that for which you receive pay. It gives precedence (when corps are brigaded) according to the date of the brevet commission.

*BREVET*, *Fr.* commission, appointment. Under the old government of France it consisted in letters or appointments signed by the king, by virtue of which every officer was authorized to discharge his particular duty. All officers in the old French service, from a cornet or sub-lieutenant up to a marshal of France were styled *Officiers à Brevet*.

*BREVETS d'Assurance ou de Retenue d'Argent*, *Fr.* certain military and civil appointments granted by the old kings of France, which were distinguished from other places of trust, in as much as every successor was obliged to pay a certain sum of money to the heirs of the deceased, or for the discharge of his debts. Hence the term *brevet d'assurance ou de retenue*.

*BRICKS*, substances composed of an earthy matter, which are hardened by art: they may be very well considered as artificial stone. Bricks are of very great antiquity, as appears from sacred history, the tower of Babel being built with them; and it is said the remains are still visible. The Greeks and Romans, &c. generally used bricks in their buildings, witness the Pantheon, &c. In the east they baked their bricks in the sun. The Romans used them unburnt, having first left them to dry in the air for 3, 4, or 5 years.

The best bricks must not be made of any earth that is full of sand or gravel, nor of such as is gritty or stony, but of a greyish marle, or whitish chalky clay, or at least of reddish earth. But if there is a necessity to use that which is sandy, choice should be made of that which is tough and strong.

The best season for making bricks is the spring; because they will be subject to crack, and be full of chinks, if made in the summer: the loam should be well steeped or soaked, and wrought with water. They are shaped in a mould, and, after some drying in the sun or air, are burnt to a hardness. This is our manner of making bricks; but whether they were always made in this manner admits a doubt. We are not clear what was the use of straw in the bricks for building in Egypt, or why in some part of Germany they mix sawdust in their clay for bricks.

We are in general tied down by custom to one form, and one size; which is truly ridiculous: 8 or 9 inches in length, and 4 in breadth, is our general measure: but beyond doubt there might be other forms, and others, introduced very advantageously. Bricks, without any particular form or shape, are used in the north of England to make up the public roads, &c. particularly those in the neighbourhood of Sheffield, Wakefield, and Leeds.

*Compass Bricks*, are of a circular form; their use is for steening of walls; we have also concave, and semi-cylindrical, used for different purposes.

*Grey-Stocks*, are made of the purest earth, and better wrought: they are used in front in building, being the strongest and handsomest of this kind.

*Place-Bricks*, are made of the same earth, or worse, with a mixture of dirt from the streets, and being carelessly put out of hand, are therefore weaker and more brittle, and are only used out of sight, and where little stress is laid on them.

*Red Stocks*, are made of a particular earth, well wrought, and little injured by mixture: they are used in fine work, and ornaments.

*Hedgerly-Bricks*, are made of a yellowish coloured loam, very hard to the touch, containing a great quantity of sand: their particular excellence is, that

that they will bear the greatest violence of fire without hurt.

**BRIDGES**, in military affairs, are of several sorts and denominations, viz.

**Rush-BRIDGES**, are made of large bundles of rushes, bound fast together, over which planks are laid, and fastened: these are put in marshy places, for the army to pass over on an emergency.

**Pendent** or **hanging BRIDGES**, are those not supported by posts, pillars, or buttments, but hung at large in the air, sustained only at the two ends.

**Draw-BRIDGE**, that which is fastened with hinges at one end only, so that the other may be drawn up (in which case the bridge is almost perpendicular) to hinder the passage of a ditch, &c. There are others made to draw back and hinder the passage; and some that open in the middle; one half of which turns away to one side, and the other half to the other, and both again join at pleasure.

**Flying-BRIDGE**, is generally made of two small bridges, and one over the other, in such a manner that the uppermost stretches out by the help of certain cords running through pulleys placed along the sides of the upper bridge, which push it forwards, till the end of it joins the place it is intended to be fixed on. They are frequently used to surprise works, or out-posts that have only narrow ditches.

**BRIDGE of boats**, is a number of common boats joined parallel to each other, at the distance of 6 feet, till they reach across the river; which being covered with strong planks, and fastened with anchors and ropes, the troops march over.

**BRIDGE of communication**, is that made over a river, by which two armies, or forts, which are separated by that river, have a free communication with one another.

**Floating-BRIDGE**, a bridge made use of in form of a work in fortification called a redoubt; consisting of two boats, covered with planks, which are solidly framed, so as to bear either horse or artillery. Bridges of this kind are frequently used.

**Ponton-BRIDGE**, a number of tin or copper boats placed at the distance of 7 or 8 feet asunder, each fastened with an anchor, or a strong rope that goes across the river, running through the

rings of the pontoons. They are covered with baulks, and then with chests or plunks, for the army to walk over. See **PONTON**.

**Cask, or Barrel BRIDGE**, a number of empty casks that support baulks and planks, made as above into a bridge, where pontoons, &c. are wanting. Experience has taught us that 5 ton of empty casks will support above water 9000 pounds: hence any calculation may be made.

**BRIDGES** are made of carpentry or masonry. The number of arches of a bridge is generally made odd; either that the middle of the stream or chief current may flow freely without interruption of a pier; or that the two halves of the bridge, by gradually rising from the ends to the middle, may there meet in the highest and largest arch; or else, for the sake of grace, that by being open in the middle, the eye in viewing it may look directly through, as we always expect to do in looking at it, and without which opening we generally feel a disappointment in viewing it.

If the bridge be equally high throughout, the arches, being all of a height, are made of one size, which causes a great saving of centering. If the bridge be higher in the middle than at the ends, let the arches decrease from the middle towards each end, but so that each half have the arches exactly alike, and that they decrease in span proportionally to their height, so as to be always the same kind of figure. Bridges should rather be of few and large arches, than of many and small ones, if the height and situation will allow of it.

*Names of all the Terms peculiar to BRIDGES, &c.*

*Abutment. See Butments.*

*Arch*, an opening of a bridge, through or under which the water, &c. passes, and which is supported by piers or buttments. Arches are denominated circular, elliptical, cycloidal, catenarian, equibrial, gothic, &c. according to their figure or curve.

*Archicolt*, the curve or line formed by the upper sides of the voussoirs or arch-stones. It is parallel to the intrados or under side of the arch when the voussoirs are all of the same length; otherwise not.

By the archivolts is also sometimes understood the whole set of voussoirs.

*Banquet*, the raised foot-path at the sides of the bridge next the parapet: it is generally raised about a foot above the middle or horse-passage, and 3, 4, 5, 6, or 7, &c. feet broad, according to the size of the bridge, and paved with large stones, whose length is equal to the breadth of the walk.

*Battardens*, or a case of piling, &c.

*Coffer-dam*, without a bottom, fixed in the river, water-tight or nearly so, by which to lay the bottom dry for a space large enough to build the pier on. When it is fixed, its sides reaching above the level of the water, the water is pumped out of it, or drawn off by engine, &c. till the space is dry: and it is kept so by the same means, until the pier is built up in it, and then the materials of it are drawn up again. *Battardens* are made in various numbers, either by a single pile, or by a double one, with clay or chalk rammed in between the two, to prevent the water from coming through the sides: and these enclosures are also made either with piles only, driven close by one another; and sometimes notched or dovetailed into each other, or with piles grooved in the sides, driven in at a distance from one another, and boards let down between them in the grooves.

*Bulwarks*, are the extremities of a bridge, by which it joins to, or abuts upon, the land, or sides of the river, &c.

These must be made very secure, quite immovable, and more than barely sufficient to resist the draft of its adjacent arch; so that, if there are not rocks or very solid banks to raise them against, they must be well re-inforced with proper walls or returns, &c.

*Caisson*, a kind of chest, or flat-bottomed boat, in which a pier is built, then sunk to the bed of the river, and the sides loosened and taken off from the bottom, by a contrivance for that purpose; the bottom of it being left under the pier as a foundation. It is evident therefore, that the bottoms of the caissons must be made very strong and fit for the foundations of the piers. The caisson is kept afloat till the pier be built to the height of low-water mark; and for that purpose its sides must either be made of more than that height at first, or else gradually raised

to it, as it sinks by the weight of the work, so as always to keep its top above water: and therefore the sides must be made very strong, and kept asunder by cross timbers within, lest the great pressure of the ambient water crush the sides in, and so not only endanger the work, but also drown the workmen within it. The caisson is made of the shape of the pier, but some feet wider on every side to make room for the men to work; the whole of the sides are of two pieces, both joined to the bottom quite round, and to each other at the salient angle, so as to be disengaged from the bottom, and from each other, when the pier is raised to the desired height, and sunk. It is also convenient to have a little sluice made in the bottom, occasionally to open and shut, to sink the caisson and pier sometimes by, before it be finished, to try if it bottom level and rightly; for by opening the sluice, the water will rush in and fill it to the height of the exterior water, and the weight of the work already built will sink it; then by shutting the sluice again, and pumping out the water, it will be made to float again, and the rest of the work may be completed. It must not however be sunk except when the sides are high enough to reach above the surface of the water, otherwise it cannot be raised and laid dry again. Mr. Labeyle tells us, that the caissons in which he built Westminster bridge, contained above 150 load of fir timber, of 40 cubic feet each, and were of more tonnage or capacity than a 40 gun ship of war.

*Centres*, are the timber frames erected in the spaces of the arches to turn them on, by building on them the voussoirs of the arch. As the centre serves as a foundation for the arch to be built on, when the arch is completed, that foundation is struck from under it, to make way for the water and navigation; and then the arch will stand of itself from its curved figure. The center must be constructed of the exact figure of the intended arch, convex, as the arch is concave, to receive it on as a mould. If the form be circular, the curve is struck from a central point by a radius; if it be elliptical, it should be struck with a double cord, passing over two pins fixed in the fociuses, as the mathematicians describe their ellipses; and

and not by striking different pieces or arcs of circles from several centres: for these will form no ellipsis at all, but an irregular mishapen curve made up of broken pieces of different circular arches; but if the arch be of any other form, the several abscissas and ordinates should be calculated; then their corresponding lengths, transferred to the centering, will give so many points of the curve; by bending a bow of pliable matter, according to those points, the curve may be drawn.

The centres are constructed of beams of timber, firmly pinned and bound together, into one entire compact frame, covered smooth at top with planks or boards to place the voussoirs on; the whole supported by off-sets in the sides of the piers, and by piles driven into the bed of the river, and capable of being raised and depressed by wedges contrived for that purpose, and for taking them down when the arch is completed. They should also be constructed of a strength more than sufficient to bear the weight of the arch.

In taking the centre down, first let it down a little, all in a piece, by easing some of the wedges; then let it rest a few days to try if the arch makes any efforts to fall, or any joints open, or any stones crush or crack, &c. that the damage may be repaired before the centre is entirely removed, which is not to be done till the arch ceases to make any visible efforts.

• *Chest.* See *Caisson*.

*Coffin-dam.* See *Battardeau*.

*Drift,* } of an arch, is the push or  
*Shout, or* } force which it exerts in the  
*Thrust,* } direction of the length of  
the bridge. This force arises from the perpendicular gravitation of the stones of the arch, which being kept from descending by the form of the arch, and the resistance of the pier, exert their force in a lateral or horizontal direction. This force is computed in *Prop. 10*, of Mr. Hutton's *Principles of Bridges*, where the thickness of the pier is determined that is necessary to resist it, and is greater the lower the arch is, *ceteris paribus*.

*Elevation,* the orthographic projection of the front of a bridge, on the vertical plane, parallel to its length. This is necessary to shew the form and dimensions of the arches and other parts,

as to height and breadth, and therefore has a plain scale annexed to it, to measure the parts by. It also shews the manner of working up and decorating the fronts of the bridge.

*Extrados,* the exterior curvature, or line of an arch. In the propositions of the second section of Professor Hutton's *Principles of Bridges*, it is the outer or upper line of the wall above the arch; but it often means only the upper or exterior curve of the voussoirs.

*Foundations,* the bottoms of the piers, &c. or the bases on which they are built. These bottoms are always to be made with projection, greater or less, according to the spaces on which they are built. Agreeable to the nature of the ground, depth and velocity of water, &c. the foundations are laid, and the piers built after different manners, either in caissons, in battardeaux, on stilts with steelings, &c. for the particular method of doing which, see each under its respective term.

The most obvious and simple method of laying the foundations and raising the piers up to the water-mark, is to turn the river out of its course above the place of the bridge, into a new channel cut for it near the place where it makes an elbow or turn; then the piers are built on dry ground, and the water turned into its old course again; the new one being securely banked up. This is certainly the best method, when the new channel can be easily and conveniently made. It is, however, seldom or never the case.

Another method is, to lay only the space of each pier dry till it be built, by surrounding it with piles and planks driven down into the bed of the river, so close together as to exclude the water from coming in; then the water is pumped out of the inclosed space, the pier built in it, and lastly the piles and planks drawn up. This is coffin-dam work, but evidently cannot be practised if the bottom be of a loose consistence, admitting the water to ooze and spring up through it.

When neither the whole nor part of the river can be easily laid dry as above, other methods are to be used; such as to build either in caissons or on stilts, both which methods are described under their proper words; or yet by another method, which hath, though seldom, been

been sometimes used, without laying the bottom dry, and which is thus: the pier is built upon strong rafts or gratings of timber, well bound together, and buoyed up on the surface of the water by strong cables, fixed to the other floats or machines till the pier is built; the whole is then gently let down to the bottom, which must be made level for the purpose: but of these methods, that of building in caissons is best.

But before the pier can be built in any manner, the ground at the bottom must be well secured, and made quite good and safe, if it be not so naturally. The space must be bored into, to try the consistence of the ground; and if a good bottom of stone, or firm gravel, clay, &c. be met with, within a moderate depth below the bed of the river, the loose sand, &c. must be removed and digged out to it, and the foundation laid on the firm bottom on a strong grating or base of timber made much broader every way than the pier, that there may be the greater base to press on, to prevent its being sunk; but if a solid bottom cannot be found at a convenient depth to dig to, the space must then be driven full of strong piles, whose tops must be sawed off level some feet below the bed of the water, the sand having been previously dug out for that purpose; and then the foundation on a grating of timber laid on their tops as before: or, when the bottom is not good, if it be made level, and a strong grating of timber, 2, 3, or 4 times as large as the base of the pier be made, it will form a good base to build on, its great size preventing it from sinking. In driving the piles, begin at the middle, and proceed onwards all the way to the borders or margin; the reason of which is, that if the outer ones were driven first, the earth of the inner space would be thereby so jammed together, as not to allow the inner piles to be driven: and besides the piles immediately under the piers, it is also very prudent to drive in a single, double, or triple row of them round, and close to the frame of the foundation, cutting them off a little above it, to secure it from slipping aside out of its place, and to bind the ground under the pier firmer: for, as the safety of the whole bridge depends on the foundation, too much care

cannot be used to have the bottom made quite secure.

*Jettée*, the border made round the stilts under a pier. See *Sterling*.

*Impost* is the part of the pier on which the feet of the arches stand, or from which they spring.

*Key-stone*, the middle voussoir, or the arch-stone in the top or immediately over the centre of the arch. The length of the key-stone, or thickness of the archivolt at top, is allowed to be about 1-15th or 1-16th of the span by the best architects.

*Orthography*, the elevation of a bridge or front view, as seen at an infinite distance.

*Parapet*, the breast-wall made on the top of a bridge to prevent passengers from falling over. In good bridges, to build the parapet but a little part of its height close or solid, and upon that a balustrade to above a man's height, has an elegant effect.

*Piers*, the walls built for the support of the arches, and from which they spring as their bases. They should be built of large blocks of stone, solid throughout, and cramped together with iron, which will make the whole as one solid stone. Their faces or ends, from the base up to high-water mark, should project sharp out with a salient angle, to divide the stream: or perhaps the bottom of the pier should be built flat or square up to about half the height of low-water mark, to allow a lodgement against it for the sand and mud, to go over the foundation; lest, by being kept bare, the water should in time undermine, and so ruin or injure it. The best form of the projection for dividing the stream, is the triangle; and the longer it is, or the more acute the salient angle, the better it will divide it, and the less will the force of the water be against the pier; but it may be sufficient to make that angle a right one, as it will make the work stronger; and in that case the perpendicular projection will be equal to half the breadth or thickness of the pier. In rivers, on which large heavy craft navigate and pass the arches, it may, perhaps, be better to make the ends semicircular: for, although it does not divide the water so well as the triangle, it will both better turn off and bear the shock of the craft.

The

The thickness of the piers should be such as will make them of weight or strength sufficient to support their interjacent arch independent of any other arches; and then, if the middle of the pier be run up to its full height, the centering may be struck to be used in another arch before the haunches are filled up. The whole theory of the piers may be seen in the third section of Professor Hutton's *Principles of Bridges*.

They should be made with a broad bottom on the foundation, and gradually diminishing in thickness by off-sets up to low-water mark.

*Piles*, are timbers driven into the bed of the river for various purposes, and are either round, square, or flat like planks. They may be of any wood which will not rot under water; but oak and fir are mostly used, especially the latter, on account of its length, straightness, and cheapness. They are shod with a pointed iron at the bottom, the better to penetrate into the ground, and are bound with a strong iron-band or ring at top, to prevent them from being split by the violent strokes of the ram by which they are driven down.

Piles are either used to build the foundations on, or they are driven about the pier as a border of defence, or to support the centers on; and in this case, when the centering is removed, they must either be drawn up, or sawed off very low under water; but it is perhaps better to saw them off and leave them sticking in the bottom, lest the drawing of them out should loosen the ground about the foundation of the pier. Those to build on, are either such as are cut off by the bottom of the water, or rather a few feet within the bed of the river: or else such as are cut off at low-water mark, and then they are called stilts. Those to form borders of defence, are rows driven in close by the frame of a foundation, to keep it firm, or else they are to form a case or jettée about the stilts, to keep the stones within it, that are thrown in to fill it up: in this case the piles are grooved, driven at a little distance from each other, and plank piles set into the grooves between them, and driven down also, till the whole space is surrounded. Besides using this for stilts, it is sometimes

necessary to surround a stone pier with a sterling, or jettée, and fill it up with stones to secure an injured pier from being still more damaged, and the whole bridge ruined. The piles to support the centers may also serve as a border of piling to secure the foundation, cutting them off low enough after the center is removed.

*Pile-driver*, an engine for driving down the piles. It consists of a large ram or iron sliding perpendicularly down between two guide-posts; which being lifted up to the top of them, and there let fall from a great height, comes down upon the top of the pile with a violent blow. It is worked either with men or horses, and either with or without wheel-work. That which was used at the building of Westminster bridge, is perhaps the best ever invented.

*Pitch*, of an arch, the perpendicular height from the spring or impost to the key-stone.

*Plan*, of any part, as of the foundations, or piers, or superstructure, is the orthographic projection of it on a plane parallel to the horizon.

*Push*, of an arch. See *Drift*.

*Salient angle*, of a pier, the projection of the end against the stream, to divide itself. The right-lined angle best divides the stream, and the more acute, the better for that purpose; but the right angle is generally used, as making the best masonry. A semicircular end, though it does not divide the stream so well, is sometimes better in large navigable rivers, as it carries the craft the better off, or bears their shocks the better.

*Shoot*, of an arch. See *Drift*.

*Spungers*, are the first or lowest stones of an arch, being those at its feet, and bearing immediately on the impost.

*Sterlings*, or *Jettées*, a kind of case made about a pier of stilts, &c. to secure it, and is particularly described under the next word, *Stilts*.

*Stilts*, a set of piles driven into the space intended for the pier, whose tops being sawed level off, above low-water mark, the pier is then raised on them. This method was formerly used when the bottom of the river could not be laid dry; and these stilts were surrounded, at a few feet distance, by a row of piles and planks, &c. close to them like a

coffer-dam, and called a *sterling*, or *jettée*; after which loose stones, &c. are thrown or poured down into the space, 'till it is filled up to the top, by that means forming a kind of pier of rubble or loose work, and which is kept together by the sides or sterlings: this is then paved level at the top, and the arches turned upon it. This method was formerly much used; most of the large old bridges in England being erected that way, such as London bridge, Newcastle bridge, Rochester bridge, &c. But the inconveniences attending it are so great, that it is now quite disused: for, because of the loose composition of the piers, they must be made very large or broad, or else the arch must push them over, and rush down as soon as the center was drawn; which great breadth of piers and sterlings so much contracts the passage of the water, as not only very much to incommode the navigation through the arch, from the fall and quick motion of the water; but likewise to put the bridge itself in much danger, especially in time of floods, when the water is too much for the passage. Add to this, that besides the danger there is of the pier bursting out the sterlings, they are also subject to much decay and damage by the velocity of the water and the craft passing through the arches.

*Thrust, See Drift.*

*Voussours*, the stones which immediately form the arch, their undersides constituting the intrados. The middle one, or key-stone, should be about 1-15th or 1-16th of the span, as has been observed; and the rest should increase in size all the way down to the impost: the more they increase the better, as they will the better bear the great weight which rests upon them without being crushed; and also will bind the firmer together. Their joints should also be cut perpendicular to the curve of the intrados. For more information, see Professor Hutton's *Principles of Bridges*, Newcastle, 1772, in 8vo.

*BRIDGE*, in gunnery, the two pieces of timber which go between the two transoms of a gun-carriage, on which the coins are placed, for elevating the piece. See *CARRIAGE*.

*BRIDLE-Arm-Protect*, a guard used by the cavalry, which consists in having

the sword hilt above the helme; the blade crossing the back of the head, the point of the left shoulder, and the bridle-arm; its edge directed to the left, and turned a little upwards, in order to bring the mounting in a proper direction to protect the hand.

*BRIDON* or *BRIDNOON*, the snaffle and rein of a military bridle; which acts independent of the bit and curb at the pleasure of the rider.

*BRIGADE*, in military affairs, implies a party or division of a body of soldiers, whether horse, foot, or artillery, under the command of a brigadier. There are, properly speaking, three sorts of brigades, viz. the brigade of an army, the brigade of a troop of horse, and the brigade of artillery. A brigade of the army is either foot or dragoons, whose exact number is not fixed, but generally consists of 3 regiments, or 6 battalions: a brigade of horse may consist of 8, 10, or 12 squadrons; and that of artillery, of 8 or 10 pieces of cannon, with all their appurtenances. The eldest brigade takes the right of the first line, the second of the second line, and the rest in order, the youngest always possessing the center. The cavalry and artillery observe the same order.

The *horse artillery* in the British service are called the *horse Brigade*; and consist of 6 troops, with their guns and stores. Their head quarters are at Woolwich, where handsome barracks, detached from those of the royal artillery, have been erected for their accommodation.

*BRIGADE-Major*, an officer appointed by the brigadier, to assist him in the management of his brigade. The most experienced captains are generally nominated to this post. According to the regulations published by authority, a brigade-major is attached to the brigade, and not to any particular brigadier-general, as the *aid-de-camp* is.

*BRIGADE-Major-General*. The military commands in Great-Britain being divided into districts, an office has been established for the sole transaction of brigade duties. Through this office all orders from the commander-in-chief to the generals of districts relative to corps of officers, &c. must pass. For further information on this head, see James's *Regimental Companion*.

*BRIGADE of Engineers*, a brigade of engineers

engineers may consist of only two or three officers, who are attached to an army.

**BRIGADE**, *Fr.* according to the French signifies the union of several squadrons or battalions, under the command of one colonel, who has also the rank of brigadier general in the army.

Brigade also signifies the junction of two troops belonging to the same corps. Likewise the incorporation of several soldiers belonging to the same regiment.

**BRIGADE d'Artillerie**, *Fr.* a certain quantity of cannon, &c. with the necessary stores, &c. The soldiers that are attached to these guns, are collectively called a brigade.

**BRIGADE de Cavalerie**, *Fr.* Among the French a brigade of cavalry consists of different regiments, making together eight or ten squadrons, who are under the command of a superior officer, who is a colonel of cavalry, and has the rank of brigadier general in the army.

**BRIGADE de Dragons**, *Fr.* this brigade consists of different regiments of dragoons; making together, (according to the respective strength of each regiment) eight squadrons or more. It is commanded by a colonel of dragoons, who has also the rank of brigadier general in the army.

**BRIGADE d'Infanterie**, *Fr.* a brigade of infantry consists of one or more regiments of foot, making together four, five, six, or eight battalions, which are under the command of a colonel of foot, who has the rank of brigadier general in the army.

**BRIGADE de Boulangers**, *Fr.* It was usual in the old French service to brigade the bakers belonging to the army. Each brigade consisted of one master baker and three boys.

**BRIGADIER**, a military officer, whose rank is next above that of a colonel; appointed to command a corps, consisting of several battalions or regiments, called a brigade. This title in England is suppressed in time of peace, but revived in actual service in the field. Every brigadier marches at the head of his brigade upon duty. Brigadiers, whether of horse or foot, in garrison, or elsewhere, take command according to the dates of their commissions. Formerly the brigadier of foot commanded the brigadier of horse in

garrison; and the brigadier of horse, the brigadier of foot in the field.

**BRIGADIER**, (*Brigadier*, *Fr.*) a certain rank which is given to a mounted soldier. He is next to the quarter-master.

**BRIGADIER des Armées**, *Fr.* This corresponds with our term Brigadier-General. A brigadier-general ranks above a colonel, and has the command of a brigade of cavalry, dragoons, or infantry.

**BRIGADIER d'Equipage**, *Fr.* a sort of head commissary or wagon master general, who has the superintendence of the different carts, &c. belonging to an army.

**BRIGAND**, *Fr.* A free-booter; every soldier who, contrary to orders and the acknowledged usages of war, commits acts of plunder.

**BRIGANDINE** or **BRIGANTINE**, in ancient military history, a coat of mail, or kind of defensive armour, consisting of tin.

**BRIGUE**, *Fr.* a plot or conspiracy which is formed against a commanding officer, to deprive him of his situation.

**BRINGER**, a term used in the recruiting branch of the British service, to signify a person who produces a man or boy, within the regulated age, that is willing to enlist. He is allowed one guinea for his trouble.

**BRINGERS-up**, an antiquated military expression, to signify the whole rear rank of a battalion drawn up, as being the hindmost men of every file.

**BRINS-d'Est**, *Fr.* large sticks or poles resembling small pickets, with iron at each end. They are used to cross ditches, particularly in Flanders.

**BRISURE**, in fortification, is a line of 4 or 5 fathom, which is allowed to the curtain and orillon, to make the hollow tower, or to cover the concealed flank.

**BROADSIDE**, in a sea-fight, implies the discharge of all the artillery on one side of a ship of war.

**BROAD-SWORD**, a sword with a broad blade, chiefly designed for cutting; not at present much used in the British service, except by some few regiments of cavalry and Highland infantry. Among the cavalry, this weapon has in general given place to the sabre.

The principal guards with the broad sword are:

The *inside guard* (similar to carte in fencing

fencing) which is formed by directing your point in a line about 6 inches higher than your antagonist's left eye, the hilt opposite your own breast, the finger nails turned upwards, and the edge of the sword to the left.

The *outside guard* (resembling tierce) in which by a turn of the wrist from the former position the point of the sword is directed above your antagonist's right eye, and the edge of the weapon turned to the right, to protect the outside of your body from the attack.

The *medium guard*, which is a position between the inside and outside guard, seldom used, as it affords very little protection.

The *hanging guard* (similar to prime and seconde) in which the hilt of your sword is raised high enough to view your opponent under the shell, and the point directed towards his body.

The *St. George's guard*, which protects the head, and differs from the last described only in raising the hand somewhat higher, and bringing the point nearer to yourself.

The swords worn by officers of the infantry being constructed either for cutting or thrusting, it is necessary for gentlemen to be acquainted both with the method of attacking and defending with the broad sword and with the rapier. Those who have not the opportunity of regular lessons from a professed teacher, may obtain much useful information from a work entitled the *Art of Defence on Foot*, with the *Broad Sword*, &c. in which the spadron or cut and thrust sword play is reduced into a regular system.

**BRODEQUINS**, *Fr.* buskins or half boots. They are generally worn by light armed troops.

**BROND**. See **BRAND**.

**BROTHER - SOLDIERS**, (*Frères d'Armes*, *Fr.*) An affectionate and endearing term which is used among military men, from the commander in chief of an army to the lowest drummer inclusive. Soldiers ought, in fact, to constitute a family within themselves. The cause they have to defend, and the dangers they must encounter, are so many motives for mutual attachment.

**BROUETTE**, *Fr.* a wheelbarrow; such as is used in the construction or demolition of fortified places.

**BROWBILL**, the ancient weapon of the English foot, resembling a *batle-ax*.

**BRUNT**. The troops who sustain the principal shock of the enemy in action, are said to bear the *brunt* of the battle.

**BRUSQUER une attaque**, *Fr.* is to open the trenches in the nearest approaches to a place, completing the works from the front towards the rear. This undertaking is extremely hazardous, unless the object invested, or attacked, be ill-garrisoned, have a narrow front to besiege, or the ditches be dry, &c.

**BRUSQUER l'affaire**, *Fr.* to attack suddenly, and without attending to any regular rule of military manoeuvre.

**BUCCANEERS**, in military history, a name frequently applied to those famous adventurers, consisting of pirates, &c. from all the maritime nations of Europe, who formerly joined together, and made war upon the Spaniards in America.

**BUCKETS**. Water buckets are necessary appendages to field pieces, to cool the gun when hotly engaged; otherwise it might fire itself, or run at the muzzle.

**BUCKLER**, a piece of defensive armour used by the ancients. It was always worn on the left arm, and composed of wicker-work, of the lightest sort, but most commonly of hides, fortified with plates of brass or other metals. The shape of it varied considerably, being sometimes round, sometimes oval, and often nearly square.

**BUDGE-Barrels**. See **BARRELS**.

**BUFF-Leather**, in military accoutrements, is a sort of leather prepared from the buffalo, which, dressed with oil, after the manner of a shamoy, makes what is generally called buffskin. Troopers coulets, shoulder-belts, and sword-belts are made of this leather. The flaps of covers to the grenadiers pouches, and to those of the artillery, are made of this kind of leather.

**BUGLE-HORN**, the old Saxon horn; it is now used by all the light infantry in the British service. By its soundings their manoeuvres are directed, either in advancing, skirmishing, or retreating. It is also used by the horse artillery,

artillery, and some regiments of light cavalry.

**BUILDING**, in a general sense, a fabric erected by art, either for devotion, magnificence, convenience, or defence.

**Military BUILDINGS**, are of various sorts, viz. powder-magazines, bridges, gates, barracks, hospitals, store-houses, guard-rooms, &c.

**Regular BUILDING**, is that whose plan is square, the opposite sides equal, and all the parts disposed with symmetry.

**Irregular BUILDING**, that whose plan is not contained within equal or parallel lines, either by the accident of situation, or the design of the builder, and whose parts are not relative to one another in the elevation.

**Insulated BUILDING**, that which is not contiguous to any other, but is encompassed with streets, open squares, &c. or any building which stands in a river, on a rock surrounded by the sea, marsh, &c.

**Engaged BUILDING**, one surrounded with other buildings, having no front to any street or public place, nor any communication without, but by a common passage.

**Interred or sunk BUILDING**, one whose area is below the surface of the place where it stands, and of which the lowest courses of stone are concealed.

In *building* there are three things to be considered, viz. commodity or convenience; secondly, firmness or stability; thirdly, delight.

To accomplish which ends, Sir Henry Wotton considers the whole subject under two heads, namely the seat or situation and the work.

1. As for the seat, either that of the whole is to be considered, or that of its parts.

2. As to the situation, regard is to be had to the quality, temperature, and salubrity or healthiness of the air; that it be a good healthy air, not subject to foggy noisomeness from adjacent fens or marshes; also free from noxious mineral exhalations; nor should the place want the sweet influence of the sun-beams, nor be wholly destitute of the breezes of wind, that will fan and purge the air; the want of which would render it like a stagnated pool, and would be very unhealthy.

In the foundations of *buildings*, Vitruvius orders the ground to be dug up, to examine its firmness; that an apparent solidity is not to be trusted, unless the whole mould cut through be sound and solid: 'tis true, he does not say to what depth it should be dug; but Palladio determines it to be a sixth part of the height of the building.

The great laws of walling are:—

1. That the walls stand perpendicular on the ground-work, the right angle being the foundation of all stability. 2. That the largest and heaviest materials be the lowest, as more proper to sustain others than be sustained themselves. 3. That the work diminish in thickness, as it rises, both for the ease of weight and to lessen the expence. 4. That certain courses, or lodges, of more strength than the rest, be interlaid, like bones, to sustain the wall from total ruin, if some of the under parts chance to decay. 5. Lastly, that the angles be firmly bound, they being the nerves of the whole fabric. These are sometimes fortified on each side the corners, even in brick buildings, with square stones; which add both beauty and strength to the edifice.

**BUINDÈS**, *Fr.* A shield used by the Turks and Tartars when they fight with sabres.

**BULLETIN**, *Fr.* any official account which is given of public transactions. See *GAZZETTE*.

**BULLETS**, are leaden balls, where-with all kinds of small fire-arms are loaded. The diameter of any bullet is found, by dividing 1.6706 by the cube root of the number, which shews how many of them make a pound; or it may be done in a shorter way. From the logarithm .2228756 of 1.6706 subtract continually the third part of the logarithm of the number of bullets in the pound, and the difference will be the logarithm of the diameter required.

Thus the diameter of a bullet, where-of 12 weigh a pound, is found by subtracting .3597270, a third part of the logarithm of 12, from the given logarithm .2228756, or, when the logarithm is less than the former, an unit must be added, so as to have 1.2228756, and the difference .8631486 will be the logarithm of the diameter sought, which is .7297 inches; observing that the number

number found will always be a decimal, when the logarithm, which is to be subtracted, is greater than that of one pound; because the divisor is greater than the dividend in this case.

Hence, from the specific gravity of lead, the diameter of any bullet may be found from its given weight: for, since a cube foot weighs 11325 ounces, and 678 is to 355 as the cube 1728 of a foot, or 12 inches, is the content of the sphere, which therefore is 5929.7 ounces; and since spheres are as the cubes of their diameters; the weight 5929.7 is to 16 ounces, or a pound, as the cube 1728 is to the cube of the diameter of a sphere which weighs a pound; which cube therefore is 456263, and its root 1.6706 inches, the diameter sought.

The diameter of musket bullets differs but 1-50th part from that of the musket bore; for if the shot but just rolls into the barrel, it is sufficient. Government allows 11 bullets in the pound for the proof of muskets, and 11 in the pound, or 29 in two pounds, for service; 17 for the proof of carbines, and 20 for service; and 23 in the pound for the proof of pistols, and 34 for service.

**BULLET**, ball or shot, have various denominations according to the use that is made of them, viz.

**Hollow BULLETS**, or shells, of a cylindrical shape. These have an opening and a fuze at the end, by which fire is communicated to the combustibles within, and an explosion takes place, similar to that occasioned by the blowing up of a mine.

**Chain BULLETS**, are two balls which are joined together by a chain, at any given distance from each other.

**Branch BULLETS**, two balls joined together by an iron bar.

**Two-headed BULLETS**, sometimes called angles, are two halves of a bullet which are kept together by means of a bar or chain.

**BULWARK**, the ancient name for bastion or rampart, which words see.

**BURDEN**, } in a general sense,  
**BURTHEN**, } implies a load or weight, supposed to be as much as a man, horse, &c. can well carry. A sound healthful man can raise a weight equal to his own, can also draw and carry 50lb. a moderate distance. An

able horse can draw 350lb, though in length of time 300 is sufficient. Hence all artillery calculations are made. (One horse will draw as much as 7 men, and 7 oxen will draw as much as 11 or 12 horses. Burthen likewise in a figurative sense means impost, tax, &c.

**BURGANET** or **BURGONET**, *Fr.* a kind of helmet used by the French.

**BURIALS**, as practised by the military, are as follows, viz. The funeral of a field-marshal shall be saluted with 3 rounds of 15 pieces of cannon, attended by 6 battalions, and 8 squadrons.

That of a general, with 3 rounds of 11 pieces of cannon, 4 battalions, and 6 squadrons.

That of a lieutenant-general, with 3 rounds of 9 pieces of cannon, 3 battalions, and 4 squadrons.

That of a major-general, with 3 rounds of 7 pieces of cannon, 2 battalions, and 3 squadrons.

That of a brigadier-general, 3 rounds of 5 pieces of cannon, 1 battalion, and 2 squadrons.

That of a colonel, by his own battalion, or an equal number by detachment, with 3 rounds of small arms.

That of a lieutenant-colonel, by 300 men and officers, with 3 rounds of small arms.

That of a major, by 200 men and officers, with 3 rounds of small arms.

That of a captain, by his own company, or 70 rank and file, with 3 rounds of small arms.

That of a lieutenant, by 1 lieutenant, 1 serjeant, 1 drummer, 1 fifer, and 36 rank and file, with 3 rounds.

That of an ensign, by an ensign, a serjeant, and drummer, and 27 rank and file, with 3 rounds.

That of an adjutant, surgeon, and quarter-master, the same party as an ensign.

That of a serjeant, by a serjeant, and 19 rank and file, with 3 rounds of small arms.

That of a corporal, musician, private man, drummer, and fife, by 1 serjeant and 13 rank and file, with 3 rounds of small arms.

All officers, attending the funerals of even their nearest relations, shall notwithstanding wear their regimentals, and only have a black crape round their left arm.

The pall to be supported by officers of the same rank with that of the deceased; if the number cannot be had, officers next in seniority are to supply their place.

The order of march to be observed in military funerals is reversed with respect to rank. For instance, if an officer is buried in a garrison town or from a camp, it is customary for the officers belonging to other corps to pay his remains the compliment of attendance. In which case the youngest ensign marches at the head immediately after the pall, and the general, if there be one, in the rear of the commissioned officers, who take their posts in reversed order according to seniority. The battalion, troop or company follow the same rule. The expence for a regimental burial is to be charged against the captains of the respective troops or companies.

For further particulars. See Reid's Military Discipline.

**BULL**, in gunnery, a round iron ring, which serves to rivet the end of the bolt, so as to form a round head.

**BULLET**, shot, small bullets, nails, and stones discharged from any piece of ordnance.

**BUSKINS**, a kind of shoe, or half

boot, adapted to either foot; formerly a part of the Roman dress, particularly for tragic actors on the stage. They are now much worn by the army.

**BUTIERE**, *Fr.* A species of large fire-arm, which was formerly used among the French to fire point-blank.

**BUTIN**, *Fr.* booty or pillage. At the beginning of the French monarchy, and for a long time after its establishment, a particular spot was marked out by the prince or general, to which all persons belonging to the victorious army were directed to bring every species of booty that might have fallen into their hands. This booty was not divided, or appropriated according to the will and pleasure of the prince or general, but was thrown into different lots, and drawn for in common.

**BUTMENTS**. See BRIDGERS.

**BUTT**, in gunnery, is a solid earthen parapet, to fire against in the proving of guns, or in practice.

**BUTTON**, in gunnery, a part of the cascable, in either a gun or howitzer, and is the hind part of the piece, made round in the form of a ball. See CANNON.

**BUTRESS**. See COUNTERFORT.

**BUZE**, a wooden, or leaden pipe, to convey the air out of mines.

**CABAS**, *Fr.* a basket made of rushes which is used in Languedoc and Roussillon, for the purpose of conveying stores and ammunition. This term is adopted in military inventories.

**CABASSET**, *Fr.* A piece of armour which was formerly used by foot-soldiers to cover the head. A slight kind of helmet.

**CABINET COUNCIL**, a council held with privacy and unbounded confidence.

**CABLE** ou **CHABLE**, *Fr.* a large rope which is used in the French artillery.

**CACADE**, *Fr.* a word used among the French to signify an unlucky enterprise in war, occasioned by an ill-concerted measure for the prosecution of it, and by ignorance or want of courage in its execution.

**CADENCE**, in tactics, implies a very regular and uniform method of marching, by the drum and music; beating time; it may not be improperly called mathematical marching; for after the length of a step is determined, the time and distance may be found. It is by a continual practice and attention to this, that the Prussians have arrived at that point of perfection, so much admired in their evolutions.

**CADENCE** or *Cadency*, in cavalry, is an equal measure or proportion, which a horse observes in all his motions.

**CADET**, among the military, is a young gentleman, who applies himself to the study of fortification and gunnery, &c. and who sometimes serves in the army, with or without pay, 'till a vacancy happens for his promotion. There is a company of gentlemen cadets maintained

maintained at Woolwich, at the King's expence, where they are taught all the sciences necessary to form a complete officer. Their number has lately been increased, and commissions are given to them when qualified. The proper signification of the word is, younger brother. See ACADEMY.

CADET, *Fr.* differs in its signification from the term as it is used in our language. A cadet in the French service did not receive any pay, but entered as a volunteer in a troop or company, for the specific purpose of becoming master of military tactics.

In the reign of Louis XIV. there were companies of Cadets. The sons of noblemen and gentlemen of fashion were received into these companies, and when reported fit to undertake a military function, were nominated cornets, sub-lieutenants or ensigns. In the reign of Louis XV. a regulation was made, by which no cadet could be admitted unless he had passed his fifteenth year and was under twenty.

He was likewise obliged to prove his nobility by the testimony of four gentlemen; officers' sons, however, were admitted on proof being given, that their fathers had actually served, or had died in the service.

A chaplain was appointed to every cadet-company, whose duty it was to instruct the cadets in reading and writing. They had likewise a master in mathematics, a drawing master, a fencing master and a dancing master.

CADRE, *Fr.* likewise means any officer that is junior to another.

CEMENT, } among engineers, a  
CEMENT, } strong sort of mortar, used to bind bricks or stones together for some kind of moulding; or in cementing a block of bricks for the carving of capitals, scrolls, or the like. There are two sorts, i. e. hot cement, which is the most common, made of resin, beeswax, brick-dust, and chalk, boiled together. The bricks to be cemented with this mixture, must be made hot in the fire and rubbed to and fro after the cement is spread, in the same manner as joiners do when they glue two boards together. Cold cement, made of Gloucestershire cheese, milk, quick lime, and whites of eggs. This cement is less used than the former, and is accounted

a secret known but to very few bricklayers.

CÆSTUS, in military antiquity, was a large gauntlet, composed of raw hides, used by pugilists at the public games.

CAGE *de la Bascule*, *Fr.* a space into which one part of the draw-bridge falls, whilst the other rises and conceals the gate.

CAIUTE, *Fr.* a small hut or cabin which soldiers make to defend them against the inclemency of the weather.

CAIC, *Fr.* a skiff or boat belonging to a French galley.

CAIMACAN, in military history, an officer among the Turks, nearly answering to our lieutenant.

CAISSE, *Fr.* a sort of wooden box in which the necessary charge for the explosion of a mine is deposited.

CAISSE, *Fr.* the military chest, containing the necessary funds for the payment of a troop or company, regiment or army.

CAISSE, also signifies a drum.

CAISSE, *Fr.* *Battre la caisse* is used in the French service to express the beating of a drum instead of *battre le Tambour*.

CAISSIER, *Fr.* a treasurer. Any person entrusted with regimental monies. A paymaster.

CAISSON, in military affairs, is a wooden frame or chest, made square, the side planks about 2 inches thick: it may be made to contain from 4 to 20 loaded shells, according to the execution they are to do, or as the ground is firmer or looser. The sides must be high enough, that when the cover is nailed on, the fuzes may not be damaged. *Caissons* are buried under ground at the depth of 5 or 6 feet, under some work the enemy intends to possess himself of; and when he becomes master of it, fire is put to the train conveyed through a pipe, which inflames the shells, and blows up the assailants. Sometimes a quantity of loose powder is put into the chest, on which the shells are placed, sufficient to put them in motion, and raise them above ground: at the same time that the blast of powder sets fire to the fuzes in the shells, which must be calculated to burn from 1 to 2½ seconds. When no powder is put under the shells, a small quantity of incased powder must be strewed over them, having

having a communication with the saucisson, in order to convey the fire to the fuzes.

**CAISSON**, as in some old military books, is a covered wagon, to carry bread or ammunition.

**CAISSON**, *Fr.* is variously used in the French service.

**CAISSON des bombes**, *Fr.* A tub which is filled with loaded shells and buried even with the ground. It is inclined a little on one side, and by means of a quantity of powder which is scattered on the top and connected with the bottom by a saucisson, an explosion may be effected so as to throw the shells into the open air towards any given point. **Caissons** which are buried in the glacis produce great effect.

**CAISSON pour les vivres**, *Fr.* A large chest whose lid rises in the center somewhat like the capital of a pillar, in order that the rain may run off. The following dimensions might contain eight hundred rations at least.

The caisson or chest must be 8 French feet 4 inches long at least, 3 feet 4 inches high from the bottom to the extreme point of the lid, or chapter, 2 feet 6 inches from its square sides to the bottom, 2 feet 5 inches broad at the bottom, outside, 2 feet 9 inches broad at top, and the cover or lid must be 5 feet 4 inches long. Poplar trees afford the best wood for the construction of caissons, because that species has a close grain, and is best calculated to keep out rain.

**CALATRAVA**, a Spanish military order so called from a Fort of that name.

The knights of Calatrava bear a cross; gules, fleur-de-lis with green, &c.

**CALCULATION**, in military affairs, is the art of computing the amplitudes of shells, time of flight, projectile curve, velocity of shots, charges of mines, &c. together with the necessary tables for practice.

**CALIBER**, in gunnery, signifies the same as the bore or opening; and the diameter of the bore is called the diameter of its calibre. This expression regards all pieces of artillery.

**CALIBER-Compasses**, } the name of a  
**CALIPER-Compasses**, } particular in-  
strument used by gunners, for measuring  
the diameters of shot, shells, &c. as also

the cylinder of cannon, mortars, and howitzers. They resemble other compasses, except in their legs, which are arched in order that the points may touch the extremities of the arch. To find the true diameter of a circle, they have a quadrant fastened to one leg, and passing through the other, marked with inches and parts, to express the diameter required: the length of each ruler or plate is usually between the limits of 6 inches and a foot. On these rulers are a variety of scales, tables, proportions, &c. such as are esteemed useful to be known by gunners. The following articles are on the completest gunners-callipers, viz. 1. The measure of convex diameters in inches. 2. Of concave ditto. 3. The weight of iron shot from given diameters. 4. The weight of iron shot from given gun bores. 5. The degrees of a semicircle. 6. The proportion of troy and avoirdupois weight. 7. The proportion of English and French feet and pounds. 8. Factors used in circular and spherical figures. 9. Tables of the specific gravity and weights of bodies. 10. Tables of the quantity of powder necessary for proof and service of brass and iron guns. 11. Rules for computing the number of shot or shells, in a finished pile. 12. Rule concerning the fall of heavy bodies. 13. Rules for raising of water. 14. Rules for firing artillery and mortars. 15. A line of inches. 16. Logarithmic scales of numbers, sines, versed sines and tangents. 17. A sectoral line of equal parts, or the line of lines. 18. A sectoral line of plans, and superficies. 19. A sectoral line of solids.

**CALIBRE**, *Fr.* See **CALIBER**.

**CALIBRE**, *Fr.* signifies, in a figurative sense, cast or character; as *un homme de ce calibre*, a man of this cast.

**CALIBRER**, *Fr.* to take the measurement of the calibre of a gun. A particular instrument has been invented for this purpose. It resembles a compass with curved branches, which serve to grasp and measure a ball.

**CALIVER**, an old term for an arquebuse or musket.

**CALOTE**, *Fr.* a species of scull-cap which officers and soldiers wear under their hats in the French cavalry, and which are proof against a sabre or sword.

word. Calotes are usually made of iron, wick, or dressed leather, and every officer chooses the sort he likes best. Those delivered out to the troops are made of iron.

**CALQUING**, the art of tracing

**CALKING**, any kind of a military drawing, &c. upon some plate, paper, &c. It is performed by covering the backside of the drawing with a black or red colour, and fixing the side so covered upon a piece of paper, waxed plate, &c. This done, every line in the drawing is to be traced over with a point, by which means all the outlines will be transferred to the paper or plate, &c.

**CALTROPS**, in military affairs, are pieces of iron having 4 points, all disposed in a triangular form; so that 3 of them always rest upon the ground, and the 4th stands upwards in a perpendicular direction. Each point is 3 or 4 inches long. They are scattered over the ground and passages where the enemy is expected to march, especially the cavalry, in order to embarrass their progress.

• **CAMARADE**. See **COMRADE**.

**CAMION**, *Fr.* a species of cart or dray which is drawn by two men, and serves to convey cannon-bills, &c. These carts are very useful in fortified towns.

It is also called *Petit Tombereau*, small tumbrel.

**CAMISADE** or **CAMISADO**, *Fr.* in military transactions, implies an attack by surprise, either during the night, or at break of day, when the enemy is supposed to be asleep or off his guard.

**CAMOUFLET**, *Fr.* in war, a kind of stinking combustibles blown out of paper cases, into the miners faces, when they are at work in the galleries of the countermines.

**CAMOUFLET** also signifies the sudden explosion of a pistol, &c. which takes place when miners encounter one another; hence *donner le Camouflet*, to take another by surprise or fire at him unexpectedly.

**CAMP**, in military affairs, is the whole extent of ground, in general, occupied by an army pitching its tents when in the field, and upon which all its baggage and apparatus are lodged. It is marked out by the quarter-master-general, who allots to every regiment its ground. The extent of the front of a

regiment of infantry is 200 yards, including the two battalion guns, and depth 320, when the regiment consists of 9 companies, each of 100 private men, and the companies tents in two rows; but when the companies tents stand in one row, and about 70 private men to each row, the front is then but 155 yards. A squadron of horse has 120 yards in front, and 100 for an interval between each regiment.

The nature of the ground must also be consulted, both for defence against the enemy, and for supplies to the army. It should have a communication with that army's garisons, and have plenty of water, forage, fuel, and either rivers, marshes, hills, or woods to cover it. An army always encamps fronting the enemy, and generally in two parallel lines, besides a corps de reserve, about 500 yards distant from each other; the horse and dragoons on the wings, and the foot in the centre. Where and how the train of artillery is encamped, see *Park of artillery*, and *Encampment of a regiment of artillery*, under the word **ARTILLERY**.

Each regiment posts a subaltern's guard at 80 yards from the colours, the officer's tent, called the *quarter-guard*, besides a corporal's guard in the rear; and each regiment of horse or dragoons, a small guard on foot, called the *standard-guard*, at the same distance. The grand guard of the army consists of horse, and is posted about a mile distant towards the enemy.

In a siege, the camp is placed all along the line of circumvallation, or rather in the rear of the approaches, out of cannon-shot; the army faces the circumvallation, if there be any.

There is one thing very essential in the establishing a camp, and which should be particularly attended to, if the enemy is near, which is, that there should not only be a commodious spot of ground at the head of the camp, where the army, in case of surprise, may in a moment be under arms, and in condition to repulse the enemy; but also a convenient field of battle at a small distance, and of a sufficient extent for them to form advantageously, and to move with facility.

The arrangement of the tents in camp, is nearly the same all over Europe, which is to dispose them in such a manner,

ner, that the troops may form with safety and expedition.

To answer this end, the troops are encamped in the same order, as that in which they are to engage, which is by battalions and squadrons; hence, the post of each battalion and squadron in the line of battle, must necessarily be at the head of its own encampment. Gustavus Adolphus, king of Sweden, was the first who formed encampments according to the order of battle.

By this disposition, the extent of the camp from right to left, of each battalion and squadron, will be equal to the front of each in line of battle; and consequently, the extent from right to left of the whole camp, should be equal to the front of the whole army when drawn up in line of battle, with the same intervals between the several encampments of the battalions and squadrons, as are in the line.

There is no fixed rule for the intervals: some will have no intervals, some small ones, and others are for intervals equal to the front of the battalion or squadron. The most general method is, an interval of 60 feet between each battalion, and of 36 feet between each squadron.

Hence it follows, 1st, That the front line of the camp must be in a direction to face the enemy; 2dly, That at the head of the encampment of each battalion and squadron, there must be a clear space of ground, on which they may form in line of battle; and 3dly, That when the space taken up by the army is embarrassed with woods, ditches, and other obstructions, a communication must be opened for the troops to move with ease to the assistance of each other.

The camps of the Greeks and Romans were either round, square, or oval, or rather of an oblong square figure, with the sharp corners taken off; and to secure them against surprises, it was the prevailing custom to surround them with intrenchments. The camps of the Anglo-Saxons and Danes were generally round, as likewise those of the Anglo-Normans. The camps of the ancient Britons were of an oval form, composed of stakes, earth, and stones, rudely heaped together: but the practice of the present times is quite different; for the security of our camps, whose form is a

rectangle, consists in being able to draw out the troops with ease and expedition at the head of their respective encampments.

*CAMP of a battalion of infantry*, is the ground on which they pitch their tents, &c.

The principal object in the arrangement of a camp, is, that both officers and men may repair with facility and expedition to the head of the line; for which reason the tents are placed in rows perpendicular to the front of the camp, with spaces between them, called streets. The general method is, to form as many rows of tents as there are companies in the battalion; those for the private men in the front, and those for the officers in the rear.

The several companies of a battalion are posted in camp, in the same manner as in the line of battle; that is, the company of grenadiers on the right, and that of light-infantry on the left; the colonel's company on the left of the grenadiers, the lieutenant-colonel's on the right of the light-infantry, the major's on the left of the colonel's, the eldest captain's on the right of the lieutenant-colonel's; and so on from right to left, till the two youngest companies come into the centre.

The battalion companies are posted two by two; that is, the tents of every two of these companies are ranged close together, to obtain, though they be fewer in number, larger and more commodious streets: the entrances of all the companies tents face the streets, except the first tent of each row belonging to the sergeants, which faces the bells of arms and front of the camp.

The number of tents in each perpendicular row is regulated by the strength of the companies, and the number of men allowed to each tent, which was formerly 5 men: thence it follows, that a company of 60 men will require 12 tents, a company of 75 men 15 tents, and a company of 100 men 20 tents; but as it always happens, that some are on duty, fewer tents may serve in time of necessity. Round tents have lately been adopted, which contain a greater number of men.

When the battalion is in the first line of encampment, the privies are opened in the front, and at least 150 feet beyond the quarter-guard; and when in

the second line, they are opened in the rear of that line.

To distinguish the regiments, camp colours are fixed at the flanks, and at the quarter and rear guards.

The colours and drums of each battalion are placed at the head of its own grand street, in a line with the bells of arms of the several companies. The officers' positions were formerly placed at the colours, with the broad part of their spears to the front. The sergeants' halberts are placed between, and on each side of the bells of arms, with their hatchets turned from the colours.

When two field-pieces are allowed to each battalion, they are posted to the right of it. Gustavus Adolphus, king of Sweden, was the first who ordered two field-pieces to each battalion, which are generally light 6-pounders.

*Distribution of the front and depth of the CAMP for a battalion of infantry.* The present mode of encampments differs from what was formerly adopted. The front of the camp for a battalion of 10 companies of 60 men each, is at present 400 feet, and during the late wars only 360 feet; the depth at present 750 feet, and during the late war 960. The front of the camp of a battalion of 10 companies of 100 men each, is at present 668 feet, and formerly only 592. The breadth of the streets from 45 to 55 feet, excepting the main street, which is sometimes from 60 to 90 feet broad.

*Of the CAMP of a battalion by a new method.* This is, by placing the tents in 3 rows, parallel to the principal front of the camp; which is suitable to the 3 ranks in which the battalion is drawn up: the tents of the first row, which front the camp, are for the men of the front rank: the tents of the second row front the rear, and are for the men of the second rank; and the tents of the third row, which front the center row, are for the men of the rear rank.

*CAMP of Cavalry.* The tents for the cavalry, as well as for the infantry, are placed in rows perpendicular to the principal front of the camp; and their number is conformable to the number of troops. The horses of each troop are placed in a line parallel to the tents, with their heads towards them.

The number of tents in each row, is regulated by the strength of the troops,

and the number of troopers allotted to each tent is 5: it follows, that a troop of 30 men will require 6 tents, a troop of 60 men 12 tents, and a troop of 100 men 20 tents. The tents for the cavalry are of the same form as those of the infantry, but more spacious, the better to contain the fire-arms, accoutrements, saddles, bridles, boots, &c. See TENTS.

*Distribution of the front and depth of a CAMP of cavalry.* Supposing the regiment to consist of 2 squadrons, of 3 troops each, and of 50 men in each troop, the extent of the front will be 450 feet, if drawn up in 2 ranks; but if drawn up in 3 ranks, the front will be only 300 feet, the depth 220, and the breadth of the back streets 30 feet, and the other streets 46 feet each. In the last war 600 feet were allowed each regiment of cavalry in front, 774 feet for the depth, and the breadth of the streets as above.

The standard-guard tents are pitched in the centre, in a line with the quarter-master's. The camp colours of the cavalry are also of the same colour as the facings of the regiment, with the rank of the regiment in the centre: those of the horse are square, like those of the foot; and those of the dragoons are swallow-tailed. The dung of each troop is laid up behind the horses.

*CAMP duty,* consists in guards, both ordinary and extraordinary: the ordinary guards are relieved regularly at a certain hour every day (generally about 9 or 10 o'clock in the morning); the extraordinary guards are all kinds of detachments commanded on particular occasions for the further security of the camp, for covering the foragers, for convoys, escorts, or expeditions.

The ordinary guards are distinguished into grand guards, standard, and quarter guards; rear guards, picket guards, and guards for the general officers; train of artillery, bread wagons, pay-master general, quarter-master general, majors of brigade, judge advocate, and provost marshal guards.

The number and strength of the grand guards and out-posts, whether of cavalry or infantry, depend on the situation of the camp, nature of the country, and the position of the enemy. The strength of general officers' guards is limited.

*CAMP maxims,* are 1. The principal rule

rule in forming a *camp*, is to give it the same front the troops occupy in order of battle.

2. The method of encamping is by battalions and squadrons, except the royal regiment of artillery, which is encamped on the right and left of the park of artillery. See ARTILLERY PARK, and *Encampment of a regiment of artillery*.

3. Each man is allowed 2 feet in the ranks of the battalion, and 3 feet in the squadron: thence the front of a battalion of 900 men, formed 3 deep, will be 600 feet; and the front of a squadron of 150 men, formed 2 deep, will be 225 feet.

4. The depth of the *camp* when the army is encamped in 3 lines, is at least 2750 feet; that is, 750 feet for the depth of each line, and 250 feet for the space between each of those lines.

5. The park of artillery should always be placed on a dry rising ground, if any such situation offers; either in the centre of the front line, or in the rear of the second line; with all the train horses encamped in the rear of the park.

6. The bread-wagons should be stationed in the rear of the *camp*, and as near as possible to the centre, that the distribution of bread may be rendered easy.

7. When the commander in chief encamps, it is generally in the centre of the army; and the town or village chosen for his residence is called head quarters.

8. That general is inexcusable, who, for his own personal accommodation, makes choice of quarters that are not properly secured, or at too great a distance to have an easy communication with the *camp*.

9. If the ground permits, the troops should be encamped as near to good water as possible.

10. When there are hussars, they are generally posted near the head quarters, or in the front of the army.

11. The ground taken up by the encampment of an army, should be equally distributed, and, if possible, in a straight line; for then the whole will have more grace; for a crooked line, and an inequality of disposition, afford a very unpleasant view both of the

*camp*, and of the troops when they are under arms.

12. Cleanliness is essentially necessary to the health of a *camp*, especially when it is to remain for any length of time. To maintain this, the privies should be often filled up, and others opened; at least every 6 days. The oil of cattle, and the carcasses of dead horses, should be buried very deep; and all kinds of corrupt effluvia, that may infect the air and produce epidemical disorders, should be constantly removed.

*Choice of CAMPS.* 1. At the beginning of a campaign, when the enemy is at too great a distance to occasion any alarm, all situations for *camps* that are healthy are good, provided the troops have room, and are within reach of water, wood, and provisions. More ground should be allowed to the troops in stationary *camps*, than in temporary ones.

2. *Camps* should be situated as near as possible to navigable rivers, to facilitate the conveyance of all manner of supplies; for convenience and safety are the principal objects for *camps*.

3. A *camp* should never be placed too near heights, from whence the enemy may overlook it; nor too near woods, from whence the enemy may surprise it. If there are eminences, not commanded by others, they should be taken into the *camp*; and when that cannot be done, they should be fortified.

4. The choice of a *camp* depends in a great measure on the position of the enemy, on his strength, and on the nature and situation of the country.

5. A skilful general will avail himself of all the advantages for a *camp*, which nature may present, whether in plains, mountains, ravines, hollows, woods, lakes, inclosures, rivers, rivulets, &c.

6. The disposition of the troops in *camp* should depend on the nature and situation of the ground; as there are occasions which require all the infantry to encamp on the right, and the cavalry on the left; and there are others which require the cavalry to form in the centre, and the infantry on the wings.

7. A *camp* should never be formed on the banks of a river, without the space of

of at least 2 or 3000 feet, for drawing out the army in order of battle; the enemy cannot then easily alarm the camp, by artillery and small arms from the other side.

8. *Camps* should never be situated near rivers that are subject to be overflowed, either by the melting of the snow, or by accidental torrents from the mountains. Marshy grounds should also be avoided, on account of the vapours arising from stagnant waters, which infect the air.

9. On the choice of *camps* and posts, frequently depends the success of a campaign, and even sometimes of a war.

*Camp guards.* They are of two sorts; the one serves to maintain good order within the camp; and the other, which is stationed without the camp, serves to cover and secure it against the enemy. These guards are formed of both infantry and cavalry; and in proportion to the strength of the army, situation of the camp, and disposition of the enemy. Sometimes it is required, that these guards should consist of the 8th part of the army; at others, of the 3d part; and when an attack from the enemy is apprehended, even of the half.

*Manner of stationing the Camp guards.* It is of the utmost consequence to station the guards in such places, as may enable them to discover easily whatever approaches the camp.

2. The guards of the cavalry are generally removed further from the camp, than those of the infantry; but never at so great a distance, as to endanger their being cut off; within cannon-shot is a very good distance. They are often stationed in highways, in open places, and on small heights; but, they are always so disposed, as to see and communicate with one another.

3. The vedettes to the out-posts should be double; for should they make a discovery, one may be detached to inform the officer commanding the out-post, and the other remain on duty; they should not be at too great a distance from their detachment; probably, about 50 or 60 paces will be sufficient.

4. The guards of infantry have different objects, and are differently stationed: their duty is, to receive and support the guards of cavalry in cases of need; to protect the troops sent out

for wood, forage, or water; in short to prevent any approaches from the small parties of the enemy. Some are stationed in the churches of the neighbouring villages, in castles, houses, and in passages and avenues of woods; others are stationed on the borders of rivulets, and in every place necessary to secure the camp. Guards that are stationed in churches, steeples, in woods or among trees, castles, and houses, should if possible, be seen from the army, or at least from some grand guard in its neighbourhood, that signals may be readily perceived and repeated.

5. The guards of infantry are generally fixed; that is, they have the same post both day and night, except such as are to support and protect the guards of cavalry, and to cover the forage grounds. All out-guards should have intrenching-tools with them.

6. The guards of cavalry have generally a day-post and a night-post; the latter is seldom more than 4 or 500 paces from the camp; one third should be mounted, one third bridled, and one third feeding their horses; but when near the enemy, the whole guard should be kept mounted during the night.

7. The security and tranquility of a camp depending upon the vigilance of the guards, the officers who command them cannot be too active in preventing surprises: a neglect in this particular is often of fatal consequence. Though an officer should, at all times, be strictly attentive to every part of the service, yet he should be more particularly watchful in the night than in the day. The night is the time most favourable for surprises; as those who are not on duty, are generally asleep, and cannot immediately afford assistance; but in the day time, the attention of all the troops is turned to the movements of the enemy; they are sooner under arms, sooner in readiness to march, and in much less danger of being thrown into confusion. It ought also to be remembered, that the officer of the quarter-guard and the advanced sentries, should never permit any person in coloured clothes to pass the front line of the camp, or in any shape enter it, without being minutely questioned as to his situation in life, &c. For this end, he should be conducted to the quarter guard, there to give in writing the

The necessary information. Those who wish to be better acquainted with the nature and mode of encampments, may read Mr. Luché's useful *Essay on Camptaculation*.

Concerning the healthiness of the different seasons of a campaign, the ingenious Dr. Pringle has the following observations. The first 3 weeks is always sickly; after which the sickness decreases, and the men enjoy a tolerable degree of health throughout the summer, unless they get wet clothes. The most sickly part of the campaign is towards the end of August, whilst the days are still hot, but the nights cold and damp with fogs and dews; then, if not sooner, the dysentery prevails; and though its violence is over by the beginning of October, yet the remitting fever, sweating ground, continues throughout the rest of the campaign, and never entirely ceases, even in winter quarters, 'till the frost begins. He likewise observes, that the last 11 days of a campaign, if protracted, 'till the beginning of November, are attended with more sickness than the two first months of the encampment. As to winter expeditions, though severe in appearance, he tells us they are attended with little sickness, if the men have strong and good shoes, warm quarters, fuel, and provisions enough.

**CAMP-COLOUR-MEN.** Men who carry the camp-colours. Each regiment has generally 6, and sometimes 1 per company; they always march with the quartermaster, to assist in making the necessary preparations against the arrival of the regiment in a new encampment.

**CAMP-FIGHT,** an old term for COMBAT.

**Flying-CAMP,** or army, generally means a strong body of horse and foot, commanded for the most part by a lieutenant-general, which is always in motion, both to cover its own garrisons, and to keep the enemy's army in a continual alarm. It is sometimes used to signify the ground on which such a body of men encamps.

**CAMP-UTENSILS,** in war time, are hatchets, shovels, mattocks, blankets, camp-kettles, canteens, tents, poles and pins: that is, each company has 10 shovels, and 5 mattocks; each tent 1 hatchet, 2 blankets, 1 camp-kettle, with its linen

bag; and each soldier 1 canteen, 1 knapsack, and 1 havre-sack.

**CAMP-DISEASES,** are chiefly bilious fevers, malignant fevers, fluxes, scurvy, rheumatism, &c.

**CAMP** is also used by the Siamese and some other nations in the East Indies, to express the quarters where the persons from different countries, who come to trade with them, usually reside.

**CAMP d'Assemblée, Fr.** The first ground which is taken when troops are encamped on the opening of a campaign.

**CAMP à cheval, Fr.** A ground of encampment across which any river runs, &c.

**CAMP DÉCOUVRU, Fr.** A ground of encampment, which is occupied by different regiments, without any attention being paid to a regular line, &c.

**CAMP DÉCOUPÉ, Fr.** A ground of encampment upon which the enemy has been encamped the preceding day, or during the course of the one on which the ground is reconnoitred.

**CAMP DÉTENU, Fr.** A ground of encampment upon which the tents are struck, either for the purpose of engaging the enemy, or marching from him, or of making any particular movement.

**CAMP EN ÉCHELONS, Fr.** A ground of encampment which is taken up in such a manner, that the different regiments lie obliquely in advance one to the other. By means of this disposition the flanks nearest to the enemy are supported by those that are further from him, and are not exposed to have their wing turned.

**CAMP fixe, Fr.** A regular or stationary camp, one that is formed before a besieged place, &c. or under the protection of a fortified town.

**CAMP d'instruction ou de discipline, Fr.** A ground of encampment which is occupied for the purpose of training troops, &c.

**CAMP momentané ou de passage, Fr.** A ground of encampment which is taken for a short interval, or previous to taking quarters, &c.

**CAMP de plaisance, Fr.** A ground of encampment which is taken for the sole purposes of parade.

**CAMP retranché, Fr.** An entrenched camp. See **CAMP**.

**CAMP retranché sous une place**, Fr. A camp which is formed under the walls of a fortified place, and is within the protection of the guns.

**CAMP tendu**, Fr. A ground of encampment, where tents, &c. are regularly pitched.

**CAMP volant**, Fr. A flying camp, one which is formed and broken up from day to day.

**Bon CAMP**, Fr. A ground of encampment upon which troops are stationed, so as to be protected on every side from the attack of an enemy.

**Mauvais CAMP**, Fr. A ground of encampment which is exposed on every side, and where there is a want of water, fuel, &c.

**CAMP de Mars**, Fr. A piece of ground in the vicinity of Paris, where troops are occasionally exercised and public festivals kept.

**CAMPAGNE**, Fr. Campaign.

**Se Mettre en CAMPAGNE**, Fr. To take the field.

**Tenir la CAMPAGNE**, Fr. To keep the field, or remain encamped, at a time when the enemy is obliged to go into quarters, or stay in garrison.

**CAMPAIGN**, in military affairs, the time every year that an army continues in the field, in war time. We also say, a man has served so many campaigns, i. e. years: the campaign will begin at such a time; this will be a long campaign, &c. The word is also used for an open country before any towns, &c.

**CAMPEMENT**, Fr. An encampment. This word is also used to denote a detachment sent before the army to mark out the ground for a camp.

**CAMPER**, Fr. To encamp.

**CAMPER par compagnie**, Fr. To have the tents of the several companies belonging to a regiment pitched at equal distances.

**CAMPER par pelotons**, Fr. To encamp two companies together, or to have their tents pitched in such a manner that they appear one company.

**CAMPER en potence**, Fr. To encamp one or more bodies of men upon the rear of another camp. This happens when the ground will not admit of a regular line; and this mode of encamping also affords the means of opposing an enemy, should he attack either in flank or front.

**CAMPUS Maii**, an anniversary assembly which was observed by our ancestors on May-day, when they mutually pledged themselves to one another for the defence of the country, against foreign and domestic foes.

**CAMPUS Martius**, a public place so called among the Romans from the God Mars.

**CANAL de lumière**, Fr. The aperture or touch-hole which leads from the pan to the barrel of a fire-arm.

**CANARDER**, Fr. To scit, to shoot.

**CANNIPERS**. See **CALLIPERS**.

**CANNON** or *pieces of ORDNANCE*, in the military art, imply machines having tubes of brass or iron. They are charged with powder and ball, or sometimes cartridges, grape and tin-shot, &c.

The length is distinguished by three parts; the first re-inforce, the second re-inforce is 2-7ths, and the second 1-7th and a half of the diameter of the shot. The inside hollow, wherein the powder and shot are lodged, is called the bore; &c.

*History of CANNON or pieces of ORDNANCE.* They were originally made of iron bars soldered together, and fortified with strong iron hoops; some of which are still to be seen, viz. one in the tower of London, two at Woolwich, and one in the royal arsenal at Lisbon. Others were made of thin sheets of iron rolled up together, and hooped; and on emergencies they were made of leather, with plates of iron or copper. These pieces were made in a rude and imperfect manner, like the first essays of many new inventions. Stone balls were thrown out of these cannon, and a small quantity of powder used on account of their weakness. These pieces have no ornaments, are placed on their carriages by rings, and are of cylindrical form. When or by whom they were made, is uncertain: however we read of cannon being used as early as the 13th century, in a sea engagement between the king of Tunis and the Moorish king of Seville. The Venetians used cannon at the siege of Claudia Jessa, now called Chioffia, in 1366, which were brought thither by two Germans, with some powder and leaden balls; as likewise in their wars with the Genoese.

in 1379. Our glorious king Edward III. made use of *cannon* at the battle of Cressy in 1346, and at the siege of Calais in 1347. *Cannon* were made use of by the Turks at the siege of Constantinople, then in possession of the Christians, in 1394, or in that of 1452, that threw a weight of 500lb. but they generally burst, either the first, second, or third shot. Louis XII. had one cast at Tours, of the same size, which threw a ball from the Bastille to Charenton. One of these famous *cannon* was taken at the siege of Dieu in 1546, by Don John de Castro, and is in the castle of St. Julião da Barra, 10 miles from Lisbon: its length is 20 feet 7 inches, diameter at the centre 6 feet 3 inches, and discharges a ball of 100lb. It has neither dolphins, rings, nor button, is of a curious kind of metal, and has a large Indostan inscription upon it, which says it was cast in 1403.

*Ancient and present names of CANNON.* Formerly they were dignified with uncommon names; for in 1503 Louis XII. had 12 brass cannon cast, of an uncommon size, called after the names of the 12 peers of France. The Spanish and Portuguese called them after their saints. The emperor, Charles V. when he marched before Tunis, founded the 12 Apostles. At Milan there is a 70-pounder, called the Pimontelle; and one at Bois le-duc, called the Devil. A 60-pounder at Dover castle, called Queen Elizabeth's Pocket-pistol. An 80-pounder in the tower of London (formerly in Sterling castle) called Mounts-meg. An 80-pounder in the royal arsenal at Berlin, called the Thunderer. An 80-pounder at Malaga, called the Terrible. Two curious 60-pounders in the arsenal at Bremen, called the Messengers of bad news. And lastly an uncommon 70-pounder in the castle of St. Angelo at Rome, made of the nails that fastened the copper plates which covered the ancient Pantheon, with this inscription upon it: *Ex clavis trabalibus porticus Agrippæ.*

In the beginning of the 15th century these uncommon names were generally abolished, and the following more universal ones took place, viz.

	Pounders	Cwt.
Canon royal, or } carthoun }	= 48	about 90

	Pounders	Cwt.
Bistard cannon, } or ½ carthoun }	= 36	79.
¼ carthoun	= 24	60
Whole culverins	= 13	50
Demy culverins	= 9	30
Falcon	= 6	25
Saker { lowest sort	= 6	13
{ ordinary	= 5	15
{ largest size	= 3	18
Basilisk	= 48	85
Serpentine	= 4	8
Aspiik	= 2	8
Dragon	= 6	12
Syren	= 60	81
Falconet	= 3, 2, & 1	15, 10, 5.

Moyens, which carried a ball of 10 or 12 ounces, &c.

Rabinet, which carried a ball of 16 ounces.

These curious names of beasts and birds of prey were adopted, on account of their swiftness in motion, or of their cruelty; as the *falconet*, *falcon*, *saker*, and *culverin*, &c. for their swiftness in flying; the *basilisk*, *serpentine*, *aspiik*, *dragon*, *syren*, &c. for their cruelty. See the Latin poet Forcastarius.

At present *cannon* or pieces of ordnance take their names from the weight of the ball they discharge: thus a piece that discharges a ball of 24 pounds, is called a 24-pounder; one that carries a ball of 12 pounds, is called a 12-pounder; and so of the rest, divided into the following sorts, viz.

Ship-guns, consisting in 42, 32, 24, 18, 12, 9, 6, and 3 pounders.

Garrison-guns, in 42, 32, 24, 18, 12, 9, and 6 pounders.

Battering-guns, in 24, 18, and 12 pounders.

Field-pieces, in 18, 12, 9, 6, 3, 2, 1½, 1, and ½ pounders.

The British seldom use any of lower calibre than 6 in the field.

The metal of which brass cannon is made, is in a manner kept a secret by the founders: yet, with all their art and secrecy, they have not hitherto found out a composition that will stand a hot engagement without melting, or at least being rendered useless. Those cast at Woolwich bid fairest towards this amendment. The respective quantities which should enter into this composition, is a point not decided; every founder has

has his own proportions, which are peculiar to himself. The most common proportions of the ingredients are the following, viz. To 2163 $\frac{1}{2}$  lb. of metal fit for casting, they put 68lb. of copper, 52lb. of brass, and 12lb. of tin. To 4200lb. of metal fit for casting, the Germans put 5637 $\frac{1}{2}$  lb. of copper, 2011 $\frac{1}{2}$  lb. of brass, and 507 $\frac{3}{4}$  lb. of tin. Others again use 100lb. of copper, 6lb. of brass, and 9lb. of tin; and lastly, others, 200lb. of copper, 10lb. of brass, and 15lb. of tin. With respect to iron guns, their structure is the same as that of the others, and they generally stand the most severe engagements, being frequently used on ship-board. Several experiments have taught us that the Swedish iron guns are preferable to all others.

CANNON is now generally cast solid, and the cavity bored afterwards by a very curious machine for that purpose, where the gun is placed in a perpendicular position; but of late these machines have been made to bore horizontally, and much truer than those that bore in a vertical form. This new machine was first invented at Strasburg, and greatly improved by Mr. Verbruggen, a Dutchman, who was head founder at the royal foundry at Woolwich, where probably the best horizontal-boring machine in Europe has been lately fixed; it bores the inside, and turns and polishes he outside at once.

*Names of the several parts of a CANNON.*

*The grand divisions exterior*, are as follows, viz. *First re-inforce*, is that part of a gun next the breech, which is made stronger to resist the force of powder.

*Second re-inforce*. This begins where the first ends, and is made something matter than the first.

*The chase*, is the whole space from the trunnions to the muzzle.

*The muzzle*, properly so called, is the part from the muzzle astragal to the end of the piece.

*Small divisions exterior.*

*The cascade*, the hindermost part of the breech, from the base-ring to the end of the button.

*The cascade-astragal*, is the diminishing part between the two breech-mouldings.

*The neck of the cascade*, is the narrow space between the breech-moulding and the button.

*The breech*, is the solid piece of metal behind, between the vent and the extremity of the base-ring, and which terminates the hind part of the gun, exclusive of the cascade.

*The breech-mouldings*, are the eminent parts, as squares or rounds, which serve only for ornaments to the piece, &c.

*The base-ring and ogce*, are ornamental mouldings: the latter is always in the shape of an S, taken from civil architecture, and used in guns, mortars, and howitzers.

*The vent-field*, is the part from the vent to the first re-inforce astragal.

*The vent astragal and fillets*, are the mouldings and fillets at or near the vent.

*The charging cylinder*, is all the space from the chase-astragal to the muzzle-astragal.

*The first re-inforce ring and ogce*, is the ornament on the second re-inforce.

*The first re-inforce astragal*, is the ornament between the first and second re-inforce.

*The chase-girdle*, is the ornament close to the trunnions.

*The trunnions*, are two solid cylindrical pieces of metal in every gun, which project the piece, and by which it is supported upon its carriage.

*The dolphins*, are two handles, placed on the second re-inforce ring of brass guns, resembling the fish of that name; they serve for mounting and dismounting the guns.

*The second re-inforce ring and ogce*, are the two ornaments joining the trunnions.

*The second reinforce-astragal*, is the moulding nearest the trunnions.

*The chase-astragal and fillets*, the two last-mentioned ornaments jointly.

*The muzzle-astragal and fillets*, the joint ornaments nearest the muzzle.

*The muzzle-mouldings*, the ornaments at the very muzzle of the piece.

*The swelling of the muzzle*, the projected part behind the muzzle-mouldings.

*Interior parts.*

*The mouth, or entrance of the bore*, is that part where both powder and ball are put in, or the hollow part which receives the charge.

*The vent*, in all kinds of fire-arms, is commonly called the touch-hole: it is a small hole pierced at the end, or near it, of the bore or chamber, to prime the piece with powder, or to introduce the tube, in order, when lighted, to set fire to the charge.

*The chamber*, which is only in large calibers, is the place where the powder is lodged, which forms the charge.

*Tools for loading and firing CANNON*, are rammers, sponges, ladles, worms, hand spikes, wedges, and screws.

*Coins, or wedges*, to lay under the breech of the gun, in order to elevate or depress it.

*Hand-spikes*, serve to move and to lay the gun.

*Ladles*, serve to load the gun with loose powder.

*Rammers*, are cylinders of wood, whose diameters and axes are equal to those of the shot: they serve to ram home the wads put upon the powder and shot.

*Sponge*, is fixed at the opposite end of the rammer, covered with lamb-skin, serves to clean the gun when fired.

*Screws*, are used to field-pieces, instead of coins, by which the gun is kept to the same elevation.

*Tools necessary for proving CANNON*, are, a searcher with a reliever, and a searcher with one point.

*Searcher*, is an iron, hollow at one end to receive a wooden handle, and on the other end has from 4 to 8 flat springs of about 8 or 10 inches long, pointed and turned outwards at the ends.

*The Reliever*, is an iron flat ring, with a wooden handle, at right angles to it. When a gun is to be searched after it has been fired, this searcher is introduced; and turned every way, from end to end, and if there is any hole, the point of one or other of the springs gets into it, and remains till the reliever, passing round the handle of the searcher, and pressing the springs together, relieves it.

When there is any hole or roughness in the gun, the distance from the mouth is marked on the outside with chalk.

The other searcher has also a wooden handle, and a point at the fore end, of about an inch long, at right angles to the length: about this point is put some wax mixed with tallow, which, when introduced into the hole or cavity is

pressed in, when the impression upon the wax gives the depth, and the length is known by the motion of the searcher backwards and forward: if the fissure be 1-ninth of an inch deep, the gun is rejected. See INSTRUMENTS.

N. B. The strength of gunpowder having been considerably encreased by Colonel Congreve, of the Royal Artillery, the quantity for service has been somewhat reduced. That for proof remaining as heretofore.

CANNON { *Ball.* See BALLS.  
          { *Shot.* See SHOT.

CANNON-Baskets. See GADGONS.

To nail CANNON. See NAIL.

CANNONADE, in artillery, may be defined the application of artillery to the purposes of a land war, or the direction of its efforts against some distant object intended to be seized or destroyed, as the troops in battle, battery, fortress, or out-work.

*Cannonading* is therefore used from a battery, to take, destroy, burn, or drive the enemy from the defences, &c. and to batter and ruin the works or fortified towns.

CANNONIER, (CANONNIER, Fr.) the person who manages the guns. See GUNNER.

CANNON, Fr. See CANNON. Canon also means in French the barrel of any fire-arm great or small.

CANON (*Chambre*) Fr. A piece that has not been well cast, and could not be used without danger. On account of the defective cavities which exist in the body of the metal, pieces of the kind are liable to burst.

CANON *Sacré*, Fr. One, or several pieces of ordnance placed on a battery, unperceived by the enemy. These are used by the besieged for the defence of breaches, and by the besiegers to oppose a *sortie*.

CANON *à la Suédois*. Fr. A piece of ordnance adopted by the French, and so called from the Swedish pieces, of which it is an imitation. Very convenient in long marches, as being very light. The weight at most 525lb. the ball 4lb. weight.

CANON (*double*) See. *Recoil maton*.

CANON RAYE, Fr. A rifled gun. See RIFLE.

CANON BIT, that part of the bit which is let into the horse's mouth.

CANONNADE, *Fr.* See CANNONADE.

CANONNIER. See CANNONIER.

CANONNIERE, *ou Embrasure*, *Fr.* an opening which is made in the parapet of a work for the purpose of pointing cannon against any particular object.

CANONNIER, *Fr.* a sort of shed covered over with canvas for the accommodation of soldiers and sutlers.

CANNONER, *Fr.* to fire against any fortified place or body of armed men with heavy ordnance, &c.

CANTABRES, *Fr.* Soldiers held in high repute at the time of the Romans: and in fact, the renown of the gallant *Cantabres* was such that a great number of the Spanish provinces reckoned it a great honor to be comprehended within the limits of ancient Cantabria. In the year 1745, *Lewis XV.* formed a regiment of *Cantabres*, which since were called *Royal Cantabres*.

CANTABRUM. A standard introduced during the reign of the Roman Emperors, and which differed from the *perillum*. This latter was a large standard, distinguished by its particular colour and motto; whereas the *Cantabrum* was only a small flag, with its particular colour also, and used as a signal for the troops to rally.

CANTREN, a machine made of wood or leather with compartments for several utensils, generally used by officers.

CANTEENS, in military articles, are tin vessels used by the soldiers on a march, &c. to carry water or other liquor in, each holds about 2 quarts. They are likewise made of wood in a circular shape.

CANTINE, *Fr.* CANTEN, a species of sutling house which is kept in a fortified place, &c. for the convenience of officers and soldiers. It also means, as with us, a small case with different compartments in which wine, &c. may be kept. Cantine is sometimes used among the French to signify the meat, &c. that is ready dressed.

CANTINIER, *Fr.* The person who keeps a canteen, booth or sutling house.

To CANTON, to disperse the troops into winter quarters.

CANTONMENTS are distinct situations, where the different parts of an army lie as near to each other as possible,

and in the same manner as they encamp in the field. The chief reasons for cantoning an army are, first, when the campaign begins early; on which occasion, in cantoning your troops, two objects demand attention, viz. the military object, and that of subsistence: the 2d is, when an army has finished a siege early, the troops are allowed to repose till the fields produce forage for their subsistence: the 3d reason is, when the autumn proves rainy, and forage scarce, the troops are cantoned to protect them from the bad weather.

CANTONNEMENT, *Fr.* Cantonnement. Troops are said to be sent into cantonnements, when they are detached from their several battalions or companies, and lie quartered in or about the different towns and villages.

CANTONNER, *Fr.* to send into cantonnements.

CANVAS-BAGS. See BAGS, Sand-Bags, &c.

CAPA-AGA. An old and experienced officer of the Seraglio, who has the charge of instructing and superintending the *Ichonoglans*; which office he fulfils with the utmost severity, in order to accustom them to subordination and discipline, and that they may be the better qualified to command in their turns.

CAPARISON, under this term is included the bridle, saddle, and housing of a military horse.

CAPE du *batardeau*, *Fr.* a roof sloping on both sides, which covers the upper part of the *batardeau* constructed in the ditch at the salient angle of a bastion. A small turret about six or seven feet high is erected in the centre of the *cape*, to prevent desertion.

CAPELINE, a kind of iron helmet worn by the cavalry, under *John, Duke of Brittany*.

CAPELLIETTI, a *Venetian* militia, composed of *Sclavonians, Dalmatians, Albanians, Morlachians*, and reckoned the best troops in the service of the State of *Venice*. The most important posts, as also the Palace and great Square of *Saint Marc*, at *Venice*, are committed to their guard.

CAPICULY, otherwise called *Janizaries*. The first corps of the Turkish infantry.

CAPITAINE,

**CAPITAINE en pied**, Fr. an officer who is in actual pay and does duty.

**CAPITAINE reformé**, Fr. a reduced officer.

**CAPITAINE général des vivres**, Fr. the person who has the chief management and superintendence of military stores and provisions.

**CAPITAINE des grides**, Fr. A person appointed to direct the roads by which the army is to march: he must be well versed in topography; is under the direction of the quarter master general, and is obliged to provide guides for all general officers, detachments and convoys.

**CAPITAINE des charrois**, Fr. Captain of the wagon-train.

**CAPITAINE général des chariots de munitions**, Fr. The person who is entrusted with this office must be a man of great experience, and possessed of sufficient abilities, to issue all necessary orders for the good of the service: he commands the whole of the *ammunition wagons*, and *wagon-train*.

**CAPITAIN des mulets**, Fr. His functions are the same as those of the *Capitaine des charrois*, with this difference, that he sometimes has a hundred, or a hundred and fifty *mules* under his management: this branch of service is of great importance when the war is carried on in a mountainous country, where the progress of the *caissons* is rendered very difficult.

**CAPITAINE des ouvriers**, Commands the carpenters, wheelwrights, and other workmen: in the artillery, and among the engineers, he superintends the workmen employed by those corps.

**CAPITAINE conducteurs d'artillerie**. They are entrusted in the armies and fortified towns with the particular details of the functions of the *Captain General*.

**CAPITAINE des portes**, Fr. a commissioned officer who resides in a garrison town, and whose sole duty is to receive the keys of the gates from the Governor every morning, and to deliver them to him every night, at appointed hours.

**CAPITAL**, in fortification, is an imaginary line which divides any work into two equal and similar parts. It signifies also, a line drawn from the angle of a polygon to the point of the bastion, or from the point of the bastion to the middle of the gorge.

**CAPITAN**, Fr. An unconscionable vaunter, who boasts of incredible acts of bravery, although he be a real coward. A *Capitan* also signifies in harsher language, a *coward*; every military man who has been once found guilty of cowardice, is ruined beyond recovery.

**CAPITOU**, Fr. Chief magistrate of Toulouse.

To **CAPITULATE**, to surrender any place or body of troops to the enemy, on certain stipulated conditions.

**CAPITULATION**, in military affairs, implies the conditions on which the garrison of a place besieged agrees to deliver it up, &c. This is likewise the last action, both in the attack and defence of a fortification, the conditions of which may be of various kinds, according to the different circumstances or situations in which the parties may be placed.

As soon as the capitulation is agreed on, and signed, hostages are generally delivered on both sides, for the exact performance of the articles; part of the place is delivered to the besiegers, and a day appointed for the garrison to evacuate the place. The usual and most honourable conditions are with arms and baggage, drums beating, and colours flying, matches lighted, and some pieces of artillery; wagons, and convoys for the baggage, sick and wounded, &c.

**CAPONNIERE**, in fortification, is a passage made from one work to another, of 10 or 12 feet wide, and about 5 feet deep, covered on each side by a parapet, terminating in a glacis. Caponnières are sometimes covered with planks and earth. See **FORTIFICATION**.

**Demi-CAPONNIERE**, Fr. a passage which is made in the bottom of a dry ditch, and which is only defended towards the enemy by a parapet or glacis. Its object is to protect the approach or passage belonging to the ditch which is directly in front.

**CAPORAL**, Fr. Corporal.

**CAPOTE de Faction**, Fr. A large great coat with a hood or cowl worn by centinels in bad weather.

**CAPS**, in gunnery, are pieces of leather, or more commonly sheep-skins, to cover the mouth of mortars when loaded, 'till they are fired, to prevent damps, or rain getting in.

**CAP-Squares**. See **CARRIAGES**.

**CAP-A-PEE**, in military antiquity, implies

implies being clothed in armour from head to foot.

**CAPSTERN**, } in military machines,  
**CAPSTAN**, } signifies a strong massy piece of timber in the form of a truncated cone, having its upper part, called the drum-head, pierced with a number of square holes, for receiving the levers. By turning it round, several actions may be performed that require an extraordinary power.

**CAPTAIN** is a military officer, who is the commander of a troop of horse or dragoons, or of a company of foot or artillery. The name of captain was the first term made use of to express the chief or head of a company, troop, or body of men. He is both to march and fight at the head of his company. Captains of artillery and engineers ought to be more masters of the attack and defence of fortified places than either a captain of infantry or cavalry; because they must be good mathematicians, and understand the raising of all kinds of batteries, to open the trenches, to conduct the sap, to make mines and fougasses, and to calculate their charges. They ought further to be well acquainted with the power of artillery, the doctrine of the military projectile, and the laws of motion, together with the system of mechanics; and should be good draughtsmen. A captain has in most services the power of appointing his own serjeants and corporals, but cannot by his own authority reduce or break them; neither can he punish a soldier with death, unless he revolts against him on duty.

The captains of artillery in the Prussian service rank as majors in the army, and have an extraordinary pay, on account of the qualifications which are required in them; and the captains of bombardiers, miners, and engineers, in the Portuguese service, have 7s. 6d. a month more than the captains of artillery in the same regiment.

**CAPTAIN General**. By the constitution King is *captain general* of all the forces of great Britain. This term signifies the first rank, power, and authority known in the British army. His Majesty was pleased to delegate this rank and the powers annexed to it, to Royal Highness the Duke of York, 1799.

**CAPTAIN-Lieutenant**, the commanding officer of the colonel's troop or com-

pany in every regiment, in case the colonel is absent, or he gives up the command of it to him. He takes rank as full captain, by an order in 1772, and by a late regulation succeeds to the first vacant troop or company; the price of a captain-lieutenancy being now the same as that of a captaincy. This title is still used in all foreign services.

**CAPTAIN reformed**, one who, upon a reduction of the forces on the termination of war, loses his company, yet keeps his rank and pay, whether on duty or not.

**CAPTAIN on half pay**, is one who loses his company on the reduction of an army, and retires on half-pay, until seniority puts him into duty and full pay again.

**CAPTAIN second**, or second captain, is one whose company has been broke, and who is joined to another, to serve under the captain of it.

**CAPTAIN-CAPITAINE**, *Fr.* in the highest acceptance of the term this word signifies a man of great talents, genius and perseverance, who can undertake the management of a whole army and conduct it to victory.

**CAPTIVE** (*Captif*, *Fr.*) A prisoner of war.

**CAPTIVI**. The name given by the Romans to their prisoners of war, who were generally loaded with chains, and placed near their colours. The captive kings had their heads shaved and were sent to Rome, to enhance the splendour of the triumph.

**CAPTURE**, *Fr.* any seizure or capture which is made against the enemy.

**CAPTURE de deserteurs**, *Fr.* Under the old government of France a particular order existed by which every intendant de province or commissaire de guerre was authorized to pay one hundred livres, or four pounds odd, to any person or persons who should apprehend and secure a deserter; and three hundred livres, or twelve pounds ten shillings for every man that could be proved to have enticed a soldier from the regular army or militia.

**CAQUE de poudre**, *Fr.* A term synonymous to a tun or barrel of powder.

**CAR**, in military antiquity, a kind of small carriage; figuratively, used by the poets for a chariot: it is mounted on wheels, representing a stately throne, used in triumphs and on other solemn occasions.

**CARABINEERS**, *Fr.* One complete regiment of carabineers was formed, during the monarchy of France, out of the different corps of cavalry. They were usually distributed among other bodies of troops, and it was their duty to charge the advanced posts of the enemy.

**CARABIN**, *Fr.* These were light armed horsemen, who sometimes acted on foot. They were generally stationed in the outposts, for the purpose of harassing the enemy, defending narrow passes, &c. In action, they usually fought in front of the dragoons, or upon the wings of the first line. Their name is derived from the Arabian word *Karab*, which signifies, generally, any warlike instrument.

**CARACOLE**, a semi-circular motion or half wheel; chiefly applied to that used either by individuals or squadrons of cavalry, to prevent an enemy from discovering where they intend to make their attack.

**CARACOLER** *autour d'une troupe ennemie*, *Fr.* To hang upon the flanks of an enemy, in order to take him by surprise, or otherwise perplex him.

**CARAVAN** (*Caravanne*, *Fr.*) from a Turkish word, which signifies a troop of travellers, pilgrims, or merchants, formed in a body, and who travel across the deserts, under an escort commanded by a chief who is called an *Aga*. These are guides attached to the *caravans*, who direct them to encamp near those places where water can be procured. With regard to other provisions the travellers take care to provide a large quantity, which they share with the Arabs, in case they should appear in great numbers; but if the escort are confident of their superiority, they will engage and sometimes give a severe drubbing to those intruders. The appellation of *caravanne* is also given to the first voyages or cruizes which the knights of Malta are obliged to undertake before they become graduates, or can be promoted to the commanderies of the order.

**CARBINE**, in military affairs, is a fire-arm somewhat smaller than the fire-lock of the infantry, and used by the cavalry. It carries a ball of 24 in the pound: its barrel is 3 feet long, and the whole length, including the stock, 4 feet.

**CARBINEERS**, or *Carabineers*. All

regiments of light-armed horse were formerly called so; but since the establishing of hussars and chassours, they have lost that denomination; and now all the foreign heavy cavalry are called carabineers.

**CARCAMOUSE**, *Mouton*, *Marmouton*, *Fr.* a French-term to express the battering ram which was used in war by the ancients.

**CARCASS**, a composition of combustibles. Carcasses are of two sorts, oblong and round: the uncertain flight of the first sort has almost rendered them useless. They are prepared in the following manner: boil 12 or 15 lb. of pitch in a glazed earthen pot; mix with that 3 lb. of tallow, 30 lb. of powder, 6 lb. of salt-petre, and as many stopins as can be put in. Before the composition is cold, the carcass must be filled; to do which, smear your hands with oil or tallow, and fill the carcass a third full with the above composition; then put in loaded pieces of gun or pistol barrels, loaded grenades, and fill the intervals with composition; cover the whole over with coarse cloth, well sewed together, keeping it in a round form. Then put it into the carcass, having a hollow top and bottom, with bars running between them to hold them together, and composed of 4 slips of iron joined at top, and fixed at the bottom, at equal distances, to a piece of iron, which, together with the hoops, when filled, form a complete globular body. When quite finished and cold, the carcass must be steeped in melted pitch, and then instantly immersed in cold water. Lastly, bore 3 or four holes at top, and fill the same with fuzee composition, covering the holes with pitch until used. Carcasses are thrown out of mortars, and weigh from 50 to 230 lb. according to the size of the mortars they are to be thrown out of. There are other carcasses for the sea-service, which differ from a shell only in the composition, and in the 4 holes from which it burns when fired.

CARCASSES were first used by the bishop of Munster, at the siege of Groll in 1672, where the Duke of Luxembourg commanded.

**CARIPI**, a kind of cavalry in the Turkish army, which to the number of 1000 are not slaves, nor bred up in the seraglio,

seraglio, like the rest, but are generally Moors, or renegade Christians, who have obtained the rank of horse-guards to the grand Signior.

**CARMAGNOLE**, *Fr.* a name given to the French soldiers who first engaged in the cause of republicanism. It comes from a place in Italy, situate in Piedmont near the Po.

**CARMINE**, a bright scarlet colour which is used in plans of fortification, and serves to describe those lines that hit the mason work.

**CARNAGE** (*Carnage*, *Fr.*) The desperate action which takes place between two bodies of armed men, who destroy one another with the greatest rancour.

**CAROUSAL**, *Carrousel*, *Fr.* in military history, signifies a magnificent entertainment, exhibited by princes or other great personages, on some public occasion, consisting of cavalcades of gentlemen, richly dressed and equipped, after the manner of the ancient cavaliers, divided into squadrons, meeting in some public place, and performing jousts, tournaments, &c. It also signifies among the French, from whom the term is taken, the place where tournaments, &c. were formerly exhibited. Thus the *Place Carrousel* in Paris, which is contiguous to the Palaces of the Louvre and the Tuileries, was appropriated to this purpose as late down as the sixteenth century.

**CARREAU**, *Fr.* in military sense, the ground. *Coucher sur le carreau*, *Fr.* to lay low; to knock down.

**CARRÉAU**, *Fr.* A very ancient sort of arrow. The *carréau* was trimmed with brass instead of being feathered, and was shot from a *balista*; whereas the arrow was trimmed with feathers, and thrown out from a bow.

**CARRIAGES**; in military affairs, are of various kinds, viz.

**Garrison-CARRIAGES**, are those on which all sorts of garrison pieces are mounted. They are made much shorter than field carriages, and have generally iron trucks instead of wheels.

**N. B.** As the trucks of garrison-carriages are generally made of cast-iron, their axle-trees should have copper clouts underneath, to diminish the friction of the iron against the wood. Travelling-carriages are in many respects

very unfit for garrison service, though they are frequently used.

**Travelling-CARRIAGES** are such as guns are mounted on for sieges, and for the field; they are much longer, and differently constructed from garrison-carriages; having 4 wheels, 2 for the carriage, and 2 for the limber, which last are only used on marches.

**Field-CARRIAGES** are both shorter and lighter than those before mentioned, bearing a proportion to the pieces mounted upon them.

**Gallop-CARRIAGES** serve for 12 pounders. These carriages are made with shafts, so as to be drawn without a limber. In the last war the king of Prussia mounted light 3-pounders on these carriages, which answered very well.

**Howitz-CARRIAGES** are for transporting howitzers, and those for the 6 and 5-8-inch howitzers are made with screws to elevate them, in the same manner as the light 6 pounders; for which reason they are made without a bed, and the centre transom must be 9 inches broad to fix the screw, instead of 1 for those made without: in the centre, between the trail and centre-transom, there is a transom-bolt, which is not in others, because the centre-transom must be made to be taken out; after which the howitzer can be elevated to any angle under 90 degrees.

**Timber-CARRIAGE.** See **TEMBREL**.

**Block-CARRIAGE**, a carriage which is made from a solid piece of timber, hollowed out so as to receive the gun or howitzer into the cap-square; the lower part of the cap-square is let into the solid wood, and the gun or howitzer is either elevated or depressed by a screw, as in other carriages. The limber for this carriage carries two large chests for ammunition, and takes four men. The pintle of the limber is so constructed as to receive the gudgeon of the carriage; by which means a greater relief is afforded when the carriage passes over rough ground.

**Block-Carriages** are also used by the horse artillery as curricles. They are particularly useful on service. The original inventor of them, is the ingenious and indefatigable Col. Congreve, to whom the board of ordnance is not a little indebted for many improvements, and

and of whose services during the present war and in preceding wars, the most unquestionable records are preserved.

**Muck-CARRIAGES** are to carry timber, and other heavy burthens from one place to another, at no great distance: they serve also to convey guns or mortars upon a battery, whither their own carriages cannot go, and are drawn by men as well as horses.

**Ponton-CARRIAGES.** Carriages of this kind are solely for transporting the pontoons; they had formerly but two wheels, but are generally now made with four. The making use of two-wheel carriages for travelling a great way, is contrary to sense and reason; because the whole weight lying upon the two wheels, must make them sink deeper into the ground, than those of a four wheel carriage.

**CARRIER**, a kind of pigeon, so called from its having been used in armies, to carry orders from one division of an army to another, or intelligence to some officer commanding a post or army at a distance.

**CARRIÈRE, Fr.** A large spot intended for tournaments, races, and other exercises. Mr. de Folard says, that the cavalry is to start (*prendre carrière*) from sixty paces distance to charge the enemy.

**To CARRY.** In a military sense to prosecute, to continue, as *to carry on the war*.

**To CARRY on the trenches.** See TRENCHES.

**CART**, in a military sense, is a vehicle mounted on two wheels, and drawn by one or more horses; of which there are several sorts, viz.

**Powder-CARTS**, for carrying powder with the army; they are divided into 4 parts, by boards of an inch thick, which enter about an inch into the shafts. Each of these carts can only stow 4 barrels of powder. The roof is covered with an oil-cloth, to prevent dampness from coming to the powder.

**Sling-CARTS**, used to carry mortars or heavy guns from one place to another at a small distance, but chiefly to transport guns from the water-side to the proof-place, and from thence back again; as also to convey artillery to the batteries in a fortification, &c.

**CARTE**, is a thrust with a sword at the inside of the upper part of the body,

with the nails of your sword hand upward. *Low carte*, is a thrust at the inside of the lower half of the body; the position of the hand being the same as in the former.

**CARTE-blanche, Fr.** a full and absolute power which is lodged in the hands of a general of an army, to act according to the best of his judgment, without waiting for superior instructions or orders. It likewise strictly means a blank paper; a paper to be filled up with such conditions as the person to whom it is sent thinks proper.

**CARTE détaillée d'un pays, Fr.** a correct drawing of a country, so that all its various localities may be seen with a bird's eye view.

**CARTEL**, in military transactions, an agreement between two states at war for the mutual exchange of prisoners.

**CARTEL, Fr.** a challenge or rendezvous given by two persons whose intentions are to fight.

**CARTOUCH**, in military affairs, is a case of wood about 3 inches thick, at bottom, bound about with narline, holding about 400 musquet-balls, besides 8 or 10 iron balls of a pound each, to be fired out of a howitzer, for the defence of a pass, &c. See **GRAPE SHOT**.

**CARTOUCHE, Fr.** In geographical or topographical design, a particular species or mode of sketching out with a crow's quill, and with Indian ink. This sketch is made on the left of one of the lower angles; and if there be two sketches, the least of the two is always on the right.

**CARTOUCHE-Jaune, Fr.** a discharge given to a soldier in the French service in consequence of his being rendered unworthy to carry arms, after having been degraded and punished. It is printed on yellow paper.

**CARTOUCHES**, in artillery, are made of leather, to sling over the shoulder of the matross, who therein carries the ammunition from the magazine or wagon, for the service of the artillery, when at exercise or on real service.

**CARTOUCHES, ou formules, Fr.** military passes which were given to soldiers going on furlough.

**CARTOUCHIER, ou Porte-Cartouches, Fr.** a cartouch-box.

**CARTRIDGE**, a case of paper, parchment or flannel, fitted to the bore of the piece, and holding exactly its proper charge. Musket and pistol cartridges are always made of strong paper; between 30 and 40 of which are made from 1 pound of powder, including their priming. Ball cartridges are made of a different coloured paper to what is used for blank. The French musquet ball-cartridges are all capped with flannel. Cannon and howitzer cartridges are sometimes made of parchment, though more generally of flannel.

**CARTRIDGE-Box**, a case of wood, made in a circular form, to wear before the body of the soldier, holding 24 musket-ball cartridges in two rows: it is covered with leather, and worn upon a belt, both on duty, and on the day of battle. See **Pouch**.

**CASAQUE**, *Fr.* A kind of coat, that does not sit so tight as the common coat. This was formerly the regimental dress of the French troops, and as each company wore a *casuque* of a particular colour, it was easily known at once what company the delinquent belonged to. When the *casuque* was abolished, scarfs of different colours were introduced in lieu of it.

**CASCADE**, *Fr.* This literally means a fall; a cascade. In mining it signifies the descents or ascents which are made at different times downwards or upwards. Hence *Cheminer par cascades*, to make way by intermediate descents or ascents.

**CASCANES**, *Fr.* holes, in the shape of wells, which are made on the terrepleine, close to the rampart, from which a gallery is thrown out under ground for the purpose of avoiding the enemy's mines.

**CASCANS**, in fortification, are holes in the form of wells, serving as entrances to galleries, or giving vent to the enemy's mines. See **FORTIFICATION**.

**CASEMATE**, in fortification, a vault, or arch of mason-work, in that part of the flank of a bastion which is next the curtain, made to defend the ditch, and the face of the opposite bastion. See **FORTIFICATION**.

**CASEMATES nouvelles**, *Fr.* arched batteries which are constructed under all the openings of revetements or ramparts. The different forts at Cherbourg, are

defended by these casemates: the works which have been finished during the present war round Dover Castle, are likewise under this description.

**CASERNER une troupe**, *Fr.* To put a troop into barracks.

**CASERNES**, in fortification, are buildings for the soldiers of the garrison to live in; generally erected between the houses of fortified towns, and the rampart.

**CASERNS**, in a general acceptance, signify barracks.

**CASE-Shot**. See **SHOT**, and **LABORATORY**.

**CASHIERED**. An officer sentenced by a general court-martial, or peremptorily ordered by the King, to be dismissed from the service, is said to be cashiered.

**CASK**, or **CASQUE**, the ancient helmet or armour for the head.

**CASSI-Aischer**. The provost-marshal in a Turkish army.

**CASSINE**, in military history, signifies a small house in the country, generally surrounded by a ditch. Cassines are very convenient to pos. small parties in, where they will be sheltered from any sudden attack, and can even make head till the nearest detachments can come and relieve them.

**CASSINE**, *Fr.* Any house which is surrounded by a ditch. Of this description are the different country seats belonging to foreign noblemen, &c.

**CASSIONS**. See **CAISSONS**.

**CASSIS**, *Fr.* **CASQUE** or **HELMET**.

**CASTILLE**, *Fr.* A term formerly used to signify the attack of a tower or castle. It also became a species of military amusement, in which the combatants threw snow-balls at one another. In 1516, a difference took place among the sham-fighters at *Roche-Guyon*, and rose to such a pitch, that the Duke D'Enghien lost his life in the struggle. This event put an end to the game of Castille, as did the melancholy fate of Henry the III. of France, to Tournamets.

**CASTING**, in founding guns, implies the operation of running any sort of metal into a mould prepared for that purpose.

**CASTLE**, in military affairs, a fortified place, or strong hold to defend a town or city from an enemy. Castles are

For the most part no higher in antiquity than the conquest; or rather about the middle of king Stephen's reign. Castles were erected in almost all parts of the kingdom, by the several contending parties; and each owner of a castle was a kind of petty prince, coining his own money, and exercising sovereign jurisdiction over his people. History informs us that 1017 castles were built in this reign.

CASTRAMETATION, is the art of measuring or tracing out the form of a camp on the ground; yet it sometimes has a more extensive signification, by including all the views and designs of a general; the one requires only the knowledge of a mathematician, the other the experience of an old soldier. The ancients were accustomed to fortify their camps by throwing up entrenchments round them. The Turks, and other Asiatic nations, fortify themselves, when in an open country, with their wagons and other carriages. The practice of the Europeans is quite different; for the surety of their camp consists in the facility and convenience of drawing out their troops at the head of their encampment; for which reason, whatever particular order of battle is regarded as the best disposition for fighting, it follows of course, that we should encamp in such a manner as to assemble and parade our troops in that order and disposition as soon as possible. It is therefore the order of battle that should regulate the order of encampment; that is to say, be post of each regiment in the line of battle should be at the head of its own encampment; from whence it follows, that the extent of the line of battle from right to left of the camp should be equal to the front of the troops in line of battle, with the same intervals in the camp as in the line. By this means every battalion covers its own tents, and the soldiers can all lodge themselves, turn out in case of necessity, at a minute's warning.

If the front of the camp is greater in the line, the troops must leave large intervals, or expose their flanks; less, the troops will not have room to march with the proper intervals.

The front or principal line of the camp is commonly directed to face the enemy. See CAMP.

CASUALS. A term used in the annual and regimental returns of the

British army, signifying men that are dead, (since first enlisted,) that have been discharged, or have deserted. The casualties form a separate column of themselves. The word is not strictly grammatical, since *casual* is an adjective and means *accidental*; arising from chance; depending on chance; not certain. Perhaps the word *casualty*, which is a substantive, might have done better.

CAT *onine tails*, a whip with nine knotted cords, with which the British soldiers are punished. Sometimes it has only five cords.

CATAFALCO, in military architecture, a scaffold of timber, decorated with sculpture, painting, &c. for supporting the coffin of a deceased hero, during the funeral solemnity.

CATAMARAN. A sort of floating rafter, originally used in China, and among the Portuguese as a fishing boat. The Catamarans in India consist of two logs of wood upon which the natives float, and go through the heaviest surf to carry or bring letters on shore. They were lately adopted in the expedition against the flotilla off Boulogne.

CATAPIRACT, the old Roman term for a horseman in complete armour.

CATAPIRACTA, in the ancient military art, a piece of heavy defensive armour, formed of cloth or leather, fortified with iron scales or links, where-with sometimes only the breast, sometimes the whole body, and sometimes the horse too was covered.

CATAPIRASTARI. Horsemen in the Roman army.

CATAPULTA, in military antiquity, an engine contrived for throwing of arrows, darts and stones, upon the enemy. Some of these engines were so large and of such force, that they would throw stones of an hundred weight. Josephus takes notice of the surprising effects of these engines, and says, that the stones thrown out of them beat down the battlements, knocked off the angles of the towers, and had force sufficient to level a very deep file of soldiers.

CATATROME. See CRANE.

CATEJA. A kind of arrow formerly in use amongst the Teutonians and the Gauls, made of very heavy wood.

CATELLA. A small chain which the Romans used to wear about their necks: a part of the military recompences.

**CATERVA**, among ancient military writers, a term used in speaking of the Gaulish or Celtiberian armies, denoting a body of 6000 armed men. The word is also used to denote a party of soldiers in disarray; in opposition to *cohort* or *turma*, which signify in good order.

**CATTUS**, } in ancient military  
**CATHOUSE**, } history, was a kind of covered shed, sometimes fixed on wheels, and similar to the *Vinea* and *Platens* of the ancients.

**CAVALCADE**, in military history, implies a pompous procession of horsemen, equipages, &c. by way of parade, to grace a triumph, public entry, or the like.

**CAVALIER**, *Fr.* A horseman.

**CAVALIER**, in fortification, is a work generally raised within the body of the place, 10 or 12 feet higher than the rest of the works. Their most common situation is within the bastion, and made much in the same form: sometimes they are placed in the gorges, or on the middle of the curtain; they are then made in the form of a horse-shoe. See **FORTIFICATION**. Their use is to command all the adjacent works and country round about it; they are seldom, or never, made but when there is a hill or rising ground, which overlooks some of the works.

**Trench-CAVALIER**, in the attacks, is an elevation which the besiegers make by means of earth or gabions, within half-way, or two thirds of the glacis, to discover, or to enfilade the covert way.

**CAVALOT**, *Fr.* an ancient piece of ordnance about 5 French feet in length, carrying about 8 or 900 paces, and generally loaded with a ball of 1 pound weight, and a pound of gunpowder.

**CAVALQUET**, *Fr.* A particular sound of the trumpet which is used among the French, when troops of horse come near, or pass through a town.

**CAVALRY**, in military affairs, that body of soldiers which serves and fights on horseback: under this denomination are included.

*Horse*, that is, regiments or troops of horse. In England there are, the horse-guards, commonly called the *first* and *second* regiment of *life guards*; and the *Oxford blues*; formerly there was the *royal regiment of horse-guards*, which is now reduced. In Ireland

there are four regiments of horse-guards. The first troop of horse was raised in 1660.

*Dragoons*, are likewise regiments of horse, but distinguished from the former by being obliged to fight both on foot and on horseback. In England there is the first, or king's regiment of dragoon-guards; the second, or queen's regiment of dragoon-guards; the third, or prince of Wales's regiment of dragoon-guards. Likewise, the first, or royal regiment of dragoons; the second, or royal North British dragoons; the third, or king's own regiment of dragoons; besides the Ironskilling regiment of dragoons, queen's regiment of dragoons, prince of Wales's regiment of dragoons, with 10 more regiments of dragoons. The first regiment of dragoons was raised in 1681.

*Hunters*. See **LIGHT-HORSE**.

*Light-horse*, are regiments of cavalry, mounted on light, swift horses, whose men are but small, and lightly accoutred. They were first raised in the last war, in 1757.

*Hussars*, are properly Hungarian horse. Their uniform is a large furred cap, adorned with a cock's feather; those of the officers, either with an eagle's or a heron's; a very short waist-coat, with a pair of breeches and stockings in one; short light boots, generally of red or yellow leather; with a curious doublet, having five rows of buttons, which hang loosely on the left shoulder. Their arms are a long crooked sabre, light carbines, and pistols. Before they begin an attack, they lay themselves so flat on the necks of their horses, that it is hardly possible to discover their force; but being come within pistol-shot of the enemy, they raise themselves with surprising quickness, and fall on with such vivacity, that it is very difficult for the troops to preserve their order. When a retreat is necessary, their horses have so much fire, and are so indefatigable, their equipage so light, and themselves such excellent horsemen, that no other cavalry can pretend to follow them; they leap over ditches, and swim over rivers, with surprising facility. Most of the German powers have troops under this name, as so has France; into which country they were originally introduced under Louis the

**CEL**, and were called Hungarian cavalry. This description of cavalry was accordingly more ancient in the French service, than that of hussars.

**CAVEAJING**, in fencing, implies a motion whereby a person in an instant brings his sword, which was presented to one side of his adversary, to the opposite side.

**CAVESSON**, *Fr.* An iron instrument fixed to the nostrils of a horse to curb, or render him manageable, through the pain it occasions.

**CAVIN**, in military affairs, implies a natural hollow, sufficiently capacious to lodge a body of troops, and facilitate their approach to a place. If it be within musket-shot, it is a place of arms ready made, and serves for opening the trenches, free from the enemy's shot.

**CAVIN**, *Fr.* In fortification, a hollow way which runs round the works of a fortified place, and which answers the purpose of a trench.

**CAUTION**, an explanation given previous to the word of command, by which the soldiers are called to attention, that they may execute any given movement with unanimity and correctness.

**CAZEMATTE**. See **CASEMATE**.

**CASEMATE**, } in fortification, is  
**CAZEMATTE**, } a certain retired place in the flank of a bastion, for the defence of the ditch, and the face of the opposite bastion; not used at present. It also implies a well, having several subterraneous branches, which are extended when they suspect the enemy is forming a mine, till they hear the miners at work.

**CAZERNES**, *Fr.* See **CASERNS**.

**CEINTURE militaire**, *Fr.* A broad leather belt which was worn round the waist, and was ornamented with gold or silver plates.

**CEINTURON**, *Fr.* Sword-belt.

**CELERES**, the life-guards which attended Romulus, in the infancy of Rome, were so called. They were laid aside by Numa Pompilius. Celeres are properly distinguished from other troops, by being lightly armed and acting always on foot. Hence probably the origin of running footmen, who are lightly clothed and always accompany the carriages of German potentates and princes. They carry a large silver headed

stick. The Celeres cannot be considered under the same head as Velites.

**CEMENT**. See **CEMENT**.

**CENOTAPH**, in military history, implies the empty tomb of a hero, or a monument erected to the honor of a person, without the body of the deceased being interred in or near it.

**CENTENIER**, *Fr.* The chief, or captain of a troop or company which consists of one hundred men.

**CENTER**, } in a general sense, signifies  
**CENTRE**, } a point equally distant from the extremities of a line, surface, or solid.

**CENTER of a battalion**, on parade, is the middle, where an interval is left for the colours; of an encampment, it is the main street; and on a march, is an interval for the baggage; when it is so placed.

**CENTER of a bastion**, is a point in the middle of the gorge of the bastion, from whence the capital line commences, and which is generally at the inner polygon of the figure.

**CENTER of gravity**, in military mechanics, is that point about which the several parts of a body exactly balance each other in any situation.

**CENTER of a conic section**, is the point where all the diameters meet.

**CENTER of an ellipse**, is that point where the transverse and conjugate diameters intersect each other.

**CENTER of motion**, is that point which remains at rest while all the other parts of the body move about it.

**CENTER of percussion**, is that point in which the force of the stroke is the greatest possible. When the moving body revolves round a fixed point, the centre of percussion is the same with the centre of oscillation, and found by the same method; but when the body moves in a parallel direction, the centre of percussion is the same with the centre of gravity.

**CENTESIMATION**, in ancient military history, a mild kind of military punishment, in cases of desertion, mutiny, and the like, when only every 100th man was executed.

**CENTINEL**, } is a private soldier,  
**CENTRY**, } from the guard, posted upon any spot of ground, to stand and watch carefully for the security of the said guard, or of any body of troops,

or post, and to prevent any surprise from the enemy. All centinels are to be very vigilant on their posts; they are not to sing, smoke, or suffer any noise to be made near them. Neither are they to sit down, lay their arms out of their hands, or sleep; but keep moving about their posts during the two hours they stand, if the weather will allow of it. No centry to move more than 50 paces to the right, and as many to the left of his post, and let the weather be ever so bad, he must not get under any other cover, but that of the centry box. No centry can be allowed to go from his post without leave from his commanding officer; and, to prevent desertion or marauding, the centries and vedettes must be charged to let no soldier pass.

**CENTINEL perdu**, Fr. a soldier posted near an enemy in some very dangerous post, where he is in perpetual danger of being shot or taken.

**CENTRY-box**, a sort of wooden box, or hut, to shelter the centinel from the injuries of the weather; but, in fortifications made of masonry, they are made of stone, in a circular form.

**CENTURION**, a military officer among the ancient Romans, who commanded an hundred men. The term is now obsolete.

**CENTURION**, Fr. See CENTENIER.

**CENTURY**, in a military sense, means a hundred soldiers, who were employed in working the battering-ram.

**CEPS**, Fr. Stocks, fetters. It also means a trap.

**Ceps de Cæsar**, Fr. Cæsar's trap. A stratagem which was used by Julius Cæsar in one of his campaigns, and was called *Ceps de Cæsar*, from the snare into which the enemy was led. Being solicitous to draw their forces towards Alexia, he made an avenue through a forest, which seemed to be the only pass through which his army could possibly move. They gave into the snare, and eagerly pursued Cæsar into the forest. The latter, however, had had the precaution to order a great number of trees on each side to be sawed within three inches of the ground, and round their several trunks there were various pieces of wood and branches, spread in such a manner,

that the soldiers could not pass without being tripped up, and the road consequently cloaked.

**CERAMICUS**. A place so called in Athens, surrounded with walls, and where the tombs and statues of such men as had died in fighting for their country were to be seen. Divers inscriptions in praise of them bore testimony of their exploits.

**CERCLE**, *Grand-cercle*, Fr. a form observed under the old government of France, by which it was directed, that every evening at a specific hour the serjeants and corporals of a brigade should assemble to receive orders; the former standing in front of the latter. Subsequent to the *grand cercle*, a smaller one was made in each regiment, when general, or regimental orders were again repeated to the serjeants of each corps, and from them communicated to the officers of the several companies.

**CERCLE**, (*meurtrier*) Fr. A large flat piece of iron, one inch thick, which is made red hot, and thrown at the assailants.

**CERCLES Goudronnés**, (*pitched hoops*.) Old matches, or pieces of old cordage, dipped into pitch or tar, and made in the shape of a circle, which are placed on chafing dishes to light the garrison of a besieged town or post.

**CERCLES à Feu**, Fr. Two, three, or four hoops tied together with wire, and all around which are fixed grenades, loaded pistol-barrels, crackers, pointed pieces of iron, &c. The whole is covered with tow and fire-work: these hoops are then driven across the works of the besiegers: they are likewise used to oppose an assault; in which case they are called *couronnes foudroyantes*.

**CERNER**, Fr. To surround.

**CERNER un ouvrage de fortification une troupe**, Fr. To surround any particular part of a fortification, troop, or company.

**CERTIFICAT**, Fr. See CERTIFICATE.

**CERTIFICATES**, are of various kinds, as applied to officers generally, or to commissaries, commanding officers, or staff. They are testimonials bearing witness to the existence of some requisite qualification, or to the performance of some act required by the regulations

regulations of the army, and for which the officer who signs is responsible, whether he certifies for himself, or for any other officer.

**Military CERTIFICATES** are of various denominations, and consist chiefly of the following kinds, viz.

**Certificate** from a field officer to the commander in chief, affirming the eligibility of a young man to hold a commission in his Majesty's service. See printed forms at the Military Library, Whitehall.

**Certificate** of the officer upon honor, that he does not exceed the regulation in the purchase of his commission.

**Certificate** from a general officer to affirm and prove the losses which officers may sustain in the field.

**Certificate** from colonels of regiments to the board for admission of proper objects to the hospital at Chelsea.

**Certificate** from a magistrate to identify the person of a recruit, and to affirm, that he has enlisted himself voluntarily into the service: likewise, that the articles of war have been read to him. For a specific form, see General Regulations, page 113.

**Certificate** from regimental surgeons, whether men when they join are proper and fit objects to be enlisted; ditto to be discharged.

**Certificate** of commanding officers for stores, &c.

**Certificate**, to enable an officer to receive his half pay.

**Certificate** of surgeons and assistant surgeons, to prove their having passed a proper examination.

**CERVELIER, Fr.** A kind of helmet to protect the head.

**CERVELLE.** See *mine sans cervelle*.

**CESSATION**, or *cessation of arms*, in a military sense, means a truce, or the total abrogation of all military operations for a limited time.

**CESTUS.** A thick leathern glove, covered with lead, which the ancient pugilists used in the course of their various exercises, and especially when they fought for the prize of pugilism. The Greeks had four different sorts of Cestuses. The first, which was called *imantes*, was made of the hide of an ox, dried but not dressed. The second called *myrmecus* was covered with metal. The third, named *meliticus*, was made

of thin leather thongs; and covered neither the wrist nor fingers. The fourth, which was called *sphaeroc* is the thick glove we have mentioned the first, at the beginning of the article.

**CESTROSPONDONUS**, a dart, that received its appellation from the sling, from which it was thrown: it was pointed at both ends.

**CETRA**, a small and very light shield made of the hide of an elephant, in use amongst the Africans and Spaniards.

**CHABLEAU, Fr.** A middle sized rope which is used to draw the craft up a river.

**CHACE** of a gun, generally means the whole length of it. See **CANNON**.

**CHAFFERY**, that part of the foundry where the forges are placed for hammering iron into complete bars, and thereby bringing it to perfection.

**CHAIN** for engineers, is a sort of wire chain divided into links of an equal length, made use of for setting out works on the ground, because cords are apt to shrink and give way.

There are several sorts of chains made use of in mensuration; as Mr. Ratibone's, of two perches in length; others one perch long; some of 1000 feet in length; but that which is most in use amongst engineers is Mr. Gunter's, which is 4 poles long, and contains 100 links, each link being  $7\frac{9}{16}$  inches in length.

**CHAIN-shot.** See **SHOT**.

**CHAINE, ou encinte, d'un fourage, Fr.** A body of armed men thrown round the place where corn and hay are gathering for the use of an army, to protect the foragers against the attacks of the enemy.

**CHAINE de quartiers, Fr.** A regular chain or communication which is kept up between towns, villages, &c. for the safety of an army.

**CHALLENGE**, a cartel, or invitation to a duel, or other combat; it may with propriety be called a provocation, or summons to fight, when an affront, in derogation of honor, has been offered.

**CHALLENGE**, is also a term applied to an objection made against any member of a court-martial, on the score of real or presumed partiality. The prisoner, however, in this case, must assign

sign his cause of challenge; of the relevancy, or validity of which the members are themselves the judges; so that peremptory challenges, though allowed in civil cases, are not acknowledged in military law. The privilege of challenging belongs equally to the prisoner and the prosecutor.

**CHAMADE**, in a military sense, means a signal made by the cuany, either by beat of drum, or sound of trumpet, when they have any matter to propose; such as to bury their dead, &c. See **PARLEY**.

**CHAMAILLER**, *Fr.* To fight at close quarters, or hand to hand, in full armour.

**CHAMBER** of a cannon, in artillery, that part of the bore of a cannon which receives the powder with which it is charged. See **CANNON**.

**CHAMBER** of a mortar, the space where the powder lies. Chambers are of several forms and dimensions, such as the conic, spheric, cylindric, parabolic, and concave, or bottled chambers. See **MORTARS**.

**CHAMBER** of a mine, that place where the charge of powder is lodged, to blow up the works over it. See **MINE**.

**CHAMBER** of a battery, is a place sunk under ground for holding powder, loaded shells, and fuzes, where they may be out of danger, and preserved from rain or moisture.

**CHAMBRE, faire chambre**, *Fr.* a military phrase among the French, to signify several persons lodged in the same room, barrack, or tent.

**CHAMFRAIN**, *Fr.* An armour used to protect the horse: it was made either of metal or of boiled leather, and covered the front part of the animal's head, in the shape of a mask. A round, sharp pointed piece of iron was fixed on the centre of it. The *chamfrain* of the Comte de Saint-Pol, (1719) at the siege of Harfleur, under Charles VII. was valued at 30,000 crowns of the then currency; that of the Count de Foix, at the taking of Bayonne was worth 15,000 gold crowns.

**CAMP CLOS**, *Fr.* Camp list, in the first centuries and even long after, was a privileged spot, granted by royal assent, under the authority of the laws of the country, where such individuals who had a difference or an affair

of honour to settle, were admitted for private combat. The place allotted for tournaments was also called *champ clos*.

**CAMP de bataille**, *Fr.* Field of battle; the ground on which two armies meet.

**CAMP de Mars**, *Fr.* the field of Mars, an open place in the neighbourhood of Paris, where troops were frequently reviewed by the kings of France, and in which the public festivals have been observed since the revolution.

**CHAMPION**, he who undertook to settle the difference of contending armies, by single combat. A warrior who fights in support of a cause, whether his own or another person's.

It is likewise an honorary title which descends to the male issue of a particular family in England. The champion of England is drunk to at every coronation, and receives a golden cup from his new sovereign.

**CHAMPION**, *Fr.* Champion. Among the French, this word signifies a brave soldier, or military man.

**CHANDELIERS**, in military affairs, constitute a kind of moveable parapet, consisting of wooden frames, on which fascines are laid to cover the workmen when at work on the trenches. They are made of various sorts and sizes.

**CHANTIER**, *Fr.* a square piece of wood, which is used for the purpose of raising any thing. It serves to place barrels of gunpowder in a proper manner, and frequently to try pieces of ordnance instead of frames.

**CHAPE**, the metalline part put on the end of a scabbard, to prevent the point of the sword or bayonet from piercing through it.

**CHAP**, *Fr.* a barrel containing another barrel, which holds gunpowder. It likewise means a composition of earth, horse-dung, and wad, that covers the mouth of a cannon, or mortar.

**CHAPLET**, *Fr.* a piece of flat iron with three tenons or ends of timber, which is fixed to the end of a cannon.

**CHAPERON**, *Fr.* A cap with a pad, and a pointed tail hanging behind, in use only a few centuries back. These caps were made of different sorts of stuffs, and of two different colours. At the time of the famous league, which ended

added when *Henry of Navarre* mounted the French throne, the opposite factions were distinguished by the colour of their *chapérons*. The same had taken place at the time of the disturbances between the dukes of Orleans, or Burgundy, and of Armagnac.

**CHAPITEAUX**, *Fr.* two small boards which are joined together obliquely, and serve to cover the touch-hole of a piece of ordnance.

**CHAPLAIN**. Previous to the commencement of the late war, each regiment had its chaplain. Regimental chaplains have been reduced since that period, and there remains now on the establishment, a *chaplain general*, who directs the performance of church service throughout the army; and for which duty, a certain allowance is given.

**CHARACTER**, in a general sense, implies any mark used for representing either ideas, or objects.

*Military CHARACTERS* } are certain marks invented for avoiding prolixity, and more clearly conveying the thoughts of the learned in those sciences; the chief of which are as follow :

+ Is the mark of addition, and when placed between two numbers, shews that the latter is to be added to the former, thus  $5+3=8$  is five, add three, makes eight.

— is the mark of subtraction, thus:  $5-3=2$  is from five, take three, there remain two.

The qualities called negative, are those which have the mark — before them without any preceding number, but such a mode of writing is asserted by Mr. Baron Meserès, in his use of the negative sign, and by Mr. Frend, in his excellent treatise on Algebra, to be neither useful nor proper.

+ in algebra is the sign of the real existence of the quality it stands before, and is called an affirmative, or positive sign. It is also the mark of addition, and signifies, that the numbers, or quantities on each side of it are added together.

— This is the note of negation, negative existence, or non-entity. It is the sign of subtraction, and signifies that the numbers, or quantities which

come after it, are to be taken from the numbers, or quantities which stand before it.

N. B. + signifies a *positive* or *affirmative* quantity, or *absolute* number; but — signifies a *fictitious* or *negative* number or quantity. Thus — 8, is 8 times less than nothing. So that any number or quantity with the sign × being added to the same number, or quantity with the sign —, their sum will be equal to nothing. Thus 8 added to — 8 is equal to 0, but — 8 taken from × 8, is equal to 16.

× is the sign of multiplication. It signifies *into*, or *multiplied by*.

÷ is the mark of division, and signifies, that the numbers, or quantities before it are to be divided by the numbers, after it.

= are the signs of equality, and signify, that the quantities and numbers on the one side of it are equal to the quantities and numbers on the other.

✓ is the sign of radicality, and shews (according to the index of the power that is set over or after it) the square, cube or other root, that is extracted, or is to be so, out of any quantity.

✓<sup>3</sup> is the sign of the cube root, and signifies the extraction of it, as in the square root above.

÷÷ is the sign of continued, or geometrical proportion.

:: is the mark of geometrical proportion disjunct, and is usually placed between two pair of equal ratios; as 3 : 6 :: 4 : 8, shews, that 3 is to 6, as 4 to 8. Or  $a : b :: d : e$ , and are thus read, as  $a$  is to  $b$ , so is  $d$  to  $e$ , &c.

> or > are signs of majority; thus  $a > b$  expresses that  $a$  is greater than  $b$ .

< or < are signs of minority; and when we would denote that  $a$  is less than  $b$ , we write  $a < b$ , or  $a < b$ , &c.

± signifies *more* or *less* such a quantity, and is used often in extraction of roots, completing of squares, &c.

**Artillery-CHARACTERS**, most generally used, are as follow :

*C. qr. lb.* which signify centners, or hundreds of 112 pounds, *qr.* quarters of 28 pounds, *lb.* pounds. Thus a piece of artillery with 14 : 3 : 16, is 14 hundred quarters, and 16 pounds.

*Pr.* signifies pounder. Thus 24 *pr.* is a 24 pounder.

*T. C. qr. lb.* signifies tuna, centners, quarters,

quarters, pounds; and 28 lb. is one quarter; 4 gr. is one centner, or 112 pounds; and 20 C. is one ton.

lb. oz. dr. mean, pounds, ounces, and drams: 16 dr. is one ounce, and 16 oz. is one pound.

lb. oz. dwt. gr. are pounds, ounces, penny-weights, and grains; of which 24 gr. make one penny-weight, 20 dwt. make one ounce, and 12 oz. one pound of troy-weight.

CHARACTERS in fire-works, are the following.

M Means meal-powder.

☉ Corned powder.

⊕ Saltpetre.

Σ Brimstone.

C Σ Crude Sulphur.

C + Charcoal.

C S Sea-coal.

B R Beech raspings.

S × Steel or iron filings.

B × Brass-dust.

G × Glass-dust.

T × Tanners dust.

C I Cast-iron.

C A Crude antimony.

⌘ Camphor.

⌘ Y Yellow amber.

L S Lapis calaminaris.

⌘ Gum.

B L Lamp-black.

G I Ising-glass.

W Spirit of Wine.

S T Spirit of turpentine.

P O Oil of spike.

CHARACTERS, used in the arithmetic of infinites, are dots over letters, denoting the character of an infinitesimal, or fluxion. Thus the first fluxions of  $x$ ,  $y$ ,  $z$ , being marked thus,  $\dot{x}$ ,  $\dot{y}$ ,  $\dot{z}$ ; the second are  $\ddot{x}$ ,  $\ddot{y}$ ,  $\ddot{z}$ ; and the third

$\ddot{\ddot{x}}$ ,  $\ddot{\ddot{y}}$ ,  $\ddot{\ddot{z}}$ .

Geographical CHARACTERS, are °, ' , " , &c. which signify degrees, minutes, seconds, thirds. Thus 40° 35', 18", 55", is read 40 degrees, 35 minutes, 18 seconds, 55 thirds. It is also used in the elevation of pieces of artillery.

CHARBON. See AIGREMORE.

CHARDONS pour monter à l'assaut, Fr. Cramp-irons used by scaling parties. Previous to the cramp-iron being

known, the soldiers to prevent their slipping in the attempt of storming a rampart, used to take off one shoe. At present they use the *cramp-iron*, or *chardon de fer*, which is fixed over the shoe by means of a strap with a buckle, or is screwed in the heel. We do not imagine this second method to be so safe as the other, especially when the attempt is extremely hazardous.

CHARDONS, Fr. Iron points in the shape of a dart, which are placed on the top of a gate, or wall, to prevent persons from getting over it.

CHARGE, in gunnery, implies the quantity of powder, shot, ball, shells, grenades, &c. with which a gun, mortar, or howitzer, is loaded.

As pieces of artillery are of various denominations, and consequently made use of on several occasions, their charges must of course have many variations.

CHARGE, is also the attack of cavalry; and *charge bayonet* is a word of command given to infantry, to rush on the enemy whom they are to charge at the point of the bayonet. To sound a charge, is the sound of the trumpet as a signal for cavalry to begin the attack.

CHARGE, in military law, is the specification of any crime, or offence for which a non-commissioned officer or soldier is tried before a court-martial. In all charges of this nature, the time and place, when and where the crime or offence was committed, must be set forth with accuracy and precision.

CHARGE, Fr. The French technically use this term in two different senses, viz. *charge précipitée* and *charge à volonté*. *Charge précipitée* is given when the four times are expressly marked, as *chargez vos armes, un, deux, trois, quatre*; and applies chiefly to the drill. *Charge à volonté* is executed in the same manner as the *charge précipitée*, with this difference, that the soldiers do not wait for the specific words.

CHARGE de mine, Fr. the disposition of a certain quantity of powder, which is used for the explosion of a mine.

CHARGED cylinder, in gunnery, implies that part of the chase of a gun, which contains the powder and ball.

CHARGER, any horse belonging to an officer on which he rides in action or parade, &c.

**CHARGERS** (*Chargeoirs*, Fr.) are either bandoleers, or little flasks that contain powder for loading or priming.

**RETOURNER la charge**, Fr. To return to the charge in regular order.

**CHARGER**, Fr. To load a piece of ordnance, or a fire-arm.

**CHARGER une armée, ou une troupe ennemie**, Fr. To get into close action with an enemy, so that wounds may be mutually given and received.

**CHARGER avec l'arme blanche**, Fr. To charge with fixed bayonet, or sword in hand.

**CHARGER en Colonne**, Fr. To advance to the charge in column.

**CHARGER en flanc**, Fr. To advance against either of the flanks of an enemy.

**CHARGER une mine**, Fr. To place the quantity of gunpowder necessary for the explosion of a mine.

**CHARGER en queue une troupe, ou une armée**, Fr. To take a troop, or an army in the rear, and to charge it sword in hand.

**CHARGES militaires**, Fr. Military commissions and appointments.

**CHARIAGE**, Fr. Land-Carriage.

**CHARIER du canon**, Fr. To convey ordnance. It is likewise used to express the carriage of ammunition and military stores.

**CHARIOT**, a car, in which men of arms were anciently placed. These were armed with scythes, hooks, &c. The person who drove the chariot was called the *chariotier*.

**CHARIOTS de Guerre**, Fr. Armed chariots.

**CHARIOT**, Fr. Wagon.

**CHARIOTS d'une Armée**, Fr. Wagon-train.

**CHARIOTS d'artillerie**, Fr. Artillery-wagons.

**CHARIOT couvert**, Fr. a covered wagon.

**CHARIOT à porter corps**, Fr. a wagon upon four wheels, which is used for the carriage of a piece of ordnance that is not mounted.

**CHARIOT à ridelles**, Fr. A four-wheeled wagon with railing round its sides: it is used in the conveyance of cannon balls, shells and ammunition.

**CHARIOTS des vivres**, Fr. Four-wheeled wagons covered at top with

painted canvas thrown over hoops for that purpose. They are generally used to convey bread and stores to an army.

**CHARPENTIER**, Fr. A Carpenter.

**CHARPENTIER Soldat**, Fr. An enlisted man who is employed in carpentry work for military purposes.

**CHARPIE**, Fr. Lint. Such as is used in dressing wounds.

**CHARRONS**, Fr. Wheelwrights.

**CHART**, or *sea-CHART*, is a hydrographical map, or a projection of some part of the earth's superficies in plano, for the use of navigators and geographers.

**Plane-CHART**, is a representation of some part of the superficies of the terraqueous globe, in which the meridians are supposed parallel to each other, the parallels of latitude at equal distances, and consequently the degrees of latitude and longitude every where equal to each other.

**CHART of reduction**, is that where the meridians are represented by right lines, inclining towards each other; thence it appears by construction, that these charts must correct the errors of the plane ones. But since these parallels should cut the meridians at right angles, and do not, they are defective, inasmuch as they exhibit the parallels inclined to the meridians.

**Mercator's-CHART**, is that where the meridians are straight lines parallel to each other, and equidistant: these parallels are also straight lines, and parallel to each other; but the distance between increases from the equinoctial towards each pole, in the ratio of the secant of the latitude to the radius.

**Globular-CHART**, a meridional projection, wherein the distance of the eye from the plane of the meridian, upon which the projection is made, is supposed to be equal to the sine of the angle of 45°. This projection comes the nearest of all to the nature of the globe, because the meridians therein are placed at equal distances.

**Chorographic-CHARTS**, are descriptions of particular countries.

**Heliographic-CHARTS**, descriptions of the body of the sun, and of the maculae or spots observed in it.

**Selenographic-CHARTS**, particular descriptions of the spots of the moon, her appearance, and maculae. Hevelius has written very accurately on Selenography.

**Telegraphic CHARTS**, are descriptions of the telegraph on paper.

**Topographic-CHARTS**, are specific delineations of military positions, in any given tract of country. Companies of topographers have been formed among the French, for the purpose of accurately and expeditiously pointing out to generals and commanding officers, all the relative points of locality, &c.

**CHARTAGNE**, Fr. A strong entrenchment, ~~most~~ generally concealed from the view of the enemy, and which is used in woods and forests, for the defence of important passages.

**CHASE of a gun**. See **CHACR**.

**To CHASE the enemy**. To move after him on horseback in full speed. To pursue a ship at sea.

**Donner la-CHASSE**, Fr. To pursue a flying enemy.

**CHASSE**, Fr. To drive away. To force an enemy to quit a position, &c.

**CHASSE**, Fr. A charge of coarse powder which is thrown into the bottom of the cartouche, to facilitate the explosion of the fire-work it contains.

**CHASSE-COQUINS**, Fr. See **BANDOLIERE**.

**CHASSEURS**, Fr. Light infantry men, forming a select body upon the left of a battalion, in the same manner that grenadiers are posted on the right. They must be particularly active, courageous and enterprising.

**CHASSEURS**, Fr. See **Hunters**.

**CHASSEURS-à cheval**, Fr. A species of light troops in the French service.

**CHASSIS**, Fr. a square platform made of wood, which is used in mining.

**CHASSIS de gallerie**, Fr. Beams of different lengths, which the miners use to support the earth in proportion as they advance into the gallery. These beams support other transversal ones which prevent the earth falling down; the whole is called *chasseau d'umineur*.

**CHASSIS à secret**, Fr. A particular method of drawing lines upon a sheet of paper, and folding it in such a manner, that when the words which are written in the intervals are read, they appear incomprehensible, except to the person who is provided with a correspondent sheet, and who by placing it upon the one received, unravels the signification of its contents.

**CHAT**, Fr. a piece of iron having

one, two or three very sharp prongs, or claws; arranged in a triangular shape, when it has three prongs. This piece of iron is fixed to a shaft. It is used in the examination of a piece of ordnance, and by being introduced into the bore shews whether it be honey-combed, damaged, or otherwise defective.

There is another species of *chat* which differs a little from the one we have just described. It consists of two branches of iron, that are fixed to the end of a piece of the same metal, and have, each of them two steel prongs, or claws. One of these branches contains a hinge with a spring so fixed, that when the *chat* is put into the bore, the least cavity releases the spring, and the defect is instantly discovered. Master-Workmen, who by no means like the invention, call the common *chat* *le diable*, the devil; and they distinguish the one with two branches, by terming it *la malice du diable*, the malice of the devil.

**CHAT**, Fr. A kind of turret formerly in use amongst the French, for the conveyance of the troops who were going to besiege a town.

**CHATEAU**, Fr. A small castle which stands by itself, and is sometimes occupied by a troop or company of soldiers who mean to hold out.

**CHATELET**, Fr. In former times a small castle or fortress. The officer who had the command of it was called *Chatelain*.

**CHATIMENT**, Fr. Punishment. Chastisement.

**CHAIMENT Militaire**, Fr. Military punishment.

**CHATTER les pièces**, Fr. to search, to probe, or examine pieces of ordnance with a chat, in order to discover whether there are any defects within the bore of a cannon.

**CHAUDIERES**, Fr. are vessels made use of in military magazines, to boil pitch in, for various purposes.

**CHAUFFAGE Militaire**, Fr. A ration of wood or other fuel.

**CHAUFFE**, Fr. a spot where the wood is collected and burnt in a foundry. The *chauffe* stands three feet under the side of the furnace, the flames which issue from it, spread over every part of the inside of the furnace, and by their intense heat dissolve the metal.

**CHAUF-**

**CHAUFFER** *une troupe, une fortresse*, Fr. To keep up such a hot and continual discharge of ordnance or musquetry against an armed body of men, or fortified place, that they must either retreat or capitulate.

**CHAUSSEE**, Fr. Any paved way which is raised across a morass, &c. It also signifies the broad road.

**CHAUSSE-Trapés**, Fr. are what we call crows feet; they consist of nails with 4 or 5 points, of which one always stands upward, above the level of the ground; each point is 4 or 5 inches long. They are usually fixed in different parts of a breach, or in any place which is accessible to cavalry, to prevent its approach: sometimes they are of use to obstruct the passage of cavalry through the streets.

**CHAUSSEE**, or *Rèe de CHAUSSEE*, an old expression for the level of the field or the plain ground.

**CHIEFAYA**. The second officer in command among the Janizaries; the Aga's lieutenant.

**CHIEKS**, a general name among mechanics, for those pieces of timber in their machines, which are double and perfectly corresponding to each other. In the construction of military carriages, &c. the term is used to denote the strong planks which form the sides.

**To CHIEER**. To incite; to encourage; to inspire; to huzza.

**CHIEERS**. A military term used among the English in the same sense that the word *acclamations* obtains among the French. Signs of joy; assurances of success before or after an engagement; testimonies of loyalty and affection off the appearance of a chief magistrate, general, &c. expressed by huzzas.

**CHIEF**, Fr. The chief or head of a party, troop, company, regiment, or army. The person who has the principal command.

**CHEF**, Fr. *Chef* has various significations in the French service. With regard to private soldiers, it serves to mark out the corporal or oldest soldier, who has the management of their provisions in quarters, or in the field; this person was called *chef de chambrée*. A *chef de chambrée* among the Romans, was called a decanus.

**CHIEF d'escadre**, Fr. A general offi-

cer, who commands any part of an army, or division of a fleet. His duty in the sea-service is nearly the same as that of a brigadier general on shore. *Chefs d'escadre* sit upon all general courts-martial, and rank according to the dates of their commissions.

**CHIEFS de files**, Fr. The front rank of a battalion, consisting generally of the best and bravest soldiers. When an engagement takes place, *par file* by files, the order of the battalion is necessarily changed; that which was rank becomes file, and what was file becomes rank.

**CHEF de file**, Fr. The man who stands on the right of a troop or company.

**CHEF de parti**, Fr. The head of a detachment, or reconnoitring party. The person who is at the head of others when some particular cause is espoused. It also signifies the principal leader in a tumult or insurrection.

**CHEF du nom et armes**, Fr. When an illustrious family in France was composed of several branches, he that represented the eldest branch was distinguished by this denomination. By illustrious families the reigning houses were equally understood. This distinction exists still amongst those nations that have retained their nobility: most likely it has taken its origin from the letters of nobility granted to military men, on account of some exploit.

**CHIEFSEA HOSPITAL**. A noble edifice which was built by Charles the 2d on his restoration, and afterwards improved by his successor James the 2d. Non-commissioned officers and private men, who have been wounded or maimed in the service, are entitled to the benefit of this hospital. There are in and out-pensioners belonging to the establishment, and the provisions of it extend to the militia under the following restrictions; serjeants who have served fifteen years, and corporals or drummers who have served twenty, may be recommended to the bounty. Serjeants on the establishment may likewise receive that allowance, with their pay in the militia. But serjeants who have been appointed subsequent to the passing of the 26th of George the 3d, are not entitled to it under twenty years service.

**CHEMIN-Couvert**. See **COVERTWAY**.  
CHEMIN

**CHEMIN des rondes**, in *fortification*, a space between the rampart and low parapet under it, for the rounds to go about it.

**CHEMINER**, *Fr.* In *fortification*, to carry on some particular work, such as a trench, &c. towards a given object.

**CHEMISE**, *Fr.* an obsolete term to signify the revetement made of brick work, which was formerly constructed to secure works made of earth, especially those that were formed of sandy soil, and would necessarily require too large a talus to support the weight. The modern term is *ouvrage revêtu, place revêtu*.

**CHEMISE à feu**, *Fr.* A piece of cloth which is steeped in combustible matter, and is made use of against a scaling party.

**CHEMISE de feu**, *Fr.* A French sea-term, to signify several pieces of old sails of various sizes, which after they have been pitched, and thoroughly soaked in other combustible matter, such as oil of petrol, camphor, &c. may be nailed to an enemy's ship on boarding her, and when set fire to, will consume the same.

**CHEMISE de maille**, *Fr.* A shirt of mail, or body lining made of several scales or iron rings, which was worn under the coat to protect the body of a man.

**CHEMISE de coup de main de surprise**. *Fr.* A shirt made of cloth highly bleached, and of which a general provides a number when he premeditates a *coup de main*. This chemise must not come below the waist, in order that it may be got over the coat and cartouch box. The General directs these shirts to be made either with two sleeves, with one or without any at all. A *coup de main* of this kind must be kept secret till the moment of its execution. This stratagem is practised to prevent a soldier from attacking his brother soldier.

**CHEMISTRY**, the art of examining bodies, and of extracting from them any of their component parts.

**CHESS**, a nice and abstruse game, supposed to have been invented during the siege of Troy. This game is particularly adapted to military capacities.

**CHEVAL de bois**, *Fr.* A wooden-horse, a military chastisement, which common prostitutes who followed the French army, were subject to undergo, by exposing them, we presume, on a wooden-horse.

**CHEVAL eclopé**, *Fr.* A lame horse.

**CHEVAL encloué**, *Fr.* A horse that is rendered useless for the moment, from having been pricked in being shod.

**CHEVAL morveux**, *Fr.* A horse that has the glanders.

**CHEVAL d'ordonnance**, *Fr.* A horse which is impressed in a town or village for some military purpose.

**A-CHEVAL**, *Fr.* To horse! A notice given by sound of trumpet for dragoons to mount.

**Etre à CHEVAL sur une rivière, sur une chaussée**, *Fr.* To be encamped or drawn up on each side of a river or road.

**CHEVALER**, *Fr.* To prop; to support.

**CHEVALER**, in the manege, is said of a horse, when, in passing upon a walk or trot, his off fore leg crosses the near fore leg every second motion.

**CHEVALET**, *Fr.* A sort of baittent, formerly used in the French service, when an army encamped. It resembles in some degrees the wigwag of the Indian.

**CHLVALET**, *Fr.* Several pieces of wood, which, being fastened together, form a sort of a rafter for troops to cross rivers upon.

**CHEVALET d'armes**, *Fr.* A covered rack which is made in the front of a place of encampment for the regular distribution and security of the fire-arms belonging to the different troops or companies. This is sometimes called *faïssceau d'armes*, a pile of arms.

**CHEVALIER**, in a general sense, signifies a knight or horseman.

**CHEVALIERS Errans**, *Fr.* Knights-errant, or adventurers who were continually wandering about in search of love adventures, and of opportunities to try their skill in arms.

**CHEVAUX-de-frise**, in *fortification*, a large joist or piece of timber, about 5 or 6 inches square, and 10 or 12 feet in length; into the sides whereof are driven a great number of wooden pins, about 6 feet long, and 1½ inch diameter, crossing one another at right angles, and

and pointed with iron. They are used on numberless occasions, as to stop up the breaches, to secure the avenues of a camp from the inroads both of horse and foot. They are sometimes mounted on wheels, with artificial fires, to roll down in an assault, &c. They were first used at the siege of Groningen, in 1658.

**CHEVAUX LEGERs**, *Fr.* A corps of cavalry, which, during the monarchy, was composed of two hundred gentlemen, making part of the King of France's guard. It has been noticed to the honor of this corps that they never lost their kettle drums, nor their colours. They were established by Henry IV. who first exclusively confined the *hommes d'armes* to the natives of *Nazarré*.

**CHEVAUX à la pâture**, *Fr.* Horses out at grass.

**CHEVAUX au piquet**, *Fr.* Horses at piquet.

**CHEVAUX au sec**, *Fr.* Horses fed upon dry forage, such as corn, &c.

**CHEVAUX au verd**, *Fr.* Horses kept upon green forage.

**CHEVAUX des vivres**, *Fr.* Horses belonging to the quarter master general's department.

**CHEVET**, *Fr.* a small wedge which is used in raising a mortar, it is placed between the frame and swell of the mortar.

**CHEVET du canon**, *Fr.* A large wedge, which is sufficiently strong to support the breach of a piece of ordnance upon its carriage.

**CHEVETAINE**, *Fr.* A term anciently used among the French to signify the leader of a troop or company. The chevetaine was the same as *Capitaine* or *Connétable*, with this difference, that the commission only lasted during the time of hostilities.

**CHEVILLE d'affût**, *Fr.* An iron bolt which goes across the whole of a gun carriage.

**CHEVILLE à oreilles**, *Fr.* An iron bolt of the above description which has rings.

**CHEVILLE ouvrière**, *Fr.* A large flat headed nail, which confines the avant-train to the gun carriage of a piece of ordnance.

**CHEVILLES de travaux militaires**, *Fr.* large nails used in the artillery. See **NAILS**.

**CHEVISANCE**, *Fr.* enterprize, feat, or achievement.

**CHEVRE**, *Fr.* a crab or gin. See **CHEVRETTE**.

**CHEVRETTE**, a kind of gin. Among the many inventions for raising guns or mortars into their carriages, this engine is very useful: it is made of two pieces of wood about 4 feet long, standing upright upon a third, which is square: they are about a foot asunder, and parallel; pierced with holes opposite one another, to hold a strong bolt of iron, which may be raised higher or lower at pleasure: it may be used with a hand-spike, which takes its poise over this bolt, to raise any thing by force.

**CHEVROTINES**, *Fr.* leaden bullets of small calibre; there are generally 60 to a pound weight.

**CHIAJA-Boch**. The third general officer in command among the Janizaries. We may judge of the power of the Aga, who is chief commandant of the Janizaries, from the rights and authority of his second lieutenant: he is captain of the richest company, which he governs despotically, he inherits the whole property of all the Janizaries who die without issue, or leave no relations behind them: and appoints his subaltern officers to be governors of the fortified towns.

**CHIAUS**. The captain of a company of Janizaries: this officer, of high rank, has two captain lieutenants under his command.

**CHICANE**, *Fr.* This word literally means trick, chicanery. In war it signifies the various expedients which are resorted to by able officers to preserve a post or place that is besieged.

**CHICANES de l'ossé**, *Fr.* A very serious and bloody contest between the assailants and the besieged, when the former endeavour to become masters of the covert-way and of the ditches. Besides courage and even rashness, much sang-froid, intelligence, and judicious contrivances are requisite in those who direct either the attack or the defence.

**CHIEF** or **CHIEFTAIN**, the head leader, or commander of any clan in time of war, was so called, especially among the Scotch.

**CHIEN d'une arme à feu**, *Fr.* that part

part of the cock of a musquet or pistol which holds the flint.

**CHIFFRES**, *Fr.* Cyphers, certain characters, consisting of different names and words which are used in military correspondence.

**CHILIARENS**, The name given in Athens to a captain who commanded 1000 men.

**CHORME**, *Fr.* the crew of galley slaves and bonavogliers or volunteers.

**CHIRURGEON**, *Fr.* Surgery.

**CHIRURGIEN**, See **SURGEON**.

**CHIRURGIEN-Major**, *Fr.* Surgeon-Major.

**CHIRURGIEN particulier**, *Fr.* A subordinate surgeon who is employed by the surgeon major, and attends at hospitals on wounded officers and soldiers.

**CHIRURGIEN d'un régiment**, *Fr.* A surgeon who is attached to some particular corps, and has pay and allowances in the same.

**CHLAMIS**, A short cloak which composed part of the military dress of the Greek: it was worn over the tunic. The Roman Emperors also adopted the *chlamis* for their military dress, and called it *paludamentum*.

**CHOC**, *Fr.* A warm and unexpected action which takes place between adverse armies, or bodies of armed men, who endeavour to maintain a post, to force a passage, or to get possession of an open town.

**CHOROGRAPHY**, in *engineering*, is the art of making a drawing or map of a country, province, or district.

**CHOROGRAPHY**, *Chorographic*, *Fr.* A general description of a country. It is not limited as *Geography* or *Topography*; the first comprehending the description of the earth, and the second of any particular part of it with its dependencies.

**CHURCHWARDENS**. The only proper use in which they can be taken with respect to military matters, relates to the militia. They are to pay, when ordered by two deputy lieutenants, half the price of volunteers, to persons chosen by ballot, on penalty of 5*l*. They are likewise, with the consent of the inhabitants, to provide volunteers, and make a rate for the expence, which must not exceed 6*l*. per man. They are able to have the rates on places where the militia has not been raised, levied

upon them. One penny in the pound is allowed them for all the money they collect. In the counties of Kent and Sussex, they possess the power of constables, for the purposes specified in the 26th of the King.

**CICATRICE**, *Fr.* a scar; the mark which a wound leaves upon the surface of the human body.

**CIDARIS**, *Fr.* the turban or cap worn by the kings of Persia, Armenia, Pontus, and Egypt.

**CILIBOE**, A round table upon which the Roman and Greek soldiers used to lay down their shields when they returned from an expedition.

**CILICES**, *Fr.* Coarse tissues of horse or goat's hair, quilted with seaweeds or cow-hair stuffed between. The ancients used to hang these *cilices* over the parapets, the ditches and breaches, to stop the dart or arrows that were shot from *balistas* or *c catapultas*.

**CILICIA**, or *Cilice*. A dress made of goat's-hair, worn by the troops in ancient times, and invented by the Cilicians. When properly woven it is water proof.

**CIMIER**, *Fr.* a heavy ornament, which the ancient knights or chevaliers in France and in other countries were accustomed to wear upon their helmets; small figures were afterwards substituted in their stead.

**CIMITIER**. See **SCIMITAR**.

**CINETTERE**, *Fr.* Scimitar.

**CINCTUS**; the appellation given to a Roman soldier, who was bound to carry arms and to fight. He received at the same time the *cingulum* (a belt), to be stript of which was reckoned the utmost disgrace.

**CINQUAIN**, in *ancient military history*, was an order of battle, to draw up 5 battalions, so that they might make 3 lines; that is, a van, main body, and reserve. Supposing the 5 battalions to be in a line, the 2d and 1th advance and form the van, the 3d falls back and forms the rear, the 1st and 5th form the main body upon the same ground. Lastly, every battalion ought to have a squadron of horse on both the right and left wings. Any number of regiments, produced by multiplying by 5, may be drawn up in the same manner.

**CINQUENELLES**, *Fr.* thick ropes which

which are used in artillery for the purpose of throwing a bridge of boats or pontoons across a river.

**CIRCITOR**, a Roman Officer who after having received his orders from a Tribune, began to visit the posts, and to ascertain whether the centinels were alert and steady at their posts.

**CIRCLE**, in *mathematicks*, is a plane figure, comprehended under one line only, to which all right lines drawn from a point in the middle of it, are equal to one another.

**CIRCUIT**, (*circuit*, Fr.) that space which immediately surrounds a town or place; it also signifies the march of a body of men, who do not move in a direct line towards any given object.

**CIRCUMFERENCE**, (*Circonférence*, Fr.) a curve line which goes round any perfect globular substance. It is this curve line which geometers divide into 360 equal parts, called degrees; each degree into 60 equal parts, called minutes; each minute into 60 seconds, and each second into 60 tierces; which latter division has been imagined or invented for the purpose of measuring the opening of an angle.

**CIRCUMFERENTER**, an instrument used by engineers for measuring angles.

**CIRCUMSPECT**, (*circonspect*, Fr.) a person who observes every thing, conceals what he designs to put in execution, and is cautious with regard to every thing he says or does. Such ought every commanding officer of a regiment and every general of an army to be.

**CIRCUMSPECTION**, (*circonspection*, Fr.) dignified reserve, great prudence, and marked discretion. These are qualifications essentially necessary to every man who holds a public situation.

**CIRCUMVALLATION**, or *line of circumvallation*, in *military affairs*, implies a fortification of earth, consisting of a parapet and trench, made round the town intended to be besieged, when any molestation is apprehended from parties of the enemy, which may march to relieve the place.

Before the attack of a place is begun, care is to be taken to have the most exact plan of it possible; and upon this, the line of circumvallation and the attack are projected. This line, being a

fortification opposed to an enemy that may come from the open country to relieve the besieged, ought to have its defences directed against them; that is, so as to fire from the town: and the besiegers are to be encamped behind this line, and between it and the place. The camp should be as much as possible out of the reach of the shot of the place; and the line of circumvallation, which is to be farther distant from the place than the camp, ought still more to be out of the reach of its artillery.

As cannon are never to be fired from the rear of the camp, this line should be upwards of 1200 fathoms from the place; we will suppose its distance fixed at 1400 fathoms from the covert way. The depth of the camp may be computed at about 30 fathoms, and from the head of the camp to the line of circumvallation 120 fathoms, that the army may have room to draw up in order of battle at the head of the camp, behind the line. This distance, added to the 30 fathoms, makes 150 fathoms, which being added to the 1400, makes 1550 fathoms constitute the distance of the line of circumvallation from the covert way. The top of this line is generally 12 feet broad, and 7 feet deep: the parapet runs quite round the top of it; and at certain distances it is frequently strengthened with redoubts and small forts; the base 18 feet wide, the height within 6, and on the outside 5 feet, with a banquette of 3 feet wide, and 1½ high. See **CONTRAVALLATION**, or **COUNTERVALLATION**.

**CIRCUS**, in *military antiquity*, a very capacious building, of a round or oval form, erected by the ancients for exhibiting shews to the people.

**CIRE préparée**, Fr. a composition which is made of yellow wax, tallow, and pitch, and is used as a sort of mastic gum to close up the heads of fuses, &c.

**CISEAUX**, Fr. chisels used by miners, to loosen earth from the sides of the excavation, without making a noise; which the miner effects by striking the chisel with his hand.

**CITADEL**, a fort with 4, 5, or 6 bastions, raised on the most advantageous ground about a city, the better to command it; and commonly divided from it by an esplanade, the more effectively

usually to hinder the approach of an enemy; so that the citadel defends the inhabitants if they continue in their duty, and punishes them if they revolt. Besiegers always attack the city first, that, being masters of it, they may cover themselves the better against the fire of the citadel. Having bastions it is thereby distinguished from a castle. Sometimes the citadel stands half within, and half without the ramparts of the place.

**CITERNE**, *Fr.* a cistern; well; every fortified town or place should have one.

**CITERNEAU**, *Fr.* a small well which is arched over for the purpose of holding rain water.

**CITOYEN**, *Fr.* citizen; the inhabitant of a place.

**CITOYEN-fiddat**, *Fr.* an armed citizen; a volunteer.

**CIVIC-CROWN**, among the ancient Romans, was a crown given to any soldier who had saved the life of a citizen. It was composed only of oak boughs, but accounted more honourable than any other.

**CIVIERE**, *Fr.* a small hand-barrow, which is carried by two men, and is much used in the artillery.

**CLAE**, *Fr.* a kind of hurdle in the shape of a rectangle, made of twigs well interwoven: these *claus* are used during a siege, for want of blinds, to cover a lodgement, a sap, or the passage over a ditch, and are covered over with earth to protect the workmen against fire works.

**CLAVIS poincées**, *Fr.* pitched hurdles. These are used with great advantage to form causeways in a marshy soil, when the waters have been drained.

**CLAJRON**, *Fr.* a species of trumpet which is shriller in its sound than the ordinary kind.

**CLAN**, a term used among the Scotch for a number of families subject to one head, or chief, who led them to war.

**CLARENCEUX**, the second king at arms, so called from the duke of Clarence, third son to king Edward III.

**CLARIGATION**, in *Roman antiquity*, a ceremony which always preceded a formal declaration of war. It was performed in the following manner: the chief of the heralds went to the territory of the enemy, where, after

some solemn prefatory indication, he, with a loud voice, intimated, that he declared war against them for certain reasons specified; such as injury done to the Roman allies, or the like.

**CLARINETTE**, *Fr.* a clarinette; a shrill musical instrument, resembling the hautboy, which is used in regimental bands.

**CLATES**, } See HURDLES.  
**CLAYES**, }

**CLAYONAGES**, *Fr.* Hurdles with which the timber work of a gallery is covered. They are likewise used in saps.

**CLEAR**, To clear the trenches. See TRENCHES.

**CLÉF d'un état, d'un pays**, *Fr.* literally signifies the key of a state or country. Any fortified place which must necessarily be taken before any irruption, can, with safety, be made into a country. Thus Luxemburg was called the key of the Austrian dominions towards France, as she formerly stood.

**CLIF de mousquet, de carabine, de pistolet**, *Fr.* an iron instrument with only one square hole, and a handle: it serves to cock the piece.

**CLERK**, in the general acceptation of the term, a writer in a public office, an officer of various kinds. See JOHNSON. Every military department belonging to Great Britain has subordinate persons of this description.

**CLERK of the general meeting, for the levying, &c. of militia-men.** In time of peace, this person has authority to adjourn any such meeting, when no lieutenant or deputy attends. It is his duty likewise to file appended lists of militia-men, to send notice of the time and place of exercise to the chief constables, and to transmit copies of accounts he receives of the commitment of deserted sergeants, &c. to the colonel and adjutant of the county battalion.

**CLERK of the sub-division meeting.** His functions are to give notice of the meeting to the deputy lieutenants, &c. and to transmit lists of men enrolled to the commanding officer; to appoint another meeting when there is not due attendance, and give notice of the same; to certify, *gratis*, in what list any person's name is inserted; to transmit copies

pies of rolls to the clerk of the general meeting; to transmit a list of the persons enrolled to the commanding officer and adjutant; to enter on the roll the time of apprehending substitutes who desert.

CLERK of the *peace* is to transmit copies of qualifications to the county lieutenant; to enter qualifications; to cause dutes, &c. of commissions to be inserted in the Gazette; and to transmit an annual account of qualifications to the secretary of state; to transmit an account of the arrival from abroad of the colonel, to the officer commanding in his absence; to deliver the annual certificate of the state of the militia, or certify his not having received one to the quarter sessions; to file certificates of officers' service, and certify their names to the high constable; to transmit copies of certificates from the county lieutenants, &c. to the treasury, and the receiver general of the land-tax; to certify to the solicitor of the treasury the omission at the quarter sessions of assessing money on places where the militia has not been raised. He is liable to penalty for neglecting to record, &c. certificates.

CLERK of the *battalion*. The colonel or commanding officer of every militia regiment in time of peace may appoint a clerk to his battalion, who is to act as paymaster.

When the militia is embodied, the paymaster may appoint some intelligent sergeant to act in the capacity of clerk. The same regulation holds good in the line.

There is likewise a *regimental clerk*, who acts under the serjeant major. See REGIMENTAL BOOK.

CLERK of the *check*, an officer who has the check and controul of the yeomen of the guard; also an officer in the ordnance, who conjointly with the clerk of survey is a check upon, and must sign all the accounts of the store-keeper before they are passed by the board.

CLERK of *Survey*, an officer in the ordnance in the store-keeper's office, who must survey the stores, and see them kept in order. He also signs the store-keeper's accounts before they pass the board.

CLERK of the *Stores*, an officer under

the board of ordnance, who is responsible to the commissary for all ordnance stores under his charge; keeping an account of all issues or receipts.

CLICH, a sabre in use among the Turks: the blade of which is crooked and very broad. The Turks have also another kind of sabre, which is sharp only at one edge; the back of the blade is tipped with a piece of strong iron; this they call *gadaruc*; it is not so much falcated as the *clich*. They have a third kind of sabre, straight, sharp at both edges, especially towards the point which is blunted: this they call *pallas*.

CLIDE, or *Javelide*, a long piece of timber withheld by a counterpoise, which, upon the latter being let loose, would throw a heavy load of stones into a fortress: the *Clide* was still in use under *Charlemain*.

CLIENTS, *Fr.* Noblemen who formerly served in the French armies under the pennant of a knight, the banner of a banneret, &c.

CLOCHE, *Fr.* a bell.

CLOCHE *sujettis à la Taxe militaire*, *Fr.* Bells subject to military requisition. The moment a town, that has been battered with cannon, surrenders, the inhabitants are compelled to redeem the bells, belonging to the churches, and divers utensils made either of brass or of some other metal. This kind of tribute is at the disposal of the chief of the artillery, who, as he thinks proper, divides it between the officers under his command; such at least was the custom during the old French monarchy.

CLOTHING. The clothing of the British army is determined by a permanent board, composed of the commander in chief, and a certain number of general officers, who act under the king's immediate authority. A considerable alteration has lately taken place in almost all articles which, under this head, are supplied to the soldiers. Those under the name of half mounting have been wholly laid aside.

The annual clothing of the infantry of the line, or fencible infantry, serving in Europe, in North America, or at the Cape of Good Hope, (Highland corps excepted) consists in a coat, waistcoat, or waistcoat, front, a pair of breeches,

unlined, except the waistband, and with one pocket only; a cap made of felt and leather, with brass plate, cockade, and tuft. The felt crown of the cap, cockade, and tuft to be supplied annually, the leather part and brass plate, every two years. Two pair of good shoes, of the value of 5s. 6d. each pair, are to be supplied annually in lieu of the half mounting, and each serjeant is to be credited with the sum of 3s. being the difference between the value of the former articles of half mounting for a serjeant and private man. Some exceptions are made with respect to highland corps, and regiments serving in the East and West Indies. For further particulars, see Regulations, published by authority, 22 April, 1803.

**CLOY**, or *to cloy guns*. See *To Nail*.

**CLOUTS**. See *AXLE-TREE*.

**CLOUX**, *Fr.* See *NAILS*.

**To CLUB**, in a military sense, to throw into confusion; to deform, through ignorance, or inadvertency.

**To CLUB a battalion** implies generally a temporary inability in the commanding officer to restore any given body of men to their natural front in line or column. This occurs after some manœuvre has been performed, and is occasioned by false directions being given to the different component parts. Ignorant and unexperienced officers may frequently commit this error; sometimes however, the circumstance may arise from an erroneous movement of a division or company, notwithstanding that the word of command was correct. An able officer in that case will instantly know how to unravel the several parts. The less informed and the less capable may find a relief in sounding the *disperse*, which sec. It does not, however, always follow, that because an officer may occasionally commit this error with respect to the minute movements of a battalion, he must therefore be unequal to the superior functions of command; or that when a man, who has risen from the ranks, is perfectly master of the mechanical arrangement of inferior movements, he should be able to act upon the enlarged scale of locality and position. The military science which is required in each of these cases essentially differs

in its appropriate exercise, but both are necessary.

**CLY-MORE**, a great two-barbed sword, formerly in use among the highlanders, two inches broad, doubly edged; the length of the blade, 3 feet 7 inches; the handle, 14 inches; of a plain transverse guard, 1 foot; the weight, 6 pounds and a half. These swords were the original weapons of England, as appears by the figure of a soldier found among the ruins of London, after the great fire in 1666.

**COAT of mail**, armour made of scales or iron rings.

**COCARDE-militaire**, *Fr.* Amongst all nations the cockade has succeeded to the scarf: it is not long, however, since the Dutch continued to wear the scarf crossways, and the Austrians over their belts. From the colour, or colours of the cockade, it is discovered what country a soldier belongs to. When first this mark of distinction was introduced, it was reckoned a badge of honour. With regard to the scarfs they were attended with great inconvenience, since an officer or private might easily be seized by it, thrown from his horse, or at least stopped in his flight. From this very reason the French within forty years have given up the shoulder knots formerly worn by their cavalry and dragoons.

**COCK**, that part of the lock of a musket, which sustains the two small pieces of iron called jaws, between which the flint is fixed.

**To Cock**, to fix the cock of a musket or pistol, so as to have it ready for an instant discharge.

**COCKADE**, a ribbon worn in the hat. This military mark succeeded the scarf that was formerly worn by the officers and soldiers belonging to European nations, which are principally distinguished in the following manner. In the army and navy of Great Britain, black silk ribbon for the officers, and hair cockades for the non-commissioned officers, private soldiers and marines; light blue, pink and white ribbons mixed, called tricolor or three-coloured, distinguish the French; red marks the Spaniard, black the Prussian and Austrians, green the Russian, &c. Under the old government of France, officers were not permitted to wear a cockade, unless

unless they were regimentally dressed; and, singular as it may appear, the officers and men belonging to a certain number of old regiments in the Prussian service do not wear any mark in their hats. In England the cockade is worn, in and out of regimentals, by every species of military character.

**CODE**, (*code*, Fr.) a collection of laws, rules, and regulations, by which the civilized proportion of mankind is governed.

**Military CODE**, (*code militaire*, Fr.) Rules and regulations for the good order and discipline of an army. Of this description are our articles of war; a revision of which is much wanted at this time.

**COFFER**, Fr. to cap, or put a head-piece on any thing.

**CORREY**, *les fusées à bombes*, Fr. To stop the vents or apertures of shells with any sort of mastic composition.

**CŒUR**, Fr. the heart. This word is frequently used among the French to signify *courage*, intrepidity, manhood, &c. Hence the expression in Corneille's *Cid*: *Roderigue! as tu Cœur?* which may be thus translated—*Roderigues, art thou a man of resolution?*

**COFFER**, in *fortification*, a hollow lodgment sunk in the bottom of a dry ditch, from 6 to 7 feet deep, and from 16 to 18 feet broad; and the length of it, the whole breadth of the said ditch, from side to side. The besieged generally make use of these coffers to repulse the besiegers, when they attempt to pass the ditch: they are distinguished only by their length from *Caponiers*; the difference between coffers and the traverse and gallery, consists in this, that the latter are made by the besiegers, and the former by the besieged. They are covered with joists, hurdles, and earth, raised 2 feet above the bottom of the ditch; which rising serves instead of a parapet, with loop-holes in it.

**COFFRE**. See **COFFER**.

**COFFRE d'une batterie**, Fr. the solid work which covers the pieces of ordnance that are planted in a battery, as well as the soldiers who are attached to the guns.

**COFFRE à feu**, Fr. a machine filled with combustible materials for the purpose of doing mischief to a scaling party, or of blowing up a ship, &c.

**COGNIZANCE**, judicial notice, trial, judicial authority. In a military sense, implies the investigation to which any person or action is liable. During the suspension of civil authority, every offence comes under military cognizance, is subject to military law, and may be proceeded upon according to the summary spirit of its regulation. Hence, a drum-head court-martial is the strongest instance of military cognizance.

**COHORT**, (*cohorte*, Fr.) in Roman antiquity, a name given to part of the Roman legion, comprehending about 600 men.

**COIN**, in gunnery, (*coin d'artilleur*, Fr.) a kind of wedge to lay under the breech of a gun, in order to raise or depress the metal.

**COIN de manœuvre militaire**, Fr. A particular manner in which the ancients used to dispose their troops on the front of the army, to break the line of the enemy. This disposition consisted in giving a great depth, and allowing only a small front, to the body of troops, and was called *faire la tête de porc*. This last title was given to an officer who commanded a column.

**COLGIAT**, a large glove which the Turks wear in the field. The *colgiat* covers the arm up to the elbow, and while it protects the hand, it helps them in parrying the blows that are struck at their heads.

**Royal Military COLLEGE**, a new institution which has been created by the immediate sanction of his Majesty, with the consent of parliament, and under the direction of the commander in chief, for the time being.

This establishment consists of two departments;—

The first, or senior department, is calculated to instruct officers, who have already acquired a sufficient knowledge of regimental duties, &c. in the higher branches of their profession. Their attention is particularly directed to those functions which relate to the Quarter-master-general's department in the field.

The second, or junior department, is meant for the education of young men, who have not yet received any commissions in the army, but who are intended from early life, for the profession of arms.

The following particulars constitute the general outline of this praise-worthy institution :—

The commander in chief for the time being is always to be considered as the chief governor of the establishment. He is President of the Supreme Board of the College; the members of which are, the Secretary at War, and such General and Staff officers as his Majesty may, from time to time, think proper to nominate. It is ~~their~~ peculiar province to see, that the regulations of the institution be duly observed, that the original intentions of the king and legislature be unequivocally fulfilled, and that the whole be conducted with economy and credit to the country.

There is constantly resident in the college, a governor and lieutenant-governor, who must both be military officers. The former not under the rank of major-general, and the latter not under that of lieutenant-colonel in the line. These are the immediate functionaries of the place, and to them is intrusted the intire direction of the establishment; subject only to the instructions and orders that may occasionally be issued from the Supreme Board of the College.

At the head of each department are placed a Commandant and a Director of Instruction. These must likewise be military men, and bear the king's commission. They are, at all times, accountable for their respective departments, being under the immediate control of the governor and lieutenant-governor of the College.

The commandants of departments, in conjunction with the Directors of Instruction, form a Collegiate Board, at which the resident governor, or, in his absence, the lieutenant-governor constantly presides.

Public examinations are made, at stated periods, by this board, in order to ascertain the progress of learning, and the degrees of improvement. The president and members of it likewise enter into the interior economy of the place, controul the expenditure of the establishment, and maintain the statutes of the College as ordered by his Majesty; subject nevertheless to the controul and occasional direction of the Supreme Board, to which the collegiate one is in every respect subordinate.

The staff, and other officers of each department are under the immediate orders of their respective commandants; who are enjoined to conduct their departments in strict conformity to the existing rules and discipline of the king's service.

The establishment is founded upon principles of the strictest economy; and the expence of being at the institution, with all the advantages of theoretical instruction and practical improvement, does not exceed the necessary charges and disbursements to which every officer is subject when he lives with his regiment.

It is a standing order of the institution, that officers must constantly appear in uniform; and they must in all respects conform to the rules, regulations, and customs of his Majesty's service.

Leave of absence is granted, during the months of December and January, to officers studying in the senior department of the college; but at no other season of the year, except for a few days, and then only under circumstances and in cases of urgent necessity.

#### *Senior department.*

The number of officers which can be admitted at a time to the studies of the senior department, is limited to 30; and it is required as indispensably necessary, that they should be perfectly conversant in all the details of regimental duty.

They must likewise have made themselves masters of the French language, be versed in mathematics, and in the science of field fortification and castrametation; and be well instructed in the art of drawing military plans, &c.

Every thing which relates to the different branches belonging to the senior department is conveyed in French, in order that officers may be enabled to improve the knowledge they acquire at the establishment, by reading with facility, the military writers that are most in estimation. The majority of such authors being found among the French, that language is of course the most cultivated; by which means the first object of acquirement will not only be obtained, but it will ensure to the general staff of the army a disposable body of intelligent officers that are conversant in a continental tongue.

The instruction is not elementary, or given upon first principles only. The attention of the officers is directed to higher branches, and the lessons they receive are exemplified by practice in the field; by taking ground, &c.

The particular and more immediate duties appertaining to the general staff, to which the faculties of the mind are principally applied, consist in taking (*à coup d'œil*, or at sight) military surveys of ground without any mechanical process or aid of instruments; and to express the same on paper with the most accurate perspicuity.

It is therefore necessary, that the officers of the senior department should be able to judge of the advantages and disadvantages of ground relative to offensive and defensive operations; to employ geometrical and trigonometrical operation on the ground; to chuse the site or position of entrenchments and batteries, by which every part of a camp may be defended, and its leading avenues, &c. be secured against the possibility of surprize. They must likewise be masters of a theory that may be adapted to every case in which field fortification can be employed, to trace camps on the ground, and to prick out the lines of entrenchments, &c. with dispatch and accuracy, in conformity to the strict rules of casemated: to be thoroughly conversant in the theory of camp out-duties, and of the grand guards of armies, to know how to reconnoitre ground for a given number of columns moving in route of march, and to place or distribute the same with attention to the conveniences of forage and water, and to the security of the magazines.

To reconnoitre the route of a column in *advancing*, to estimate the labour of opening the several communications, to calculate the number of artificers that are requisite, and the time that is necessary to clear the route for the march of a column, and to detail the same in an accurate manner upon paper.

To reconnoitre the route of a column in *retreat*, specifying in a clear and succinct manner upon paper, the several points in retreat that are favourable to each arm composing the rear guard, when they may halt, and act as covering parties to the retiring column.

To reconnoitre and take up ground for a given number of troops on a *defensive* position, and to place the same; to establish a chain of posts, to construct batteries, throw up abatis, and other means of defence, adapted to the particular circumstances of the ground made choice of for the position.

To reconnoitre the ground upon which any given number of troops might be encamped under circumstances of aggression. In taking this position for the purpose of acting *offensively*, particular attention must be paid to the future movements of the army, by providing the readiest means of directing and supporting its operations.

Marches and movements constitute so essential a branch of military tactics, that on them almost wholly depends the issue of a campaign. It is consequently expected, that every officer belonging to the senior department, should be able to calculate the march of a column under all the various and desultory circumstances which attend the movements of troops. He must accurately ascertain the ground, the defiles, the width of roads, obstacles, &c. and the length of the several columns. The hours occupied in marching, in defiling, passing obstacles, &c. must come within this calculation.

It must be remarked, that this is a route of march which has in view only to convey a body of troops from one position to another, without being connected with military operations relative to the enemy.

To calculate the march of several columns with respect to each other.

To reconnoitre routes for the march of several columns in *advancing*; to form the columns of march so as to correspond with the field of battle which they are to occupy, and to point out the routes by which they are severally to arrive. The remark which we have already made applies to this part likewise.

To regulate an order of march, and to ascertain the arrival of several columns on the field, with regard to the appropriate manner of deploying, and their relative dispositions, whether with a view to their encamping, or to forming in order of battle.

To reconnoitre routes for the march of

of several columns in *retreat*, for the purpose of forming columns of march according to the circumstances of the retreat, and in conformity to the ground to which they retire.

N. B. It will be observed, that this and the following movements are marches made relative to a plan of operation.

To regulate the retreat and relative support of the rear guards attached to the several columns.

To estimate the resources of a country, in a green and dry forage, in cattle, grain, horses and carriages, together with the population.

To draw out plans of resources, general plans of operations and subordinate ones of position, and cantonments.

According to the season of the year, and the state of the weather, officers are employed in acquiring the theory, or applying in practice on the ground, the several points of instruction to which their attention has been directed.

It is required of them, individually, to reconnoitre a given tract or line of country.

The military positions they take up, as well as the disposition they make of troops, whether in camp or in order of march, are invariably represented by plans in drawing, and all instruction is exemplified by applications which are made in the field, and are adapted to the local circumstances of ground. In order to render the different lessons familiar to the mind, and to make them practically easy, imaginary marches are made from one supposed camp to another, and the various orders which relate to the movements of troops are given out and explained, as if they were to be actually carried into effect. Points of attack or defence are taken up, ambuscades are laid, and all the chicane of what the French so justly call *la petite guerre*, is entered into with as much promptitude and caution, as if the enemy were in the neighbourhood of the college. The manœuvres of light troops are particularly practised; and the different instructions which have been published in French on that branch of military tactics by Mons. Jarry are practically taught, as time and circumstances permit.

The elements of field fortification,

and the higher branches of attack and defence, are not only inculcated with the greatest perspicuity, but they are reduced to practice by imaginary lines of circumvallation and contravallation; by posts and positions suddenly taken, and quickly fortified; whilst the manifold feints and stratagems of war which have been practised by the best generals, are locally attempted, for the double purpose of applying practice to established facts, and of seizing some new idea that may grow out of ancient practice.

In order to add practical knowledge to theory, and to adapt the observations of established military writers to local experience, every survey or reconnoitring of country, for the retreat or advance of columns; for offensive or defensive positions; for encampments, or the construction and erection of batteries, &c. is made upon spots that are actually in the neighbourhood of the establishment; and every object of instruction is applied to the local circumstance of the ground as it actually exists. It is required, that plans of these different surveys, &c. should at all times accompany, and be given in, with the lesson of instruction.

Officers of the senior department must not only be well acquainted with these particulars, but they must further know how to regulate the cantonments of an army.

Whenever an officer has completed his studies, he is reported to the commander in chief, as having qualified himself for the quarter-master general's department; he then returns to his regiment, (having had his name previously registered at the college) in order that he may be employed on the general staff of the army, when his services are required.

When an officer wishes to be admitted to the Military College, his application must be addressed to the commander in chief, for the time being, through the medium of the colonel or commanding officer of his regiment, who sends it, under cover, to the official or public secretary at the Horse-Guards, with his own certificate of the good conduct of the applicant.

When an officer, thus admitted, is found deficient in any of the branches of

of elementary knowledge, which he is expected to have acquired previous to his entrance into the senior department, he may have the advantage of instruction from the professors and masters of the junior department. It would, however, be more gratifying to all parties, were such officers to qualify themselves before they quit their corps.

The same allowances which are established for troops in barracks, are made to officers who attend the instructions of the senior department.

Every officer admitted to this department is required to have a horse to attend his duty in the field, and regular rations of forage, &c. are issued to him for his keep.

The officers of the senior department mess together, and their table is regulated by specific statutes of the college.

#### *Junior department.*

This department is calculated to receive three hundred students from the age of fourteen to sixteen. Fifty out of this number may be cadets of the Hon. East India company's service; one hundred the sons of noblemen and gentlemen who are intended for the army; one hundred the sons of officers actually in the service; and fifty the sons of officers who have died, or have been disabled, in his Majesty's service, and are left in pecuniary distress.

The students are formed into four companies; and proper persons are appointed for their care and superintendence.

They are to wear an established uniform, and to be conducted as a military body; regard being had to their youth, and certain instructions adopted for its government.

The course of study which is arranged for this department is of a preparatory nature, leading gradually to branches of a higher class that are fitted for the staff; and adding to classical knowledge, every accomplishment that is required to form the character of a perfect gentleman and officer.

The students are taught the several branches of mathematics, field fortification, together with the general principles of gunnery and artillery service. They are instructed in drawing military plans, military movements, and per-

spective. They are also made acquainted with the first rudiments of war, the science of military manœuvre, with geography and history, as well as with the German and French languages. Professors and masters are appointed to teach the Hindoo and Persian tongues, as being immediately necessary to the service of India. Masters are likewise provided to instruct cadets in the geography of India, and to make them familiarly acquainted with the local knowledge of the settlement for which they are severally intended.

The Directors of Instruction are made particularly responsible for the proper management of the studies, and different elementary branches which constitute an essential part of the establishment.

The professors and masters are employed generally to instruct in both departments, under the controul of the chief director.

The whole establishment, which has military knowledge and improvement for its basis, is conducted upon strict military principles, and in scrupulous conformity to the rules and discipline which are issued by authority for the government of the army at large.

A sufficient number of masters are constantly resident in the college, for the instruction of such students as may wish to continue their classical studies. Frequent lessons are given them on moral and natural philosophy.

They are likewise taught riding, swimming, fencing, and the sabre and sword exercise.

The instruction of the department is divided into two parts, forming a junior and senior division of study.

Public examinations are held in this department, in order to remove students from the lower to the higher division of study; and also for the purpose of granting certificates to such as are qualified to act as commissioned officers in the service, at an age under what is required by the present regulations of the army.

From this department students will join the regiments into which they severally enter; and after having obtained some experience, by going through the different duties of a regimental officer, they will be qualified to return to the College, and to enter into the senior department.

department, if they are disposed to study the service of the general staff.

The public examinations are held in presence of one or more visitors or inspectors, nominated by the Commander in Chief; and it is required, that they should be members of the Supreme Board of the College.

The expence attending the education of a young gentleman in this department, is according to the foundation on which he is admitted to the College.

The sons of noblemen and gentlemen pay 80*l.* per annum.

The sons of officers in the King's service, pay 40*l.* per annum; and orphans, who are the sons of officers that have died in the service, or the sons of those that have been disabled and are straitened in circumstances, are educated, clothed, and maintained free of all expence.

The board, clothing, and accommodation, are included in the several sums above specified.

There are two vacations in the course of twelve months, viz.—At Christmas and Midsummer, for*e*. term not exceeding one month each vacation.

The administration of the funds of the establishment, is under the direction of the Collegiate Board.

The accounts are balanced at the expiration of six months in every year, and are laid before the Supreme Board; at which periods, reports of progress made in the several branches of literature and technical science, and of the public examinations, are made before the committee. These documents, accompanied by well digested remarks and seasonable suggestions, for the preservation of good order, &c. and the improvement of the institution, are laid before his Majesty, by the Commander in Chief, as President and Governor of the College.

The Supreme Board of the College is composed in the following manner;

The Commander in Chief for the time being, President.

The Secretary at War.

A Governor.

The Master-General of the Ordnance.

The Governor of Chelsea College.

The Quarter-Master-General.

The Adjutant-General.

Two honorary members.

The Barrack-Master General.

The Lieutenant-Governor.

The Commandant of the Senior Department.

These are the members of the Supreme Board; and such others may, from time to time be named, as his Majesty shall think fit.

A Secretary to the Supreme Board.

Treasurer to the College.

**COLLEGE *Royale Militaire***, Fr. a general term used among the French to express the place where military instruction was given during their Monarchy. This establishment consisted of several colleges, which were subordinate to the Royal Military School, or *Ecole Royale Militaire*, of Paris.

On the 28th of March, 1776, the French King gave directions; that ten colleges should be established, over the gates of each of which was written—**COLLEGE *Royale Militaire***; Royal Military College. These colleges were under the immediate care and instruction of the Benedictine Monks, and other religious orders; the most enlightened of which was that of the Jesuits.

The secretary of state held the same jurisdiction over these colleges that he possessed over *la Flèche* and the Military School in Paris. Great attention has been given to this establishment by Bonaparte since his accession to the Imperial dignity. For particulars respecting the old institution, see the article *Royal Military School*.

**COLLET**, Fr. That part of a cannon which is between the astragal and the muzzle.

**COLONEL**, the commander in chief of a regiment, whether of horse, foot, dragoons, or artillery, in England: but in France, Spain, and some other southern nations, the colonels of horse are called *Maîtres de Camp*; in Germany, and most northern nations, they are called *Rittmeesters*. Colonels of horse take place, and command one another according to the dates of their commissions, and not in consequence of the seniority of their regiments. Colonels of foot command in the same manner.

According to some authors, the word  
*Colonel*

*Colonel* is derived from the Italians or Spaniards.

Skinner supposes it may come from colony, *colony*, and that the heads or chiefs of colonies may have given the appellation to the officers commanding regiments.

In former times, officers, although at the head of considerable corps, were only styled captains, but not colonels. See *Dictionnaire de Trevoux*, fol. edit.

A question arises whether the old word *Colonel* might not have been derived from the Latin *Coronarius*; either from some ceremony which was performed upon the person receiving the rank, or from his being placed at the head, *Corona*, of a regiment. The former certainly appears the most probable, as it might have had its origin from the Roman manner of rewarding a general.

The Spaniards have it *Coronel*; the Italians, *Colonnello*.

We are inclined to think that it is derived from the Latin *Corona*, whence *Coronarius*; and that it came to us from the Spanish. Both the English and Scotch, but particularly the latter, pronounce the word *Colonel*, and so do the Irish.

*Colonel of horse*, who is the first officer of the regiment; hence his attention ought to be given to keeping the regiment complete, to have it composed of both men and horses fit for service, and to take particular care to have them well exercised and taught the different evolutions; to be able on all occasions to form themselves according to the ground, or manner in which they may attack, or be attacked.

*Colonel of foot, or infantry*. His functions are more extensive than those of the cavalry, as the infantry are employed to more different purposes. A colonel of infantry should understand something of fortification, and be well acquainted with field-engineering. He cannot be too careful to maintain union and harmony among his officers; and, to succeed in this, he must acquire their esteem and confidence, and make himself to be respected. The true way to succeed in this, is to keep up subordination with unalterable firmness; to do justice to every one, to employ all his credit to procure favours

to the corps in general, and to the officers in particular, without ever losing sight of the health, comfort and contentment of his men.

*Colonel of dragoons* is nearly connected with that of horse, to which word we refer the reader.

*Colonel of artillery*. The commander of a battalion of artillery is one of the most laborious employments both in war and peace, requiring the greatest ability, application, and experience. He is supposed to be a very able mathematician and engineer, to be thoroughly acquainted with the power of artillery, to understand the attack and defence of fortifications in all the different branches; to be able on all occasions to form the artillery according to the ground or manner in which they may attack or be attacked; in short, he should be master of every thing belonging to that important corps.

*Colonel of engineers*, should be a very able mathematician and mechanic, he should be master of fortification, and be correctly versed in the art of planning, constructing, attacking and defending. See *ENGINEER*.

*Lieutenant-Colonel*, is the second person in command of a regiment. Under his direction all the affairs of the regiment roll. His military qualifications should be adequate to the size and the importance of the corps he has the honour to serve in.

*Colonel general of the French infantry*. An appointment of great trust and authority, which was suppressed during the old government of France. A colonel-general was formerly entitled to the nomination of every commission and place of trust in the infantry. He could order courts-martial, and enforce the sentences awarded by them without ulterior reference; and he had a company in every regiment which was called the colonel-general's company.

This appointment was created during the reign of Francis I. in 1544, and became an immediate gift of the crown, under Henry III. in 1584.

There was likewise a colonel-general of the cavalry; which appointment was entrusted to two officers under the reign of Louis XIII. One commanded the French and the other the German cavalry.

The appointment of colonel-general of dragoons was created by Louis XIV. in 1688.

**COLONEL** *by brevet*, *Breveté COLONEL*, *Fr.* One who has obtained the rank of colonel in the army without having that rank in any particular regiment.

**COLONEL** *réforme*, *Fr.* A reduced half-pay officer, who has the rank of colonel in the army, without having any command or regimental rank, or who has retired from the service retaining his brevet rank.

**COLONELLE**, *Fr.* is the first company in a French regiment. *Madame la Colonelle* is the colonel's wife.

**COLONNE**, *Fr.* Column. This word is variously used in military phraseology.

**COLONNE d'artillerie**, *Fr.* The march or movements of a corps of artillery in regular order, with the several pieces of ordnance, accompanied by stores and ammunition, for the purpose of attacking or checking an enemy.

**COLONNE du centre**, *Fr.* A part of an army which is advancing between other armed bodies, for the purpose of occupying any particular ground, of attacking an enemy, or of avoiding his attack by retreating.

**COLONNE de droite**, *Fr.* A successive movement of troops which form a part of an army, and preserve the same line of march without any interval or interruption. This column of the right has other columns upon its left, and the one which is next to it is called the second column belonging to the right, another the third column of the right, and so on to the last, which alone is called the left column, and is the one upon which the whole army moves.

**COLONNE d'équipages**, *Fr.* The line of march which is observed by the baggage-wagons, &c. In advancing against an enemy these always follow the main army, and precede it when the troops are forced to retreat.

**COLONNE de gauche**, *Fr.* A successive movement of troops (left in front) which form a material part of an army, and preserve the same line of march without interruption. This column constitutes the left of the army, and is its directing body in that point of view,

when it advances against or retires from an enemy.

**COLONNE de troupes**, *Fr.* Any successive movement of troops, horse or foot, in regular order.

**Fermer une COLONNE**, *Fr.* To be the rear rank of a body of troops that are marching rank and file in any direction.

**Ouvrir une COLONNE**, *Fr.* To be the leading or front rank of a body of troops that are marching in regular order.

**Ouvrir une COLONNE**, *Fr.* To plant signals as marks of direction for troops that are marching in regular order. To clear the way, by removing all sorts of obstacles, &c.

**COLOURS**, in the military art, are large silk flags fixed on half pikes, and carried by the ensign. When a battalion is encamped, they are placed in its front; but in garrison they are lodged with the commanding officer.

The first standard, guidon, or colours, of a regiment, are not to be carried on any guard but that of his Majesty, the Queen, Prince of Wales, or captain-general.

The size of the colours to be 6 feet 6 inches flying, and 6 feet deep on the pike. The length of the pike (spear and ferril included) to be 9 feet 10 inches. The cords and tassels of the whole to be crimson and gold mixed.

**Camp-COLOURS**, are a small sort of colours placed on the right and left of the parade of the regiment when in the field: they are 18 inches square, and of the colour of the facing of the regiment, with the number of the regiment upon them. The poles to be 7 feet 6 inches long, except those of the quarter and rear guards, which are to be 9 feet.

**COLOUR-guard**. See **GUARD**.

**A pair of COLOURS**, a term used in the British service to signify an ensigncy, or the first commissioned appointment in the army.

**COLOURS used in the drawings of fortification**. It is necessary to use colours in the drawings of plans and profiles of a fortification, in order to distinguish every particular part, and separate, as it were, the one from the other, so as to make their difference more

môre sensible. The different sorts of colours, generally used in these kinds of drawings, are, *Indian-ink*, *carmine*, *verdigrise*, *sap-green*, *gum-bouch*, *Prussian blue*, *indigo* and *umber*.

*Indian-ink* is the first and most necessary thing required in drawing; for it serves, in drawing the lines, to express hills or rising grounds, and, in short, for all what is called shading in drawings. The best sort of *Indian-ink* is of a bluish black, soft and easily reduced into a liquid, free from sand or gravel. It is sold in sticks from sixpence a stick to half a crown, according to its goodness and quantity. That made in Europe is good for nothing.

The manner of liquifying it, is by putting a little clear water into a shell or tea-cup, and rubbing it gently 'till the water is black, and of a consistence much like common ink: when it is used for drawing lines, it must be made very black, though not too thick, otherwise it will not easily flow out of the drawing-pen; but when it is for shading, it must be pale, so as to go over the same shade several times, which adds a beauty to the shading.

*Carmine*, is an impalpable powder, and the fairest red we know of: it serves for colouring the sections of masonry, the plans of houses, and all kinds of military buildings; as likewise their elevation: but then it is made of a paler colour. It is also used for drawing red lines in plans, to represent walls. It is exceedingly dear, being generally sold for a guinea an ounce; but a little will go a great way. It must be mixed with a little gum-water.

*Verdigrise*, or *sea-green*, used in drawings, is either liquid in small vials for six-pence a piece, or mixed in little pots or shells, &c. it serves to colour wet ditches, rivers, seas, and in general to represent all watery places.

*Sap-green*, is a stone of a faint yellowish green, when liquified with clear water; but when mixed with a little *sea-green*, it makes a beautiful grass-green; but, as all mixed colours are liable to fade, if *verd'iris* can be had, it will be much better. *Sap-green* is very cheap.

*Gum-bouch*, is a fine yellow in stones, and very cheap. It may be dissolved

in water, but without gum: it serves to colour all projects of works; as likewise to distinguish the works unfinished from those that are complete. It serves also to colour the trenches of an attack.

*Indigo*, is in small cakes, and very cheap; it serves to colour iron, and roofs of buildings which are covered with slates: it must be well ground upon a smooth stone or glass, and mixed with a little gum-water.

*Prussian blue*, is a kind of friable stone, of an exceeding fine blue: it is used to represent the colour of blue cloth in drawing encampments, battles, &c. It must be well ground, and mixed with a little gum-water.

*Smalt*, also a good sort of blue, and may be used for the same purposes. It is not dear.

*Ultramarine*, is an impalpable powder, and of a very delicate-sky-blue. It is a dear colour.

*Umbre*, is a yellowish brown colour in powder: when it is mixed with gum-water, it serves to colour dry ditches, sand and all kinds of earth. By mixing a little red ink with it, it will make a wood colour.

If some tobacco-leaves are steeped in clear water for several hours, and filtered through a woollen cloth, or brown paper, with a little red ink mixed with it, it will make the best earth or wood colour, as lying smoother than any other.

*Gum-water*, is best when it is made some time before it is used; for which reason take some *gum arabic* and steep it in clear water for some hours, 'till it is dissolved: then strain it through a woollen cloth or brown paper, and preserve it in phials, well stopped, 'till wanted.

**COLUMN**, a body of troops formed in *deep files* and narrow *front*, the whole advancing with the same degree of movement, and having sufficient space between the ranks and files to prevent confusion. The name of column is also given to several bodies placed behind each other, and intended to march on successively, to form or to keep in *order of battle*: but in this case they are not to be called, *files of troops*. There are more or less *columns*, according to the nature of the ground, but it is not necessary that they should all

all of them advance the same way in order to meet at an appointed spot. Those officers, who have been taught by experience alone, (which is far from being sufficient if they are ignorant of the theory) will do well to consult *l'art de la guerre par regles & par principes*, by Marshal de Puysegur and *les Œuvres de Folard*. It is next to an impossibility to remember all that is prescribed by those skilful authors; but every officer, who who is anxious to improve his knowledge in the military art, may derive great advantage from the perusal of their works.

**Close-COLUMN**, a compact solid column, with very little space between the divisions of which it is composed.

**Open COLUMN**, a column with intervals between the divisions equal to their respective fronts.

**COMBAT**, a battle or duel. Anciently it was not uncommon for contending powers to adjust their dispute by single combat, when each party chose for itself a champion, who contested the point in presence of both armies.

**COMBATANTS**, (*Combattants*, Fr.) Troops engaged in action.

**COMBATRE**, Fr. to act against an enemy with offensive weapons, for the purpose of defending one's country and its rights, &c. Hence, *tout est soldat pour vous combattre*. Every thing is up in arms to fight you.

**COMBINAISON**, Fr. a calm and dispassionate examination of the various projects and designs which are suggested to the human mind by the multiplied occurrences in warfare.

**COMBINER ce que fait l'ennemi**, Fr. to weigh well the movements of an enemy.

**COMBLEAU**, Fr. a cord used to load and unload pieces of artillery, also to hoist them on their carriage, the same as other heavy burdens, by means of a crane.

**COMBLEMENT des fossés**, Fr. When the besiegers have succeeded in rendering themselves masters of the covert-way, they contrive, by all possible means, to fill up the ditches, by establishing galleries which protect the workmen, in order that the miners may carry on their operations with more safety: by this means they form an

entrenchment which defends them against the sorties or any other attempt that might be made by the besieged.

**COMBUSTIBLES**, Fr. combustible materials; such as are used in offensive and defensive operations.

**COME-in**. Soldiers are said to come in, as volunteers, recruits, &c. when invited to join any particular standard.

**COME-over**. When men desert from an enemy, and join the army that opposes him, they are said to come over. This term is opposed to *go over*.

**To COME-in to**, to join with, to bring help. "They marched to Wells, where the Lord Audley, with whom their leaders had before secret intelligence, *came in to them*." Johnson.

**To COME-up**, to overtake. **To come up** with an enemy, is a military phrase much in use.

**COMINGE**, Fr. a shell of extreme magnitude, which takes its name from the person who originally invented it, containing eighteen inches in diameter, and five hundred pounds in weight.

**COMMAND**, generally called *the word of command*, is a term used by officers in exercise, or upon service.

**COMMAND**, in military matters. All commands fall to the eldest in the same circumstance, whether of horse, dragoons, artillery, foot, or marines. Among the officers of the corps of the British troops, entire or in parts, in case two of the same date interfere, a retrospection of former commissions, or length of service, is to be examined and ended by the judgment of the rules of war.

**COMMANDE**, a rope made, use of in boats and pontoons.

**COMMANDS in fortification**, are:

*A command in front*, when any eminence is directly facing the work which it commands.

*A command in rear*, when any eminence is directly behind the work which it commands.

*A command by enfilade*, when an eminence is situated in the prolongation of any line of a work, and a considerable part of it may be seen from thence.

*To have in command*. An official term. As I have it in command from his Royal Highness the Duke of York, &c.

**COMMANDANT**, is that person who has the command of a garrison, fort,

fort, castle, regiment, company, &c. called also commander.

**COMMANDE**, *Fr.* a person subordinate to and under the orders of another.

**Ouvrage commandé**, *Fr.* a work which is overlooked and consequently commanded by some other.

**COMMANDEMENT**, *Fr.* in a military sense, means any spot which is higher than another. A commandement is called *simple*, when the difference between two heights is only 9 feet. It is called *double*, when the difference is 18 feet; triple when 27, and so progressively, taking 9 feet invariably for the height of each commandement. A commandement may be considered in three lights. In *front*, in *enfilade*, and in *reverse*. The commandement in *front*, is when you see all the persons who are employed in protecting a work; in *enfilade*, when you only see them from a flank; and in *reverse*, when you see them obliquely from behind.

**COMMANDEMENT**, *Fr.* a command; a situation of trust which is given to a military officer.

**COMMANDEMENT**, *Fr.* an order which is given out by a superior officer.

**COMMANDEMENT**, *Fr.* in fortification signifies the elevation and consequently the superiority of a mountain over a plain, or any other ground that is under it.

**COMMANDEMENT** (*ordre de*) *Fr.* a right of command which exists among the French between officers of cavalry and infantry. In a fortified post, or town, the officers of infantry have the command over the officers of cavalry; but in an open country the officers of infantry are commanded by the former.

**COMMANDEUR**, *Fr.* to command; to be superior in rank, and to possess authority over others.

**COMMANDER**, *Fr.* in fortification, to overlook, to command.

**COMMANDEUR**, a certain benediction belonging to some military order. A body of the knights of Malta are so called.

**COMMANDEUR**, *Fr.* A Knight of an order who enjoys some lucrative situation in consequence of his rank.

**COMMANDING-ground**, implies, in a military sense, a rising ground

which overlooks any post, or strong place. There are, strictly speaking, three sorts of commanding ground; namely.

**Front COMMANDING-ground**. Every height is called so, that lies opposite to the face of the post which plays upon its front.

**Reverse COMMANDING-ground**, an eminence which plays upon the rear of a post.

**Enfilade COMMANDING-ground**, or **Curtain COMMANDING-ground**, a high place, which, with its shot, scourges all the length of a line, &c.

**COMMIS**, *Fr.* Clerk or inferior person, who is employed in any of the French war-departments.

**COMMISSAIRE**, *Fr.* Commissary. This term was used in the old French service, to express a variety of military occupations. The following are the principal designations.

**COMMISSAIRE-général des armées**. Commissary-general of the armies. This situation was created for the benefit of an individual named Besancon. He had the power of ordering specific reviews of corps to be made, &c. It was, however, discovered, that the powers entrusted to him were of too extensive a nature, and the place was suppressed in the person for whom it had been created.

**COMMISSAIRE-général de la cavalerie légère**, *Fr.* Commissary general of light cavalry. He ranked as the third general officer of the cavalry. A regiment called the commissary general's regiment was exclusively under his command.

**COMMISSAIRE d'artillerie**, *Fr.* Commissary of artillery. One commissary general superintended in each department of the ordnance, and had one of the three keys which belonged to the general magazine. This officer had the power of giving directions respecting the cleanliness and the general government of the magazines.

**COMMISSAIRES provinciaux d'artillerie**, *Fr.* Provincial commissaries attached to the ordnance.

**COMMISSAIRES ordinaires d'artillerie**, *Fr.* Commissaries in ordinary attached to the ordnance. These were subordinate to the provincial commissaries, and were distributed among the navy, forts, and garrison towns.

**COMMISSAIRES extraordinaires d'artillerie**,

*illerie*, Fr. Extraordinary commissaries attached to the ordnance. These formed the third class of commissaries under the monarchical government in France. They likewise did duty on board the king's ships, or in garrison towns.

*COMMISSAIRE provincial en l'Arsenal de Paris au département de l'Isle de France*. Provincial commissary belonging to the arsenal in Paris. This officer received his commission from the grand master, in whose gift the situation lay, and had the exclusive privilege of being rendered privy to every alteration or movement that was made in the arsenal.

*COMMISSAIRE général des poudres et salpêtres*, Fr. Commissary general of gun-powder and saltpetre. This place was created with that of the superintendant general of gun-powder and saltpetre, in 1634. This situation, however, did not exclude him from paying the paulet or tax. It was finally suppressed, and the grand master of the ordnance provided a person who exercised its functions.

*COMMISSAIRE général des fontes*, Fr. Commissary general of the founderies. This appointment was bestowed invariably upon those men who had given distinguished proofs of their ability in casting cannon, &c. It was in the gift of the master of the ordnance.

*COMMISSAIRES des guerres*, Fr. Commissaries of the war departments or muster masters general. Peculiar privileges were attached to these appointments; but the persons holding them were subordinate to the governors and commandants of towns and garrisons, without whose permission they could not muster a regiment.

*COMMISSAIRES ordinaires des guerres*, Fr. Commissaries in ordinary, or deputy muster masters. These were subordinate to the former, and were entrusted with the superintendence of hospitals, to see that proper provisions were procured for and distributed among the sick. They likewise gave proper vouchers to account for the absence of soldiers, and regulated what number of extraordinary wagons should be furnished to the troops on marches.

*COMMISSAIRE provinciaux et ordinaires des guerres*, Fr. Provincial or ordinary commissaries of war. Specific

duties were attached to their appointments, the discharge of which was principally confined to the different provinces.

*COMMISSAIRES des guerres entretenus dans l'hôtel des invalides*. Fr. Commissaries of war, specifically attached to and resident in the hotel des invalides. It was their duty to keep a regular roll, containing all the names of the different officers, non-commissioned officers and soldiers, who might be detached on garrison duty, &c. which return was made monthly by them to the secretary at war. Each commissary at every review or inspection of the corps of invalids, had particular directions to mark out those men who appeared capable of serving; and a regular return to that effect was made to the secretary at war.

*COMMISSAIRE des vivres*. Fr. Commissary of stores. The commissary of stores had several deputies, who acted immediately under, and were in every respect accountable to him for the management of their trust.

*COMMISSAIRE général des fortifications*, Fr. Commissary general of fortifications. This was a very important situation during war, as it was the duty of the commissary general to trace the lines of circumvallation, &c. at a siege; to determine upon the mode of attack and defence, and to see that the necessary repairs were made.

*COMMISSAIRE provincial des guerres*. Fr. provincial commissaries of war created in 1635; they were suppressed and re-established by Lewis XIV. in 1704.

*COMMISSARY*, in military affairs, is of various denominations, though generally a civil officer appointed to inspect the musters, stores, and provisions for the army. In war-time their number is unlimited.

*COMMISSAIRES general, and COMMISSAIRES of accounts*, are appointed by warrant under the king's sign manual, directing them to obey all instructions given them for the execution of their duty by the lords commissioners of the treasury. These instructions are generally prepared by the comptrollers of the army accounts, under the orders, and subjected to the subsequent inspection of the treasury.

**COMMISSARY.**

**COMMISSARY-general of the musters, or muster-master general.** He takes account of the strength of every regiment as often as he pleases; reviews them, sees that the horses are well mounted, and all the men well armed and clothed. He receives and inspects the muster-rolls, and knows exactly the strength of the army. A new appointment has been created this war in the person of inspector general of cavalry, which answers every purpose for which that of muster-master general was intended.

**COMMISSARY-general of stores,** a civil officer in the artillery, who has the charge of all the stores, for which he is accountable to the office of ordnance. He is allowed various other deputy commissaries, clerks, and conductors, especially in war-time.

**COMMISSARY of the train horses,** a civil officer likewise of the artillery, who has the inspection of all horses belonging to the train, the hospital and the bakery; having under him a number of conductors, drivers, &c.

**COMMISSARY of accounts** is a responsible person who attends each army, where the numbers are of sufficient importance, with a proper establishment, for the purpose of examining and controlling accounts on the spot. All commissaries of accounts make returns of their examinations, and on these documents the comptrollers of the army accounts found the best enquiry into the expenditure which the nature of the subject admits of.

**COMMISSARY-general of provisions,** has the charge of furnishing the army in the field with all sorts of provisions, forage, &c. by contract: he must be very vigilant and industrious, that the troops may never suffer want. He has under him various commissaries, storekeepers, clerks, &c.

**COMMISSION,** in a military sense, any situation or place which an individual may hold in the regular army, or militia of Great Britain. All commissions in the line, guards, or volunteer corps must have the royal sign manual. The former are issued from the war-office, subjecting the individual to the payment of certain fees, according to the rank he holds; which fees are received by the several agents, and by them accounted for to the war-office.

Commissions in the militia do not bear the royal sign manual; that of the adjutant alone excepted, who is generally called a king's officer. Lieutenants or deputy lieutenants of counties affix their seals and signatures to these commissions or appointments; but they must previously have been laid before the King for his approbation. Fourteen days constitute the allotted time; and if his Majesty does not *disapprove* of the person so recommended, a notification is sent by one of the principal secretaries of state to the lord lieutenant, or to those acting by commission in his absence, or during a vacancy, stating his Majesty's pleasure.

**COMMISSION of array.** In the reign of Henry II. 1181, an assize of arms was settled to the following effect. That every person possessed of a knight's fee, was to have a coat of mail, an helmet, a shield, and a lance, and as many of these as he had fees. Every free layman that had in goods or rents to the value of 16 marks, was to have the same arms; and such as had 10 marks were to have a lesser coat of mail, an iron cap, and a lance; the two last of which with a *rambois* were assigned for the arms of burgesses, and all the freemen of boroughs. These arms were all to be provided before the feast of St Hilary next following.

To enforce these regulations, it was customary for the time, at certain seasons of the year, to issue commissions to experienced officers, to draw out and array the fittest men for service in each county, and to march them to the sea coasts, or to such other quarters of the country as were judged to be most in danger. Of these *commissions of array*, there are many hundreds in the Gascon and French rolls in the tower of London, from the 36th of Henry III. to the reign of Edward IV. The form of the ancient commissions of array may be seen in Rushworth's historical collection published in 1640. These commissions were again attempted to be revived by Charles I. but they were voted illegal and unconstitutional by the parliament in those days. They would not be so at present.

**COMMISSION militaire, Fr.** a commission in the army.

**COMMISSION militaire, Fr.** a temporary

rary Court or Tribunal established to enquire into capital offences, and to pass sentence on the delinquents.

**Non-COMMISSIONED**, applies to that particular class of men who act between what are called the rank and file of a battalion, and the commissioned or warrant officers. See **SERGEANTS**.

**COMMITTEE**, a select number of persons to whom the more particular consideration of some matter is referred, and who are to report their opinion to the court, &c. of which they are members.

**COMMUNICATION**, in fortification signifies all sort of passages, or ways which lead from one work to another. The best, and indeed the only good communications are those which the besieger cannot annoy, or interrupt by his fire. The obstinate defence of a work is rendered almost impracticable, if you are destitute of good communications. Subterraneous galleries, collars, or caponieres, slopes made on the outside of gorges, may be termed communications.

When the ditches are filled with water, floating bridges, &c. serve as communications.

**COMPAGNE**, Fr. a room or cabin belonging to the chief of a galley.

**COMPAGNIE**, Fr. a certain number of soldiers under the inspection or management of a chief called *captain*. A *compagnie d'ordonnance* was originally composed of fifteen companies of *gens d'armes*, of one hundred *hommes d'armes* each. Formerly the word *enseigne* implied a company of infantry, and the word *corvette* a company of horse.

**COMPAGNIE-Colonelle**, Fr. Among the French the first company in a battalion, or that which is called the colonel's: among the British this company used to be commanded by the captain lieutenant; but by a recent regulation all companies have their respective captains.

**COMPAGNIE-Lieutenant-Colonelle**, Fr. The second company in a battalion, or that which belonged to the Lieutenant-Colonel. Before a late regulation, these companies were called in the British army field officers' companies.

**COMPAGNIE-Franches**, Fr. •Free corps or companies, which during the old government of France, were put upon a certain establishment in war time.

**COMPANY**, in a military sense, means a small body of foot or artillery, the number of which is never fixed, but is generally from 50 to 120, commanded by a captain, a lieutenant, and an ensign, and sometimes by a first and second lieutenant, as in the artillery and flank companies of the line. A company has usually 3 or four sergeants, 3 or four corporals, and 2 drums. In the guards the companies consist of 120 men each, as in the artillery. In the Austrian service a company consists of 200 men.

**Free-COMPANY**, is one of those corps commonly called irregular; is seldom or never under the same orders with the regular corps of the army, but for the most part acts like a detachable army, either by itself, or in conjunction with some of its own kind; therefore their operations are properly considered under the title of the *petite guerre*.

**Independent-COMPANY**, that which is not incorporated in a regiment.

**COMPARTIMENT de feu**, Fr. a specific division of the intermediate spaces belonging to a mine, and the regular allotment of the sautoirs or tram-bags to convey fire to the furnaces at one and the same time.

**COMPARTIMENT du mineur**, Fr. See *compartment de feu*.

**COMPAS de proportion**, Fr. a mathematical instrument which facilitates the prompt dividing of the lines on a plan.

**COMPASSEMENT de feu**, Fr. See *COMPARTIMENT*.

**COMPASSION**, *Compassion*, Fr. According to a French author (see *Dictionnaire Militaire par M. Dupain de Mondesson*) a quality not known in military life. He describes compassion to be a sentiment or impulse of the soul which carries us insensibly towards the relief of every object in bodily or mental distress. A sentiment however, which in war we carefully conceal; repressing every feeling of the heart, becoming obdurate on every occasion, and seeking nothing but the destruction of our enemies. Such are the sentiments of this French writer. British valour is, on the contrary, susceptible of much compassion.

**COMPÉTENCE militaire**, Fr. military cognizance.

**COMPLEMENT of the curtain**, that part

part in the interior side of a fortification which makes the demi-gorge. See FORTIFICATION.

**COMPLEMENT** of the line of defence, the remainder of the line of defence, after you have taken away the angle of the flank. See FORTIFICATION.

**COMPLETE**, (*complet*, Fr.) A battalion, troop or company is said to be complete, when the established number of men are present and fit for duty.

To **COMPLETE**, (*completer*, Fr.) to carry up to its full establishment.

**COMPLIMENT** of the line of the army. See HONOURS.

**COMPLIMENT** from guards. See HONOURS.

**COMPOSER**, Fr. To enter into a composition; to make terms with an enemy; as when a fortress, town or body of men surrender.

**COMPOSITION**, Fr. This term among the French signifies the component or constituent parts of any establishment, &c. Thus regiments form divisions, and the whole put together make up an army.

**COMPOSITIONS**, Fr. terms, conditions, &c. which are entered into by two contending parties, when one is forced to give way.

**COMPOSITION**, Fr. in artillery, the different ingredients with which gunpowder is made, viz. sulphur, saltpetre, and charcoal.

• **COMPOSITION** also signifies a mixture of bees wax with pitch and tar, that is used in the making up of fuses and shells.

**COMPOUND** motion. See GUNNERY.

**COMPRESSION**. The act or circumstance of being restrained or confined.

**Globe of COMPRESSION**, an excavation of a globular form, which is made in the earth, and is so filled with gunpowder, that its explosion becomes effectual the instant it is lighted. See GLOBE.

• **COMPTROLLER** of the artillery, the person who inspects the musters of the artillery, makes the pay-lists, takes the account and remains of stores, and is accountable to the office of ordnance. This post is only in war time. Also an officer who superintends the accounts of the army at large. Hence comptroller of accounts.

**COMPTEPAS**, Fr. (from *Compter les pas*, to count or measure steps or paces,) an instrument which serves to measure the ground a person has run over, either on foot, on horseback, or in a carriage.

**COMRADE**, (*Camarade*, Fr.) a fellow soldier, in the same regiment, troop, or company.

**CONCQUE**, Fr. a piece of ordnance wider about the mouth than at the breech. • A kind of shell used by the ancients in lieu of a trumpet.

**CONCAVE**, (*concave*, Fr.) any thing hollow, as the inside of a shell, &c.

**CONCAVITY**, (*concavité*, Fr.) the hollow space which appears in an excavation, &c. Such for instance is the hollow that is made by the springing of a mine.

To **CONCERT**, (*concerter*, Fr.) in a military sense, is to digest, arrange and dispose matters in such a manner, that you may be able to act in conjunction with other forces, however much divided, at any given point of offensive or defensive operation.

**CONCERTER** une opération de guerre, Fr. to concert measures for actual warfare; as to fix on some specific time, describe some direct mode, and adopt the necessary means to carry a plan into execution.

**CONCORDAT**, Fr. an agreement which was sometimes entered into by officers in the old French service, to create a purse or fund for the use of an individual that quitted the regiment with credit to himself, in order to make way for other officers that were junior in rank. It sometimes happens in the British service, that an officer is allowed to retire on full pay; the moiety of which is made up to him by the officers who remain, and were his juniors.

**CONCOURIR** au bien du ser. Fr. To do every thing in one's power for the good of the service.

**CONDITIONS** of peace, (*conditions de paix*, Fr.) terms upon which peace is made.

**CONDUCTEUR**, Fr. A person entrusted with the conveyance of military stores, &c.

**CONDUCTEUR**, ou guide, F. An inhabitant of a town or village who is well acquainted with the different roads,

**CONDUCT**, (*Conduite*, Fr.) that line which is observed by an officer, who is entrusted with the management of others, or has the direction of any particular enterprise. By his good or bad conduct he exhibits proofs of genius, capacity and judgment, or of ignorance and gross incompetency.

**CONDUCTORS**, (*conducteurs d'équipages*, Fr.) are assistants to the commissary of stores, to conduct depots, or magazines, from one place to another: they have also the care of the ammunition wagons in the field: they report to the commissary, and are under his command.

**CONDUITE d'une troupe**, Fr. the charge or management of any body of troops on a march.

**CONFEDERATE Troops**, (*troupes confédérées*, Fr.) troops of different nations united together in one common cause against an enemy. Hence the league by which they are so engaged, is called a *confederacy*.

**CONFEDERATES**, (*Confédérés*, Fr.) different princes, states, or bodies of people acting together.

**CONFEDERATION**, (*Confédération*, Fr.) a compact entered into by two or more powers to act offensively against a common enemy, or to stand upon the defensive; an assembly of people.

**CONFÉRENCE**, Fr. In military language a communication which is made between two or more persons to settle the conditions of a peace, &c.

**CONFIDENCE**, in a military sense, implies an explicit reliance upon the skill, courage, &c. of an individual. Next to a perfect knowledge of military tactics, the faculty of securing the confidence of the soldiers is, perhaps, one of the surest means of becoming successful in war. There are instances, indeed, which prove that many victories have been gained by men who had the entire confidence of their army, without being remarkable for much military knowledge: whilst on the other hand, battles have been lost by the most celebrated generals, because they did not possess the good opinion of their men. When confidence and military science go together, an army must be unfortunate not to succeed in the most desperate enterprise.

**CONFLICT**. See **COMBAT**.

**CONFUSION**, (*confusion*, Fr.) the loose and disorderly state into which a regiment or a whole army is thrown, by defeat.

**CONGÉ**, Fr. leave of absence. The old service of France admitted of two sorts. The *Congé limité*, a limited or specific leave, and *Congé absolu*, a full discharge: in time of war, the latter was always suspended.

**CONGÉDIER**, Fr. to dismiss.

**CONGÉDIER une armée**, Fr. to send an army into quarters.

**CONGLOMERATE**, to gather together, to assemble in a knot.

**CONGRESS**, (*Congrès*, Fr.) in military and political affairs, is an assembly of commissioners, deputies, envoys, &c. from several courts, meeting to agree on terms for a general pacification, or to concert matters for their common good.

**CONIC**, (*conique*, Fr.) like a cone. A piece of ordnance wider towards the mouth, than about the breech, is said to be conic.

**CONJURATEURS ou Conjurés**, Fr. conspirators; persons leagued together for the purpose of assassinating their Prince or Sovereign, or of overturning the established government. This term applies generally to any illegal combination of men.

**CONJURATION**, Fr. Conspiracy. League entered into by persons, who are mutually sworn to support and carry into execution some projected scheme.

**CONNÉTABLE de France**. Constable of France. This appointment succeeded to that of Grand Sénéchal de France. It was not originally a military place of trust, but merely an office belonging to the king's household.

**CONNÉTABLE de France**, Fr. was a particular corps under the immediate command and direction of the Marshals of France; composed of forty-eight mounted guards, who wore a *houqueton*, for the king's service, of a Provost-general, four-Lieutenants and four *Eccompts*.

**CONNOISSANCE**, Fr. knowledge of any thing.

**CONNOISSANCE d'un Pays**, Fr. the complete knowledge of a country, of its mountains, vallies, rivers, fortified places

places and bridges, &c. also of its magazines and means of subsistence for an army.

To **CONQUER**, (*conquerir*, Fr.) to obtain possession, of a town, country, &c. by force of arms.

**CONQUEROR**, (*conquerant*, Fr.) a warrior who manages his affairs in such a manner, that he gets the better of all his enemies, and obtains a complete triumph.

**CONQUESTS** (*Conquêtes*, Fr.) territory, &c. obtained by dint of fighting.

**CONSCRIPT**, (*conscriptus*,) a term anciently applied to the senators of Rome, from their names being entered all in one register.

**CONSCRIPTS**, men raised to recruit the imperial and French armies. In Bohemia and Hungary, all men capable of bearing arms are enregistered, and must march whenever there is occasion for their services. The conscripts in France have been raised during the present war upon similar principles.

The militia of Great Britain comes likewise under the appellation, with this difference, that the men are raised by ballot, and do not march out of their native country, unless they be voluntarily disposed so to do.

**CONSEILLE-de-guerre**, Fr. This term not only signified a council of war, at which the French king and his minister sat to determine upon military matters, both by sea and land, but it likewise meant a general or regimental court-martial.

**CONSEIL-de-guerre secret**, Fr. A secret council held by the sovereign and his ministers to deliberate on a defensive, offensive or federative war.

**CONSIGNE**, Fr. Parole or counter-sign.

It likewise means, when used in the masculine gender, a person formerly paid by the French government for constantly residing in a garrison town, in order to take cognizance of all persons who entered or went out of the gates. He had a place allotted to him in the half-moon, and delivered a regular report to the governor, or commandant of the place.

**CONSIGNE**, Fr. An individual who is not permitted to go beyond certain limits, or to leave a house wherein he is detained by superior command.

**CONSIGNER**, Fr. To order a person to be stopped. It also signifies to regulate things in a town or garrison so as to ensure public tranquillity.

**CONSPIRATION**, Fr. Conspiracy.

**CONSPIRATION contre le service du Roi**, Fr. a conspiracy against the king's service. During the existence of the old government of France, any conspiracy, collusion, or unlawful understanding, which was discovered to exist against the king, his governors, commandants, or other inferior officers, was reckoned a capital military offence; and by an order which took place on the 1st of July, 1727, it was enacted, that every person convicted of the crime should be broken upon the wheel.

**CONSTABLE**, *chief*. A person employed under the militia establishment of Great-Britain, to issue, when directed, orders to the constables to return lists of men liable to serve, and to give notice to the constables of the number of men appointed to serve, and direct them to give notice to the men chosen. To forward notice of the time and place of exercise to the constables, and of the orders for embodying the militia. To order proper persons to furnish carriages for the militia, as well as for every other part of the British army on its march, and to be repaid their extra expences by the county treasurer. To transmit to the petty constables, certificates from the clerk of the peace of the service of officers. Constables are allowed one penny in the pound of the money they collect; but they forfeit fifty pounds whenever they neglect to assist in raising money to be assessed where the militia has not been raised.

**CONSTABLES** are to attend subdivision meetings, with lists of men liable to serve, and verify them; likewise to produce returns on oath of the days notice was given to the men chosen by ballot. On their refusing to return lists, they are liable to be imprisoned, or to suffer fine. It is their duty to affix notice of the time and place of exercise on the church doors. They are paid for their trouble in the same manner as the chief constables are, but are only subject to 20*l*. penalty, for neglect-

neglecting to assist in raising money directed to be assessed where the militia has not been raised.

They may likewise apprehend persons suspected of being deserted serjeants, corporals or drummers, belonging to the militia.

*High Constable and Marshal* were officers of considerable weight and dignity, not only in France, but throughout all the feudal governments of Europe. The title of constable *or comes stabuli*, according to the ingenious author of an essay on military law, explains the original nature of this office, which was that of commander of the cavalry; and as these once constituted the principal strength of the imperial or royal armies, this officer became naturally the commander in chief of those armies. The office of marshal appears originally to have been of a much inferior nature, the person who exercised it being the actual superintendent of the stables, or chief of the equeries, whose duty was to furnish the provender for the horses, and to oversee their proper management. But in process of time this office grew into high consideration, and the marshal subordinate only to the constable, became the second in command of the armies, and in the absence of the latter supplied his place. See *MARSHAL*.

The powers of the constable as a field officer, were extremely ample and dignified. The constable was subordinate only to the king in the command of the army; and even when the king was actually in the field, the efficient command of the troops seems to have been in this officer, and all the general orders were issued jointly in the sovereign's name and in the constable's.

*CONSTANCE, Fr.* Courage, perseverance and resolution: qualities which are essentially necessary in war to make troops undergo a variety of hardships, in order to get the better at last.

*CONSTITUTION d'un pays, Fr.* The nature of a country; its local advantages or disadvantages with respect to military operations.

*CONSUL*, the person invested with the powers of the consulate.

*CONSUL chief, or ?* The first or *premier Consul, Fr.* Chief magistrate

of three persons, each bearing the title of consul, according to the late constitution of France. The duty of the chief consul was to command, direct, and superintend all the military establishments of the country, and, whenever it was judged expedient, to lead her armies into battle. Bonaparte, in consequence of the revolution which took place in 1799, was appointed chief consul. He has since been created and acknowledged Emperor of the French.

*CONSULAR*, relating, or appertaining to the consul.

*CONSULATE*, a civil and military power which was originally instituted by the Romans, on the extinction of their kings in Tarquin the Proud. It revived in France, and was the principal feature of her late constitution.

*CONSULSHIP*, the office of consul.

*CONSUMPTION, (consumption, Fr.)* the expenditure or waste of stores, ammunition, &c.

*CONTACT*, a touching, or the point or points where one body touches another.

*CONTAGION, Fr.* a species of pestilential disease which gets among soldiers that he encamped upon marshy grounds, &c.

*CONTINER une Armée, un Ennemi, Fr.* To keep an army or an enemy in check. Of this description was supposed to be the confederacy formed at Pilnitz in 1792, to check the French Revolution. But its issue proved, that partial views gained the ascendancy over the common cause; and that instead of weakening the French, its incongruous materials only served to strengthen them.

*CONTINGENT*, something casual or uncertain, that may or may not happen.

The *CONTINGENT bill* of a regiment is an account of extra charges, which depend on the accidental situation or circumstances, that may attend any regiment in its due course of service.

*CONTINGENT (contingent, Fr.)* the quota of armed men or pecuniary subsidy which one state gives another.

*CONTOUR, Fr.* the limits of a country, of a town, camp, plan, or drawing; it is the basis or foundation of each.

**CONTRABAND**, this term is applicable to various foreign commodities which are either totally prohibited by the English laws, or are subject to severe penalties and heavy duties. For the encouragement of the fair trader, and in order to secure the revenue from illicit encroachments, the light dragoons are frequently employed upon the coast to prevent the smugglers from carrying contraband goods into the country. Other troops are sometimes put upon this service, but light horsemen are best calculated to do the duty.

**CONTRAINDRE**, *Fr.* to levy contributions on a town, village, &c. either in money or provisions.

**CONTRAÎTE**, *Fr.* The exaction which is made when a town or country is put under contribution.

**CONTRAMURE**, in fortification, is a wall built before another partition-wall to strengthen it, so that it may receive no damage from the adjacent buildings.

**CONTRAVALLATION**, (*contravallation*, *Fr.*) a line formed in the same manner as the line of circumvallation, to defend the besiegers against the enterprises of the garrison: so that the army, forming a siege, lies between the lines of circumvallation and contravallation. The trench of this line is towards the town, at the foot of the parapet, and is never made but when the garrison is numerous enough to harass and interrupt the besieger by sallies. This line is constructed in the rear of the camp, and by the same rule as the line of circumvallation, with this difference, that as it is only intended to resist a body of troops much inferior to a force which might attack the circumvallation, so its parapet is not made so thick, nor the ditch so wide and deep; 6 feet are sufficient for the first, and the ditch is 8 feet broad, and 5 feet deep.

Among the ancients this line was very common, but their garrisons were much stronger than ours; for, as the inhabitants of towns were then almost the only soldiers, there were commonly as many troops to defend a place, as there were inhabitants in it. The lines of circumvallation and contravallation are very ancient, examples of them being found in histories of the remotest

antiquity. The author of the military history of *Louis le Grand* pretends however, that *Cæsar* was the first inventor of them; but it appears from the chevalier de Follard's treatise on the method of attack and defence of places, used by the ancients, how little foundation there is for this opinion. This author asserts, with great probability on his side, that these lines are as ancient as the time in which towns were first surrounded with walls, or, in other words, were fortified.

**CONTRAVENTION Militaire**, *Fr.* responsibility; every commanding officer, whatever his rank may be, is responsible for all the offences committed by the troops under his command.

**CONTREBANDE**, *Fr.* See **CONTRABAND**.

*Faire la CONTREBANDE*, *Fr.* to smuggle.

**CONTREBANDIER**, *Fr.* a smuggler.

**CONTRE-approches**, *Fr.* Lines in fortification or trenches which a besieged garrison or invested army makes to defeat the attempts of its adversaries.

**CONTRE-batteries**, *Fr.* Batteries which are erected for the purpose of answering those of an enemy, who besieges a place, or gives battle.

**CONTRE finesse**, or **CONTRE-ruse**, *Fr.* A stratagem employed to oppose or prevent the effect of another: it is also called *contre-mine*.

**CONTRE-forts**, *Fr.* Brick-work which is added to the revetement of a rampart on the side of the terre-pleine, and which is equal to its height. Contre-forts are used to support the body of earth with which the rampart is formed. They are likewise practised in the revetements of counterscarps, in gorges and demi-gorges, &c. The latter are constructed upon a less scale than the former. It has been suggested by an able engineer in the French service, to unite *contre-forts*, and consequently to strengthen them, by means of arches.

*Contre-forts* likewise form a part of the construction of powder-magazines, which are bomb-proof.

**CONTRE-garde, ou couvre-face**, *Fr.* In fortification, counter-guard; a work which only surrounds the faces of another work, and from which it is separated by the ditch or *fossé*. These counter-

counter-

counter-guards are built in front of a bastion, or half-moon, to prevent the enemy from attacking the latter, until the former are destroyed.

**CONTRE-ligne**, Fr. a sort of temporary fortification which is thrown up with earth, and stands between a besieged town or fortress and a besieging army, in order to prevent the sorties of the former.

**CONTRE-marche**, Fr. See MARCH.

**CONTRE-mine**, Fr. See MINE.

**CONTRE-mineurs**, Fr. See MINE.

**CONTRE-mot**, Fr. a second parole or countersign, which is given in times of alarm.

**CONTRE-mur**, Fr. an outward wall erected round the principal wall of a town.

**CONTRE-ordre**, Fr. a counter-order.

**CONTRE-queue d'aronde**, Fr. a work in fortification, which has two faces or sides, making a reentrant angle, by joining together towards the inside of the work. It has also two branches, which with the faces, contain a narrower space towards the enemy than on the other side.

**CONTRE-ronde**, Fr. a round which is made subsequent to another, to see if the first round was gone according to order.

**CONTRE-signe**, Fr. The signature or name of a prince, minister, or of any privileged person, which is written on the outside of a letter, and renders it post free, &c.

**CONTRE-signer**, Fr. to counter sign.

**CONTRE-temps**, Fr. When two persons, fighting with swords, thrust at the same time without parrying; the thrust is equally dangerous for both parties, and is called a *contre-temps*, or counter-thrust.

**CONTRE-tranchées**, Fr. trenches made against the besiegers with their parapet; they must communicate with several parts of the town, in order that the garrison be able to retire into it hastily, after having broken or stopped the communications; otherwise it would be losing time to erect a work which you would be obliged to demolish, or to fill up, when you had reached the third parallel.

**CONTRIBUER au succès d'une entreprise militaire**, Fr. to do every thing in our power, either by personal exertion,

or by the means of others under our command, towards the successful issue of a battle, &c. and to contribute thereby to the glory and welfare of our country.

**CONTRIBUTE**, (*contribuer*, Fr.) to furnish from good will and patriotism, or from compulsion, money, stores, &c. for the support of an army.

**CONTRIBUTION**, in military history, is an imposition or tax paid by countries who bear the scourge of war, to secure themselves from being plundered and totally destroyed by the enemy. When a belligerent prince, wanting money, raises it on the enemy's country, and is either paid in provisions or in money, and sometimes in both, he is said to do so by contribution.

**CONTROL**, *comptrol*, or *controle*, is properly a double register kept of acts, issues of the officers or commissioners in the revenues, army, &c. in order to ascertain the true state thereof.

**CONTROLES**, Fr. See MASTER-ROIS.

**CONTROLEURS des guerres**, Fr. Master-masters. This term was likewise applied to signify various other appointments belonging to the interior arrangement of the French army, viz. *controlleurs général d'artillerie*, *controlleurs des hôpitaux militaires*. See SUPERINTENDANT of military hospitals.

**CONTROLEUR général des vivres**. See COMMISSARY general of stores.

**CONTUSION**, (*contusion*, Fr.) the effect of a ball or of any other hard substance upon the human frame, when it is struck, without breaking or tearing the skin.

**CONVALESCENT**, *récovering*, returning to a state of health. Hospitals have been established during the present war in different districts, for the preservation of our troops. Among others, there is in each district a convalescent hospital.

*List of CONVALESCENTS*, is a return made out by the surgeon belonging to a battalion, hospital, &c. to ascertain the specific number of men who may shortly be expected to do duty.

**CONVENTION**, (*convention*, Fr.) an agreement which is entered into by troops that are opposed to one another, either for the evacuation of some.

some particular post, the suspension of hostilities, or the exchange of prisoners.

**CONVENTIONS** *entre Souverains pour restitution des déserteurs*, Fr. agreements or stipulations made between neighbouring powers to check desertions. In conformity to these conventions, all deserters whatever are arrested within the dominion of a sovereign, who has passed an agreement of the kind with the prince, from whose army they have deserted. The intelligence is forwarded to the commandant of the nearest town, who sends for the deserter, and forwards him to his corps, where the expences of his escort are repaid.

**CONVENTIONS secrètes** *entre les officiers d'un corps*, Fr. certain secret agreements which are entered into by the officers of a regiment.

**CONVERSION**, Fr. a sudden motion of the troops whilst manœuvring, or in battle, which is made either by wheeling from the right or from the left. There are two sorts of conversions: the one upon the flank, and the other upon the center.

**CONVERSION**, *quart de conversion*, Fr. a wheel which comprehends the quarter of a circle, and turns the front of a battalion where the flank was, when the flank is attacked.

**CONVEX**, (*convexe*, Fr.) externally round, as a globe, cannon ball, &c.

**CONVEXITY**, (*convexité*, Fr.) the external surface of any round body or substance.

**CONVOCAION**, Fr. the act of summoning various persons belonging to a state, for the purpose of discussing matters which relate to civil or military matters.

**CONVOQUER**, Fr. to call together.

To **CONVOY**, (*convoyer*, Fr.) This term is used among the French, both for sea or land: in the latter sense it corresponds with our term, to escort.

**CONVOY**, (*convoy*, Fr.) in military affairs, a detachment of troops employed to guard any supply of men, money, ammunition, provision, stores, &c. conveyed in time of war, by land or sea, to a town or army. A body of men that marches to secure any thing from falling into the enemy's hand, is also

called a *convoy*. An officer having the command of a convoy, must take all possible precautions for its security. He must endeavour, before its march, to procure good intelligence concerning the enemies out-parties. And as the commanding officer of the place from which the convoy is to march, and those of such other places as he is to pass by, are the most proper persons to apply to for assistance, he must therefore take such measures as will enable him to keep up a constant intercourse with them. The conducting a convoy is one of the most important and most difficult of all military operations; so much so, that a general officer sometimes commands it.

To **CO-OPERATE**, (*coopérer*, Fr.) to put a well digested plan into execution, so that forces, however divided, may act upon one principle and towards one end.

**COOK**, each troop or company has cooks, who are excused from other duties.

**COPPER**. No other metal is allowed to the magazines, or barrels of gunpowder.

**COQUILLES à boulet**, Fr. shells or moulds. They are made either of bras or iron; two are required for the casting of a cannon-ball; but they never close so effectually as to prevent the liquid metal, which has been poured in, from running somewhat out of the part where they join. This excrescence is called the beard, which is broken off to render the ball completely round.

**CORBEILLES**, Fr. large baskets, which being filled with earth, and placed one by another along the parapet, serve to cover the besieged from the shot of the assailing enemy. They are made wider at top than at the bottom, in order to afford loop-holes, through which the men may fire upon the besiegers. Their usual dimensions are one foot and a half high, as much in breadth at the top, and eight or ten inches at the bottom.

**CORDAGES**, Fr. All sorts of ropes which are used in artillery, &c.

**CORDE**, Fr. Cord, in geometry, and fortification, means a straight line which cuts the circumference into two parts, without running through the center.

**CORDE-à-jeu.** A rope-match, composed of combustible materials.

**CORDEAU, Fr.** a cord which is used in measuring ground. It is divided into toises, feet and inches, for the purpose of ascertaining, with precision, the opening of angles and the extent of lines. In wet weather a small chain made of wire is substituted, to prevent mistakes that would necessarily occur from the cord becoming shorter or longer, according to the influence of the weather. The technical terms among French engineers, are *Manier le cordeau*; *Pendre le cordeau*; *Travailler au cordeau*.

**CORDEAU de Campement, Fr.** a long cord divided at equal distances with a piece of cloth of a bright colour, that it may be better seen; it serves to mark from left to right the alignment of the camp of each battalion in battle array.

**CORDEAU de Mesure.** See *CHAÎNE d'Ingénieur*.

**CORDERIE, Fr.** a rope-walk.

- **CORDON,** in fortification, is a row of stones made round on the outside, and placed between the termination of the slope of the wall, and the parapet which stands perpendicular, in such a manner, that this difference may not be offensive to the eye; whence those cordons serve only as ornaments in walled fortifications.

*The Cordons of the revêtement of the rampart is often on a level with the terre pleine of the rampart. It has been observed in a late French military publication, that it might be more advantageously placed some feet lower, especially when there is a wall attached to the parapet, to shield the rounds from the enemy's fire.*

**CORDON,** in military history, is a chain of posts, or an imaginary line of separation between two armies, either in the field or in winter quarters.

**CORRIDOR,** the covert way which is formed between the fossé and the palisade on the counterscarp. See *COVERT-WAY*. This word is becoming obsolete as a military term, and is chiefly confined to domestic buildings.

**CORNAGE,** an ancient tenure, which obliged the land-holder to give notice of an invasion by blowing a horn.

**CORNE à amorcer,** a priming horn.

**CORNE, ou OUVRAGE à CORNE, Fr.** See *HORNED-WORK*.

**CORNES de Bélier, Fr.** low flanks in front of a maille, for the defence of the ditch. See *OUVRAGE à corne*.

**CORNET,** in the military history of the ancients, an instrument much in the nature of a trumpet; when the cornet was sounded alone, the ensigns were to march without the soldiers; whereas, when the trumpet only sounded, the soldiers were to move forward without the ensigns. A troop of horse was so called.

**CORNET,** in the military history of the moderns, the third commission officer in a troop of horse or dragoons, subordinate to the captain and lieutenant, equivalent to the ensign amongst the foot. His duty is to carry the standard, near the centre of the front rank of the squadron.

**CORNET d'Oruc, Fr.** a horn made of beaten iron, which the officers use in going their rounds to hear from over the parapet what passes in the ditches, and even beyond the covert-way.

**CORNETTE, Fr.** See *CORNET*.

*The CORNETTES or Cornets of the colonel general of cavalry, in the old French service, as well as those attached to the quarter-master general and commissary general, ranked as lieutenants, and the cornettes of la colonelle général des dragons ranked as youngest lieutenants, and commanded all other cornets.*

**CORNETTE, Fr.** was likewise the term used to signify the standard peculiarly appropriated to the light cavalry. Hence cornettes and troops were synonymous terms to express the number of light-horse attached to an army. The standard so called was made of taffetas or glazed silk, one foot and a half square, upon which the arms, motto, and cypher of the prince who commanded the cavalry were engraved. A sort of scarf or long piece of white silk, (the old French colours) was tied to the cornette whenever the cavalry went into action, in order to render the standard conspicuous, that the men might rally round it.

**CORNETTE (porte) BLANCHE, Fr.** an ornament, which in ancient times, served to distinguish French officers who were high in command. It was worn by them on the top of their helmets. It likewise meant a royal standard, and was substi-

substituted in the room of the Pennon Royal. The cornette-blanche was only unfolded when the king joined the army; and the persons who served under it were princes, noblemen, marshals of France, and old captains, who received orders from his Majesty direct.

**CORNEION**, *Fr.* a species of trumpet used among the ancients. Prior to the Romans being acquainted with the trumpet and kettle-drum, a *Corneion* drew sounds from the horn of a wild bullock, faced with silver. The sound was loud and shrill, and was heard from a great distance. This instrument, which perhaps in the opinion of some will not be considered as a very wonderful invention, did not originally belong to the Romans, but was borrowed from the Phrygians. A Phrygian named *Marsyas* was the inventor, without ever thinking that a horn would render his name memorable.

**CORNUTUM**, a kind of iron or brass helmet added to the helmet; a military distinction, which was granted to the Roman soldier who had shown proofs of extraordinary valour.

**CORNISH** *Fr.* a gunnery, the next ring from the muzzle backwards. See **CANNON**.

**CORNUA Exercitus**. The Romans used to call by this name what we term *right* and *left wing* of an army. However, according to Polybius, by *cornua exercitus*, they only meant the auxiliary troop, which were divided so as to occupy both extremities of a Roman army. These two divisions were distinguished by the appellation of *dextrum cornu* and *sinistrum cornu*, right and left wing.

**CORPORAL**, (*caporal*, *Fr.*) a rank and file man with superior pay to that of common soldiers and with nominal rank under a serjeant. He has charge of one of the squads of the company, places and relieves sentinels, and keeps good order in the guard. He receives the word of the inferior rounds that pass by his guard. Every company has three or four corporals.

**Lance-CORPORAL**, (*caporal breveté*, *Fr.*) one who acts as corporal, receiving pay as a private.

**CORPS**, any body of forces, destined to act together under one commander.

**CORPS**, *Fr.* Among the French by

this denomination were formerly understood the regiments of *Picardie*, *Piedmont*, *Champagne*, *Navarre*, *Normandie*, and *la Marine*, on account of their being of the earliest creation, and enjoying honorary prerogatives over all the other regiments of foot.

**Corps de garde**, *Fr.* an inferior post which is sometimes covered in, and at others is in the open air, garrisoned and defended by troops who are occasionally relieved, and whose immediate duty is to prevent a post of greater consequence from being surprised. **Corps de garde**, in the French acceptation of the word, signifies not only the place itself, but likewise the men who are stationed to protect it.

**Corps de garde avancés**, *Fr.* These posts are occupied by cavalry and infantry, according to the exigency of the service, and the peculiar nature of the ground. When a camp is secured by intrenchments, and has one line of defence, the corps de garde, or advanced post of the cavalry is on the outside of the line, and each part has its quarter and main guard. These guards are always within sight of the same line, unless the unevenness of the ground should obstruct the view. The quarter guard or *petit corps de garde* is more in front, but still in sight of the main guard, and the *redette* is still further in advance for the security of both.

**Corps de réserve**. See **RESERVE**.

**Corps d'armée**, *Fr.* the whole of an army, including detachments, &c.

**Corps de bataille**, *Fr.* the whole line of an army which is drawn out in order of battle.

**Corps de casernes**, *Fr.* the range of buildings called barracks, erected for the convenience of troops.

**Corps géométrique**, *Fr.* signifies length, breadth, and depth.

**Corps de troupes**, *Fr.* any body of armed men, large or small, which is under the orders of a commanding officer.

**To CORRESPOND**, to hold intercourse. An officer or soldier who corresponds with the enemy, is liable to suffer death, by the articles of war.

**CORRESPONDENCE**, (*correspondance*, *Fr.*) a written intercourse which is kept up between officers at the head of the army, or between belligerent powers,

powers, who are embarked in the same cause, and who communicate together in order to secure ultimate success.

**Military CORRESPONDENCE**, (*correspondance de guerre*, Fr.) See **MILITARY SECRETARY**.

**Secret CORRESPONDENCE**, (*correspondance secrète*, Fr.) secret intelligence; or a correspondence which is maintained between the general of an army, and one or more confidential agents that are employed to watch the enemy.

**CORSAIR**, (*corsaire*, Fr.) in naval history, a name given to the piratical cruisers of Barbary, who frequently plunder the merchant ships of countries with whom they are at peace.

**CORSELET**, a little cuirass; or according to others, an armour, or coat made to cover the whole body, anciently worn by the pike-men, who were usually placed in the front and on the flanks of the battle, for the better resisting the enemy's assaults, and guarding the soldiers posted behind them.

**CORTEAU**, Fr. a warlike machine in use among the ancients.

**CORVÉE**, Fr. a species of hard labour for the repair of public roads, &c. to which a certain number of soldiers, and sometimes the inhabitants of towns and villages, were subjected during the French Monarchy. This personal tax was done away at the Revolution, and turnpikes have since been established throughout France and its subject departments. *Corvée* likewise means a job.

**COSECANT**, the secant of an arch which is the complement of another to 90°.

**COSINE**, the right sine of an arch which is the complement of another to 90°.

**COSMOGRAPHY**, (*Cosmographie*, Fr.) a science which teaches the structure, shape, disposition, and connection of all the different parts of the globe, likewise the manner of delineating them on paper: it is composed of two parts, viz. astronomy and geography.

**COSSACKS**, in military history, a wild irregular people, who inhabit the Ukraine, and live by plunder and piracy, in small vessels on the Black Sea. A scythe fixed at the end of a pole was

their ancient weapon. They are now a regular militia, and use the same arms as the Croats and Pandours, being very active and well mounted.

**COTANGENT**, the tangent of an arch which is the complement of another to 90°.

**COTE**, Fr. side. The whole extent or length of a branch in fortification; the distance or space between two given points, or the demi-gorges of two neighbouring bastions.

**COTE extérieur du polygone**, Fr. exterior side of the polygon. The line which is drawn from the capital of one bastion to another.

**COTE intérieur du polygone**, Fr. interior side of the polygon. The line which is drawn from the angle of one gorge to the angle of the gorge most contiguous to it. See sides of the Polygon.

**COTER**, Fr. to mark upon the plans and profiles of works of fortification, the exact measurement thereof divided into toises, feet, inches, and lines: the figure which is used to distinguish the different parts of the work is called the *Cote*; so that when it is necessary to repair a bastion, the engineer instantly knows the defective part.

**COTISER**, Fr. to give one's allotted proportion of money or provisions, &c. for the use of an army.

**COTOYER une armée**, Fr. to keep a parallel line with an enemy, so as to prevent him from crossing a river, or to seize a convenient opportunity to attack him.

**COTTE d'armes**, Fr. the military dress of the ancient Gauls, the length of which frequently varied; sometimes it hung to the ground both before and behind, with the sides sloping; sometimes it came just above the knee, and at other times just below the knee. In subsequent years it was only worn by the *hérauts d'armes* and *les gardes de la manche*, as we may have seen in our days. Those Gauls that were opulent displayed great magnificence in their *cotte d'armes*. Since that period the privilege has descended to the sons of grandes and noblemen.

**COTTIEREAUX**, Fr. a banditti that formerly infested France, particularly the province of Berri. They were destroyed by Philip Augustus in 1163. Their only weapon was a large knife.

**COUCHER**,

**COUCHER**, *Fr.* in an active sense of the verb, to lay.

**COUCHER sur le carreau**, *Fr.* to lay low.

**COUENR en joue**, *Fr.* to take aim with a firelock.

**COUDE**, *Fr.* any turning or deviation from a direct line, that is made by a river, canal, road, or branch of a work in fortification.

**Coude d'une rivière**, *Fr.* a winding of the river.

**COVENTRY**, a town in Warwickshire.

*To be sent to COVENTRY*, a military term used to express the situation of an officer who is not upon a good footing with his brother officers. This term derives its origin from a circumstance which happened to a regiment that was quartered in the town of Coventry, where the officers were extremely ill received by the inhabitants, or rather denied all sort of intercourse with them. Hence to be sent to Coventry signifies to be excluded from all social communication with others; or, more properly, with those who before were intimate.

*To COVER*, in the mechanical disposition of a battalion, company, or squad, only means that a man is to stand in such a position in file, as that when he looks exactly forward to the neck of the man who leads him, he cannot see the second man from him. Nothing but great attention at the drill can bring men to cover so truly as never to destroy the perpendicular direction of any leading body. The least deviation in the men who cover upon either flank of a leading column or division, will throw all that follow out of the true line.

*To COVER ground*, is to occupy a certain proportion of ground, individually or collectively. A foot soldier upon an average covers 22 inches of ground when he stands in the ranks. The dimensions are taken from his shoulder points.

A file on horseback covers or occupies in the ranks about 2 feet 8 inches. Thus three file, 8 feet, twelve file will occupy about 32 feet or 10 yards and 2 feet, thirteen file, 34 feet 8 inches, or 11 yards, 1 foot 8 inches, fourteen file, 37 feet 4 inches, or 12 yards 1 foot 4 inches, and so on.

One horse's length from nose to croup,

on an average, 8 feet and about 2 inches, or 2 yards 2 feet 2 inches. This consequently will be the space which about three file occupy in front.

Cavalry and infantry officers cannot pay too much attention to the calculation of distances; by an accurate knowledge of which, ground will be properly covered, and any proportion of men, on horseback or on foot, be drawn up so as to answer the intentions of an able general. The best way that an officer can form his eye, is to exercise it to the measurement of ground by the regular pace of 2 feet, used in military drawings; by this he can calculate his interval exactly, when he once knows how many feet his division occupies; for it is only halving the number of feet, and the number, so produced, is his distance in paces of two feet each. This instruction has been given to cavalry officers, by a very able Tactician.

**COVER**, (*à couvert*, *Fr.*) a term in war to express security or protection: thus, to land under cover of the guns, is to advance offensively against an enemy who dares not approach on account of the fire from ships, boats, or batteries. It likewise signifies whatever renders any movement imperceptible: as, under cover of the night, under cover of a wood, &c. The gallery or corridor in fortification is, however, particularly distinguished by the term *Chemin Couvert*, covert way, because the glacis of the parade is its parapet.

**COVERT-WAY**, in fortification, is a space of 5 or 6 fathoms on the border of the ditch towards the country, covered by a rising ground, which has a gentle slope towards the field. This slope is called the glacis of the covert-way. See FORTIFICATION.

*Second COVERT-WAY*, or as the French call it *avant-chemin couvert*, is the covert-way at the foot of the glacis. See FORTIFICATION.

**COULER une pièce**, *Fr.* to pour the melted metal into a mould for the purpose of casting a piece of ordnance.

**COULVRENIER**, *Fr.* a militiaman of the fifteenth century. The *Coulvrenier* wore a habergeon with sleeves, a gougerin and salade, a brass plate, a dagger, and a sharp edged sword.

**COUNCIL**, *of war*, an assembly of principal officers of an army or fleet, called by the general or admiral who commands, to concert measures for their conduct.

**COUNTER-APPROACHES**, lines or trenches made by the besieged, when they come out to attack the lines of the besiegers in form.

**Line of COUNTER-APPROACH**, a trench which the besieged make from their covered way to the right and left of the attacks, in order to scour or enfilade the enemy's works.

**COUNTER-BATTERY**, a battery used to play on another in order to dismount the guns. See **BATTERY**.

**COUNTER-ENTRANCE**. See **FAUSSE-BRAYE**.

**COUNTER-FORTS**, in fortification, are certain parts and parts of the wall, distant from 15 to 25 feet one from another, which are advanced as much as may be in the ground, and are joined to the breast of the cordon by vaults, to sustain the chemin de roades, or that part of the rampart where the rounds are gone, as well as to fortify the wall, and strengthen the ground. See **BUTTES**.

**COUNTER-GARDS**, in fortification, are small ramparts, with parapets and ditches, to cover some part of the body of the place. They are of several shapes, and differently situated. They are generally made before the bastions, in order to cover the opposite flanks from being seen from the covert way; consisting then of 2 faces, making a salient angle, and parallel to the faces of the bastion. They are sometimes made before the ravelins. See **FORTIFICATION**.

**COUNTER-ROUND**. See **ROUNDS**.

**COUNTER-MINES**. See **MINES**.

**COUNTER-TRENCHES**. See **SIEGE**.

**COUNTER-WORKING**, is the raising of works to oppose those of the enemy.

**COUNTER-SWALLOW'S TAIL**, in fortification, is a kind of an out-work very much resembling a single tenaille.

To **COUNTERMAND**, is to give contrary orders to those already issued; to contradict former orders, &c.

**COUNTERMURF**, a wall built up behind another, in order to increase the strength of any work.

**COUNTERMARCH**, (*contre-marche*, Fr.) a change by wings, companies, sub-

divisions, or files, whereby those who were on the right take up the ground originally occupied by the left; generally used in changing the front. See **MARCH**.

**COUNTERSCARP**, in fortification, is properly the exterior talus, or slope of the ditch, on the farther side from the place, and facing it. Sometimes the covert-way and glacis are meant by this expression. See **FORTIFICATION**.

**COUNTERSIGN**, in a general acceptance of the term means any particular word, such as the name of a place or a person, which, like the parole, is exchanged between guards, entrusted to persons who visit military posts, go the rounds, or have any business to transact with soldiers in camp or garrison. It ought always to be given in the language best known to the troops.

**COUNTERVALLATION**, or line of countervallation, a trench with a parapet, made by the besiegers, betwixt them and the place besieged, to secure them from the sallies of the garrison; so that the troops which form the siege are encamped between the lines of circunvallation and countervallation. When the enemy has no army in the field, these lines are useless.

**COUNTY-LIEUTENANT**. See **LIEUTENANT OF COUNTY**.

**COUNTY-TREASURER**. See **TRIAS-TER OF COUNTY**.

**COUP-DE-MAIN**, a desperate resolution in all small expeditions, of surprise, &c. The favorable side of the proposed action must ever be viewed; for in what may happen, arise, or fall out, is chiefly thought upon, it will, at the very best, not only greatly discourage, but, in general, produce a total failure. The very name of an expedition implies risk, hazard, precarious warfare, and a critical but desperate operation, or *Coup-de-Main*.

**COUP-d'œil**, Fr. in a military sense, signifies that fortunate aptitude of eye in a general, or other officer, by which he is enabled by one glance on the map, or otherwise, to see the weak parts of an enemy's country, or to discern the strong ones of his own. It also signifies to catch a ready view, and thereby to secure an accurate knowledge of the enemy's position and movements in action. By possessing a ready *comp-d'œil*,

*d'ail*, a general may surmount the greatest difficulties, particularly in offensive operations. On a small scale this faculty is of the greatest utility. Actions have been recovered by a sudden conception of different openings upon the enemy, which could only be ascertained by a quick and ready eye, during the rapid movements of opposing armies. General Désaix, at the battle of Marengo, gave a striking proof of the importance of this faculty.

**COUPE**, *Fr.* the rough draft or sketch of a drawing which represents the inside of a building, &c.

**COUPE-GORGE**, *Fr.* a disadvantageous position; a situation in which a body of men must be exposed to every sort of danger. Literally, a cut-throat place.

**COUPELLE**, *Fr.* A kind of tin or copper shovel, which is used in the artillery to fill the cartridges with gunpowder, &c.

**COUPER** *une communication, un convoi, un pont, une retraite, une troupe.* *Fr.* to cut off a communication, to interrupt a convoy, break down a bridge, cut off a retreat, or any armed body of men.

**COUPURES**, in fortification, are passages, sometimes cut through the glacis, of about 12 or 15 feet broad, in the re-entering angle of the covert-way, to facilitate the sallies of the besieged. They are sometimes made through the lower curtain, to let boats into a little haven built in the reentrant angle of the counterscarp of the out-works.

**COURRE**, *Fr.* a ditch that is dug to prevent a besieging army from getting too close to the walls of a fortified town or place.

**COURAGE**, (*Courage*, *Fr.*) a quality of the mind, which is sometimes natural and sometimes acquired. It is equally necessary to the officer and soldier. The French make a difference between bravery and courage. They say soldiers may be very brave, and yet not have courage enough upon all occasions to manifest their bravery. A general who is determined upon an emergency to risk neck or nothing, always knows how to inspire his troops with courage, (provided they be well disciplined, for if not, he can do nothing,) and in that respect the famous Turenne and Maurice of Nassau, who

had often a superior force to oppose, were wonderfully skilful. *Fernand Cortez*, who had only five hundred men of infantry, and twenty horse, to make the conquest of Mexico, perceiving that his troops, (which he called an army,) were frightened at the great number of Indians mustering against them, ordered his ships to be set on fire. He conquered the enemy; but we must confess, that he had to deal with barbarians, who mistook his twenty horsemen for sea monsters, and the firing from the musquetry and artillery, for the thunder from above. An manner of stratagem must be resorted to, in order to revive or inspire courage. A general, for instance, who, at the head of an inferior force cannot avoid a battle, causes it to be rumoured, that the enemy will give no quarter, and that he has heard the report from his spies.

**COURAGE MILITAIRE**, *Fr.* military prowess. A peculiar degree of hardihood, by which the mind is driven to acts of uncommon boldness and enterprise.

**COURANTIN**, *Fr.* a squib; a term used among French artificers.

**COURÇON**, *Fr.* a long piece of iron which is used in the artillery, and serves to constrain, or tighten cannon.

**COURSEURS**, *Fr.* a name used among the French to signify light armed troops that are mounted, and go upon reconnoitring parties, or in pursuit of a flying enemy. It literally means runners. Those who, on a march, leave their ranks to go marauding, are also called *courseurs*.

**COURIER**, in a military sense, means a messenger sent post, or express, to carry dispatches of battles gained, lost, &c. or any other occurrences that happen in war.

**COURIERS DES RENDES**, *Fr.* were two active and expert messengers attached to the French army, whose duty consisted wholly in conveying packets of importance to and fro, and in taking charge of pecuniary remittances.

**COURIR aux armes, au combat, à la gloire.** To rush or run to arms in order to prevent being surprised; to hasten after, or to seek with enthusiasm, the means of acquiring glory.

**COURROIS**, *Fr.* stirrup-leathers. Dragons are sometimes furnished with these

these articles. The culprit is obliged to pass through two lines facing inwards, and receives a blow from every soldier as he goes by.

**COURONNEMENT**, or *Couronnement* in fortification, implies the most exterior part of a work when besieged.

**COURONNES guerrières**, *Fr.* Military crowns or garlands. See **CROWNS**.

**COURSEUR**. See **CHARGER**.

**COURSES**, *Fr.* the incursions which an army makes into an enemy's country.

**COURSIER**, *Fr.* a gun which is placed in the fore-castle of a galley for the purpose of firing over the ship's beam. The weight of its ball is from 33 to 34lb.

**COURT-martial**, a court appointed for the investigation and subsequent punishment of offences in officers, under-officers, soldiers and sailors: the powers of which are regulated by the mutiny-bill, in the words, and to the effect following. "His Majesty may, from time to time, grant a commission, under his royal sign manual, to any officer, not under the degree of a field-officer, for holding a general court-martial within this realm; and also grant his warrant to the lord-licutenant of Ireland, or other chief governor or governors there for the time being, or the governor or governors of Minorca, Gibraltar, and any of his Majesty's dominions beyond the seas respectively, or the person or persons, their commander in chief, from time to time, to appoint courts-martial in the kingdom of Ireland, and other places and dominions respectively; in which courts-martial, all offences mentioned in the articles of war, and all other offences hereinafter specified, shall be tried and proceeded against in such manner as the act for that purpose directs." The courts have power by their sentence of judgment to inflict corporal punishment, not extending to life or limb, on any soldier for immorality, misbehaviour, or neglect of duty. A general court-martial shall not consist of a less number than 13, whereof none are to be under the degree of a commissioned officer; and the president of such general court-martial shall neither be the commander in chief, or governor of the garrison where the

offender shall be tried, nor under the degree of a field officer, unless where a field officer cannot be had; in which case the officer next in seniority, not being under the degree of a captain, shall preside at such court-martial; and that such court-martial shall have power and authority to administer an oath, to every witness, in order to the examination or trial of any of the offences that shall come before them.

That in all trials of offenders by general courts martial, to be held by virtue of this act, every officer present at such trial, before any proceedings be had thereupon, shall take the following oaths upon the Holy Evangelists, before the court and judge advocate, or his deputy (who is hereby authorized to administer the same) in these words,

"You shall well and truly try and determine according to the evidence, in the matter now before you, between our sovereign lord the king's majesty, and the prisoner to be tried:

"So help you God."

*The oath.* "I, A. B. do swear, that I will duly administer justice according to the rules and articles for the better government of his Majesty's forces, and according to an act of parliament now in force for the punishment of mutiny and desertion, and other crimes therein mentioned, without partiality, favour, or affection; and if any doubt shall arise, which is not explained by the said articles or act of parliament, according to my conscience, the best of my understanding, and the custom of war in the like cases. And I further swear, that I will not divulge the sentence of the court until it shall be approved by his Majesty, the general, or commander in chief; neither will I upon any account, at any time whatsoever, disclose, or discover the vote, or opinion of any particular member of the court-martial, unless required to give evidence thereof, as a witness, by a court of justice in a due course of law.

"So help me God."

And as soon as the said oaths shall have been administered to the respective members, the president of the court is hereby authorised and required to administer to the judge advocate, or the person officiating as such, an oath in the following words:

*The*

*The oath.* "I, A. B. do swear, that I will not, upon any account, at any time whatsoever, disclose or discover the vote or opinion of any particular member of the court-martial, unless required to give evidence thereof as a witness by a court of justice in a due course of law. "So help me God."

And no sentence of death shall be given against any offender in such case by any general court-martial, unless 9 officers present shall concur therein; and if there be more officers present than 13, then the judgment shall pass by the concurrence of two-thirds of the officers present; and no proceeding or trial shall be had upon an offence, but between the hours of 8 o'clock in the morning and 3 in the afternoon, except in cases which require an immediate example.

Provided always, that the party tried by any general court-martial in the kingdom of Great Britain or Ireland, or in Jersey, Guernsey, Alderney, or Sark, or the islands thereto belonging, shall be intitled to a copy of the sentence and proceedings of such court-martial, upon demand thereof made by himself, or by any other person or persons on his behalf (he or they paying reasonably for the same) at any time not sooner than 3 months after such sentence: and in case of trials by any general court martial at Gibraltar or Minorca, at any time not sooner than 6 months after the sentence given by such court-martial; and in case of trials by any general court-martial in his Majesty's other dominions beyond the seas, at any time not sooner than 12 months after the sentence given by such court-martial; whether such sentences be approved or not; any thing in this act notwithstanding.

Provided also, and be it enacted by the authority aforesaid, that every judge advocate, or person officiating as such at any general court-martial, do, and he is hereby ordered to transmit, with as much expedition, as the opportunity of time and distance of place can admit, the original proceedings and sentence of such court-martial to the judge advocate general in London: which said original proceedings and sentence shall be carefully kept and preserved in the office of such judge advocate general, to the end that the persons intitled thereto may be

enabled, upon application to the said office, to obtain copies thereof, according to the true intent and meaning of this act.

Provided always, and be it hereby declared and enacted, that no officer or soldier, being acquitted, or convicted of any offence, be liable to be tried a second time, by the same or by any other court-martial, for the same offence, unless in case of an appeal from a regimental to a general court-martial; and that no sentence given by any court-martial, and signed by the president thereof, be liable to be revised more than once. Nor can any officer or soldier be tried for any offence committed by him more than 3 years prior to the issuing of the warrant, unless he hath purposely absented himself to avoid such trial.

*A regimental COURT MARTIAL* cannot sentence to the loss of life or limb. The colonel or commanding officer approves the sentence of a regimental court-martial.

*A garrison COURT MARTIAL* resembles a regimental one in as much as the members are not sworn, and only differs by its being composed of officers of different regiments. The governor, or other commanding officer of the garrison, approves the sentence. For further particulars respecting courts-martial, see *Regimental Companion*, vol. II. 5th edition.

*Court of enquiry*, an assemblage of officers who are empowered to enquire into the conduct of the commander of an expedition, &c. or to see whether there is ground for a court-martial, &c. Courts of enquiry cannot award punishment, but must report to the officer by whose order they were assembled. Courts of enquiry are also appointed to examine into the quality and distribution of military stores.

*COURTINE, Fr.* See *CURTAIN* in *FORTIFICATION*.

*COUSIN, Fr.* a sort of wedge or small piece of wood which is placed under the breech of a cannon in order to point it properly, and to keep it steady in the proposed direction.

*COUSSINET, Fr.* a wedge of wood which is fixed between the carriage and the center part of a mortar, and serves to keep it in a prescribed degree of elevation.

**COUSSINET** à mousquetaire, Fr. a bag formerly worn by a French soldier on his left side beneath the cross-belt. It hung upon hooks near the butt of his musquet.

**COUSTILLE**, Fr. an offensive weapon which was occasionally used by the troops in the fifteenth century, in the time of Charles VII.; it was longer than the common sword, sharp edged from the hilt to the point, of a triangular shape, and very slender.

**COUSTILIER**, Fr. a person so called an account of his being armed with a *coustille*.

**COUTEAU**, Fr. a knife.

**COUTEAU de chasse**, Fr. a hanger.

**COUTEAU de bois, ou spatule**, Fr. a wooden instrument in the shape of a short blunt blade. It is used in pressing down earth or hay between a shell and the inside of a mortar, in order to keep the former compact and steady.

**COUTELAS**, Fr. See CUTLASS.

**COUVERT**, Fr. cover.

**COUVRE-FACE**, Fr. a term used by some engineers, and among others by Cohorn, to express the counter-guard; others, particularly Montalembert, convey by *Couvre-face général* a second line of complete investment.

**Le COUVRE-FEU**, Fr. a signal made by the ringing of a bell, or beat of drum, to give notice to the soldiers or inhabitants of a fortified place, that the gates are shortly to be shut. It literally means the covering or extinction of fire or light. See CURFEW.

**COUVRIR**, Fr. to cover, defend, conceal.

**COUVRIR une ville, un port, une troupe, un pays, un magasin, un entrepôt, une armée assiégante**, Fr. to lie encamped in front of a town, bridge, body of men, any particular ground or post, magazine, or between a fortified place and the main besieging army, so as to prevent the approaches of an enemy. To this end temporary works should be erected, defended by chosen troops, who must be attacked and beaten, before possession can be obtained of any of the above-mentioned objects.

**COUVRIR une marche, un mouvement, une communication**, &c. Fr. to conceal the march or movement of an army, by means of detachments, which are sent forward for that purpose.

**CRAB**. See GIN.

**CRAIKE**. The constabulary of this place, as far as it regards the militia, is deemed a part of the North Riding of Yorkshire, and is subject to the jurisdiction of the Lord Lieutenant.

**CRAMPONS**, Fr. grappling hooks. Iron instruments distributed amongst the troops intended to storm a rampart, and which they fastened to their shoes by means of a strong strap of leather; to be able to climb up. A piece of iron fixed at the extremity of the ladders was also called *crampon*.

**CRANE**, an instrument made with ropes, pulleys, and hooks, by which great weights are raised.

**CRANEQUENIER**, Fr. Formerly an archer who served both on foot and horseback; his bow was very light; in the origin it was made of wood, next of horn, and finally of iron: it was bent by means of an iron bandage, called *cranequin*, which was fastened round the waist. The Dukes of Burgundy used to have six hundred of them in their suite. He was also called *cranequier*.

**CRAPAUD**, *ou affut*, Fr. Crapaud literally means a toad. It is a sort of gun-carriage without wheels, on which a mortar is carried to attack or defend a fortified place.

**CRATES**, engines of war used by the ancients to cover the workmen in proportion as they drew nearer to the walls of a besieged town.

**CRAVATES**, Fr. a foreign corps of cavalry in the old French service, the true denomination of which should be *Croate*, since the men who composed it came from *Croatia*. Their service is the same as that of the *hussars*, *pan-dours*, &c. Their horses were excessively swift. They wore pantaloons like the Hungarians.

**CREDIT**, (*crédit*, Fr.) trust reposed, with regard to property: correlative to *debt*. Johnson. It is customary, upon the arrival of troops that are to continue quartered in a town, village, &c. to warn the inhabitants not to give credit to the men.

**CREDITS**. See DEBTS and Credits.

**CREMAILLE**, in field fortification, is when the inside line of the parapet is broken in such a manner as to resemble the teeth of a saw; whereby this advantage

vantage is gained, that a greater fire can be brought to bear upon the *défilé*, than if only a simple face were opposed to it; and consequently the passage is rendered more difficult.

*Redoubts en CRÉMAILLERE*, or *Crémaillé*, are such as are constructed as above mentioned.

*CRÉNAUX*, *Fr.* in fortification, small openings or loop holes which are made through the walls of a fortified town or place. They are extremely narrow towards the enemy, and wide within; so that the balls from the besiegers can scarcely ever enter, whereas two or three soldiers may fire from within.

*CRÉNELÉ*, *Fr.* embattled; having loop holes.

*CRÉSET*, any great light upon a beacon, light-house, or watch-tower.

*CRÊTE*, *Fr.* a tuft of feathers, a plume, a tassel, generally worn in the helmet. These crests, which the cavalry wore of a greater length than the infantry, were considered as an ornament, and as proper to frighten the enemy: in the origin they were made of horse-hair; and according to Herodotus were invented by the Ethiopians. Not long after, feathers were adopted, and the red ones had the preference, on account of their being of blood colour. Sometimes the antients would have three of these plumes in their helmets; probably to mark their rank, the same as the Turks have two or three tails.

*CRÊTE*, in fortification, implies the earth thrown out of the ditch in a fortification, trench, &c. The most elevated part of a parapet or glacis.

*CRÊTE d'un chemin couvert, d'une pièce de fortification, d'une montagne, d'un rocher*, &c. *Fr.* the peak or highest part of a covert way, or of any work in fortification; the summit of a hill, rock, &c.

*CRÉVICE*, (*crévasse*, *Fr.*) a chasm or hollow space which is made by time or mismanagement in a piece of ordnance, &c.; it also signifies a crack in a wall.

*CRI*, *Fr.* the acclamation or shout which is made by soldiers when the enemy gives way, and a battle is won. Also the sound given by the voice in challenging a scutry.

*CRI des armes*, *Fr.* a savage custom

which is still preserved by the Turks and other uncivilized nations, whenever they go into action. It was formerly practised among the French, Spaniards, and the English, &c. The national exclamations were *Montjoie* and *St. Denys* for France, *St. James* for Spain, *St. George* for England, *St. Malo* or *St. Yves* for the Dukes of Brittany, *St. Lambert* for the principality of Liege, &c. The war-loop may likewise be considered in this light. It is still practised among the savages of America. See *WAR-HOOP*.

Every species of noise however is now exploded in Europe. When two armies are upon the point of engaging, a dead silence prevails; the eye and ear of the soldier being rivetted to the word of command; and when he comes into close contact with the enemy, nothing is heard besides the noise of drums, trumpets and cymbals, to which are added the discharge of ordnance and the fire of musketry.

In making any desperate assault, or in charging bayonet, or when one battalion is directly opposed to another, or squadron to squadron, French soldiers frequently use the *cri des armes*; *tué, tué* and the Spaniards vociferate *amat*. Silence and calmness in the soldier, with steadiness and observation in the officer, are nevertheless superior to such ungovernable effusions. The former must contribute to regularity, the latter seldom fail to create disorder.

*CRIC*, *Fr.* a machine which is used to move forwards or drag up a piece of ordnance, a mortar, &c.

*CRINIÈRE*, *Fr.* that part of the caparison which covers the horse's neck. The name of *crinière* is also given to a bunch of curling horse-hair worn upon the helmets of the dragoons, and that flows down on the sides like a garland.

*CRIMP*, (*Raccolleur*, *Fr.*) a person who makes it his business to entice others into a military life, generally by unfair means.

*CRITUQUES*, *Fr.* small ditches which are made in different parts of a ground, for the purpose of inundating a country, in order to obstruct the approaches of an enemy.

*CRISTA*, the plume that was worn among the ancients.

**CROATS**, in military history, light irregular troops so called; generally people of Croatia. They are ordered upon all desperate services, and their method of fighting is the same as the Pandours. They wear a short waistcoat, and long white breeches, with light boots, and a cap greatly resembling the hussar cap. Their arms are a long firelock with rifled barrel, and short bayonet, a crooked hanger, and a brace of pistols. The late empress queen had 5000 of these troops, the greatest part of which had no pay, but lived by plunder, in the acquisition of which they are remarkably dexterous.

**CROC**, *au CROQUET de SABLE*, Fr. a pole with an iron hook, used to place the gabions and fascines.

**CROCHET** *de tranchée*, Fr. the further end of a trench or *boyau*, which is purposely carried on to conceal the head of the *boyau*, in order to prevent it from being enfiladed; and to serve as a small place of arms from whence soldiers may fire against sallying parties.

**CROCUS**, a calcined metal used by soldiers to clean their musquets, &c.

**CROISADE**, in military history, **CRUSADE**, implies a holy war, or an expedition of the Christians against the Infidels for the recovery of the holy land, and so called from those who engaged in it wearing a cross on their clothes.

**CROISER** *une entreprise, une manœuvre de guerre, un projet*, Fr. to war or cross any particular project, military manœuvre, plan, &c. with a good or bad design. The motive, in this case, may proceed from a sincere love of one's country, or from vanity and jealousy.

**CROIX** *de St. Louis*, Fr. The cross of St. Louis, a French order which was purely of a military nature. It was instituted by Louis, surnamed the Great, in 1693.

In 1719 the number of grand crosses to be distributed in the French army was limited, with appropriate allowances in the following manner:

445 Commandeurs and chevaliers.  
12 grand crosses at 6000 livres, 13 commandeurs at 4000 livres, 27 ditto at 3000, 35 chevaliers at 2000, 38 ditto at 1500, 106 ditto at 1000, 1 ditto at 900, 99 ditto at 800, 45 ditto at 600, 25

ditto at 500, 35 ditto at 400, 5 ditto at 300, and 4 ditto at 200.

The King was Sovereign Grand Master of the Order. Land and sea officers wore it promiscuously. The cross consisted of an enamelled golden *fleur de-lis*, which was attached to the button-hole of the coat by means of a small ribbon, crim-on coloured and watered.

On one side was the cross of St. Louis with this inscription, *Ludovicus Magnus instituit*, 1693; on the reverse side a blazing sword with the following words, *Bellicæ virtutis primum*.

This is the only order which could be properly and strictly called military. There were several others during the old French government, which we judge superfluous to our present undertaking.

**CROQUANT**, Fr. The name of a faction which committed great depredations towards the end of the sixteenth century, in several provinces on the other side of the Loire. In 1593, the peasantry of Perigord, Limousin, and Poitou assembled in large bodies, appointed their commanders, refused to pay the taxes, over-ran the country, and gave no quarter to any of the nobility that had the misfortune to fall into their hands. They were named *Croquants*, from the word *croquer*, to devour, to pilfer.

**CROQUIS**, Fr. a rough sketch taken of any thing.

**CROSS**, the ensign, or grand standard borne by the crusaders in the holy war.

**Cross-fire**, in the art of war, is when the lines of fire of two or more adjoining sides of a field redoubt, &c. cross one another; it is frequently used to prevent an enemy's passing a defile. It may be two ways obtained: first by constructing the redoubt with the face opposite to the defile, tenailed; that is, forming a re-entering angle. The other way is, to defend the defile by two redoubts, whose faces command the passage; flanking each other at the same time.

**Cross-bar shot**, shot with iron bars crossing through them, sometimes standing 6 or 8 inches out at both sides: they are used at sea, for destroying the enemy's rigging. At a siege they are of great service in demolishing the enemy's palisading, &c.

**Cross-bars.** See CARRIAGES.

**Cross-bow,** a missive weapon used to propel arrows, &c. previous to the use of gun-powder.

**CROW,** an iron bar, used as a lever in moving heavy ordnance or carriages, &c.

**CROWS-feet,** in the art of war, are 4 pointed irons, so made, that what way soever they fall, one point is always uppermost. The short ones are about 4 inches in length, and the long ones 6 or 7. The short ones are thrown on bridges, &c. and the long ones on the earth, both to incommode the cavalry, that they may not approach without great difficulty.

**CROWN-work,** in fortification, an out-work that takes up more ground than any other. It consists of a large gorge, with two sides terminating towards the country in two demi-bastions, each of which is joined by a particular curtain, forming two half bastions and one whole one: they are made before the curtain, or the bastion, and generally serve to enclose some buildings which cannot be brought within the body of the place, or to cover the town gates, or else to occupy a spot of ground which might be advantageous to the enemy. See FORTIFICATION.

**CROWNED horn-work,** in fortification, is a horn-work, with a crown-work before it.

• **CROWNS,** in ancient military history, were of various uses and denominations, viz.

**Oval Crown,** *corona ovalis*, given to a general, who without effusion of blood, had conquered the enemy.

**Naval Crown,** *corona navalis*, distributed to those who first should board an enemy's ship.

**Camp Crown,** *corona castrensis*, the reward of those who first passed the palisades and forced an enemy's camp.

**Mural Crown,** *corona muralis*, the recompence and mark of honour due to those who first mounted the breach at the assault of a besieged town.

**Civic Crown,** *corona civica*, more esteemed than the preceding: it was the distinguishing mark of those who had saved the life of a Roman citizen in battle. It was given to Cicero for dissipating the conspiracy of Cataline, and denied to Cæsar, because he imbrued

his hands in the blood of his fellow-citizens.

**Triumphal Crown,** *corona triumphalis*, the symbol of victory, and presented to a general who gained any signal advantage to the republic.

**Grass Crown,** *corona graminea*, was delivered by the whole Roman people to any general who had relieved an army invested or besieged by the enemy. The other crowns were distributed by the emperors and generals; this was given to Fabius by the Roman people, for obliging Hannibal to decamp from Rome.

**Olive Crown,** *corona oliva*, the symbol of peace, and presented to the negotiators of it.

**CRUCIES à feu,** Fr. earthen pots with two handles, filled with grenades, having the intervals between them filled with powder: these *fire-pots* are first stopped with a sheep-skin fastened round the neck; a match is next fixed to each handle; these are set fire to, and thrown upon the enemy, on their approach to storm the walls; the moment the pots break, the fire from the matches communicates to the powder and to the grenades.

**CRUPELLAIRES.** Fr. the nobility amongst the ancient Gauls, all of them *ferrestis*, that is to say, covered with iron; they served on foot, until pursuant to a regulation of Charles VII. king of France, they were named *hommes d'armes*, and each of them was obliged to keep four horses.

**CUBE,** a solid contained between six equal square sides. The solidity of any cube is found by multiplying the superficial content of any one of the sides by the height. Cubes are to one another in the triplicate ratio of their diagonals.

**CUBE-root,** is the side of one of the squares constituting the cube.

**CUBIC-foot,** implies so much as is contained in a cube, whose side is 1 foot or 12 inches.

**CURVE hyperbola** is a figure expressed by the equation  $xy = a$ , having 2 asymptotes, and consisting of 2 hyperbolas, lying in the adjoining angles of the asymptotes, and not in the opposite angles, like the Apollonian hyperbola, being otherwise called, by Sir Isaac Newton, in his *enumeratio linearum tertii ordinis*, an hyperbolismus of a parabola;

bola; and is the 65th species of lines, according to him.

**CUBIC number**, is that which is produced by multiplying any number by itself, and then again the product by that number.

**CURC parabola**, a curve of the second order, having infinite legs, diverging contrary ways.

**CUE or QUEUE**, the hair tied in form of a tail. All the British soldiers, excepting the grenadiers and light infantry, are now ordered to wear their hair cue'd.

**CUILLER à Canon**, Fr. A copper ladle or scoop, which is used to draw the cartridge out of the gun.

**CUIRASSE**, a piece of defensive armour, made of plate, well hammered, serving to cover the body, from the neck to the girdle, both before and behind, called breast and back-plate.

**CUIRASSIERS**, a sort of heavy cavalry armed with cuirasses, as most of the German horse are. The several German powers have regiments of cuirassiers, especially the Emperor, and the King of Prussia. The late King of France had also one regiment; but we have had none in the English army since the Revolution.

**CUISH**, from *Cuisse*, Fr. thigh. The ancient armour, which covered the thighs, was so called.

**CUISINES**, Fr. kitchens; ditches dug by the soldiers, in rear of the camp to cook their victuals.

**CUISSARS**, Fr. are plates or scales made of beaten iron, which formerly served to cover the thighs.

**CUITE**, Fr. a technical word to express the preparation of saltpetre for the making of gunpowder. See **SALPETRE**.

**CUL de chandron**, Fr. the hollow or excavation left after the explosion of a mine.

**CULASSE**, Fr. See **BREACH** of a GUN.

**CULATE**, Fr. that part which stands between the touch-hole of a cannon and the button.

**CULBUTER une Colonne**, to overthrow a column. This term is frequently used when cavalry attack infantry by rapidly charging it.

**CULCÈTE**. Mattresses used from time immemorial; at first they were

made of dried herbs, next of feathers, and finally of wool. In proportion as the Romans relaxed from their former severe discipline, they would carry mattresses with them, notwithstanding they were forbidden. During the siege of Numantia, *Scipio* finding that all prohibitions were superfluous, set the example to his troops; insisted upon having no bed made for himself, but constantly slept on a bundle of hay. It is not necessary, however, that a general should lie on the bare ground for ever; let it suffice that he has done so once; he stands more in need of sleep than any other man in his army; he is exposed to be summoned up frequently in the course of the night; besides, the fatigues and agitation of mind which he has undergone on the preceding day, require that he should enjoy some repose to be able to resume the labour of the morrow.

**CULÉE d'un pont**, Fr. buttment of a bridge.

**CULOT**, Fr. the thickest part of a shell.

**CULVERIN**,

**CULVERIN-ordinary**,

**CULVERIN of the largest size** } See **CANNON**.

**CUNEUS**. See **WEDGE**.

**CUNETTE**. See **CUVETTE**.

**CURFEW-bell**, a signal given in cities taken in war, &c. to the inhabitants to go to bed. The most memorable curfew in England, was that established by William the Conqueror, who appointed, under severe penalties, that, at the ringing of a bell, at 8 o'clock in the evening, every one should put out his lights, and fires, and go to bed, &c.

**CURTAIN**, in fortification, is that part of the body of the place, which joins the flank of one bastion to that of the next. See **FORTIFICATION**.

*Angle of the CURTAIN*. See **FORTIFICATION**.

*Complement of the CURTAIN*. See **FORTIFICATION**.

**CURTELASSE**,

**CURTELAX**,

} See **CUTLASS**.

**CUSTODE**, Fr. that piece of stuff which covers the holster of a pistol.

**CUSTREI**, the shield-bearer of the ancients was so called.

**CUT**, the action of a sharp or edged instrument. There are six cuts established for the use of the cavalry, to be made with

with the broad sword or sabre. See *Sword Exercise*.

*To Cut off.* To intercept, to hinder from union or return. In a military sense, this phrase is variously applicable, and extremely familiar.

*To Cut off an enemy's retreat,* is to manœuvre in such a manner as to prevent an opposing army or body of men, from retiring when closely pressed, either to their entrenchments, or into a fortified town from which they had marched or sallied. Whole armies may be cut off either through the mismanagement of their own generals, by extending the line of operation too far, or through the superior talents of an individual, who in the midst of the hurry, noise, and desolation, which invariably attend a pitched battle, suddenly takes advantage of some opening in the wings or center, and cuts off a material part of his enemy's line. This happened at Marengo. When one army is superior to another in numbers, and is commanded by a shrewd and intelligent officer, it may always cut off a part at least of the opposing forces that come into action. Bacon observes that the king of this island, a wise man, and a great warrior, handled the matter so as to cut off their land forces from their ships.

*To Cut short.* To abridge: as the soldiers were cut short of their pay.

*To Cut up.* When the cavalry are sent in pursuit of a flying enemy, the latter are generally cut up.

*To Cut through.* A small body of brave men, headed by a good officer, will frequently extricate itself from apparent captivity, or destruction, by cutting its way through superior force. British soldiers have frequently exhibited proofs of this extraordinary effort of natural courage.

*CUTLER,* a military artificer, whose business is to forge, temper, and mount all sorts of sword-blades.

*CUTTING-off.* See *RETRENCHMENT*.

*CUVETTE,* in fortification, is a small ditch of 10 or 12 feet broad, made in the middle of a large dry ditch, about 4 or 4½ feet deep, serving as a retrenchment to defend the ditch, or else to let water in, (if it can be had during a siege), and afford an obstacle should the enemy endeavour to cross the fossé.

*CYCLOPOEDIA.* See *ENCYCLOPOEDIA*.

*CYCLOID,* a curve formed by a point in a circle revolving upon a plane.

Thus every point in the outer rim of a carriage wheel in motion moves in a cycloid.

*CYLINDER,* or *concave cylinder of a gun,* is all the hollow length of the piece or bore. See *CANNON*.

*Charged CYLINDER,* the chamber or that part which receives the powder and ball.

*Vacant CYLINDER,* that part of the hollow or bore which remains empty when the piece is loaded.

*CYMAR,* a slight covering; a scarf.

*CYMBAL (CYMBALE, Fr.)* a warlike musical instrument in use among the ancients, made of brass and silver, not unlike our kettle-drums, and, as some think, in their form, but smaller. They are now used by the British and other European nations, in their martial music.

*CZAR,* in military history, a title of honour assumed by the great dukes, or, as they are now stiled, emperors of all the Russias. This title is no doubt, by corruption, taken from *Cæsar*, emperor; and the Czars accordingly bear an eagle as the symbol of their empire. The first that bore this title was Basil, the son of Basilides, about the year 1470. The Empress is called the *Czarina* or *Tzarina*.

## D

**D**AGGER, in military affairs, a short sword or poignard, about 12 or 13 inches long. It is not long since duellists fought with sword and dagger.

**DAGUE**, *Fr.* dagger, a short thick poignard which was formerly used when individuals engaged in single combat.

**DAM.** See **DYKE**.

**DAMAS**, *Fr.* a sabre made of the best polished steel, and well tempered: it is excessively sharp, and is so called from Damascus in Syria, where the first of the kind were manufactured.

**DAMASQUINÉ**, *Fr.* is said of a poignard, sabre, sword, musket, pistol, shield, helmet, or lance, that is ornamented with gold or silver.

**DAME**, *Fr.* among miners any portion of earth which may remain after the explosion of a mine has taken place. It likewise means a piece of wood with two handles used to press down turf or dirt in a mortar.

**DAME**, *ou quille*, *Fr.* a small turret which is erected upon a parapart wall, or on the top of a building, to overlook the country, and prevent soldiers from deserting.

**DANGERS** *pour les troupes de terre*, *Fr.* dangers to which land forces are exposed. Under this title are comprehended unknown defiles, certain passages in a country that have not been reconnoitred; bridges which from the stratagem of the enemy are rendered unsafe; rocks, straits of rivers, a wood, a forest, an ambuscade; a height in the shape of a curtain, behind which troops are concealed; marshes, sandy grounds; false information; traitors; weariness; the want of pay and of provisions; hard treatment, want of discipline; the bad example given by the officers; neglect; unbounded security; bad morals; plunder allowed unseasonably; all the above are things which at various times may expose an army; but a wise and prudent general knows how to remove all dangers of the kind.

**DANSE militaire**, *Fr.* a military dance used among the ancients.

**DARD**, *Fr.* a dart.

**DARD à feu**, *Fr.* a javelin trimmed with fire-works, that is thrown on ships or against places which you wish to set on fire.

**DARDER**, *Fr.* to throw a dart or any other pointed weapon.

**DARDEUR**, *Fr.* a person who throws a dart.

**DARE**, a challenge or defiance to single combat.

**DARRAIN.** See **BATTLE-array**.

**DARSE**, *Fr.* the interior part of a port, which is shut with a chain, and where galleys and other small craft are sheltered.

**DART**, in ancient military history, implies a small kind of lance, thrown by the hand.

**DAUPHIN**, a title given to the eldest son of France, and heir presumptive to the crown, on account of the province of Dauphiny, which in 1313 was given to Philip of Valois, on this condition, by Humbert, dauphin of the Viennois.

**DAUPHIN**, *Fr.* a warlike engine used by the ancients to pierce through and sink the galleys of their enemy. It threw a heavy mass of lead or of iron with such impetuosity as to do great execution. This engine is mentioned in the account of the naval engagement in which the Athenians, under the command of Nicias, were defeated by the Syracusans.

**DAUPHINS des canons**, *Fr.* dolphins which are made in relief on the trunnions of field pieces.

**DAY**, in a military sense, implies any time in which armies may be engaged, from the rising of one day's sun to that of another. According to Johnson it signifies, the day of contest, the contest, the battle. Hence a hard-fought day.

**DAYSMAN**, an umpire of the combat was so called.

**DEBAN-**

## D E B

**DEBANDADE.** *A la débandede,* helter-skelter.

*Se battre à la débandede,* to fight in a loose, dispersed manner.

*Laisser à la débandede,* to leave at random, or in disorder.

**DÉBANDEMENT,** *Fr.* the act of being out of the line, or irregularly formed. This may often occur among the best disciplined corps, or even in a whole army. An extraordinary circumstance may sometimes be productive of a *débandement*. It may likewise happen when a corps is exercising, on account of the men not being well dressed.

**DEBARK.** See **DISEMBARK.**

**DÉBAUCHER,** *Fr.* to debauch, seduce, or entice a soldier from the service of his King and country. During the reign of Louis XV. and in former reigns, it was enacted, that any person who should be convicted of having *debauched* or enticed a soldier from his duty should suffer death. By a late act of parliament it is made a capital offence to entice or seduce a soldier from any regiment in the British service.

**DEBENTURE,** is a kind of warrant, given in the office of the board of ordnance, whereby the person whose name is therein specified, is intitled to receive such a sum of money as by former contract had been agreed on, whether wages, or otherwise. Debenture, in some of the acts of parliament, denotes a kind of bond or bill, first given in 1649, whereby the government is charged to pay the soldier, creditor, or his assigns, the money due on auditing the account of his arrears. The payments of the board of ordnance for the larger services at home are always made by debentures; and the usual practice has been to make those payments which are said to be in course of office, at a period which is always somewhat more than three months after the date of each debenture, and which can never exceed six: to pay, for instance, at once for the three months of January, February, and March, as early as possible after the 30th of June.

Debentures are generally made up at the Pay-Office, by virtue of warrants from the War-Office, with the state of regimental charges annexed, after which is issued the final, or clearing warrant. See **WARRANT**.

## D E B

**DÉBILIER,** *Fr.* to take off the horses that are used in dragging boats up a river.

**DÉBLAYER un Camp,** *Fr.* To evacuate a camp for the purpose of cleaning and purifying the ground.

**DÉBLAYER les terres d'un fossé,** *Fr.* to throw away the superfluous earth which is not used in constructing a parapet.

**DÉBORDEMENT,** *Fr.* This word is applied to that excess and want of good order among troops, which induce them to overrun a country that is friendly or otherwise. *Debordement* was the ancient appellation given to the irruption of a tribe of barbarians, who came from afar to invade a strange country.

**DÉBORDER,** *Fr.* to extend to the right or left so as to be beyond the extreme points of a fortified town or place.

**DÉBOUCHÉ,** *Fr.* the outlet of a wood or narrow pass.

**DÉBOUCHÉ de tranchée,** *Fr.* the opening which is made at the extremity of a trench, in order to carry the work more forward, by forming new boyaus, and to attack a place more closely.

**DÉBOUCHÉMENT,** *Fr.* the marching of an army from a narrow place into one more open.

**DÉBOUCHER,** *Fr.* to march out of a defile or narrow pass, or out of a wood, village, &c. either to meet an enemy or to retire from him. It also signifies to begin a trench or boyau, in fortification, in a zig-zag direction from a preceding one.

**DÉBOUCHER une grosse bouche à feu,** *Fr.* to take the wadding out of a piece of ordnance.

**DÉBOURRER,** *Fr.* to take the wadding out of a cannon or musquet.

**DÉBRIS d'une armée,** *Fr.* the remains of an army which has been routed.

**DEBTS and Credits.** Every captain of a troop or company in the British service is directed to give in a monthly statement of the *debts and credits* of his men; and it is the duty of every commanding officer to examine each list, and to see, that, no injustice or irregularity has been countenanced or overlooked in so important an object as every money matter between officer and soldier most unquestionably is.

**DÉBUSQUER**, *Fr.* to drive an enemy's party from an ambuscade or post.

**DÉCAMPER**, *Fr.* to leave one camp in order to go and occupy another.

**DECAGON**, in fortification, is a polygon figure, having 10 sides, and as many angles; and if all the sides and angles be equal, it is called a regular decagon, and may be inscribed in a circle. The sides of a regular decagon are, in power and length equal to the greatest segment of an hexagon inscribed in the same circle, and cut in extreme and mean proportion.

**DECAGONI**, *Fr.* See **DECAGON**.

**To DECAMP**, to march an army or body of men from the ground where it before lay encamped. It also signifies to quit any place or position in an unexpected manner. See **CAMP**.

**DÉCAMPEMENT**, *Fr.* the breaking up of an encampment.

**DECANUS**, in Roman military history, an officer who presided over ten other officers, and was head of the contubernium, or serjeant of a file of Roman soldiers.

**DÉCHARGER**, *Fr.* the act of firing off a musquet.

**DÉCHARGE GÉNÉRALE**, *Fr.* a general discharge.

**DÉCHARGE d'armes sur un mort**, *Fr.* a discharge of musquetry over a dead body.

**DÉCHARGEURS**, *Fr.* are men appointed to attend the park of artillery, and to assist the non-commissioned officers, &c. who are employed on that service. It is the duty of the former to keep a specific account of articles received and consumed, in order to enable the latter to furnish their officers with accurate statements.

**DÉCHIRER la cartouche avec les dents**, *Fr.* to bite cartridge.

**To DECIMATE**, to divide any body of men into as many tenths as the aggregate number will afford, and to make them cast lots for the purpose of being punished.

**To DECIMATE soldiers**, *Décimer des soldats*, *Fr.* to chuse one out of ten, by lot, either by way of punishment, or for the purpose of being employed upon some public work.

**DECIMATION**, in Roman military history, a punishment inflicted upon such soldiers as quitted their post, or

behaved themselves cowardly in the field. The names of all the guilty were put into an urn or helmet, and as many were drawn out as made the tenth part of the whole number; the latter were put to the sword, and the others saved.

**DECIMER**, *Fr.* See **DECIMATE**.

**DECLARATION of war**, (*Déclaration de guerre*, *Fr.*) a public proclamation made by the herald at arms to the member, or subjects of a state, declaring them to be at war with any foreign power, and forbidding all and every one to aid or assist the common enemy, at their peril.

**To DECLARE WAR**, (*déclarer la guerre*, *Fr.*) to make it publicly known, that one power is upon the eve of acting offensively against another.

**DÉCLICQ**, *Fr.* a machine that serves to drive staves in the ground.

**DECLIVITY**, as opposed to acclivity, means a gradual inclination, or obliquity reckoned downwards.

**DÉCOIFFER**, *Fr.* to take off the cover that is placed on the punning match which leads to the saucisson of a mine.

**DÉCOIFFER une fusée**, *Fr.* to take off the wax or mastic composition by which the inflammable matter is confined. This term is also used with regard to shells. The French sometimes say, *grater la fusée de bombes*; to scrape off the fuse of a bomb.

**DÉCOMBRER**, *Fr.* to carry away the loose stones, &c. which have been made in a breach by a besieging enemy.

**DÉCOMBRES**, *Fr.* the rubbish which is the consequence of a breach being made in a work; or any other loose ruins that may have been occasioned by time.

**DÉCOMPTE**, *Fr.* in a general sense, discount or deduction made on any given sum or allowance.

**DÉCOMPTE** also signifies a liquidation, or balance, which from time to time was made in the old French service, between the captain of a company and each private soldier, for monies advanced or in hand; hence *Payer le décompte aux troupes*, to pay whatever sum or sums may be due to the troops, after having deducted monies that had been advanced. *Dic. de l'Acad.* In the British service every infantry soldier is settled with on the 24th day in each

each month. The cavalry is paid every second month.

• **DÉCONFIRE**, *Fr.* discomfit; route.

**DÉCOUCHER**, *Fr.* to sleep out of quarters.

**DÉCOUDRE**, *être en découdre*, *Fr.* to be on bad terms; to be determined to fight.

**DÉCOURAGER**, *Fr.* to dishearten.

• **DÉCOUVERTE**, *Aller à la découverte*, *Fr.* To patrol. In the old French service, the party ordered to perform this duty, when in a garrison, usually went three miles round the fortifications to pick up stragglers who could not account for themselves, and to secure spies, should any be lurking about.

*Aller à la Découverte*, when applied to any party that is detached from the army, signifies to reconnoitre the enemy. Cavalry are usually employed upon this duty.

**DECOY**, a stratagem to carry off the enemy's horses in a foraging party, or from the pasture; to execute which, you must be disguised, and mix on horseback in the pasture, or amongst the foragers on that side on which you propose to fly; you must then begin by firing a few shots, which are to be answered by such of your party as are appointed to drive up the rear, and are posted at the opposite extremity of the pasture, or foraging ground; after which they are to gallop from their different stations towards the side fixed for the flight, shouting and firing all the way: the horses being thus alarmed, and provoked by the example of others, will break loose from the pickets, throw down their riders and the trusses, and setting up a gallop, will naturally direct their course to the same side; inasmuch that, if the number of them was ever so great, you might lead them in that manner for several leagues together: when you are got into some road, bordered by a hedge, or ditch, you must stop as gently as possible; and without making any noise; the horses will then suffer themselves to be taken without any opposition. It is called in French *Hurac*; and Count Saxe is the only author that mentions it.

**DECOYED**, an enemy is said to be decoyed when a small body of troops draws him into action, whilst the main body lies in ambush ready to act with the greatest effect.

**DÉCRIRE un pays**, *Fr.* to give a general and sometimes a particular description of a country, which requires precision and correctness in the person who makes either a verbal or written description.

**DECURIO**, in Roman military history, a commander of ten men in the army, or chief of a decury.

**DÉCURY**, ten Roman soldiers ranged under one chief, or leader, called the Decurio.

**DEDANS d'une ville de guerre**, *Fr.* the inside of a fortified town, i. e. all the works which are within the line of circumvallation.

**DEEP**, a term used in the disposition or arrangement of soldiers that are placed in ranks before each other; hence *two deep, three deep, &c.* Troops are told off in ranks of two, or three deep, and on some occasions in four or more.

**DÉFAIRE**, *Fr.* to defeat.

**DÉFAITE**, *Fr.* defeat. The loss of a battle. An army is *vaincue* (overpowered) when the field of battle is lost; it is *défaite* when besides the loss of the field of battle, there are a great number killed, wounded and made prisoners. The word *défaite* is only applicable to an army, but never to a detachment; in the latter case it is said to have been overpowered.

**DEFAULTER**. See **DEserter**.

**DEFEAT**, the overthrow of an army.

**DEFECTION**. See **MUTINY**.

**DEFENCE**, in fortification, consists of all sorts of works that cover and defend the opposite posts; as flanks, parapets, cazemattes, and fausse-brays. It is almost impossible to fix the miner to the face of a bastion, till the defences of the opposite one are ruined; that is, till the parapet of its flank is beaten down, and the cannon, in all parts that can fire upon that face which is attacked, is dismounted. See **FORTIFICATION**.

**Active DEFENCE**, generally considered, means every species of offensive operation which is resorted to by the besieged, to annoy the besiegers. Such, for instance, is the discharge of heavy ordnance from the walls, the emission of shells, and the firing of musquetry. A mass of water may likewise be understood to mean active defence, provided

it can be increased according to the exigency of the service, and be suddenly made to overflow the outworks, or entrenchments of the besieging enemy. Mines which are carried beyond the fortifications may likewise be included under this head.

*Passive DEFENCE* is chiefly confined to inundations, and is effected by letting out water in such a manner, that the level ground which lies round a fortified town or place may be entirely overflowed and become an inert stagnant pool. Mere *submersion* is, in fact, the distinguishing character of this species of defence, which does not afford any other movement than what naturally arises from the greater or lesser elevation of the waters, without the means of urging them beyond a given point.

*Distant DEFENCE*, consists in being able to interrupt the enemy's movements by circuitous inundations; to inundate, for instance, a bridge, when a convoy is passing, or to insulate batteries, the heads of saps or lodgments which have been made in the covert-way, is to act upon a distant defence. By this species of defence an enemy's communications may be perpetually intercepted, and his approaches so obstructed as to force him to leave dangerous intervals.

See Belidor's treatise on Hydraulic Architecture.

*Line of DEFENCE*, represents the flight of a musquet-ball from the place where the musqueteers stand, to scour the face of the bastion. It should never exceed the reach of a musquet. It is either *sichant* or *razant*: the first is when it is drawn from the angle of the curtain to the flanked angle; the last when it is drawn from a point in the curtain, ranging the face of the bastion.

*Line of DEFENCE* is the distance between the salient angle of the bastion and the opposite flank; that is, it is the face produced to the flank. See *FORTIFICATION*.

*DEFENCE of rivers*, in military affairs, is a vigorous effort to prevent the enemy from passing; to effect which, a careful and attentive officer will raise redoubts, and if necessary join curtains thereto: he will place them as near the banks as possible, observing to cut a trench through the ground at the wind-

ings of the river, which may be favourable to the enemy, and to place advanced redoubts there, to prevent his having any ground lit to form on, &c. See *RIVERS*.

*To be in a posture of DEFENCE*, is to be prepared to oppose an enemy, whether in regard to redoubts, batteries, or in the open field.

*To DEFEND*, to fortify, secure, or maintain a place or cause.

*DÉFENDANT*, Fr. a synonymous word for *flankant*: the *flank* defends the *certain* and the opposite *face* of the *bastion*: the *half-moon*, and the *horn-work*, or *crown-work*; the *covert-way* defends or protects the *approaches* of the *glacis*, in an entrenchment the *redan* protects the space which connects it with another *redan*; a *place of arms* defends the approach on four sides.

*DÉFENSE*, Fr. *être en état de défense*, technically signifies to be in a state of defence, or able to resist. The French usually say: *cette redoute est en défense*; this redoubt is in a state of defence.

*DEFENSE*, Fr. prohibition. An order issued by some superior officer forbidding the troops of a garrison or camp to do certain things. See *LINE of DEFENCE*.

*DEFENSES d'une place*, Fr. the works of a fortified place. See *DEFENCE* in *FORTIFICATION*.

*DEFENSIVE*, serving to defend; in a state or posture of defence.

*DEFENSIVI-aeur*. See *WAR*.

*DEFIANCE*. See *CHALLENGE*.

*DEFICIENT*, wanting to complete, as when a regiment, troop, or company has not its prescribed number of men.

*DÉFI d'armes*, Fr. a challenge, or provocation to fight, much in practice several centuries back.

*Le FILE*, in military affairs, a narrow passage, or road, through which the troops cannot march, otherwise than by making a small front, and filing off; so that the enemy may take an opportunity to stop or harass their march, and to charge them with so much the more advantage, because the rear cannot come up to the relief of the front.

*DÉFILE*, among the French is also called *pièdre*.

*To DEFILE*, is to reduce divisions or platoons into a small front, in order to march

march through a *défilé*; which is most conveniently done by facing to either the right or left, and then wheeling to either right or left, and marching through by files, &c. It has been mentioned by a writer on military manœuvres, that *défiling* should be performed with rapidity, for this obvious reason, that a body of men which advances towards, or retires from an approaching enemy, may get into line, or into columns prepared for action, without loss of time. There may, however, be exceptions to this general rule. For instance, if the regiment is passing a bridge, either retreating or advancing, and the bridge is not firm, the pressure upon it must be as little as possible, because if it should break down, the regiment is suddenly separated, and the remainder may be cut to pieces. In passing a common *défilé* the pace must be proportioned to the nature of the ground.

**DÉFILING** *a lodgment.* See **ENFILADE**.

**DÉFORMER**, *Fr.* in a military sense, signifies to break: as *déformer une colonne*, to break a column.

**DEFFY**. See **CHALLENGE**.

**DÉGAGER** *un soldat*, *Fr.* to give a soldier his discharge, either on account of his having served his time, of his being infirm, or in consequence of his paying a small sum to procure a substitute.

• **DÉGARNIR** *une fortress, une ligne, un poste*, &c. to dismantle a fortress, a line of fortification, a post, by withdrawing the troops, and sending away the cannon.

**DÉCAST**, *Fr.* the laying waste an enemy's country, particularly in the neighbourhood of a town which an army attempts to reduce by famine, or which refuses to pay military exactions.

**DÉGORGEOIR**, *Fr.* a sort of steel pricker used in examining the touch-hole of a cannon.

**DÉGORGER**, *Fr.* to clear out some obstruction.

**DÉGORGER** *une embrasure*, *Fr.* to lower the earth in an embrasure, so as to have a perfect view of any object against which a piece of ordnance is to be pointed.

**DÉGOURDI**, *Fr.* polished. It is said proverbially of a soldier who understands his duty well, that he is a

man *dégourdi*; in the like manner it is said of a clumsy, awkward recruit, that he must be *dégourdi*, that is to say, that he wants a proper drilling.

**DEGRADATION**, (*Dégradation, Fr.*) in a military life, the act of depriving an officer for ever of his commission, rank, dignity, or degree of honour; and taking away, at the same time, title, badge, and every other privilege of an officer.

**DEGRADATION** *sur les ouvrages par le feu de l'ennemi*, *Fr.* vide *Ouvrages dégradés*.

**DÉGRADER**, *Fr.* to degrade. The character of a soldier in France was formerly, and we presume still is, so scrupulously watched, that criminals were never delivered over to the charge of the civil power, or sent to be executed, without having been previously degraded; which was done in the following manner:

As soon as the serjeant of the company to which the culprit belonged, had received orders from the major of the regiment, to degrade and render him incapable of bearing arms; he accoutred him cap-a-pee, taking care to place his right hand upon the butt-end of the musquet, while the soldier remained tied. He then repeated the following words: *finishing thee unworthy to bear arms, we thus degrade and render thee incapable of them.* "Te trouvant indigne de porter les armes, nous t'en dégraders." He then drew the musquet from his arm backwards, took off his cross-belt, sword, &c. and finally, gave him a kick upon the posteriors. After which the serjeant retired, and the executioner seized the criminal. See **DRUM-OUT**.

**DÉGRADER** *un officier, un soldat*, *Fr.* to take away an officer's commission, and declare him unworthy to serve. To order a front rank man into the rear, as matter of disgrace, or to drum him out of a regiment.

**DÉGRÉ**, *Fr.* See **DIGREE**.

**DÉGRÉ** *de latitude*, *Fr.* a portion of land between two parallels.

**DÉGRÉ** *de longitude*, *Fr.* a portion of land between two meridians.

**DIGREE**. Though this term properly belongs to geometry, nevertheless it is frequently used both in fortification, and gunnery. Hence it will not be

## D E L

be improper to declare, that it is a division of a circle, including a 360th part of its circumference. Every circle is supposed to be divided into 360°, parts called degrees, and each degree into 60', other parts, called minutes; each of these minutes being divided into 60" seconds, each second into thirds, and so on.

**DÉGUISEMENT** *de nom & de qualité*, Fr. disguise of name and rank.

**DEHARNACHER**, *ou* **D'HARNACHEMENT**, Fr. to unsaddle a horse, and take off every part of his harness and armour.

**DÉHORS**, in the military art, are all sorts of out-works in general, placed at some distance from the walls of a fortification, the better to secure the main places, and to protect the siege, &c. See **FORTIFICATION**.

**DELATOR**, an informer. Under the Roman emperors this contemptible species was very common. Tacitus informs us, that the tyrants encouraged them to carry on that infamous trade by granting them rewards. *Caligula* allowed them one-eighth of the property of the accused person. The support of the law became an instrument of which the informers took advantage to get a livelihood, but as they consulted only their own interest, they invariably lodged their informations against the most respectable citizens, so that tranquillity and personal safety were entirely out of the question; till at last *Titus* and *Trajan* put an end to that public nuisance, and had the informers put to death. The espionage of the present French Government is the same infamous system revived.

**DELINEATION**, an outline, or sketch. See **DESIGN**.

**DELIVER**. See **STRENGTHEN**.

**DÉLIVRER**, *une troupe, une ville assiégée*, Fr. to relieve a body of men, or besieged town, by forcing the enemy to withdraw.

**DELIS**, Fr. select men from Albania who volunteer their services for the armies of the Grand Seigneur, and receive no pay: their undaunted courage is superior to that of any other nation. No man was admitted into that body unless he be of a proper height, robust, and of a martial countenance. Previous to their being em-

## D E M

bodied they must give proofs of their valour. Their dress alone is enough to intimidate the foe. The *Sanjacs* and *Beyglertseys* select their guard from amongst these Albanians, on account of their courage and fidelity. They are armed with a sabre, a lance, a battle-axe, and sometimes with pistols; but they prefer other weapons to fire-arms, as they may, in their opinion, acquire more glory by making use of the former.

**DÉLOGER**, Fr. to dislodge; to march off. This term is used among the French both to signify the act of withdrawing or marching away one's self, or of forcing others to retreat and quit a position. Hence, *déloger l'ennemi*: to dislodge an enemy.

**DÉLOGEMENT**, Fr. it is said of troops quartered by *étape*: the same is said of a camp.

**DEMANTELIER**, Fr. to dismantle; to destroy the works of a fortified place.

**DÉMENTI**, Fr. the lie. A young soldier must know, from the moment he embraces the profession of arms, that this word can never escape with impunity from the lips of a man of honour, and especially of a soldier; in short, upon no occasion whatever, must he use the expression; for amongst civilized nations to give the lie is a very gross insult: amongst military men it is reckoned the greatest offence, and the satisfaction required is not so easily given as it was amongst the Romans, who had nothing more to do than to say to the affronted person, *noli te factum esse*.

**DEMI-BASTION**, is a work with only one face and one flank. See **FORTIFICATION**.

**DEMI-CANNON**. See **CANNON**.

**DEMI-CULVERIN**. See **CANNON**.

**DEMI-DIAMÈTRE**, Fr. a strait line drawn from the center of a circle to its circumference.

**DEMI-DISTANCE** *des polygones*, Fr. is the distance between the exterior polygons and the angles.

**DEMI-DISTANCES**, Fr. half-distances; as *serrez la colonne à demi-distances*, close the column at half distances.

**DEMI-FILE**, Fr. is that rank in a French battalion, which immediately succeeds

## D E M

succeeds to the *serre-demi-file*, and is at the head of the remaining half of its depth.

**DEMI-GORGE**, in fortification, is half the gorge, or entrance into the bastion, not taken directly from angle to angle, where the bastion joins the curtain, but from the angle of the flank to the center of the bastion; or the angle which the two curtains would make, by their prolongation. See **FORTIFICATION**.

**DEMI-LANCE**, a light lance or spear.

**DEMI-LUNE**, in fortification, is a work placed before the curtain to cover it, and prevent the flanks from being discovered sideways. It is made of two faces, meeting in an outward angle. See **FORTIFICATION**.

**DEMI-lignes détachées**, Fr. these works are constructed like bastions, either level, flat, or elevated, according as circumstances require, and which depends upon the elevation or depth of the covert-way.

**DEMI-parabole**, Fr. a curved line, but less so than that of the parabole. V. *Parabole*.

**DEMI-parallèles**, or *Places d'Armes*, Fr. parts of trenches conducted in parallel lines in front of the place, between the second and third parallel, with a view of protecting from a shorter distance, the head of the saps, until the third parallel is completed. Their length and depth are the same as that of the parallels: they are from forty to fifty toises long.

**DEMI-pique**, a long javelin or spear-throw.

**DEMI-revêtement**, Fr. a revêtement made of brick work, which supports the rampart, from the bottom of the ditch, to a foot above the level of the country. The *demi revêtement* costs less than the *revêtement entier*, and is equally as advantageous in every respect.

**DEMI-tour à droite**, Fr. See **RIGHT ABOUT**.

**DEMI-tour à gauche**, Fr. See **LEFT ABOUT**.

**DÉMISSION**, Fr. Resignation.

**DÉMOLIR une place**, Fr. is to destroy the fortifications of a fort, that it may no longer be in a state of defence.

**DEMOLITION**, the act of overthrowing buildings.

## D E N

**DEMONTER une pièce d'Artillerie**, Fr. to dismount a piece of artillery; to take it off its carriage.

**DÉMONTRE le canon d'une forteresse**, Fr. To hit a piece of ordnance or artillery belonging to a fortress, so as to destroy its carriage, and by that means render it useless to the enemy.

**DÉMONTER une troupe à cheval**, Fr. to wound or lame the horses of a troop of cavalry, so as to render them unfit for service.

**DEMUNIR**, Fr. to take away from a place the provisions and ammunition it contained.

**DENNISON**, a free man, or native of a country or state, as opposed to alien.

**DENOMBREMENT**, Fr. the complement of a troop or company; also the number of battalions, &c. which compose an army, or of inhabitants that dwell in a town.

**DENONCER un soldat**, Fr. to give notice to the captain of a troop or company, or to the regiment, of a soldier's intention to desert.

**DENONCER une troupe**, Fr. to give intelligence of the movement of an armed body of men, of its strength, proposed route, &c.

**DENONCIATEUR d'un deserteur**, Fr. During the old government of France, a military regulation existed by which any person who discovered a deserter, was entitled to his full discharge, if a soldier; and to one hundred livres, or 4l. 3s. 4d. reward.

**DENONCIATEUR**, in a general sense, may not improperly be called a military informer. So rigid indeed, were the regulations, (even in the most corrupt state of the French government) against every species of misapplication and embezzlement, that if a private dragoon gave information to the commissary of musters of a troop horse that had passed muster, having been used in the private service of an officer, he was entitled not only to his discharge, but received moreover one hundred livres in cash, and became master of the horse and equipage; with which he retired unmolested. It is not mentioned in the publication from which we extract this remark, whether the officer was cashiered, but we presume he was.

One hundred and fifty livres were like-

wise

## D E P

wise paid to any dragoon, or soldier, who should give information of a premeditated duel; he obtained moreover his discharge.

**DENSITY** of bodies. See **MOTION**.

**DENTS** (*armé jusqu'aux*) Fr. is said of a man who carries as many arms about him as if he was going to fight half a score.

**DEPARTEMENT**, Fr. when speaking of the quarters distributed among the troops, the expression used, is to have expedited the *département* of the quarters.

**DÉPARTEMENT**, Fr. a certain extent of country which is under the same jurisdiction, or authority: any particular district which is subject to the orders, and under the superintendence of a civil magistrate, or military character.

**DÉPARTEMENT** also signifies as with us, a public office, viz. *département de la guerre, de la marine*; the war, the marine department.

**DÉPASSER**, (or **DÉBORDER**), Fr. To over run. In oblique movements, particular care should be taken not to afford an enemy that advances on the same points with yourself, the means of outflanking you; which must inevitably happen, should any part of your troops over-run their proper ground. For the instant such an error occurs, your antagonist will only have to form a retired flank, oppose you in front on that part, and charge the remainder in flank, after having cut off all the troops that had over-run.

*Se laisser DÉPASSER*, to suffer yourself to be overtaken.

**DÉPECHES**, Fr. dispatches, letters, &c. which are carried by a special messenger.

**DEPENSES** *secrètes*, Fr. in a military sense, implies secret service money.

**DÉFERIR**, Fr. to waste away; an army is said to be in this state when it is afflicted with a pestilential or epidemical disorder; when it is short of provisions; when the troops do not enter into cantonments as the season requires it, or if they suffer from any other accident.

**DEPEUPLER**, Fr. to depopulate.

**DEPLOY**, (*déployer*, Fr.) to display, to spread out; a column is said to deploy, when the divisions open out, or extend to form line on any given division.

## D E P

**DEPLOYMENT**, (*déploiement*, Fr.) or *flank march*, in a military sense, the act of unfolding or expanding any given body of men, so as to extend their front. According to the system published by authority, a *deployment* may be made in various ways. The principal one is, from the close column into line. A battalion in close column may form in line on its front, right or left, on its rear, or on any central division, by the *deployment*, or flank march, and by which it successively uncovers and extends its several divisions.

In the passage of the obstacle, parts of the battalion are required to form in close column, and again *deploy* into line; although the division formed upon continues to be moveable. This, however, depends wholly upon the nature of the ground or country, over which the battalion is marching.

*Deployment into line on a front division, the right in front*, is effected by halting that division in the alignment, and all the others in their true situations, parallel and well closed up to it; and then by taking a point of forming upon, and dressing by the prolongation of that division. For a minute explanation of the deployments on a rear and central division, see Rules and Regulations, p. 186.

*Oblique Deployments* differ from those movements, which are made when a battalion stands perpendicular to the line on which it is to form. These *deployments* are frequently made on an oblique line advanced, on an oblique line retired; and when the close column halted is to form in line in the prolongation of its flank, and on either the front, rear, or central division. See Infantry Regulations, p. 192.

**DÉPOSER un ennemi, ou une troupe**, Fr. to oblige an enemy to quit his position; to drive him out of a fortified place, &c.

**DEPOT**, any particular place in which military stores are deposited for the use of the army. In a more extensive sense, it means several magazines collected together for that purpose. It also signifies an appropriated fort, or place, for the reception of recruits, or detached parties, belonging to different regiments. The barracks near Maidstone are *depots* for the British cavalry, but

and the Isle of Wight, is allotted for the infantry. During hostilities, the greatest attention should be given to preserve the several *depots* which belong to the fighting army. Hence the line of operation should be invariably connected with them; or rather, no advance should be made upon that line, without the strictest regard being paid to the one of communication.

**DEPOT** is also used to denote a particular place at the tail of the trenches, out of the reach of the cannon of the place. It is here that the besiegers generally assemble, who are ordered to attack the outworks, or support the troops in the trenches, when there is reason to imagine the besieged intend making a vigorous sally.

**DEPOT**, likewise means a temporary magazine for forage, for fascines, gabions, tools, and every other thing necessary for the support of an army, or for carrying on a siege.

**DÉPOUILLE**, *Fr. mettre en dépouille*, is an expression made use of in casting of cannon, and signifies to strip it of the matting, clay, &c.

**DÉPOUILLES de l'ennemi**, *Fr.* See **SPOILS**.

**DEPRESSION**, the placing of any piece of ordnance, so that its shot be thrown under the point blank line.

**DEPRESSED gun**, any piece of ordnance having its mouth depressed below the horizontal line.

**DEPTH**, a technical word peculiarly applicable to bodies of men drawn up in line or column.

**DEPTH of a battalion or squadron**, in military affairs, the number of ranks, or the quantity of men. Infantry were formerly drawn up 6 or 8 deep, that is, it consisted of so many ranks; but now troops are generally drawn up only 3 deep, and in defence of a breast-work but 2 deep. When infantry is drawn up 3 deep, the first rank is called the front rank; the second, the centre rank; and the third, the rear rank; and the files which bind the right and left, are called the flanks. The cavalry is generally drawn up 3 deep, and on some occasions only 2 deep.

**DEPTH of formation**. The fundamental order of the infantry in which they should always form and act, and for which all their various operations

and movements are calculated, is *three ranks*. The formation in *two ranks* is to be regarded as an occasional exception that may be made from it, where an extended and covered front is to be occupied, or where an irregular enemy, who deals only in fire, is to be opposed. The formation in two ranks, and at open files, is calculated only for light troops in the attack and pursuit of a timid enemy, but not for making an impression on an opposite regular line, which vigorously assails, or resists.

**DEPTH** is not only applicable to men drawn up in line, and standing at close or open files two or three deep, but it may likewise signify the relative depth of an army marching towards any given object, in desultory columns.

**DEPUTY**, a person appointed by commission to act instead of another.

**DEPUTY barrack-masters.**

**DEPUTY muster-masters.**

**DEPUTY commissaries.**

**DEPUTY judge-advocate.**

**DEPUTY lieutenants.** Civil officers belonging to the militia of Great Britain, and appointed by the several county lieutenants. His Majesty may authorise any three to grant commissions, and to act when the county lieutenant is abroad, or when there is none. If twenty qualified persons can be found, it is usual to appoint that number for each county. For specific qualifications, see the 26th of George III.

No deputy lieutenants are to be appointed, till their qualifications have been delivered to the clerk of the peace.

They must take the required oaths within six months after their appointment; and if they should act without having given in their qualifications, each to forfeit 200l.

It is their duty to appoint a clerk of the subdivision meeting, and they have besides, the power of appointing a second general meeting and subdivision meetings.

They may direct lists of men liable to serve to be amended, but they must certify the number of men in such lists to the clerk of the general meeting.

They may appoint the number of men to serve for each place, and may order the chief constable to give notice

the constables of the number of men appointed.

They may cause the men to be chosen by ballot, and order the chief constables direct the constables to give notice to men so chosen, when and where they are to appear.

They may proceed to a fresh ballot when the requisite number of men have been enrolled.

They have also the power of adding to for two parishes together, and of issuing new lists to be made where they have been lost.

They may issue warrants for the attendance of constables, and imprison or take them for neglect.

They may summon and examine persons on oath, respecting apprentices who are suspected of having been fraudulently bound, and appoint them to view.

They may hire substitutes for quakers refusing to serve, or to provide substitutes, and they may levy by distress; and if no distress can be found, they may commit the party. They may likewise determine complaints of quakers respecting distress.

They may discharge improper, or unpersons that have been chosen by ballot, and may cause others to be chosen.

They may, in conjunction with the commanding officer, discharge men declared incapable of service.

They may likewise ballot for men to serve in the room of such persons as have been discharged, or who have served their time according to the regulations. They may ballot for persons to serve the room of deserters, provided such deserters do not return before the expiration of three months from their original enlistment. One deputy lieutenant has a justice of the county, may act at division meetings. One may administer oaths, and cause the clerk to enrol persons that have been duly sworn.

Five, in the absence of the lieutenant, may change a proportion of the persons who have served five years, when militia is not called out for actual service, and may alter subdivisions, and established allotment of men in divisions.

Three, in the absence of the lieutenant, may summon general meetings

for the purpose of appointing what number of additional men shall serve for each district, when the privy council shall fix a greater number for a county than has been appointed by act of parliament.

Deputy lieutenants may likewise appoint the time and place for the annual exercise, if no general meeting of the lieutenancy be holden.

Whenever his majesty shall think it expedient to order the militia to be embodied, it is their duty to issue orders to the chief constable to prepare lists, &c.

Three deputy lieutenants, or one lieutenant, must transmit a certificate annually to the clerk of the peace, with a list containing the names of the officers and men of the militia.

**DÉROBER** *une marche*, Fr. to steal a march.

**DÉROUTE**, Fr. The total overthrow of an army, battalion, or of any armed party. See **DÉFAIT**.

**DÉROUTER l'ennemi**, Fr. to disconcert an enemy; to get him into such a precarious situation, that he can form no judgment of the issue of an engagement.

**DÉSARCONNER**, Fr. to dismount a horseman.

**DÉSARMEMENT**, Fr. the act of disarming or reducing troops.

**DÉSARMER**, Fr. to reduce any given number of troops, by taking away their arms, &c.

**DÉSARMER une pièce d'artillerie**, Fr. to draw the charge out of a piece of artillery; it also signifies to dismount it wholly.

**DÉSASSIÉGER**, Fr. to cause a siege to be raised. (This word is become obsolete; it is not to be found in the *Dictionnaire de l'Académie Française*; but it is a military expression.)

**DÉSAVANTAGE**, Fr. disadvantage; a state not prepared for defence. This is said of the infantry when in an open country the enemy oppose a numerous cavalry.

**To DÉSCEND**, signifies to leave any position on an eminence for immediate action.

**To Descend upon**, to invade. When an enemy from surrounding heights suddenly marches against a fortified place, he is said to descend upon it. The term is also applied to troops debarking.

barking from their ships for the purpose of invasion.

**DESCENDRE la garde**, Fr. to come off guard, after being regularly relieved.

**DESCENDRE la tranchée**, Fr. to quit the trench on being regularly relieved.

**DESCENDRE une rivière**, Fr. to follow the stream of a river.

**DESCENT**, (*descente*, Fr.) hostile invasion of any state or kingdom; the debarkation of troops on any coast, for the purpose of acting offensively.

**DESCENTE de fossé**, Fr. a hollow passage which is made by the besiegers, to get under the glacis of a fortress into its fosse.

**DESCENTE de fossé souterraine ou couverte**, Fr. a hollow passage which may have been effected under ground, or without any opening from above.

**DESCENTE de fossé à ciel ouvert**, Fr. a passage towards the ditch or fosse of a fortified place, which has not been effected under cover.

**DESCENTS into the ditch**, (*descentes dans le fossé*, Fr.) cuts and excavations made by means of saps in the counterscarp beneath the covert way. They are covered with thick boards and hurdles, and a certain quantity of earth is thrown upon the top, in order to obviate the bad effects which might arise from shells, &c.

When the ditch or fosse is full of water, the *descent* must be made to its edge, after which the ditch must be filled with strong fascines covered with earth. When the ditch is dry, the saps are carried on to the bottom, and traverses are made in order to secure a lodgment, or to render the approaches of the miner more practicable. When the ditch or fosse which is full of water has little or no bank, the *descent* is simply made over it; care being taken to cover its enfilade or range with blinds and chandeliers, or to execute it as much out of that line as possible.

**DESCENTS**, in fortification, are the holes, vaults, and hollow places, made by undermining the ground.

**DESCLIQUER**, Fr. this word is expressive of the action of the ancients when throwing stones at the besiegers.

**DESEMPARER un camp**, Fr. To break up camp; to strike tents for

the purpose of marching to some other ground, or in order to meet the enemy.

**DÉSENCLOUER**, Fr. to take the nail out of a cannon that has been spiked; it also signifies to remove obstructions from any passage that has been incumbered.

**DÉSENROLER**, Fr. to give a soldier his discharge, to strike him off the muster-roll.

**To DESERT** (*diserter*, Fr.) to go away by stealth after having been regularly enlisted; to abandon any person or cause.

**DESERTER**, in a military sense, a soldier who, by running away from his regiment, troop, or company, abandons the service.

**DESERTERS** from the militia may be apprehended by any person in the same manner, that deserters are from the regular army. And every person who shall be discovered in the act of concealing, or assisting a deserter, is to forfeit 5*l*. Persons apprehending a deserter are entitled to 20*s*.

**Penalty of DESERTION**. All officers and soldiers, who having received pay, or having been duly enlisted in our service, shall be convicted of having deserted the same, shall suffer death or such other punishment as by a court-martial shall be inflicted.

Any non commissioned officer or soldier, who shall, without leave from his commanding officer, absent himself from his troop or company, or from any detachment with which he shall be commanded, shall, upon being convicted thereof, be punished according to the nature of the offence, at the discretion of a court-martial.

No non-commissioned officer or soldier shall enlist himself in any other regiment, troop, or company, without a regular discharge from the regiment, troop, or company in which he last served, on the penalty of being reputed a deserter and suffering accordingly: and in case any officer shall knowingly receive and entertain such non-commissioned officer or soldier, or shall not, after his being discovered to be a deserter, immediately confine him, and give notice thereof to the corps in which he last served, he, the said officer so offending, shall by a court-martial be cashiered.

Whatsoever officer or soldier shall be

convicted of having advised any other officer or soldier to desert our service, shall suffer such punishment as shall be inflicted upon him by the sentence of a court-martial.

*Justices may commit DESERTERS.* And whereas several soldiers being duly enlisted, do afterwards desert, and are often found wandering, or otherwise absenting themselves illegally from his majesty's service; it is further enacted, that it shall and may be lawful to and for the constable, headborough, or tythingman of the town and place, where any person, who may be reasonably suspected to be such deserter, shall be found, to apprehend, or cause him to be apprehended, and to cause such person to be brought before any justice of the peace, living in or near such town or place, who hath power to examine such suspected person: and if by his confession, or the testimony of one or more witness or witnesses upon oath, or by the knowledge of such justice of the peace, it shall appear, or be found, that such suspected person is a listed soldier, and should be with the troop or company to which he belongs; such justice of the peace shall forthwith cause him to be conveyed to the gaol of the country or place where he shall be found, or to the house of correction, or other public prison, in such town or place where such deserter shall be apprehended; or to the Savoy, in case such deserter shall be apprehended within the city of London or Westminster, or places adjacent; and transmit an account thereof to the secretary at war for the time being, to the end such person may be proceeded against according to law: and the keeper of such gaol, house of correction, or prison, shall receive the full subsistence of such deserter or deserters, during the time that he or they shall continue in his custody, for the maintenance of the said deserter or deserters; but shall not be intitled to any fee or reward, on account of the imprisonment of such deserter or deserters, any law, usage, or custom to the contrary notwithstanding.

*Reward for taking up DESERTERS.* And for the better encouragement of any person or persons to secure or apprehend such deserters as aforesaid; be

it further enacted by the authority aforesaid, that such justice of the peace shall also issue his warrant in writing to the collector or collectors of the land-tax money of the parish or township where such deserter shall be apprehended, for paying, out of the land tax money arising or to arise in the current year, into the hands of such person who shall apprehend, or cause to be apprehended, any deserter from his majesty's service, the sum of 20s. for every deserter that shall so be apprehended and committed; which sum of 20s. shall be satisfied by such collector to whom such warrant shall be directed, and allowed upon his account.

*Penalty for concealing DESERTERS, or buying their arms, clothes, &c.* Provided always, that if any person shall harbour, conceal, or assist any deserter from his majesty's service, knowing him to be such, the person so offending shall forfeit, for every such offence, the sum of 5l. or if any person shall knowingly detain, buy, or exchange, or otherwise receive, any arms, clothes, caps, or other furniture belonging to the king, from any soldier or deserter, or any other person, upon any account or pretence whatsoever, or cause the colour of such clothes to be changed; the person so offending shall forfeit for every such offence the sum of 5l. and upon conviction by the oath of one or more credible witness or witnesses, before any of his majesty's justices of the peace, the said respective penalties of 5l. and 5l. shall be levied by warrant under the hands of the said justice or justices of the peace, by distress and sale of the goods and chattles of the offender; one moiety of the said first-mentioned penalty of 5l. to be paid to the informer, by whose means such deserter shall be apprehended; and one moiety of the said last-mentioned penalty of 5l. to be paid to the informer; and the residue of the said respective penalties to be paid to the officer to whom any such deserter or soldier did belong: and in case any such offender, who shall be convicted, as aforesaid, of harbouring or assisting any such deserter or deserters, or having knowingly received any arms, clothes, caps, or other furniture belonging to the king, or having caused the colour of such clothes to be changed, contrary

contrary to the intent of this act, shall not have sufficient goods and chattels, whereon distress may be made, to the value of the penalties recovered against him for such offence, or shall not pay such penalties, within 4 days after such conviction; then, and in such case, such justice of the peace shall and may, by warrant under his hand and seal, either commit such offender to the common gaol, there to remain without bail or mainprize for the space of three months, or cause such offender to be publicly whipped, at the discretion of such justice.

**DÉSERTEUR**, *Fr.* See **DESERTER**.

**DÉSHONNEUR**, *Fr.* Dishonor, loss of character.

**DÉSIGN**, (*dessein*, *Fr.*) in a general sense, implies the plan, order, representation or construction of any kind of military building, chart, map, or drawing, &c. In building, the term *ichnography* may be used, when by design is only meant the plan of a building, or a flat figure drawn on paper: when some side or face of the building is raised from the ground, we may use the term *orthography*; and when both front and sides are seen in perspective, we may call it *scenography*.

**DESIGNING**, the art of delineating, or drawing the appearance of natural objects, by lines on a plane.

**DESIGNS**, (*desseins*, *Fr.*) premeditated plans, schemes for execution, &c.

**DÉSŒBEISSANCE**, *Fr.* disobedience of orders. During the war in Italy, (as may be seen in the *Histoire de France*, vol. 37, by *Garnier*) an act of laudable disobedience (if it may be so called) is said to have been committed by a private soldier, whilst an expedition of great moment was taking place under the command of Marshal de *Brisac*.

**DÉSOLER**, *Fr.* to ravage, to ruin a country by heavy exactions, to destroy it by sword and fire.

**DÉSORDRE**, *Fr.* disorder; confusion, such as occurs among troops when they are defeated; the licentious conduct manifested among troops when entering a conquered place. A general has it always in his power, when his troops enter a conquered town, to prevent their committing any disorder.—*Marshal Saxe* having taken Prague in

1741 gave, previous to his entering the town, the most positive and strict orders, that not the least disorder should be committed. These orders were so punctually obeyed, that most of the inhabitants did not perceive, till the following day that they had changed their sovereign. The magistrates, through gratitude, went in a body to present to the marshal, a diamond worth 40,000 livres, on a magnificent gold dish: there had been engraved in the setting an inscription relative to the transaction: they likewise caused rich presents, and large bounties to be distributed amongst the French officers and soldiers. When war is carried on in this way, half its calamities are softened down; it secures immortality to the conqueror, at the same time that he acquires the love and the esteem of the conquered. Conquerors of this cast, experience to the very last a pleasing retrospect, which those who only think of filling their pockets, are ever strangers to. The discipline established by *Charles XII.* was so severe, that even those towns, which were taken by storm, after having been summoned three times, were not plundered without a particular permission proclaimed by the trumpeters of the army; and the pillage was carried on in such good order, that it subsided the instant the second signal was given.

**DÉSORDRES**, *Fr.* acts of plunder and depredation.

**DESSEIN topographique**, *Fr.* topographical representation of a thing.

**DESTINATION**, the place or purpose to which any body of troops is appointed, in order to do or attempt some military service.

*Destination d'une batterie, d'une compagnie, d'un régiment, d'un ouvrage*, *Fr.* the particular purpose or object for which a battery, a body of armed men, a regiment, or a work may be erected, posted or stationed, for offensive or defensive measures.

To **DETACH**, is to send out part of a greater number of men on some particular service, separate from that of the main body.

**DETACHED pieces**, in fortification, are such out-works as are detached, or at a distance from the body of the place; such as half-moons, ravelins, bastions, &c.

**DÉTACHE-**

**DETACHEMENS** *non armés*, or *gardes de fatigues, de corvées*, &c. Fr. detachments of men unarmed; parties sent on fatigue duty.

**DETACHMENT**, (*détachement*, Fr.) in military affairs, an uncertain number of men drawn out from several regiments or companies equally, to be marched or employed as the general may think proper, whether on an attack, at a siege, or in parties to scour the country. A detachment of 2000 or 3000 men is a command for a general officer; 800 for a colonel, 500 for a lieutenant-colonel, 200 or 300 for a major, 80 or 100 for a captain, 40 for a lieutenant or ensign, 12 for a serjeant, and 6 for a corporal. Detachments are sometimes made of entire squadrons and battalions. One general rule in all military projects that depend upon us alone, should be to omit nothing that can insure the success of our detachment and design; but in that which depends upon the enemy, to trust something to hazard.

**DETAIL of duty**, in military affairs, is a roster or table for the regular and exact performance of duty, either in the field, garrison, or in cantonments. The general detail of duty is the proper care of the majors of brigade, who are guided by the roster of the officers, and by the tables for the men to be occasionally furnished. The adjutant of a regiment keeps the detail of duty for the officers of his regiment, as does the serjeant-major that for the non-commissioned, and the latter that for the privates.

**DÉTAIL**, *Fr. faire le détail d'une armée, d'une compagnie, ou d'un corps de gens de guerre*; is to keep a strict eye upon every part of the service, and to issue out instructions or orders, that every individual belonging to a military profession may discharge his trust with accuracy and fidelity. *Faire le détail d'une compagnie*, likewise means to make up a company's reports, &c.

**DÉTAIL de fortification**, Fr. a private account of the materials and expences attending a work.

**DÉTENDRE**, *Fr.* This word literally means to stretch. The French say, *détendre un camp*, to strike the tents of a camp.

**DETENTE**, Fr. a trigger.

**DETERMINER une action ou un**

*mouvement*, Fr. to put into motion a project or design which has been previously weighed and concerted; it also means to force the enemy to come to action.

**DETONATION**, (*détonation*, Fr.) a sudden and violent inflammation and explosion, such as occurs in the ignition of gunpowder and of nitre.

**DÉTRAQUER**, *Fr.* A French expression which is peculiarly applicable to bad horsemanship. It literally signifies, *to put out of order*; to spoil. A French military writer very properly observes on the subject, that many young riders imagine themselves extremely clever and expert, if they can make their horses exhibit a fine curved neck, &c. by suddenly applying the spurs, and checking on the bit; the consequence of which is, that the poor animal reaches the spot of destination heated and almost gored to death.

**DÉTRIPLER les files**, *Fr.* to take some files out of a battalion, troop, or company, when the men are drawn up three deep.

**DÉTROIT**, *Fr.* any narrow arm of the sea; a canal; a narrow passage, &c.

**DÉTROIT ou Détresse**, *Fr.* the critical state into which an army may be brought by having its line of communication cut off.

**DEVANCER une armée, une troupe**, *Fr.* to take an advantageous position in front of an army, or of any other armed body of men, by means of a forced march, &c.

**DEVASTATEURS**, *Fr.* A term applied by the French to the Spaniards, on account of their barbarous and inhuman conduct in Mexico and Peru. It now generally signifies soldiers who are not disciplined, and pillage every country they enter.

**DEVASTATION**, in military history, the act of destroying, laying waste, demolishing or unpeopling towns, &c.

**DÉVASTER**, *Fr.* to lay waste.

**DÉVASTER un pays**, *Fr.* to plunder and waste a country.

**DÉVELOPPER**, *Fr.* to unfold, to unravel; as *Se développer sur la tête d'une colonne*, to form line on the head of a column.

**DÉVELOPPER**

**DÉVELOPPER** *une armée*, Fr. to draw up an army in regular array.

**DEVISE**, (*devise*, Fr.) a motto; the emblems on a shield or standard. The origin of *mottos* is connected with that of heraldry. The study of *mottos* will help us to trace back the military expeditions of the remotest antiquity. The standards, the banners, the pennons, the coats of mail, the shields of the ancients, discover historical facts under an unknown cypher, or a *motto* composed only of a few words. *Parables* were the *mottos* of the Hebrews, and *hieroglyphus* those of the Egyptians. The Greeks, Athenians, Carthaginians, in short, all the European nations had their *mottos* and emblematical figures, and we may venture to say, that military institutions gave rise to the civil ones.

**DEUIL**, *militaire*, Fr. military mourning. The Author of the *Dictionnaire Militaire* makes the following singular remark respecting military mourning, -

With regard to the military mourning which is worn by British officers, it appears, perhaps, singular and not sufficiently dignified in a Frenchman's eye, because the French peasants out of economy adopt the same; it is, however, in my opinion, noble and impressive. Whereas the mourning which our officers observe, is too fantastic and courtier-like, without a sufficient indication of martial sentiment, by which alone it ought to be suggested.

**DEVISE**, Fr. motto. See **DEVICE**.

**DEVIS**, *d'architecture militaire*, & *d'architecture civile*, Fr. in the first instance the detailed drawing of the fortifications of a town, or the intrenchments of an army; in the latter case, the plan of certain edifices, such as barracks, magazines, arsenals, hospitals, warehouses, &c.

**DÉVOIR-MILITAIRE**, Fr. a strict and correct observance of military duty.

**DEVON**. The tinnets belonging to that county may be arrayed by the warden of the stannaries.

**DÉVOIDER**, in the *mange*, is applied to a horse that, upon working upon volts, shakes his shoulders go too fast for the croupe to follow easily.

**DEY**. The chief of the government of Tunis, a vassal to the Grand Turk.

**DIABLE**, Fr. See **CHAI**.

**DIADEM** (*Diadème*, Fr.) The mark of Royalty worn round the head.

**DIAGONAL**, reaching from one angle to another; so as to divide a parallelogram into equal parts.

**DIAGONAL MOVEMENTS**. See **ECHILLON**.

**DIAMETER**, in both a military and geometrical sense, implies a right line passing through the centre of a circle, and terminated at each side by the circumference thereof. See **CIRCLE**.

The impossibility of expressing the exact proportion of the diameter of a circle to its circumference, by any received way of notation, and the absolute necessity of having it as near the truth as possible, has put some of the most celebrated men in all ages upon endeavouring to approximate it. The first who attempted it with success, was the celebrated Van Culen, a Dutchman, who, by the ancient method, though so very laborious, carried it to 36 decimal places: these he ordered to be engraved on his tomb-stone, thinking he had set bounds to improvements. However, the indefatigable Mr. Abraham Sharp carried it to 75 places in decimals: and since that, the learned Mr. John Machin has carried it to 100 places, which are as follows:

If the diameter of a circle be 1, the circumference will be 3.1415926535.8979323846, 2643333279, 5028811971, 6939937510, 5820974944, 5923078164, 0523620899, 8028034825, 3421170679, + of the same parts; which is a degree of exactness far surpassing all imagination.

But the ratios generally used in the practice of military mathematics are these following. The diameter of the circle is to its circumference as 113 is to 355 nearly.—The square of the diameter is, to the area of the circle, as 452 to 355.—The cube of the diameter is, to the solid content of a sphere, as 678 to 355.—The cubes of the axes are, to the solid contents of equi-altitude cylinders, as 452 to 355.—The solid content of a sphere is, to the circumscribed cylinder as 2 to 3—.

*How to find the DIAMETER of shot or shells.* For an iron ball, whose diameter is given, supposing a 9-pounder, which is nearly 4 inches, say, the cube root of 2.08 of 9 pounds is, to 4 inches, as the

the cube root of the given weight is to the diameter sought. Or, if 4 be divided by 2.08, the cube root of 9, the quotient 1.923 will be the diameter of a 1-pound shot; which being continually multiplied by the cube root of the given weight, gives the diameter required.

Or by logarithms much shorter, thus. If the logarithm of 1.923, which is .283979, be constantly added to the third part of the logarithm of the weight, the sum will be the logarithm of the diameter. Suppose a shot to weigh 24 pounds: add the given logarithm .282979 to the third part of .460070 of the logarithm 1.3802112 of 24, the sum .7440494 will be the logarithm of the

diameter of a shot weighing 24 pounds, which is 5.5468 inches.

If the weight should be expressed by a fraction, the rule is still the same: for instance, the diameter of a  $1\frac{1}{2}$  pound ball or  $\frac{3}{2}$ , is found by adding the logarithm .2839793, found above, to .0586971 $\frac{1}{2}$  of the logarithm of  $\frac{3}{2}$ , the sum .3426764 will be the logarithm of the diameter required, i. e. 2.2013 inches.

As the diameter of the bore or the caliber of the piece, is made  $\frac{1}{8}$  part larger than that of the shot, according to the present practice, the following table is computed.

DIAMETERS of the shots and calibers of English guns.

lb.	0	1	2	3	4	5	6	7	8	9	
0	0	1.923	2.423	2.775	3.053	3.288	3.498	3.679	3.846	4.000	Diam.
	0	2.019	2.544	2.913	3.204	3.568	3.668	3.861	4.038	4.200	Calib.
1	4.143	4.277	4.403	4.522	4.635	4.743	4.846	4.945	5.040	5.131	Diam.
	4.349	4.490	4.623	4.748	4.866	4.931	5.083	5.192	5.292	5.368	Calib.
2	5.220	5.305	5.388	5.409	5.547	5.623	5.697	5.769	5.839	5.908	Diam.
	5.480	5.570	5.661	5.742	5.824	5.893	5.982	6.057	6.129	6.203	Calib.
3	5.975	6.041	6.105	6.168	6.230	6.290	6.350	6.408	6.465	6.521	Diam.
	6.273	6.343	6.410	6.475	6.541	6.604	6.666	6.707	6.788	6.846	Calib.
4	6.576	6.631	6.684	6.737	6.789	6.840	6.890	6.940	6.989	7.037	Diam.
	6.904	6.962	7.018	7.076	7.128	7.182	7.231	7.287	7.338	7.383	Calib.

#### EXPLANATION.

The numbers in the first horizontal line are units, and those in the first vertical column tens; the other numbers under the one, and opposite to the others, are the respective diameters of shot and calibers. Thus, to find the diameter of the shot, and the caliber of a 24 pound-

der, look for the number 2 on the left-hand side, and for 4 at top; then the number 5.547, under 4, and opposite 2, will be the diameter of the shot, in inches and decimals, and the number 58.21, under the 4, the caliber of a 24 pounder, &c.

DIAMETERS of leaden bullets from 1 to 29 in the Pound.

	0	1	2	3	4	5	6	7	8	9
0	0	1.671	1.326	1.158	1.05	.977	.919	.873	.835	.803
1	.713	.51	.730	.711	.693	.677	.662	.655	.637	.626
2	.615	.605	.596	.587	.579	.571	.564	.557	.550	.544
3	.533	.536	.526	.521	.517	.511	.506	.501	.497	.493

The diameter of musquet bores differs about 1-50th part from that of the bullet. The government allows 11 bullets in the pound, for the proof of muskets, and 14 in the pound, or 29 in 2 pounds, for service; 17 for the proof of carbines, and 20 for service; 28 in the pound for proof of pistols, and 31 for service.

DIAMETER of powder measures. See POWDER MEASURES.

La DIANE, *Fr.* The Reveillé.

DICATOR, a magistrate of Rome, elected in times of exigence and public distress, and invested with absolute authority.

DIFFERENCE. The sum paid by an officer in the British service, when he exchanges from half to full-pay. It likewise means the regulation price between an inferior and a superior commission. Officers who retire upon half-pay and take the difference, subject themselves to many incidental disadvantages, should they wish to return into active service.

DIFFERENCES among officers, of a town, &c. (*Differences entre les officiers d'une place*, *Fr.*) disputes, &c. Whenever any differences occur between the staff officers of a town and those of a garrison, in case they do not come under any specific military code, all such differences must be settled by the governor or commandant.

DIGÉRER un projet, *Fr.* to weigh well every thing which may conduce to the good success of an enterprize.

DIGGING. See MIXING.

DIGLADIATION, a combat with swords.

DIGUE, *Fr.* See DYKE.

DIGUON, *Fr.* a staff, at the end of which is suspended a vane or streamer. This term is properly marine.

DIKE or DYKE, a channel to receive water, also a dam or mound, to prevent inundation. *Dikes* differ from *sluices*; the former being intended only to oppose the flowing of other water into a river, or to confine the stream by means of strong walls, pieces of timber, or a double row of hurdles; the intervals of which are filled up with earth, stones, or pebbles. When it is found necessary to establish a post upon a *dyke*, it must be fortified on all sides, since it would otherwise be useless.

DILAPIDATION. *Fr.* Embezzlement, misapplication of public monies.

DIMACHIE, in ancient military affairs, were a kind of horsemen, answering to the dragoons of the moderns.

DIMICATION. See BATTLE.

To DIMINISH or *increase the front of a battalion*, is to adopt the column of march or manoeuvre according to the obstructions and difficulties which it meets in advancing. This is one of the most important movements, and a battalion, which does not perform this operation with the greatest exactness and attention, so as not to lengthen out in the smallest degree, is not fit to move in the column of a considerable corps. See Infantry Regulations, p. 112.

DIRECTEUR Général, *Fr.* A military post of nominal importance which was originally instituted by Louis XIV. This charge was entrusted to eight lieutenant generals, four to command and superintend the infantry, and four for the cavalry. They possessed, however, little or no authority over the army in general; being subordinate in some degree to the general officer whose corps they might inspect, and to whom they rendered

rendered a correct account of its interior œconomy. They were likewise assisted by Inspectors General. The four directors were afterwards replaced by the inspectors, from a principle of œconomy, The permanent ones of that appellation were: Director General of the royal artillery school: Director-General of military hospitals; Director-General of fortification; Director-General of the cavalry; Director-General of stores.

**DIRECTION**, in military mechanics, signifies the line or path of a body in motion, along which it endeavours to force its way, according to the propelling power that is given to it.

*Angle of DIRECTION*, that formed by the lines of direction of two conspiring powers.

*Quantity of DIRECTION*, a term used by military mathematicians for the product of the velocity of the common center of gravity, of a system of bodies, by the sum of their quantities of matter: this is no ways altered by any collisions among the bodies themselves.

**DIRK**, a kind of dagger used by the highlanders in Scotland, which they generally wear stuck in their belts.

**TO DISALLOW**, in a military sense, not to admit charges which may be made against the public by officers and agents.

**DISALLOWANCES**, deductions made from military estimates, when the charges against the public do not appear correct.

**TO DISARM**. To deprive a soldier of every species of offensive or defensive weapon.

**DISARMED**. Soldiers divested of their arms, either by conquest, or in consequence of some defection.

**DISBANDED**, the soldiers of any regiment, who are in a body dismissed from the conditions of their military service.

**DISBARK**. SEE **DISSEMBARK**.

**DISCHARGE**, in a military sense is, the dismissing a soldier from the troop or company he belonged to, either at his own request, or when, after long and faithful services he is discharged, and entitled to his majesty's bounty.

This term is also applied to the firing of cannon or muskets; as, a discharge of cannon or small arms.

**DISCIPLINARIAN**, an officer who

pays particular regard to the discipline of the soldiers under his command.

**DISCIPLINE**, in a military sense, signifies the instruction and government of soldiers.

*Military DISCIPLINE*, } By military  
*Military Constitution*, } constitution  
 is meant, the authoritative declared laws for the guidance of all military men, and all military matters; and by *discipline* is meant, the obedience to, and exercise of those laws. As health is to the natural body, so is a sound military constitution to the military one; and as exercise is to the first, so is discipline to the last. Bravery will perchance gain a battle; but every one knows that by discipline alone the long-disputed prize of a war can be ultimately obtained.

**DISCIPLINE** is the right arm of a general, and *money* is his *shield*; without those two ingredients, it would be better to be a drum-boy, or a lifer, than the general of an army.

The kingdom of Prussia is an example extant in favour of discipline; for since that state has raised an army, and maintained that army in strict discipline, it has held a very considerable share in the system of Europe; and should it neglect its army, it will sink from the kingdom of Prussia, into the electorate of Brandenburg.

*Marine DISCIPLINE*, is the training up soldiers for sea-service, in such exercises and various positions as the musquet and body may require; teaching them likewise every manœuvre that can be performed on board ships of war at sea, &c.

**DISCIPLINE** *militaire*, Fr. SEE **MILITARY DISCIPLINE**.

**DISCOBOLES**, Men, who by profession contended for the prize of the *discus* at the Grecian games. The range of the *discus* thrown from a vigorous arm, was considered as a measure which served to name a certain distance, the same as we say, within *musket-shot*, or *cannon shot*.

**DISCORD**, (*discorde*, Fr.) according to heathen mythology, an ill-tempered goddess whom Jupiter turned out of heaven, on account of her continually setting the gods at variance with one another. She was represented as having serpents instead of hair, holding

ing a lighted torch in one hand, and a snake and dart in the other; her complexion was olive colour, her looks wild, her mouth foaming with rage, and her hands stained with gore. Ever since she was driven from the heavens, she has resided on earth, and is chiefly visible in courts and cabinet councils. She is continually travelling from the one to the other, in order to excite all sovereigns to wage war against one another; and in the course of her excursions, she often disturbs the peace of private individuals. This description is figurative, and ought to convince young military men, that the slightest differences between the members of a corps, may become epidemical, and ruin the whole corps. Discord among troops in a garrison town, may be attended with fatal consequences; for the garrison are interested in obtaining the esteem and attachment of the inhabitants, whose assistance they may chance to be in great need of, should a long siege take place.

**DISCOVERER**, a scout, one who is set to detect the enemy.

**DISCRETION**, *Fr.* discretion. *Se rendre à discrétion*, to surrender at discretion, implies to throw one self upon the mercy of a victorious enemy. The French likewise say, *les soldats vivent à discrétion dans un pays*; which in familiar English signifies, soldiers live *scot-free* in a country.

**DISCRETION**, (*discrétion*, *Fr.*) under this term are comprehended circumspection, prudence, wisdom and activity; qualities which essentially contribute to the ultimate success of an undertaking.

**DISCUS**, a *quoit*, made of stone, lead, or some other metal, one foot long, and eighth inches wide. It was used among the Greeks and Romans at their public games and festivals. He who threw it highest, or to the greatest distance, carried the prize. *Discus* was also the name of a round shield which was consecrated to the memory of some hero, and was suspended in a temple. There was one to be seen at the *Cabinet des Antiques* in Paris, which had been found in the Rhone.

**DISEMBODIED**. See **DISBANDED**.

**To DISEMBODY**. **To disband**.

**DISEMBARK**, to land from on board any vessel or craft, used to convey troops on the sea.

**To DISEMBARK**, (*débarquer*, *Fr.*) to land troops at any given spot upon the coast, &c.

**DISEMBARKATION**, (*débarquement*, *Fr.*) the disembarking or landing troops.

**To DISENGAGE**, to clear a column or line, which may have lost its proper front by the overlapping of any particular division, company, or section when ordered to form up. To do this, ground must be taken to the right or left. It is, however, a dangerous operation when the army or battalion gets into a line of fire. In that case the files that overlap must remain in the rear, and fill up the first openings.

**To DISENGAGE**, is also to extricate yourself and the men you command from a critical situation. A battalion, for instance, which may have advanced too far during an action, and got between two fires, may, by an able manœuvre, disengage itself.

**To DISENGAGE the wings of a battalion**. This is necessary when the battalion countermarches from its center, and on its center by files. The battalion having received the word "by wings, inward face," is next ordered "by wings, three side steps to the right, march," by which the wings are disengaged from each other. In countermarching, &c. the leading files must uniformly disengage themselves.

**To DISENGAGE**, in fencing, to quit that side of your adversary's blade, on which you are opposed by his guard, in order to effect a cut or thrust where an opportunity may present.

**DISETTE**, *Fr.* scarcity. The want of some article of the first necessity; i. e. some article of life.

**DISGARNISH**, (*dégarnir*, *Fr.*) to take guns from a fortress.

**DISHONOUR**, (*dishonneur*), *Fr.* dishonour; loss of character. The surname of *sans reproche* was formerly held in high consideration by military men: many hardships had they to endure and conditions to fulfil, to deserve the appellation, and the distinctions attached to it. In the present time it is thought, and number of military men are persuaded, that the words *sans reproche*,

*proche*, only signify that a man has fought with courage and intrepidity; this may be very well altogether, but those military men are grossly mistaken. Whatever is done contrary to the laws of *honour*, though not in battle, or at a siege, must, nevertheless, be called dishonour.

**DISLODGE**, to drive an enemy from their post or station.

**DISMANTLE**, to strip a town or fortress of its outworks.

*To DISMANTLE a gun.* To render it unfit for use.

*To DISMISS*, to discard.

**DISMISSED.** An officer in the British service may be dismissed generally or specifically. When an officer is dismissed generally, it is signified to him, that his Majesty has not any further occasion for his services. When an officer is dismissed specifically, it is expressly notified, that he is rendered incapable of ever serving again. Sometimes, indeed, this species of dismissal is attended with public marks of extreme disgrace and degradation. In the Austrian service a colonel has been dismissed at the head of his regiment, and has had his sword broken before him, &c. During the late war the colonel of a militia regiment has not only been rendered incapable of ever serving again, but has been expelled the House of Commons for military misconduct. The charges against him, together with the circumstantial proofs of his guilt, and the King's approbation of the sentence were read in the circle of every regiment throughout Great Britain, in 1795, and nothing but a plea of severe indisposition saved the culprit from having the minutes publicly communicated to him at the Horse Guards.

**DISMOUNTING**, in a military sense, is the act of unhorsing. Thus, to dismount the cavalry, &c. is to make them alight.

*To Dismount cannon*, is to break their carriages, wheels, axle-trees, or any thing else, so as to render them unfit for service. It also implies dismounting by the gun, &c.

**DISOBEDIENCE of orders.** Any infraction, by neglect or wilful omission, of general or regimental orders. It is punishable by the 5th art. of the 2d Sect. of the Articles of War.

**DISPART**, in gunnery, is to set a mark on the muzzle-ring, so that it may be of an equal height with the base-ring; hence a line drawn between them, will be parallel to the axis of the concave cylinder, for the gunner to take aim by it, to hit the mark he is to fire at; for the bore and this imaginary line being parallel, the aim so taken must be true. This exactness cannot be made use of in an engagement, and but very seldom at a siege; for in those cases practice and the eye must be the only guides.

*DISPART-frontlet.* See **FRONTLET**.

**To DISPERSE.** In a military sense, may be variously understood. In an active one, *R.* signifies to disperse any body of men, armed or unarmed, who may have assembled in an illegal or hostile manner. The cavalry are generally employed on these occasions.

*To DISPERSE*, likewise means to break suddenly from any particular order, in line or column, and to repair to some rallying point. Hence to sound the disperse, is to give notice that the battalion or battalions are to retreat from their actual position, in a loose and desultory manner, and to reassemble according to the natural line of formation, taking the colours as their central points to dress by.

**DISPLACED**, officers in the British service are sometimes displaced from a particular regiment in consequence of misconduct proved upon the minutes of a general court-martial; but they are at liberty to serve in any other corps. The power of displacing an officer is vested in the King only.

*To DISPLAY*, in a military sense, is to extend the front of a column, and thereby bring it into line. See **DISPLAY**.

**DISPOSE**, to dispose cannon, is to place it in such a manner, that a discharge may do the greatest mischief. For instance, to dispose cannon along the front of the line.

**DISPOSITION**, in a general sense, is the just placing an army or body of men upon the most advantageous ground, and in the strongest situation for a vigorous attack or defence.

**DISPOSITION de guerre**, Fr. warlike arrangement, or disposition. Under this head may be considered the mode of establishing, combining, conducting and

and finally terminating a war, so as to produce success and victory.

Wisdom and discretion in council point out the form necessary for the first establishment of a warlike enterprise, or disposition, afford the means of bringing it to a conclusion, and assimilate all the various parts so as to unite the whole.

The following maxims are in the memoirs of general Montecuculi.

Deliberate leisurely, execute promptly.

Let the safety of your army be your first object.

Leave something to chance.

Take advantage of circumstances.

Use all the means in your power to secure a good reputation.

The disposition or arrangement of a warlike enterprise may be universal, or particular.

An universal disposition or arrangement of war implies every thing which relates to that system upon an extensive scale; such as the combination of many parts for the ultimate benefit of the whole, &c.

A particular disposition or arrangement of war signifies the detail of minute objects, and the appropriation of various parts, one with another, for the purpose of effecting a general combination. This disposition, (without which the other must prove abortive,) consists in an observance of the strictest discipline by every individual that belongs to a troop or company. To this end, general officers should be scrupulously exact in attending to the inspection of particular corps; specific instructions for regimental economy and discipline should be given, and the strictest regard be paid to the execution of orders.

**DISPOSITIONS**, *Fr.* the preparations which a good and intelligent general makes, to enable him to attack an enemy, or to defend himself against his attack. We make use of the same term, viz. military dispositions.

*Faire des Dispositions*, *Fr.* to make the necessary arrangements for a battle; or to adopt such measures, that every thing may be in a good state to meet the enemy.

To **DISPUTE** the ground, (*disputer le terrain*, *Fr.*) to fight foot to foot.

**DISPERSE** *une armée*, *Fr.* to attack an army in such a manner, that the several battalions are obliged to disperse, and retreat by different routes.

**DISTANCE**, in military formation, signifies the relative space which is left between men standing under arms in rank, or the intervals which appear between those ranks, &c.

**DISTANCE of files**. Every soldier when in his true position under arms, shouldered and in rank, must just feel with his elbow the touch of his neighbour with whom he dresses; nor in any situation of movement in front, must he ever relinquish such touch, which becomes in action the principal direction for the preservation of his order, and each file as connected with its two neighbouring ones, must consider itself a complete body, so arranged for the purpose of attack, or effectual defence. Close files must invariably constitute the formation of all corps that go into action. The peculiar exercise of the light infantry is the only exception. See Infantry Regulations, p. 75.

**DISTANCE of ranks**, open distances of ranks are two paces asunder; when close they are one pace; when the body is halted and to fire, they are still closer locked up. Close ranks, order or distance is the constant and habitual order at which troops are at all times formed and move; open ranks, order or distance is only an occasional exception, made in the situation of parade, or in light infantry manoeuvres.

**DISTANCE of files and ranks**, relate to the trained soldier, but in the course of his tuition he must be much exercised at open files and ranks, and acquire thereby independence and the command of his limbs and body.

**DISTANCE of the bastions**, in fortification, is the side of the exterior polygon. See FORTIFICATION.

**DISTRIBUTION**, (*distribution*, *Fr.*) in a military sense, generally applies to any division, or allotment, which is made for the purposes of warfare. Thus an army may be distributed about a country. In a more confined sense it means the minute arrangements that are made for the interior economy of corps; as distribution of pay or subsistence, distribution of allowances, &c.

**DISTRICT**, in a military sense, one of

of those parts into which a country is divided, for the conveniences of command, and to secure a ready co-operation between distant bodies of armed men. During the present war, Great Britain and Ireland have been divided into several districts; each district being under the immediate superintendence of general officers.

**DITCH.** See **FORTIFICATION**, **Moat**.

To *drain a Ditch*, is to make the water run off into lower ground, by means of small trenches cut for this purpose.

**DIVAN**, a particular private council of war among the Turks, held by the *capituly* infantry, in the palace of the *Zamiceragazy*, in order to discuss the military operations of the corps, &c. There is another *Divan* held by the supreme council of the Grand Signor, at which all the generals attend.

**DIVERSION**, in military history, is when an enemy is attacked in one place where he is weak and unprovided, in order to draw off his forces from making an irruption somewhere else; or where an enemy is strong, and by an able manœuvre he is obliged to detach part of his forces to resist any feint or menacing attempt of his opponent. To derive advantage from a diversion, taken in an extended acception of the term, it is necessary, that one state should have greater resources than another; for it would be absurd to attack the territories of another before you had secured your own.

It is likewise requisite, that the country you attack by stratagem or diversion, should be easy of access, and the invasion you make must be prompt, vigorous and unexpected, directed against a weak and vulnerable quarter. A little good fortune is however essential to render a diversion perfectly successful, as all the ways and means by which it ought to be made, cannot be reduced to rule.

The most memorable instance of a diversion well executed, which we meet with in history, was performed by Scipio in Africa, whilst Hannibal carried the war into Italy. In 1659, a diversion no less remarkable, was practised by the imperial and allied armies against the Swedes.

*Faire DIVERSION*, *Fr.* to oblige an enemy to divide his forces.

**DIVISION**, (*division*, *Fr.*) a certain proportion of an army consisting of horse and foot together, or of horse and foot separately, which is under the order of a brigadier, or other general officer.

**DIVISION**, (*division*, *Fr.*) a certain proportion of a troop or company, which is under the command of its respective officers. It also means any given number which is detached on military duty, from an established body of men: hence a division of artillery, wagon-corps, pioneers, &c.

**DIVISIONS** of a *battalion*, are the several platoons into which a regiment or battalion is divided, either in marching or firing; each of which is commanded by an officer.

**DIVISIONS** of an *army*, are the number of brigades and squadrons it contains.—The advance, the main and the rear guards are composed out of the several brigades, and march in front, in the center, and in the rear of an army. Each army has its right wing, its center and its left wing. When armies march they advance in column, that is, they are divided into several squadrons and battalions of a given depth, successively formed upon one another. If an army be drawn out or displayed in order of battle, it is usually divided into the first line, which constitutes the front, the second line, which makes the main body, and the third line, or reserve.

**DIVINE service**, in the army, is or should be performed every Sunday. All officers and soldiers, not having just impediment, shall diligently frequent divine service and sermons in the places appointed for the assembling of the regiment, troop, or company, to which they belong: such as wilfully absent themselves, or, being present, behave indecently or irreverently, shall, if commissioned officers, be brought before a court-martial, there to be publicly and severely reprimanded by the president: of non-commissioned officers or soldiers, every person so offending, shall, for his first offence, forfeit 12d. to be deducted out of his next pay; for the second offence, he shall not only forfeit 12d. but be laid in irons for 12 hours, &c. *Art. of War.*

**DODECAGON**, in geometry, is a regular polygon, consisting of 12 equal sides and angles, capable of being regularly fortified with the same number of bastions.

**DODECAHEDRON**, is one of the platonic bodies, or five regular solids, and is contained under 12 equal and regular pentagons.

The solidity of a *dodecahedron* is found by multiplying the area of one of the pentagonal faces of it by 12; and this latter product by 1-3d of the distance of the face from the center of the *dodecahedron*, which is the same as the centre of the circumscribing sphere.

The side of a *dodecahedron* inscribed in a sphere, is the greater part of the side of a cube inscribed in that sphere, cut into extreme and mean proportion.

If the diameter of the sphere be 1.0000, the side of a *dodecahedron*, inscribed in it will be .35682 nearly.

All *dodecahedrons* are similar, and are to one another as the cubes of the sides; and their surfaces are also similar, and therefore they are as the squares of their sides; whence as .509232 is to 10.51162, so is the square of the side of any *dodecahedron* to the superficies thereof; and as .3637 is to 2.78516, so is the cube of the side of any *dodecahedron* to the solidity of it.

**DOG-nails.** See **NAILS**.

**DOLMAN**, a robe of Thessonica cloth, which the grand signor makes a present of to the janizaries on the first day of their *ramazan*, or lent.

**DOLON**, a long hollow stick, containing a pointed iron, which is thrown at discretion.

**DOLPHINS.** See **CANNON**.

**DOMMAGE**, *Fr.* in a general acceptance of the term signified in the old French service, the compensation which every captain of a troop or company was obliged to make in consequence of any damage that their men might have done in a town, or on a march. If any disagreement occurred between the officers and inhabitants, with respect to the indemnification, a statement of losses sustained was sworn to by the latter, before the mayor or magistrates of the place, who determined the same. But if the officers should refuse to abide by their deci-

sion, a remonstrance was drawn up and transmitted to the secretary at war, with a copy of the same to the intendant of the province. Officers have frequently been displaced or degraded on this account. Hence the term *dommage* is supposed to have been derived from the latin words *damnum*, *jactura*, and signifies the loss or privation of a step.

**DONDAINE**, *Fr.* a machine which was used by the ancients to cast round stones and pebbles on their enemies.

**DONJON**, *Fr.* a turret; a dungeon.

**DONNER**, *Fr.* to charge an enemy, to fire upon him.

**DONNER**, *Fr.* is to charge the enemy as soon as the signal for battle is given. Thus it is said, *les troupes donnèrent tête baissée*: the troops rushed headlong, and broke the enemy's line.

**DONNER de l'inquiétude à l'ennemi**, *Fr.* to march in various directions, and by other manœuvres to disconcert an enemy.

**DONS militaires**, *Fr.* military rewards.

**DORYPHORI**, the body guards of the Roman emperors; they were armed with a pike, and were forced to take a particular oath; they were held in high consideration, and were promoted to the first military ranks.

**DOSER**, in military matters, is a sort of basket carried on the shoulders of men, used in carrying the earth from one part of a fortification to another, where it is wanted.

**DOUBLEMENT**, *Fr.* the augmentation of the rank and file of a battalion.

**DOUBLER un battalion**, *Fr.* to extend the front of a battalion, so that it covers twice the ground it did in front; or to reduce it in such a manner that it does the same in depth.

**DOUBLING**, in the military art, is the placing two or more ranks or files into one.

**DOUBLE your ranks**, is for the 2d, 4th and 6th ranks (when so drawn up) to march into the 1st, 3d, and 5th; so that of 6 ranks they are made but 3; which is not so when they double by half-files, because then 3 ranks stand together, and the 3 other come up to double them; that is the 1st, 2d, and 3d, are doubled by the 4th, 5th and 6th, or the contrary.

**DOUBLE your files**, is for every other file

file to march into that which is next to it, on the right or left, as the word of command directs; and then the 6 ranks are doubled into 12, the men standing 12 deep; and the distance between the files is double what it was before. By this method, 3 files may be doubled into 6, &c.

To **DOUBLE round**, in military movements, is to march by an inversion of a second line, on the extremity of a first line, thereby to outflank an enemy.

**DOUBLE tenaille.** See **TENAILLE**.

**DOUILLE, Fr.** a small iron socket which is at the heel of the bayonet, and receives the extreme end of the musquet, so as to be firmly united together.

**DOUILLE** likewise signifies the cavity which belongs to the round piece of iron that is fixed to the end of the ramrod, by means of two nails through two small holes, called *yeux* or eyes, and to which the worm is attached.

**DRABANTS**, a company of two hundred select men, of which Charles IX, of Sweden, was captain. They were a fine body of men, and of tried courage. Charles XII. with one hundred and fifty *Drabants*, has been known to vanquish one thousand Russians.

**DRAGON** et **DRAGON VOLANT**, *Fr.* some old pieces of artillery were anciently so called. The *Dragon* was a 40-pounder; the *Dragon Volant* a 32. But neither the name nor the size of the caliber of either piece is now in use.

**DRAGONNADE, Fr.** a term given by the Calvinists to the barbarous usage which was exercised against them in France in 1681.

**DRAGONNE, Fr.** a sword-knot, at the extremity of which hangs a tassel. The sword-knot was originally worn by the Germans, and is (with them) the distinction of an officer when in plain clothes; no other person being permitted to wear a gold or silver one. In Austria the swordknot is gold lace, edged with a black stripe, in commemoration of the loss of Jerusalem; the British sword knot is made of crimson and gold.

**DRAGONNER, Fr.** According to the French acceptation of the term, is to attack any person in a rude and violent manner; to take any thing by force; to adopt prompt and vigorous measures; and to bring those people to reason by

hard blows, who could not be persuaded by fair words.

**DRAGOONS**, in military affairs, are a kind of horsemen, or cavalry, who serve both on horseback and foot; being always ready on every emergency, as being able to keep pace with the horse, and to do infantry duty. In battle, or on attacks, they generally fight sword in hand after the first fire. In the field they encamp on the right and left of the lines. They are divided into brigades, regiments, and squadrons. Their martial music consists of drums and trumpets. The first regiment of dragoons in England was raised in 1681, and called the royal regiment of dragoons of North Britain. This name is derived from the Latin word *Draconarii*, used among the Romans.

To **DRAGOON**, is to persecute by abandoning a place to the rage of the soldiery.

**DRAG-ropes.** See **ROPES**.

**DRAIN**, in the military art, is a trench made to draw water out of a ditch, which is afterwards filled with hurdles and earth, or with fascines, or bundles of rushes and planks, to facilitate the passage over the mud. See **TRINCH**.

**DRAKE**, a small piece of artillery.

**DRAPEAU, Fr.** regimental colours.

*Battre les DRAPEAUX, Fr.* See **BATTRE**.

**DRAUGHT**, a plan or delineation of any place, a body of troops selected from others.

To **DRAUGHT**, to draw forces from one brigade, &c. to complete another; to select a proportion from brigades, regiments, or companies for any particular service.

**DRAUGHT-hooks**, in a gun-carriage, are fixed to the trunion-bolts on the cheeks of artillery carriages, near the trunion holes and trails: they are used to draw the guns backwards and forwards by men with drag-ropes fixed to those hooks.

**DRAUGHTED**, the soldiers of any regiment being allotted to complete other regiments are said to be draughted.

**DRAUGHTSMEN**, a body of men educated at the tower, to assist the engineers in drawing plans, fortifications, and surveying.

To **DRAW**, to delineate or make a sketch.

**DRAW**

**DRAW RAMROD**, a word of command used in the drill exercise, on which the soldier draws his ramrod half from the pipes, and seizing it back-handed by the middle, waits for the signal for the next motion, when he turns it round, and with an extended arm, places the butt of the rod about one inch in the muzzle of the firelock; in which position he waits for the command *ram down cartridge*.

**DRAW-SWORD**, a word of command in the sword exercise of the cavalry.

The drawing of swords is performed in 3 motions. 1st. Bring the right hand smartly across the body to the sword knot, which being placed on the wrist, and secured by giving the hand a couple of turns inwards, seize the hilt of the sword. 2d. Draw the sword with an extended arm; sink the hand till the hilt of the sword is immediately under the chin, the blade of the sword perpendicular, and the back of the hand outwards. 3d. Bring down the hilt till in a line with the bridle hand, the blade perpendicular, the edge turned towards the horse's left ear.

Officers of infantry, when the men are under arms, draw their swords without waiting for any word of command.

*To DRAW off*, to retire; also to abstract or take away; as to draw off your forces.

*To DRAW on*, to advance; also to incite: as to draw an enemy's fire.

*To DRAW over*, to persuade to revolt; to entice from a party.

*To DRAW out*, to call the soldiers forth in array for action.

*To DRAW up*, to form in battle array.

**DRAW-bridge**. See **BRIDGE**.

**DRAWING**, in a military sense, is the art of representing the appearances of all kinds of military objects by imitation, or copying, both with and without the assistance of mathematical rules.

**DRESS-military**. The clothing of the army is generally called regimentals, every part of which should facilitate, and not hinder, the various motions of the manual exercise. A soldier, without regard to fashion or taste (to use the words of a modern author) should be dressed in the most comfortable and least embarrassing manner possible; and the keeping him warm, and leaving him the entire use of his limbs, are objects always to be had in view.

*To DRESS*, in a military sense, is to keep the body in such a relative position, as to contribute towards, and make a part of, an exact continuity of line, upon whatever front, or in whatever shape, the battalion may be formed. Soldiers dress by one another in ranks, and the body collectively dresses by some given object.

**DRESSING of a battalion after the halt**, is to bring all its relative parts in a line with the point, or object, towards which it was directed to move. Whatever correction is necessary, must be made by advancing or retiring the flanks, and not by moving the center; which, having been the guide in the march, has properly stopped at the point where it has arrived.

**DRESSING of a battalion when it is to retire**, is to have some intelligent officer placed thirty paces in the rear, so as to stand perpendicular to the front directing sergeant, by whom the direction of the march is to be ascertained, as the officer will, of course, be in the line, or nearly so, of the directing sergeants. See *Infantry Instructions*, p. 229.

**DRESSERS**, in military dispositions, are those men, who take up direct, or relative, points, by which a corps is enabled to preserve a regular continuity of front, and to exhibit a straight alignment. In every operation of this sort the dressers must be particularly alert, especially when a general line is to be formed to give battle to the enemy. Under this circumstance every thing will depend upon the activity, skill and aptitude of eye in the two center dressers of each battalion. No line, indeed, can be said to be in a proper situation to meet, or march up to the enemy, whilst there is the least interval from center to flanks. Solid, compact, and straight lines in forward movements are the nerves and sinews of immediate conflict; whereas unconnected movements produce confusion, are naturally weak, and always tend to give a superiority to the enemy.

**DRESSER, Fr.** See *to Dress*.

**DRESSER une batterie, Fr.** to dispose pieces of artillery in a battery for the purpose of acting against an enemy.

**DRINKING to excess in the army** is at all times highly criminal, but upon service

## DRU

service it ought never to be overlooked; and the consequence will be a trial by a court-martial. It has been productive of almost innumerable mischiefs, and is a most detestable and horrid practice. See DRUNKENNESS.

*To DRILL*, to teach young recruits the first principles of military movements and positions, &c.

*To be sent to DRILL*, to be placed under the command of the drill officer, or non-commissioned officer, and made to join the recruits in performing the manual and platoon exercise, &c. This is sometimes ordered as a punishment to those who are perfect in their exercise, when a battalion, company, or individual has done something to merit exposure.

*DRILL*, *Fr.* signified formerly a soldier; from thence it is that an old soldier who knows his duty is called a *bon-drille*.

*DRIVERS*, pieces of bone or wood made in the shape of a musquet-flint are so called.

*DRIVERS of baggage or artillery*, men who drive the baggage, artillery, and stores, having no other duty in the army.

*DROITE*, *Fr.* the right.

*DROITE d'une riviere*, *Fr.* that side of a river which lies upon your right when you take a front view of its source.

*DRUM*, is a martial musical instrument in the form of a cylinder, hollow within, and covered at the two ends with vellum, which is stretched or slackened at pleasure, by means of small cords and sliding leathers. This instrument is used both by foot and dragoons: which is done in several manners, either to give notice to the troops of what they are to do, or to demand liberty to make some proposal to an enemy. Every troop of dragoons, and every company of foot or artillery, has two or more drums, according to the effective strength of the party. The drum was first invented by Bacchus, who, as Polyænus reports, fighting against the Indians, gave the signal of battle with cymbals and drums; and the Saracens, who invaded Christendom, introduced the drum into the European armies. The various beats are, as follow, viz.

## DRU

*The general*, is to give notice to the troops that they are to march.

*The assembly*, } to order the troops to  
*The troop*, } repair to the place of  
rendezvous, or to their colours.

*The march*, to command them to move, always with the left foot first.

*Tat-too*, or *tap-too*, to order all to retire to their quarters.

*The reveille*, always beats at break of day, and is to warn the soldiers to rise, and the sentinels to forbear challenging, and to give leave to come out of quarters.

*To arms*, for soldiers who are dispersed, to repair to them.

*The retreat*, a signal to draw off from the enemy. It likewise means a beat in both camp and garrison a little before sun-set, at which time the gates are shut, and the soldiers repair to their barracks.

*The alarm*, is to give notice of sudden danger, that all may be in readiness for immediate duty.

*The parley*, } is a signal to demand  
*The chemade*, } some conference with  
the enemy.

*DRUM*, or *DRUMMER*, the person who beats the drum.

*Kettle-DRUMS* are two sorts of large basins of copper or brass, rounded at the bottom, and covered with vellum or goat-skin, which is kept fast by a circle of iron, and several holes, fastened to the body of the drum, and a like number of screws to stretch it at pleasure. They are used among the horse. The *kettle-drum* belonging to the royal regiment of artillery, is mounted on a most superb and pompous wagon, richly gilt and ornamented, and drawn by white horses elegantly caparisoned, with a seat for the drum-major-general.

*DRUM-major*, is always that person in the regiment, who beats the best drum, has the command over the other drums, and teaches them their duty. Every regiment has a drum-major.

*DRUM-STICKS*, the sticks with which the drummer beats his drum.

*DRUNGARIUS*. A Roman captain who had the command of one thousand men.

*DRUNGE*, a body of Roman troops composed of from 1000 to 4000 men.

*DRUNGUS*,

**DRUNGUS**, a flying Roman camp, which was composed of a particular body of men that kept very close to one another when in battle.

**DRUNKENNESS**. According to Dr. Johnson, intoxication with strong liquor.

The articles of war say respecting this vice. Whatsoever commissioned officer shall be found drunk on his guard, party, or other duty, under arms, shall be cashiered for it; any non-commissioned officer or soldier so offending, shall suffer such corporal punishment as shall be inflicted by the sentence of a court-martial. Sect. xiv. Art. v.

**DUAL**, a weapon used by the inhabitants of New Holland.—See GRAY'S Voyage of discovery.

**DUC de la Nation**, Fr. Under the second race of the French kings, the armies were headed by a duke, who was called *Duc de la Nation*, as long as he retained the command. Thus it happened that *Robert le Fort* became Duke of the French.

**DUCHUS-BASCY**. The captain of the Turkish founders, who is to provide all necessary materials.

**DUEL**, is a single combat, at a time and place appointed, in consequence of a cartel or challenge. Duelling was anciently authorised; but the motive of the duellists was the good of their country, when one, or a small number of combatants was chosen to save the blood of a whole army, and decide, by victory or death, the quarrels of kings or nations. Thus it was with Goliath and David, the Horatii and Curatii, and several others.

**DUELING** was so general a method of determining differences among the nobles, that even ecclesiastics were not excused; only, to prevent their being stained with blood, they procured champions to fight for them. None were excepted from combat, but sick people, cripples, and such as were under twenty-one years of age, or above sixty. Jests and tournaments, doubtless, rendered duels more frequent.

In the seventeenth century duelling was much discountenanced, as will appear by the following extract from the History of Gustavus Adolphus, King of Sweden, surnamed the Great,

“Duels were not extremely fashionable in those days; we hardly find half a dozen in the space of thirty years continued war; every hour affording better proofs for valour, than such irrational appeals to public opinion. Nor were superior commanders ill thought of by their adherents and followers, in case they refused to refer themselves to such sort of decisions. Cratz, in the transports of resentment, challenged Walstein when he was generalissimo and absolute; yet nothing resulted from the provocation; it was passed by with neglect. John de Wert killed Merodé, but the affair was purely a rencounter. Young Pappenheim, it is true, lost his life in a real duel, but that happened merely because he had eluded the vigilance of his general, who had locked the city-gates and planted spies to watch the combatants. Aldinger never forgave Sirot for drawing his sword in his presence, though he himself set the example, and insisted upon making his life the forfeiture for the offence. Greater cautions were still taken in the Swedish service: Count de Sonches challenged General Stalhaus, but first resigned his commission. Duels before this time had been severely prohibited in France, and the French King declared, with an oath, that he would reward such military persons as had spirit enough to refuse a challenge. By Gustavus's laws all private quarrels were decided by the officers of the regiment, and all challenges referred to a court-martial: and if an inferior officer allowed the common soldiers to engage hand to hand, he was to be cashiered *ipso facto*, and serve as a private man, being answerable also for the mischiefs that should be committed in such engagements. The best and most remarkable swordsman in the course of these wars was the Count de Forgatz, yet we find nothing concerning him in the public field of action. As to the custom of seconds, I think it appeared as early as the year 1570.”—See *Hart's History of Gustavus Adolphus*, page 45, in the *Essay on the Military State*, &c. &c.

No officer or soldier shall pretend to send a challenge to any other officer or soldier, to fight a duel, if a commissioned officer, on pain of being cashiered; if a non-commissioned officer

or soldier, of suffering corporal punishment, at the discretion of a court-martial. *Art. of war.*

For a very singular deviation from this article, as far as relates to officers, see the first volume of the *Regimental Companion*, 5th edition.

DUELLING was authorised before the Normans came into England, but the practice was not so frequent as after the conquest.

DUELLIST, (*duelliste*, Fr.) a man who makes it his profession to fight and sometimes to insult other persons. Duelling is not the true test of valour; for it will happen, that a man may individually fight well, although he be a cheat at play, and an arrant-coward in the hour of battle.

DUKIGJ-BACHI, the second officer of the Turkish artillery.

DULEDGE, a peg of wood which joins the ends of the felloes, forming the circle of the wheel to a gun carriage; and the joint is strengthened on the outside of the wheel by a strong plate of iron, called the *duledge plate*.

DUMB-BELLS, weights which are used in drilling the soldier, who holds one in each hand, which he swings backwards and forwards, to open his chest, increase muscular strength, throw back his shoulders, and accustom him to that freedom of action in the arms, and to that erect position of body which are so essentially necessary to a soldier.

The following method of exercising recruits with the dumb-bells, is extracted from a work entitled *Military Instruction*.

The dumb-bells being placed one on each side of the recruit, and himself in an erect, steady posture—on the word,

*Raise bells*—he will take one in each hand, and by a gentle motion, raise them as high as his arm will suffer him above his head; then gradually sinking them with stretched arm, as much behind him as possible, he will form a circle with them, making the circle complete, by causing the backs of his hands to meet behind his body; this will be repeated according to his strength, 5 or 6 times.

*Extend bells*.—The bells being raised to the shoulder, they will be forced forwards, keeping the same height, then brought back in the same manner; this

will throw the chest forward, and force back the neck and shoulders, this must be frequently repeated.

*Swing bells*.—The top part of the bells to be made meet together in front, the height of the breast; then forced backwards with an extended arm, and be made to touch behind; in doing this, the palm of the hands must be uppermost, and the elbows well down: this circle must be repeated 11 or 15 times: Time, the circle performed in 2 seconds.

*Ground bells*.—The recruit will let fall the bells by his sides, and remain steady and firm.

DÜNES, Fr. sand hills, commonly called downs. *As les dunes sur la côte de Flandres*: the downs, or sand-hills along the coast of Flanders.

DUNGEON, } in fortification, is  
DONJON, } commonly a large tower or redoubt of a fortress, whither the garrison may retreat, in case of necessity, and capitulate with greater advantage. Also a place in which prisoners were kept.

DUTY, in a military sense, is the exercise of those functions that belong to a soldier: yet with this nice distinction, that duty is counted the mounting guard, &c. where no enemy is directly to be engaged; for when any body of men marches to meet the enemy, this is strictly called *going upon service*.

On all duties, whether with or without arms, piquets, or courts-martial, the tour of duty begins with the eldest downwards. An officer who is upon duty cannot be ordered for any other before that duty is finished, except he be on the inlying piquet, as then he shall be relieved, and go on the duty ordered.

*Military Duties* may be divided into two general classes, under the heads of *Brigade and Regimental duties*.

*Brigade duties*, are those which one regiment does in common with another, collectively or by detachments; and of which the brigade-major keeps a regular roster.

*Regimental duties*, are those which the several companies of a regiment perform among themselves, and of which the adjutant keeps a regular roster.

*Duties of Honor* are, 1. the king's guard; 2. those of the royal family; 3. the

3. the captain-general's, or field-marshal's, commanding the army; 4. detachments of the army, or out-posts; 5. general officers' guards; 6. the ordinary guards in camp or garrison; 7. the pickets; 8. general courts-martial, and duties without arms or fatigue.

The following *general regulations* are to be observed, respecting duties in general.

When field or other commissioned officers, are given out at head-quarters, for one *duty*, they cannot be taken off to be put on any other *duty*.

No officer is allowed to exchange his *duty* with another, after he has been put in orders for it, without leave of the commanding officer of his regiment.

Guards, or detachments, which have not marched off from the parade, are not to be reckoned as for a *duty* done; but, if they should have marched from the parade, it stands for a *duty* done, though they should be dismissed immediately.

If any officer's tour of *duty* for the picket, general court-martial, or *duty* of fatigue, happen when he is on *duty*, he shall not make good such *duty* when he comes off.

No regiment can demand a tour of *duty*, unless it has marched off the place of parade, and beyond the main guard.

General courts-martial that have assembled, and the members sworn in shall be reckoned for a *duty*, though they should be dismissed without trying any person.

Whenever the pickets are ordered to march to any parade, it is not to be accounted a *duty*, unless they march off that parade.

All commands in the regular forces, fall to the eldest officers in the same circumstances, whether of cavalry or infantry, entire, or in parties. In case two commissions, of the same date, interfere, a retrospect is to be had to former commissions.

Officers, on all duties under arms, are to have their swords drawn, without waiting for any word of command for that purpose.

DYKE. See DIKE.

DYNASTY, (*Dynastie*, Fr.) This word is frequently found in the History of the Monarchies and Empires of the East; it signifies a series of princes who have reigned successively. When a new family succeeds to the throne, it is a new dynasty that begins. The house of Nassau Orange began a new dynasty of the Kings of England in 1688; and Napoleon Bonaparte bids fair to lay the foundation of a new dynasty in France.

## E

**EAGLE.** *Black-Eagle*, an order of military knighthood in Prussia, instituted by the elector of Brandenburg, in 1701, on his being crowned king of Prussia. The knights of this order wear an orange-coloured ribbon, from which is suspended a black eagle.

*White-EAGLE*, is a like order in Poland, instituted in 1325, by Uladislaus V. on occasion of the marriage of his son Casimir to the daughter of the great duke of Lithuania. The knights of this order wear a chain of gold, to which a silver eagle, crowned, is suspended.

**EAGLE.** The standard of the ancient Romans. In a general sense, it formerly meant the standard of the Roman ar-

mies; in a more limited acceptation the sign or flag of the several legions.

At present it is the standard of the German empire.

The difference between the Roman and the Imperial eagle consists in this, that the first were eagles of gold or silver, fixed at the end of a pike, having their wings extended, and holding the lightning in their claws; the second are eagles painted upon the colours and standards of the emperors. The eagle likewise signifies, in a figurative sense, the German empire.

**EARL-MARSHAL.** An officer who has the care and direction of military solemnities. The dukes of Norfolk are  
by

by hereditary right, earl-marshal of England.

**EARTH-BAGS.** See BAGS.

**EASE**, in a military sense, signifies a prescribed relaxation of the frame, from the erect and firm position which every well-dressed soldier should observe. He is, on no account to lounge, or in his common gait so far to give way to an idle fluctuation of his limbs, as to feel himself constrained when he returns to duty. A habit of this sort will gradually gain upon recruits, if they are not corrected during the intervals of the drill.

**To stand at Ease**, in a technical acceptance of the term, is to draw the right foot back about six inches, and to bring the greatest part of the weight of the body upon it. The left knee must be a little bent, and the hands brought together before the body, the right hand in front. But the shoulders must invariably be kept back and square, the head to the front, and the whole carriage of the person be unconstrained.

In cold weather, when standing at ease, the men are permitted by command, to move their limbs without quitting their ground.

**Stand at Ease**, (from the support) on this command the soldier retires his right foot six inches, bends his left knee, and carrying the right hand smartly across the body, seizes the buckle by the small of the butt, and raises it sufficiently to slope it over his left shoulder, and relieve the left arm from the pressure of the cock. In some regiments, instead of seizing the small of the butt with the right hand, they only place the hollow of the hand below the left elbow.

**EASE ARMS**, a word of command, given immediately after the order, to *handle arms*, by which the soldier is directed to drop his right hand to the full extent of the arm, from the top of the ramrod on the front of the sling, with his fingers spread along it.

**EAU**, *Fr.* water, is a principal object to be considered, when ever an army advances, retreats, or encamps. It is the quarter-master-general's business, through his subordinate deputies, to secure this indispensable necessary of life. Small running rivulets are preferable to large rivers, because the latter cannot

be so easily turned for the convenience of the army; whereas the former may be always stopped, or diverted from their natural course.

Wells are never resorted to, but in cases of absolute necessity. Stagnant or pond water is in general unwholesome, and never limpid or clear.

**Haute Eau**, *Fr.* high-water.

**Basse Eau**, *Fr.* low-water.

**Eaux Mères ou Amères**, *Fr.* The water which remains after the first boiling of saltpetre. It has a bitter salt taste, and is used to fill the tubs a second time.

**Petites Eaux**, *Fr.* the water which remains after the saltpetre has been boiled to a certain degree. See SALTPETRE.

**ÉBAUCHE**, *Fr.* the first sketch or first outline of a plan.

**ÉPOULEMENT**, *Fr.* the crumbling of a wall or rampart, which is occasioned either by violence, or by waste of time. It also signifies the rubbish, &c. that is caused by the explosion of a mine.

**ÉBRANLER**, *Fr.* To shake.

*Ébranler une troupe ennemie*, *Fr.* to cause a hostile body of men to give way, or become unsteady, by the frequent and well directed discharge of cannon or musquetry.

**SEBASTIER**, *Fr.* to make a first movement towards an enemy, for the purpose of bringing him to battle; to prepare to mount an assault. It also signifies to retire in order to avoid the enemy.

**ÉCARTER l'ennemi**, *Fr.* to oblige an enemy to abandon his position and to give up some premeditated plan. This is done by intercepting his convoys, by harassing engagements, and by keeping him in continual alarm.

**ÉCHANTILLON**, *Fr.* means literally a pattern or model. In a military sense, it signifies a plank, which is covered on one side with iron, and serves to finish the mouldings, &c. of a piece of ordnance.

**ÉCHARPÉ**, *Fr.* a person that has been severely wounded with a sabre or cutlass. It is said of a regiment that it has been *écharpé*, by which is meant that it has lost nearly all its men, or been cut to pieces.

**En ÉCHARPÉ**, in the military art. To

To batter *en echarpe*, is to fire obliquely, or sideways. See BATTERY.

ÉCHARPER, *Fr.* to cut across with a sabre.

ÉCHAUFFOURIE, *Fr.* This word is become obsolete. It meant formerly the unexpected meeting of two bodies of troops that engaged immediately.

ÉCHAUGETTE, in military history, signifies a watch-tower, or kind of sentry-box.

ÉCHEC, *Fr.* a check; a repulse; such as is experienced by an army, or body of armed men, who are either driven back when they advance, or are prevented from so doing by a superior force, or by military skill.

ÉCHELLE, *Fr.* scale. In a mathematic sense, is a straight line drawn double, which is divided into a certain number of parts, each part containing as many toises or yards, &c. as the size of the sheet or paper will admit, which are again reduced into feet.

ÉCHELIER, *Fr.* ladder, in civil and military architecture, means a machine, which is made of two side pieces or arms, that receive a certain number of small steps, or equal distances from one another. These *échelles* or ladders, are of two kinds: large and small. The small ladders are used to ascend into the ditches of fortified places, and the large ones for scaling the walls, &c. See SCALING LADDERS.

ÉCHELLES, *Fr.* President Fauchet in his *Book II. de la milice et des armées*, tells us, that by this word were meant several troops of horse; so that *échelles* in ancient times signified what is now called a *troup*. They were however accompanied by *gross carlits* and *sergents*, *archers*, *roudeillers*, *piquiers*, *arbalétriers*, who all served on foot: each *échelle* had a particular standard with the *motto* and armorials of its captain.

ÉCHELON, *Fr.* from *échelon* the step of a ladder. A position in military tactics, where each division follows the preceding one, like the steps of a ladder; and is convenient in removing from a direct to an oblique, or diagonal line. When troops advance in *echelon*, they almost invariably adopt the ordinary time. Hence to march in *echelon*, may not improperly be said to approach towards any given object by a gradual movement.

ÉCHELON *movements and positions*, are not only necessary and applicable to the immediate attacks and retreats of great bodies, but also to the previous oblique or direct changes of situation, which a battalion, or a more considerable corps already formed in line, may be obliged to make to the front or rear, or on a particular fixed division of the line.

The oblique changes are produced by the wheel less than the quarter circle of divisions from line which places them in the echelon situation. The direct changes are produced by the perpendicular and successive march of divisions from line to front, or rear. See *Infantry Regulations*, p. 105.

ÉCHOUEUR, *Fr.* to fail in an undertaking or enterprise.

ÉCLAIRER, *Fr.* to thin. Hence to thin the ranks by cannon shot or musketry.

ÉCLAIRER, *Fr.* according to the translator of the French military tactics, signifies to keep an eye on, to catch, to observe. It literally means to enlighten.

ÉCLAIRER *une Marche*, *Fr.* to detach, in front of an army, small or large detachments of troops, who are preceded by sharpshooters or light infantry, for the purpose of ascertaining the position of the enemy, &c.

ÉCLAIRER *ce que font des assiégés*, *Fr.* to throw inflammable balls or pots filled with combustibles into the works of a fortified place, for the purpose of knowing the strength of a garri-son, &c.

ÉCLAIRIR *une tranchée*, *Fr.* to throw balls of fire, &c. towards the trenches of an enemy, in order to discover what the operations of the besiegers are during the night.

ÉCLAIREUR, *Fr.* according to the same writer, a *trapper*, a *flanker*.

ÉCLAIREURS, *Fr.* a corps of grenadiers lately raised by Buonaparté, the chief consul of France, for the immediate protection of Paris, and the security of its constitution.

ÉCLOPES, a French military term, to express those soldiers who, though invalid, are yet well enough to follow the army. Among these may be classed dragoons or horsemen, whose horses get suddenly lame, and cannot keep up with

with the troop or squadron. They always march in the rear of a column.

**ÉCLUSES**, *Fr.* See **SILICIS**.

**ÉCOLES d'artillerie**, *Fr.* *military schools* where the pupils are taught every thing that relates to the profession of arms: whether they be officers, cadets or private soldiers.

**ÉCOLES de génie**, *Fr.* *military schools* for the education of engineers. Before an officer can be admitted he must have attended the several lectures, and have undergone a general examination upon mathematics, the art of drawing, tracing plans of military architecture, of defence, attack, &c. &c. See **SCHOOL**.

**ECONOMY**, in a military sense, implies the minutiae, or interfor regulations of a regiment, troop, or company. Hence regimental economy.

**ÉCORF**, *Fr.* steep shore. *Côte en corse* signifies a very steep descent.

**ÉCOUPE**, *Fr.* an instrument used by the pioneers. See **OSILES**.

**ÉCOUTES**, *Fr.* small galleries made at equal distances in front of the glacis, of the fortifications of a place, the whole of which correspond with a gallery parallel to the covert-way: they serve to annoy the enemy's miners and to interrupt them in their work.

**ÉCOUVILION**, *Fr.* a maulkin or drag. The sponge made use of to clean and to cool the inside of a cannon, when it has been discharged.

**ÉCOUVILLONER**, *Fr.* To clean a piece of ordnance before it has been fired, or to cool it after.

**ÉCRETER**, *Fr.* To batter or fire at the top of a wall, redoubt, epaulement, &c. so as to dislodge or drive away the men that may be stationed behind it, in order to render the approach more easy. *Ecrire les pointes des palissades*, is to blunt the sharp ends of the palisades. This ought always to be done before you attack the covert way, which is generally fenced by them.

**ÉCRIRE en chiffres**, *Fr.* a particular method of writing in certain figures, marks, &c. upon interesting matters which must be kept secret. The present telegraph is a kind of *writing in figures*, and was much in use amongst the Persians, the Greeks, the Egyptians, the Tyrians, and the Romans.

**ÉCROUÉ soldat**, *Fr.* a soldier that is confined and reported as such during the French Monarchy. When this hap-

pened by the command of his officer he could not be removed to another place of confinement in consequence of any sentence of a civil court. *Écroûé* comes from *Écrone* a gaoler's book. With us all military regulations are subordinate to civil law.

**ÉCROULEMENT**, *Fr.* the decay or fall of the earth or mason-work belonging to a rampart, which is occasioned by the waste of time, or by the force of ordnance.

**ÉCU**, *Fr.* a large shield which was used by the ancients, and carried on their left arms, to ward off the blows of a sword or sabre. This instrument of defence was originally invented by the Sannites. The Moors had *écus* or shields, sufficiently large to cover the whole of their bodies. The chiefs of the Romans, only differed from the *ecu* in shape; the former being entirely round, and the latter oval.

**Écu de campagne**, *Fr.* a certain sum of money which is given to the cavalry during one hundred and fifty days that the troops are in winter quarters.

**EDGE**, the thin or cutting part of a sword or sabre.

**EDICT**. See **PROCLAMATION**.

**EDUCATION**, in a military sense, implies the training up of youth to the art of war. The first object to be considered is, whether nature has given the young man the talents necessary for the profession or not; for here sense, parts, courage, and judgment, are required in a very eminent degree. The natural qualities of an officer are, a robust constitution, a noble open countenance, a martial genius, fire to produce activity, phlegm to moderate his transports, and patience to support the toils and fatigues of war, almost without seeming to feel them. Acquired qualities of an officer consist in moral virtues and sciences: by the first is meant, a regular good conduct, economy, prudence, and a serious application to what regards the service. Military sciences indispensably demand the reading of ancient and modern historians; a good knowledge of military mathematics, and the study of the chief languages of Europe.

It is in ancient authors we find all that is excellent, either in politics or war: the make and form of arms are changed

changed since the invention of gunpowder; but the science of war is always the same. On one side, history instructs us by examples, and furnishes us with proofs, of the beautiful maxims of virtue and wisdom, which morality has taught us: it gives us a kind of experience, before-hand, of what we are to do in the world; it teaches us to regulate our life, and to conduct ourselves with wisdom; to distrust mankind; ever to conduct ourselves with integrity and probity, never to do a mean action; and to measure grandeur with the level of reason, that we may despise it, when it becomes dangerous or ridiculous.

On the other hand, history serves to give us a knowledge of the universe, and the different nations which inhabit it; their religions, their governments, their interests, their commerce, their politics, and the law of nations. It shews us the origin of the illustrious houses who have reigned in the world, and given birth to those who still subsist.

The knowledge of military mathematics, regards the operations of war in general; every thing there consists in proportion, measure, and motion: it treats of marches, encampments, battles, artillery, fortification, lines, sieges, mines, ammunition, provisions, fleets, and every thing which relates to war; but no just notion can be acquired without geometry, natural philosophy, mechanics, military architecture, and the art of drawing.

The study of languages is most useful to an officer, and he feels the necessity of it, in proportion as he rises to higher employments. Thus the Latin, German, and French languages, are very necessary for an English officer; as are the English, French, and Italian, for a German.

**EFFECTIVE** (*effectif*, Fr.) fit for service; as an army of 30,000 effective (fighting) men.

**EFFEMINATE**, (*effeminé*, Fr.) addicted to excessive pleasure, sloth and luxury, all of which are detrimental to military courage. Such were the real causes of the decay and fall of the Romans: the relaxation was universal among the civil, the military and the body politic: discipline had raised them to the highest pitch of glory and splen-

dour, whilst riches became their ruin. The Roman soldiers with their eagles, their bracelets, clasps of solid gold, &c. were less great than the former *adventurers* the soldiers of Romulus, carrying a *bundle* of hay on their piles.

**EFFORT** *du Canon*, Fr. the effect or impression made by a piece of ordnance, which wholly depends upon the manner it is loaded and fired.

**EGREGII**, persons among the ancient Romans, who, by military exploits obtained the government of a province.

**ÉGUILLETES**. Shoulder-knots.

**TO ELANCE**, to throw darts, &c.

**ELDER** *battalion*. A battalion is counted elder than another, by the time since it was raised. See **SENIORITY**.

**ELDER officer**, is he whose commission bears the oldest date. See **SENIORITY**.

**ELEMENTS**, (*éléments*, Fr.) the first rudiments of an art or a science.

**ELEPHANTS**, (*éléphants*, Fr.) animals well known among Eastern nations who employed them in their armies.

**ELEVATION**, (*élévation*, Fr.) in gunnery, that comprehended between the horizon and the line of direction of either cannon or mortar; or it is that which the chace of a piece, or the axis of its hollow cylinder, makes with the plane of the horizon.

**ELEVATION**, (*élévation*, Fr.) in a military sense, with regard to plans or drawings of fortification, elevation signifies the representation of a work when completed.

**ÉLITE** *de Troupes*, Fr. the chosen troops of an army. We have adopted the term; hence the *élite* of an army.

**ELLIPSIS**, an oval figure made by the section of a cone, by a plane, dividing both sides of a cone; and though not parallel to the base, yet meeting with the base when produced.

**ÉLOIGNEMENT** *permis au soldat*, Fr. the bounds or limits within which a soldier is allowed to walk for his amusement.

**ÉLOIGNER l'ennemi**, Fr. to oblige an enemy to quit his position, by giving him battle, and thus forcing him to retreat.

**EMBARKATION**. The act of putting troops on board of ship, when destined to be conveyed on an expedition.

**EMBARGO**, a prohibition for any ships

## E M B

ships to leave a port: generally enforced on the rupture of any two or more nations.

\* **EMBARK.** See **EMBARCATION.**

**EMBARRAS, Fr.** a cheval de frise.

**EMBATTLE.** See **BATTLE ARRAYS.**

**EMBAUCHER, Fr.** to persuade young men to enlist.

**EMBAUCHEUR, Fr.** a term which corresponds with *crimp*.

**EMBEZZLING,** } the act of ap-

**EMBEZZLEMENT,** } propriating, by breach of trust, which, with respect to military stores, is punishable by the articles of war, but not at the discretion of a general court martial, as the offender must be sentenced to be cashiered.

**EMBLÉE, Fr.** a prompt, sudden, and vigorous attack which is made against the covert-way and out-works of a fortified place. This military operation is executed by means of a rapid march, and an unexpected appearance before a town, followed by an instantaneous assault upon the out-posts of the enemy; who is thereby thrown into so much confusion, that the assailants force their way at the same time, and endeavour to get possession of the town.

**EMBOITEMENT, Fr.** the closing up of a number of men, in order to secure the front rank from any injury they might sustain by the firing of the rear.

**EMBOITURE, Fr.** an iron box screwed over the nave of the wheels, and which covers the axle-tree.

**EMBOLON, Fr.** a military disposition of troops, which was used among the ancients, for the purpose of presenting a narrow front. The shape was that of a salient angle on the center.

**EMBOUCHURE du canon, Fr.** the muzzle of a cannon.

**EMBRASER, Fr.** to set fire to.

**EMBRASSER, Fr.** to comprehend; to embrace; to encompass.

**EMBRASSEUR, Fr.** a piece of iron, which grasps the trunnions of a piece of ordnance, when it is raised upon the boring machine, to widen its calibre.

**EMBRASURE, in fortification,** is an opening, hole, or aperture in a parapet, through which cannon is pointed to fire at the enemy. Embrasures are generally made from 10 to 12 feet distant from one another, every one of them being from 6 to 9 feet wide without, and 2 or

## E M O

2½ within: their height above the platform is 2½ or 3 feet towards the town, and 1½ foot on the other side towards the field, so that the muzzle of the piece may be sunk occasionally, and brought to fire low. See **BATTERY** and **FORTIFICATION.**

**EMBROCHER, Fr.** a vulgar term used among French soldiers, to signify the act of running a man through the body—literally, to *spit him*.

**EMBUSCADE, Fr.** See **AMBUSCADE.**

**SEMBUSQUER, Fr.** to lie in ambush.

**ÉMÉRILLON, Fr.** a merlin, or small piece of brass or cast iron, which does not exceed a pound weight.

**ÉMERY, a ground iron ore.** The British soldiery are each allowed a certain quantity for cleaning their arms.

**EMERY, oil, and brack-dust, or craggs,** articles used by soldiers, to keep their firelocks in constant good order. There is an allowance issued for this purpose by government to the captains of companies, who receive the same, half-yearly, from the regimental paymasters. This allowance is charged against the ordnance.

**ÉMEUTE, Fr.** Insurrection.

**ÉMIGRANTS,** persons who have quitted their native country.

**ÉMINENCE, in military art,** a high or rising ground, which overlooks and commands the low places about it: such places, within cannon-shot of any fortified place, are a great disadvantage; for if the besiegers become masters of them they can from thence fire into the place.

**ÉMIRALÉM Gonfalonier, Fr.** the general of the Turks, or keeper of all their colours; he marches immediately before the Grand Signor.

**ÉMISSARY, a person sent by any power that is at war with another, for the purpose of creating dissension among the subjects of the latter, of obtaining intelligence, &c.**

**ÉMOLUMENTS, (emolumens) Fr.** Perquisites; fair profits. Every general, and other public officer, if men of honour, ought to be satisfied with the emoluments allowed them. Whatsoever they get beyond, is injurious to the state and to the nation.

**ÉMOUSER, Fr.** to blunt, to dull. In a military sense, it signifies to take off the four corners of a battalion, which has

It is formed a square, and to give it, by these means, an octagon figure; from the different obtuse angles of which it may fire in all directions.

**EMPALE.** See FORTIFY.

**EMPEREUR.** *Fr.* to take possession. He is *l'empereur d'une Summe*, &c. to take possession of a height.

**EMPELEMENT,** in *fortification*. See FORT.

**EMPEREUR.** *Fr.* See EMPEROR.

**EMPEROR,** a title hitherto given to the Sovereign of Germany; but since adopted by the Emperor of France. It is derived from the Latin *imperator*, and signifies the chief in command. The term is, however, variously used; for although *imperator* means a certain extent of country, which comprehends several provinces, and many different states, and should consequently be the honorary title of emperor to its principal chief, there are instances in which the person so invested is only chief king. Hence the British empire is under the chief magistracy of George the Third, *King*, &c. It is, in fact, more suitable to a military government, than to one whose vital formation consists of a complex mixture of King, Lords and Commons.

**EMPLACEMENT,** *Fr.* from *empler*, to pile up. The act of disposing balls, grenades, and shells, in the most secure and convenient manner. This generally occurs in arsenals and citadels.

**EMPLACEMENT,** *Fr.* the spot upon which a body of armed men is posted.

**EMPLOIS** *Militaires, Fr.* military employments, such as commissions, &c. in an army.

**EMPLOYÉS,** *Fr.* persons employed in the service, to supply the necessary subsistence, &c. for an army. Of this description are commissaries, purveyors, &c.

**EMPRIZE.** See EXPEDITION.

**EMULATION,** a noble jealousy, without the slightest tincture of envy, whereby gentlemen endeavour to surpass each other in the acquisition of military knowledge. Is not the want of encouragement to excite emulation, the great cause of misconduct among military men? An officer who is not protected, who is never sure of the least favour, neglects himself, and takes less trouble

to acquire that glory, (which is rarely heard of, though merited by the bravest actions) than to enjoy the tranquillity of an ordinary reputation. Brave actions, by whomsoever accomplished, should never be buried in oblivion, as they excite to emulation, and are full of instruction.

**ENAMBUSH.** See AMBUSH.

**ENCAMPMENT,** the pitching of a camp. See CAMP.

In the regulations published by authority, are particularly enjoined the following:

*Attentions relative to ENCAMPMENTS.*

On the arrival of a brigade or a battalion, on the ground destined for its camp, the quarter and rear guards of the respective regiments will immediately march; and when circumstances require them, the advanced picquets will be posted. The grand guards of cavalry will be formed, and the horses picketed. The men's tents will then be pitched, and till this duty is completed, the officers are on no account to quit their troops or companies, or to employ any soldier for their own accommodation.

Privies are to be made in the most convenient situations, and the utmost attention is required in this, and every other particular, to the cleanliness of the camp.

If circumstances will allow the ground on which a regiment is to encamp to be previously ascertained, the pioneers should make these and other essential conveniences, before the corps arrives at its encampment.

Whenever a regiment remains more than one night in a camp, regular kitchens are to be constructed.

No tents, or huts, are to be allowed in front of, or between the intervals of the battalions. A spot of ground for this purpose should be marked by the quarter-master, with the approbation of the commanding officer.

On arriving in a camp which is intersected by hedges, ditches, unequal or boggy ground, regiments will immediately make openings of communication, of 60 feet in width.

The ground in front of the encampment is to be cleared, and every obstacle to the movement of the artillery and troops is to be removed.

Commanding officers of regiments must take care that their communication with the nearest grand route is open, and free from any impediments.

**ENCEINTE**, in *fortification*, is the interior wall or rampart which surrounds a place, sometimes composed of bastions or curtains, either faced or lined with brick or stone, or only made of earth. The *enceinte* is sometimes only flanked by round or square towers, which is called a Roman wall.

**ENCLOUER un canon**, Fr. to spike the cannon.

**ENCLOUEURE**, Fr. this term is used in the artillery, to signify the actual state and condition of any thing that has been spiked.

**ENCOMBRER**, Fr. in *fortification*, to fill up any hollow space; such as a stagnant lake, &c. with rubbish.

**ENCOUNTERS**, in military affairs, are combats, or fights, between two persons only. Battles, or attacks by large or small armies are figuratively so called. The marquis de Feuquieres mentions four instances of particular encounters brought on by entire armies, with a design to create a general engagement.

**ENCOURAGE**. See **ANIMALE**.

**ENCOURAGEMENT**, (*encouragement*, Fr.) exortient to action, &c.

**ENCROACHMENT**, the advancement of the troops of one nation, on the rights or limits of another.

**ENDORMI**, Fr. asleep; *soldat endormi*, a soldier asleep on guard. See the articles of war, which direct that any centinel who is found asleep during the period of his duty, shall be punished with death.

**ENDECAGON**, a plain figure of 11 sides and angles.

**ENEMY**, (*ennemi*, Fr.) in a comprehensive meaning, this term signifies any power or potentate with whom we are at war, together with his subjects, by sea and land; it also includes his allies, all persons adhering to and favouring his cause and undertaking; his troops, the inhabitants of his cities and villages. It more particularly applies to armed bodies of men that are acting against each other.

**ENFANS perdus**, Fr. forlorn hope, which consists of soldiers detached from several regiments, or otherwise appointed to give the first onset in bat-

tle, or in an attack upon the counter-scarp, or the breach of a place besieged; so called (by the French) because of the imminent danger they are exposed to.

**ENTILADE**, in *fortification*, is used in speaking of trenches, or other places, which may be scoured by the enemy's shot, along their whole length. In conducting the approaches at a siege, care must be taken that the trenches be not *entiladed* from any work of the place. See **TRENCHES**.

**To ENTILADER**, is to sweep the whole length of any work or line of troops, with the shot of artillery or small arms.

**ENFILER**, Fr. to *entilade*; to batter and sweep with cannon-shot, the whole extent of a strain line.

**ENFILER**, Fr. to expose yourself to the enemy's fire, by being posted within reach of his point blank shot; or by getting into narrow passes, from whence you can with difficulty retreat, after having sustained a galling discharge of musquetry.

**ENFONCER**, Fr. to break; to throw into disorder by piercing the ranks of a battalion, &c.

**ENFORCER des ennemis**, Fr. to plunge into the thickest of a body of armed men, who are combating against you.

**ENGAGEMENT**, Fr. See **EX-LISTEMENT**.

**ENGAGEMENT**. See **BATTLE**.

**ENGAGER une affaire**, Fr. to bring the enemy to a general engagement, by having previously attacked him in a variety of ways.

**ENGAGEMENT**, Fr. The act of *entilading*.

**To ENGARRISON**, to protect any place by a garrison.

**ENGARBER**, Fr. to place barrels of gun-powder in a magazine.

**ENGINES**, in military mechanics, are compound machines, made of one or more mechanical powers, as levers, pulleys, screws, &c. in order to raise, project, or sustain any weight, or produce any effect which could not be easily effected otherwise.

**ENGINE to drive fuzes**, consists of a wheel with a handle to it, to raise a certain weight, and to let it fall upon the driver, by which the strokes become more equal.

**ENGINE to draw fuzes**, has a screw fixed

fixed upon a three-legged stand, the bottom of which has a ring to place it upon the shell; and at the end of the screw is fixed a hand-screw by means of a collar, which being screwed on the fuze, by turning the upper screw, draws out or raises the fuze.

ENGINEER, is commonly applied to an officer who is appointed to inspect and contrive any attacks, defences, &c. of a fortified place, or to build or repair them, &c.

The art of fortification is an art which stands in need of so many others, and whose object is so extensive, and its operations accompanied with so many various circumstances, that it is almost impossible for a man to make himself master of it by experience alone; even supposing him born with all the advantages of genius and disposition possible for the knowledge and practice of that important art. We do not pretend to deny that experience is of greater efficacy, than all the precepts in the world; but it has likewise its inconveniences as well as its advantages; its fruits are of slow growth; and whoever is content with pursuing only that method of instruction, seldom knows how to act upon emergencies of all kinds, because old age incapacitates him from exercising his employment. Experience teaches us, through the means of the errors we commit ourselves, what theory points out at the expense of others. The life of man being short, and opportunities of practice seldom happening, it is certain nothing less than a happy genius, a great share of theory, and intent application joined to experience, can make an engineer one day shine in his profession. From whence it follows, that less than the three first of the four necessary qualities, should not be a recommendation for the reception of a young gentleman into the corps of engineers.

The fundamental sciences, and those absolutely necessary, are arithmetic, geometry, mechanics, hydraulics, and drawing. Without arithmetic, it is impossible to make a calculation of the extent, and to keep an account of the disbursements made, or to be made; nor without it can an exact computation be made upon any occasion whatsoever.

Without geometry, it is impossible to lay down a plan or map with truth and

exactness, or settle a draught of a fortification, or calculate the lines and angles, so as to make a just estimation, in order to trace them on the ground, and to measure the surface and solidity of their parts.

Mechanics teach us the proportions of the machines in use, and how to increase or diminish their powers as occasion may require; and likewise to judge whether those which our own imagination suggests to us, will answer in practice.

Hydraulics teach us how to conduct waters from one place to another, to keep them at a certain height, or to raise them higher.

How faintly soever we may express ourselves in speaking or writing, we can never give so perfect an idea as by an exact drawing; and often in fortification both are wanted; for which reason the art of drawing is indispensably necessary for engineers.

To the qualities above mentioned, must be added activity and vigilance; both which are absolutely necessary in all operations of war, but especially in the attack of such places as are in expectation of succours. The besieged must have no time allowed them for consideration; one hour lost at such a juncture often proves irreparable. It is by their activity and vigilance, that engineers often bring the besieged to capitulate, much sooner than they would have done, if those engineers had not pushed on the attack with firmness and resolution. Want of vigilance and activity often proceed from irresolution, and that from weakness of capacity.

As the office of an engineer requires great natural qualifications, much knowledge, study, and application, it is but reasonable that the pay should be proportioned to that merit which is to be the qualification of the person employed; he must be at an extraordinary expence in his education, and afterwards for books and instruments for his instruction and improvement, as well as for many other things; and that he may be at liberty to pursue his studies with application, he must not be put to shifts for necessaries. It should likewise be considered, that if an engineer do his duty, be his station what it will, his fatigue must be very great; and, to dedicate

dedicate himself wholly to that duty, he should be divested of all other cares.

The word *engineer* is of modern date, and was first used about the year 1650, when one Captain Thomas Rudd lent the title of chief engineer to the king. In 1660 the title given to engineers was trench-master; and in 1692, sir William Pultney, and after him sir Francis Vere, acted as trench-masters in Flanders. In the year 1634, an engineer was called camp-master-general, and sometimes engine-master, being always subordinate to the master of the ordnance.

At present the corps of *Royal Engineers in England*, consists of 1 colonel in chief, 1 colonel on second, 1 chief engineer, 5 colonels, 6 lieutenant-colonels, 18 captains, 15 captain-lieutenant and capitals, 31 lieutenants, 10 second lieutenants.

The establishment of the corps of *Invalid Engineers*, comprises a colonel, lieutenant-colonel, captain, captain-lieutenant and captain, first lieutenant and second lieutenant.

The corps of *Royal Engineers in Ireland* consists of a director, colonel, lieutenant colonel, major, captain, captain lieutenant and captain, and 2 first lieutenants.

**ENGINEERY**, the act of managing artillery; also a genus of war.

**ENGORGEMENT**, *Fr.* The stoppage of any communication.

**ENGUARD**, See GUARD.

**EN-JOUE**, *Fr.* a word of command among the French, which corresponds with *present* in platoon firings. It literally means to *your cheek*.

**ENLARGEMENT**, the act of going or being allowed to go beyond prescribed limits; as the extending the boundaries of an arrest, when the officer is said to be enlarged, or under arrest at large.

**ENLEVER un convoi, un détachement**, *Fr.* to take a convoy or detachment, by surprize and in spite of any resistance which might be made.

**ENNEAGON**, in *geometry* or *fortification*, is a figure consisting of nine angles, and as many sides, capable of being fortified with the same number of bastions.

**ENNEGONE**, *Fr.* See ENNEAGON.

**ENRANK**, to place in orderly or regular rows.

**ENRÉGIMENTER**, *Fr.* to form several companies into a regiment.

**ENROUEMENT**, *Fr.* the making marshy ground solid.

**ENROLEMENT**, *Fr.* enrolment. This term, according to the military acceptation of it in the French service, differs from the words *engagement*, *enlistment*, inasmuch as in some instances, the officer enrolls or enlists a soldier without his consent; whereas in others the soldier is enrolled, after having declared that he voluntarily enlisted.

**ENROUEMENT par argent**, *Fr.* the act of recruiting soldiers by means of bounties.

**ENROLLED**, } See LISTED.

**ENROUEMENT**, }

**ENCONCE**, to cover as with a fort.

**ENSEIGNE**, *ou porte enseigne*, *Fr.* the colour, originally derived from the Latin word *Insigne*. The French designate all warlike symbols under the term *enseigne*; but they again distinguish that word by the appellations of *drapeau*, colours, and *étendards*, standards. *Drapeau* or colours, are particularly characteristic of the infantry; *étendards* or standards belong to the cavalry. We make the same distinctions in our service. See COLOURS.

**Porte-ENSEIGNE**, *ou porte-drapeau*, *Fr.* This term is also used among the French to signify the soldier who is entrusted with the standard or colours, for the purpose of relieving the officer occasionally.

**ENSEIGNE de vaisseau**, *Fr.* The lowest commissioned officer in the French navy.

**ENSEMBLE**, *Fr.* together, the exact execution of the same movements, performed in the same manner, and by the same motions; it is the union of all the men who compose a battalion, or several battalions or companies of cavalry, who are to act as if put in motion by the same spring, both wings as well as the centre. Upon the strict observation of this *ensemble* every success depends, but it is not to be acquired, except by constant practice.

**ENSHIELD**, to cover from the enemy.

**ENSIFORM**, having the shape of a sword.

**ENSIGN**, in the military art, a banner, under which the soldiers are ranged according

according to the different regiments they belong to. See COLOURS.

**ENSIGN**, or *ensign-bearer*, is an officer who carries the colours, being the lowest commissioned officer in a company of foot, subordinate to the captain and lieutenant. The word *ensign* is very ancient, being used both by the Greeks and Romans, and amongst both foot and horse. Ensigns belonging to the foot, were either the common ones of the whole legion, or the particular ones of the manipuli. The common ensign of the whole legion was an eagle of gold or silver, fixed on the top of a spear, holding a thunderbolt in his talons, as ready to deliver it. That this was not peculiar to the Romans, is evident from the testimony of Xenophon, who informs us, that the royal ensign of Cyrus was a golden eagle spread over a shield, and fastened on a spear, and that the same was still used by the Persian kings. In the rustic age of Rome, the ensign was nothing more than a wisp of hay carried on a pole, as the word *manipulus* properly signifies. The ensign of the horse was not solid, as the others, but a cloth, somewhat like our colours, distended on a staff, on which the names of the emperors were generally inscribed. The religious care the soldiers took of their ensigns was extraordinary: they worshipped them, swore by them (as at present several European powers do) and incurred certain death if they lost them. The Turks and Tartars make use of horses' tails for their ensigns, whose number distinguishes the rank of their commanders, for the sultan has 7, and the grand vizier only 3, &c.

**ENTASSER une troupe, une armée, un ouvrage**, Fr. to rout a body of armed men, to overthrow an army. It also means to destroy a work, by blowing it up, or by battering it with cannon.

**ENTAMER des opérations de guerre**, Fr. to commence warlike operations, either by besieging a fortified place, or by entering the enemy's country for the purpose of bringing him to battle.

**ENTAMER la paix**, Fr. to make proposals of peace, or overtures of accommodation.

**ENTERPRISE**, in military history, an undertaking attended with some hazard and danger.

**ENTERPRISEUR**, an officer who un-

dertakes or engages in any important and hazardous design. This kind of service frequently happens to the light infantry, light-horse, and hussars.

**ENTRÉE, or rank ENTRÉE**, a line of men in one continued row on the side of each other. When behind each other, they are said to be in file. See *ENTRÉE file*.

**ENTONNOIR**, Fr. the cavity or hole which receives after the explosion of a mine. It likewise means the muscose or port-fen which is used to convey the priming-powder into the touch-hole of a cannon.

**ENTRÉE d'honneur des généraux, d'officiers, &c.**, Fr. The solemn entry of governors, general officers, &c. into the city, castles, castles and forts, within the district, of which they have the command.

**ENTRÉES**, Fr. means and places appropriated in garrisons, towns, for the reception of stores, &c. In a maritime port it means an harbour where public warehouses, where goods are deposited, and from whence they might be forwarded to different quarters within or beyond the immediate confines of a country.

**ENTREPRENDRE**, Fr. To undertake any thing from one's own mind, or in consequence of a superior order.

**ENTREPRENDRE une guerre, une bataille**, &c. to put the united strength of a country in action to encounter different bodies of troops against fortified places, by embarking them for foreign service, or by rendering them subservient to military purposes in any other way.

**ENTREPRENDRE sur ses quartiers**, Fr. to appear in force against an enemy's quarters, with the intention of driving him from them.

**ENTREPRENEUR**, Fr. See COX-TRACTOR.

**ENTREPRISE**, Fr. See **ENTERPRISE**.

**ENTRETENIR une armée**, Fr. to provide the necessary clothing, pay and subsistence of an army.

**ENTRETENIR la paix**, Fr. to keep up the bonds of national amity, by a strict observance of treaties, &c.

**ENTRETENIR la guerre**, Fr. to make the best use of military resources, for the support of national glory, &c.

**ENTRÉE**

**ENTRETIEN des liaisons secrètes chez l'ennemi**, Fr. to keep up, by means of corruption and bribery, a secret communication with one or more persons in the service of an enemy.

**ENTRETIEN des armes**, Fr. the care which soldiers pay to their arms, by keeping them in constant good order. An allowance is made in the British service to enable the privates to procure the necessary articles for cleaning, &c. This allowance is called *emery*, oil and crocus, which see.

**ENTRETOISE de couche**, Fr. the piece of wood which is placed between the cheeks of a gun-carriage, and upon which its breech rests.

**ENTRETOISE de lunette**, Fr. a piece of wood which is placed between the cheeks and under the lower end of a gun-carriage. It has a hole in the middle for the purpose of receiving an iron pin, which is used in advancing the cannon.

**ENTRETOISE de mine**, Fr. a piece of wood which is placed between the cheeks of a gun-carriage; that which is directly underneath the breech.

**ENTRETOISE de volée**, Fr. a piece of wood which is placed at the upper end of a cannon, between the two cheeks of its carriage.

**ENVAHIR**, Fr. See **ENVAHIR**.

**ENVELOPE**, in fortification, a work of earth, sometimes in form of a single parapet, and at others like a small rampart: it is raised sometimes in the ditch, and sometimes beyond it. Envelopes are sometimes *en zig zag*, to inclose a weak ground where that is practicable, with single lines, to save the great charge of horn-works, crown-works, and *tenailles*, or where room is wanting for such large works. These sort of works are to be seen at Besançon, Douay, Luxemburg, &c. Envelopes in a ditch are sometimes called *sillons*, *contre-gardes*, *conserves*, *lunettes*, &c. which words see.

**ENVELOPPER**, Fr. to surround.

**ENVELOPPER une armée**, Fr. to surround an army.

**ENVOYÉ**, Fr. The French use this term to signify an officer or trumpet, who is sent from one army to another, either to settle an exchange of prisoners, or to make a communication of any kind.

To **ENVIRON**, to surround in a hostile manner, to hem in, to besiege.

**EPAULE**, in fortification, denotes the shoulder of a bastion, or the place where its face and flank meet, and form the angle, called the angle of the shoulder. See **FORTIFICATION**.

**EPAULEMENT** in fortification, is a kind of breast-work to cover the troops in front, and sometimes in flank. In a siege, the besiegers generally raise an epaulement of 8 or 10 feet high, near the entrance of the approaches, to cover the cavalry, which is placed there to support the guard of the trenches. These works are sometimes made of filled gabions, or fascines and earth. This term is frequently used for any work thrown up to defend the flank of a post, or any other place. It is sometimes taken for a demi-bastion, and at other times for a square orillon to cover the cannon of the casemate. See **FORTIFICATION**.

**ÉPAULER**, Fr. to support.

**ÉPAULER une batterie, un travail, une tranchée, une troupe**, Fr. to raise a parapet, or any other high fence for the security of a battery, a work, trench, or troop, &c. This parapet or fence must be so constructed, that the view of the object is cut off from the enemy, and protected against an enfilade.

**EPAULETTES**, are a kind of shoulder-knots; those for the sergeants and rank and file of the colours of the facing, with a narrow yellow or white tape round it, and worsted fringe; those for the officers are made of gold or silver lace, with rich fringe and bullions. They are badges of distinction, worn on one or both shoulders. When a sergeant or corporal is publicly reduced, the shoulder-knot is cut off by the drum-major in the front or circle of the battalion.

Among the French, all the degrees of rank, from a cadet to a general officer, were so minutely marked out by the epaulette, that a common centinel might instantly know what officer approached his station, and could pay the prescribed honours without hesitation or mistake.

This is not the case in our service. Some few alterations have lately been made in those ornaments: but they are so partial and confined to the upper ranks

ranks only, that it is impossible to distinguish the youngest ensign from the oldest captain by his epaulette, or by any other part of his uniform. When Highland or Fusileer regiments are mixed with the line, every sentinel is still more perplexed, as all the officers belonging to those corps indiscriminately wear two epaulettes made of fringe and bullion of the same quality.

Epaulettes have been introduced into the navy during the late war.

The following are the gradations of rank as distinguished by epaulettes.

Masters and commanders have one epaulette on the left shoulder.

Post captains under three years, one epaulette on the right shoulder.

And after having been post three years two epaulettes.

Rear admirals have one star on the strap of the epaulette, vice admirals two stars, and admirals three stars.

ÉPÉE, *Fr.* a sword.

*Mourir d'une telle épée*, *Fr.* to be defeated by a man of superior talents, &c.

ÉPERON, *ou contra-fort*, *Fr.* a sort of buttress, which is built against a wall in order to support it: or the better to enable it to bear a weight of earth. Éperon also means a spur.

ÉPERONNIÈRE, *Fr.* a spur-leather.

ÉPIATIS, a purple glove, which, among the Romans was always worn by their warriors, or by their comedians on the stage, when they performed the part of a warrior.

ÉPIBATE, Roman seamen, who sometimes did soldiers' duty.

ÉPIQU, *Fr.* a weapon in the shape of a halbert, with a sharp pointed iron. The shaft was four or five feet long.

ÉPICYCLOID, a curve formed by the revolution of the periphery of a circle along the convex or concave part of another circle.

ÉPIER *l'ennemi*, *Fr.* To obtain intelligence relative to the movement, &c. of an enemy. A French author very properly observes, that able generals can always obtain information concerning the designs of their adversaries, without entrusting the source or sources of that information to a third person: he concludes by saying, Happy

is that chief, who writes more himself, than he has occasion to dictate to his secretary.

ÉPIGNARE, *Fr.* a small piece of ordnance which does not exceed one pound in caliber.

ÉPINGLETTE, *Fr.* an iron needle with which the cartridge of any large piece of ordnance is pierced before it is primed.

ÉPOUVANTE, *Fr.* a sudden panic with which troops are seized, and by which they are induced to retreat without any actual necessity for so doing.

*Donner l'épouvante*, *Fr.* to force an enemy to retreat precipitately, leaving his baggage, &c. behind. This is effected by means of a sudden march, by surprise, and by some ingenious manœuvre.

*Prendre l'épouvante*, *Fr.* to be seized with a sudden panic; to retreat in disorder.

ÉPREUVE, *Fr.* See PROOF.

ÉPROUVETTE, is a machine to prove the strength of gunpowder. There are different sorts of epreuves, according to the fancy of different nations who use them. Some raise a weight, and others throw a shot, to certain heights and distances.

ÉTAGON. See HERTAGON.

ÉPUISÉS *volantes*, *Fr.* mills of a simple construction, which serve to raise or to drain the waters, so as to make a solid foundation for such works as are to be erected on a marshy soil.

ÉPULE *militaires*, military banquets. It was customary amongst the Romans, when a general was saluted *imperator*, or when an officer was promoted to the generalship, to give a feast to the soldiers, in order to gain their support. The generals would do the same before a battle to encourage the men, and after the action to refresh them.

To EQUALIZE, in a military sense to render the distribution of any number of men equal as to the component parts.

To EQUALIZE a battalion. To tell off a certain number of companies in such a manner, that the several component parts shall consist of the same number of men. In this case the grenadier and light infantry companies are squared with the rest of the battalion.

**EQUANGULAR**, having equal angles.

**EQUATION**, an expression of the same quantity in two dissimilar terms, but of equal value. See **ALGEBRA**.

**ÉQUELÉ**, *Fr.* a word generally applied to any piece of ordnance or musquetry, but chiefly to the former, when, by frequent use, its mouth has been widened, and the direction of the ball or bullet is consequently affected.

**ÉQUERRE**, *Fr.* an instrument made of wood or of metal, which serves to trace and measure right angles, and to obtain a perpendicular line upon an horizontal one. This instrument is absolutely necessary to miners.

**ÉQUERRE**, the master of the horse. It likewise means any person who is appointed to attend the king, or Prince of Wales in that capacity.

**EQUESTRIAN statue**, the inanimate resemblance, in bronze, stone, or marble, of any person mounted on horseback.

**EQUESTRIAN order**, among the Romans, signified their knights or equites; as also their troopers or horsemen in the field; the first of which orders stood in contradistinction to the senators, as the last did to the foot; each of these distinctions was introduced into the state by Romulus.

**EQUILIBRIUM**, equality of weight or power.

**TO EQUIP**, (*équiper*, *Fr.*) to furnish an individual, a corps, or an army, with every thing that is requisite for military service; such as arms, accoutrements, uniforms, &c. &c.

**EQUIPAGE**, in a military sense, is all kinds of furniture made use of by the army; such as

*Camp-EQUIPAGE*, } are tents, kitch-

*Field-EQUIPAGE*, } en-furniture, saddle-horses, baggage-waggons, bat-horses, &c.

**ÉQUIPAGES ou baggages d'une armée**, *Fr.* Under this term are comprehended military stores, camp equipage, utensils, &c. with which an army is usually furnished. This word is used as to any particular department or component part of an army, viz. *équipages d'artillerie*, stores, ammunition, tumbrils, cannon-ball, &c. for the use of the artillery.

**ÉQUIPAGES d'un régiment, d'une**

*troupe*, *Fr.* arms, accoutrements, &c. belonging to a regiment, or armed body.

**Gros ÉQUIPAGES**, *Fr.* four-wheeled wagons, caissons, &c.

**Ménus ÉQUIPAGES**, *Fr.* Under this term are comprehended led horses, mules and other beasts of burthen; carriages with two wheels, &c.

**L'ÉQUIPEMENT des soldats**, *Fr.* the equipment or complete dress, including accoutrements and arms, &c. of soldiers.

**EQUIPMENT**, the act of getting completely equipped, or supplied with every requisite for military service.

**EQUITATION**, *Fr.* the art of managing horses. According to *Dionysius Siciliensis* the Thessalians were the first who trained horses and rendered them fit for human service. The Athenians and Greeks, who paid great attention to *equitation*, were indebted to them for their first notions of that art. The latter especially made great progress in it, not only with regard to training, &c. but they also discovered remedies for their several diseases.

**EQUITES**, an order of equestrian knights introduced among the Romans by Romulus.

**EQUITES singulares**, a particular corps of cavalry raised by order of Augustus, for his body guard. They were called *equites singulares*, on account of their being selected from other corps.

**EQUITRIUMPHALES**, *Fr.* four white horses a-breast that drew the triumphal car, when a general made his entry into Rome.

**ESCADRON**, *Fr.* Squadron. This term is derived from the Italian *scara* or *scadra*, corrupted from the latin quadrum. Froissart was the first French writer that made use of the word *escadron* to signify a troop of horse drawn out in order of battle. The term *escadron* is more ancient than *battalion*. See **SQUADRON**.

**ESCADRONNER**, *Fr.* to form squadron.

**ESCALADE**. See **SCALADE**.

**ESCALADE d'un soldat** was used in the old French service to express the act of a soldier who got into a town, camp or quarters, by scaling the ramparts, &c. When discovered in the act

of so doing, the centinels had orders to fire at him; and if apprehended, he was tried and condemned to death.

**ESCALADER**, *Fr.* to scale a place.

**ESCALE**, *Fr.* a machine used to apply the petard.

**ESCARMOUCHE**, *Fr.* See **SKIRMISH**.

**ESCARPE**, is the outward slope or talus of the rampart.

**ESCARPMENT**. See **DECLIVITY**.

**ESCAUPILL**, *Fr.* a kind of quilted blanket, cut in the shape of a cassock or long gown. This armour was suggested by necessity, when the Spaniards under Ferdinand Cortez invaded Mexico. They had no wire to make coats of mail with, to protect themselves against the arrows of the Indians; but they were taught by experience that a wadding between two pieces of cloth, well quilted, was a better safeguard than knitted brass wire.

**ESCHARPE**, (*more correctly* **ESCHARPE**) *Fr.* a scarf. In ancient times, a military mark to distinguish officers and soldiers from the rest of the people. Before a regular clothing was adopted among the nations in Europe, officers and soldiers appeared with two scarfs of different colours, which crossed each other before and behind, in order to point out the country and the corps to which the wearer of them belonged. The scarf was preserved among the French, as late down as the reign of Louis the XIVth. It consisted of a piece of white silk, which, previous to the revolution, was the national colour of France.

Scarfs, however, were continued much later among other nations, particularly among the Germans, who wear them to this day across their uniforms.

**ESCOPELIE**, *Fr.* an engine which serves to raise weights.

**ESCOPETTE**, *Fr.* a kind of pike three feet and a half long, formerly used by the *carbiniers*. There is also a fire arm called *escopete* which resembles a small rifled piece, it carries five hundred paces. The French cavalry had *escopetes* so late as under Lewis XIII.

**ESCOPETTERIE**, *Fr.* a volley.

**ESCORT**, in the art of war. See **CONVOY**.

*Escort of deserters*, consists in general of a corporal and three rank and

file unless the number exceed four or five. Deserters are conducted by them a certain distance, and either delivered over to the next military station, or lodged in some county gaol. The principal regulations respecting this important trust are, that when an order from the war office shall be received by the commanding officer of any corps or detachment, for a party to take charge of a deserter, and convey him to any place, the said commanding officer shall advance, or cause to be advanced, so much money on account of pay for the deserter, as will be sufficient to defray the arrears thereof, during the time of his confinement, and the expence of medicines and attendance, (if any shall be due) and a farther sum proportioned to the time he will be on his march, either to his final destination, or to the next quarter, as the case may require: he shall likewise cause such necessaries as the man may be absolutely in need of, to be provided and paid for; the sums defrayed and advanced, on account of pay, &c. to be stated distinctly on the back of the route or order, as likewise the particulars and actual charge of the necessaries, and to be signed by the commanding officer himself, or by the adjutant or paymaster by his direction. The person receiving the money, viz. the gaoler, and the non-commissioned officer who takes charge of the deserter, shall likewise sign to the sums respectively received by them.

When a deserter is delivered over from one party to another, the commanding officer of the corps, to which the latter party belongs, or the adjutant or paymaster, by his direction, shall carefully inspect the route, and see that the money which hath been received, is there properly accounted for; he shall also advance a farther sum (if requisite) on account of pay, proportioned to the distance of the ensuing march; and so on, till the deserter shall arrive at his place of destination.

If, upon such inspection of the route, any improper charges shall be found, the non-commissioned officer, under whom they have been incurred, shall make good the amount thereof.

No pay shall be advanced, nor shall any necessaries be provided, but by or under

under the immediate direction of the commanding officer, adjutant, or paymaster, who is to sign his name to the charge.

No more money shall be advanced on account of pay, than the time and distance may require.

Necessaries shall be supplied but once for any march.

No horse-hire shall be allowed, nor any fees at goals. The subsistence of a deserter commences from the first day of confinement inclusive; and is six-pence per diem, for all ranks and corps.

The agent of the regiment to which a deserter belongs, shall repay the money advanced, provided it is properly accounted for on the route, and shall charge the same in the following manner, viz.

The subsistence, not exceeding six-pence a day, against the public.

Necessaries, including hand-cuffs, against the deserter, who shall pay for them by stoppages.

Medicines, and other necessary expences, in consequence of sickness, against the surgeon of the corps.

The order or route, by which the deserter is marched, being the voucher for the expenditures, the same shall be carefully preserved and deposited either in the Savoy, or at the head quarters of the corps to which he belongs, according to the destination of the said order or route; or with the agent of the corps, to be produced when called for, on settlement of the accounts.

ESCORTE, *Fr.* See ESCORT.

ESCOUADE, *Fr.* in the old French service, generally meant the third part of a company of foot or a detachment. Companies were divided in this manner for the purpose of more conveniently keeping the tour of duty among the men.

The word *escouade* is, however, more specifically applicable to the old distribution of a French artillery company, which was divided into three parts, called *escouades*. The first, containing double the complement of the rest, was composed of 24 cannoniers or bombardiers, including two serjeants, two corporals, two *anspessades* or lance corporals of the same profession, and twenty-four soldiers, called *soldats apprentis*. The second *escouade* was composed of

twelve miners or sappers, including one serjeant, one corporal, and one *anspessade* or lance corporal of the same profession, and twelve *soldats apprentis*.

The third *escouade* was composed of twelve workmen or artificers in wood or iron attached to the artillery, amongst whom were included one serjeant, one corporal, and one *anspessade* or lance corporal of the same trade, together with twelve *soldats apprentis*. We have corrupted the term and called it squad. See SQUAD.

ESCOUT, See SPY.

ESCRIME, *Fr.* the art of fencing; tilting.

ESCRIMEUR, *Fr.* a fencer; one who understands the sword.

ESCUAGE, an ancient feudal tenure, by which the tenant was bound to follow his lord to war, or to defend his castle.

ESKY, (*bas*) the Turkish soldier who carries the colours: in general it is the senior man in the company.

ESPACES, *Fr.* regulated intervals between the battalions, the companies, and the tents in a camp, between the ranks in a manoeuvre, on a march, or in battle.

ESPADON, in old military books, a kind of two-handed sword, having two edges, of a great length and breadth; formerly used by the Dutch.

ESPADONNER, *Fr.* to fight with the back-sword.

ESPECES, *Fr.* coin. Hence *payer en especes sonnantes*; to pay in cash, or ready money; a circumstance indispensably necessary to military men.

ESPION, *Fr.* a spy.

ESPIONNAGE, *Fr.* the act of obtaining and giving intelligence; which is as dangerous to the employer as it is to the person that undertakes it.

ESPLANADE, in fortification, the sloping of the parapet of the covert-way towards the field, and is therefore the same as the glacis of the counterscarp; but begins to be antiquated in that sense, and is now only taken for the empty space between the glacis of a citadel, and the first houses of the town.

ESPONTON, *Fr.* a sort of half pike. On the 10th of May, 1690, it was ordered by the French government that every *esponton*, or half pike, should be 8 feet in length. The colonels of corps

as well as the captains of companies always used them in action. The officers of the British army were formerly provided with this weapon; but it has been replaced by the sword in both countries.

**ESPRINGAI**, in the ancient art of war, a machine for throwing large darts generally called *muchette*.

**ESPRINGARDE**, *Fr.* not *ESPRINGALE*, a machine for throwing stones. In the *Dictionnaire de l'Academie Françoise*, it is written *ESPRINGALE*; but Montrelet, Fautchet, and Froissart have it as above.

**ESPRIT de Corps**, *Fr.* this term is generally used among all military men in Europe. It may not improperly be defined a laudable spirit of emulation which produces a peculiar attachment to any particular corps, company or service. Officers, without descending to mean and pitiful sensations of selfish envy, under the influence of a true *esprit de corps*, rise into an emulous thirst after military glory. The good are excited to peculiar feats of valour by the sentiments it engenders, and the bad are deterred from ever hazarding a disgraceful action by a secret consciousness of the duties it prescribes. Grenadiers and light infantry men are peculiarly susceptible of this impression. What a common battalion man might do with impunity, would entail dishonour and reproach upon either of the flanks. The same observation holds good with respect to regiments. There are some corps in the British army whose uniform good conduct and behaviour before the enemy have from the first of their establishment, secured to them an enviable reputation; the consequence of which is, that every young man who gets a commission in a corps of this cast, naturally feels anxious, not only to support, but to add, if possible, to the fame it possesses. Such a sentiment creates an *Esprit de corps*. The British foot guards have been remarkable for this quality, particularly on service. Being necessarily looked at by the Line with a jealous eye on account of the privilege which the officers enjoy with respect to rank, it is particularly incumbent upon them to do something more than the rest, to prove at least, that they are not unworthy of the pre-

cedence they enjoy. Advocates as we certainly are for having this sort of rank confined to themselves, we should nevertheless do an act of injustice to a truly brave set of men, did we not acknowledge, that they induce an *Esprit de corps* which does credit to British gallantry. Highland corps are remarkable for the same impression.

**ESQUADE**. See *SQUAD*.

**S'ESQUICHER**, *Fr.* to avoid coming to blows.

**ESQUIRE**. See *ARMIGER*.

**ESSAI des armes à feu; de la poudre à tirer**, *Fr.* the act of proving fire-arms, and of ascertaining whether gun-powder be fit for service.

**ESSES**, in the train of artillery, are fixed to draught-chains and made in the form of an S, one end of which is fastened to the chain, and the other hooks to the horses harness, or to a staple: they serve likewise to lengthen and piece chains together.

**ESSIEU**, *Fr.* a piece of solid timber which runs across the carriage, enters the wheel at both ends, and is fastened by means of an S. This word is sometimes written *aissieu*, and signifies literally an axle-tree.

**ESSUYER le feu**, *Fr.* to remain exposed to the fire of cannon or musquetry.

**ESSUYER le premier feu**, *Fr.* to receive the enemy's fire without attempting to fire first.

**ESSUYER la pierre**, *Fr.* a word of command in the platoon exercise, which signifies to try the flint.

**ESTABLAGE**, *Fr.* the harness which is between the two shafts of a cart, and serves to support them.

**ÉTABLIES**, *Fr.* troops which guarded towns or forts were formerly so called. The term garrison has been since substituted.

**To ESTABLISH**. To fix, to settle. It is likewise a technical phrase, to express the quartering of any considerable body of troops in a country. Thus it is common to say: The army took up a position in the neighbourhood of — and established its head quarters at —

**ESTABLISHMENT**, in the military sense, implies the quota of officers and men in an army, regiment, troop, or company.

**Peace-ESTABLISHMENT**. is the reduction

duction of corps to a certain number, by which the aggregate force of a country is diminished, and its expenditure lessened.

**Warr-ESTABLISHMENT**, is the augmentation of regiments to a certain number, by which the whole army of a country is considerably increased.

**ESTACADE**, *Fr.* a dyke constructed with piles, in the sea, river, or morass, to oppose the entry of troops or succours.

**ESTAFETTE**, a military courier, sent express from one part of an army to another.

**ESTAFFE**, contribution money.

**ESTAFILADE**, *Fr.* a cut across the face.

**ESTIMATE**, army estimates are the computation of expences to be incurred in the support of an army for a given time.

**ESTOC**, *Fr.* the point of a sword or sabre, or of any other weapon.

**D'Estoc & de Taille**, to push and thrust vigorously at one's antagonist, in every direction.

**ESTOCADÉ**, *Fr.* a long rapier, (called in derision *brette*, or *flamberge*;) used by duellists.

**ESTOILE**. See **Etoile**.

**ESTRADE**, *Fr.* a road or way. This word is derived from the Italian *strada*, which signifies road, street, or way. Some writers take its etymology from *Estradiots*, a class of men on horseback, who were employed in scouring the roads, and in procuring intelligence respecting the movements of an army. See **BATEUR d'ESTRADE**.

**ESTRADE ou retraite**, *Fr.* the retrograde movement which an armed body makes in order to avoid an engagement, or to secure a retreat after having been unsuccessful.

**Battre l'Estrade ou la retraite**, *Fr.* to give notice to troops, by beat of drum or sound of trumpet, that they must retire. This occurs when an engagement is not successful; when it is prudent to avoid one; or when circumstances require that the men should repose.

**ESTRADIOTS**, *Fr.* very brave warriors, who, like the Turks and Arabs, are very expert in managing their horses. They formerly made themselves very formidable in that part of Italy which is called the *Apennine mountains*; for,

being more hardy than the Turks, they could keep the field the whole year round. Their favourite weapon was the *zagaye*.

**ESTRAMACON**, *Fr.* a kind of sword or sabre, formerly in use. It also means the edge of a sabre: hence *Estramaconner*, to wound with a sabre.

**ESTRAPASSER**, *Fr.* to ride a horse beyond his strength.

**ÉTABLISSEMENT**, *Fr.* an advantageous position, in which a body of troops, well supplied with provisions, will make a successful stand.

**ÉTAGES de batteries**, *Fr.* the different stages, or small emplacements (forming sometimes a species of amphitheatre), upon which batteries are erected, as at the flanks of bastions, &c. or in other quarters. Their use or object is to protect every thing in front by a considerable range of artillery. The battery which is least elevated on a bastion is called *batterie inférieure ou flanc bas*, lower battery, or under flank. The next is termed *seconde batterie*, second battery, whether it consists of two or more pieces; and the highest is named *batterie supérieure*, superior or upper battery. Advantage is often taken of the ground upon which a fortress is erected, in order to dispose artillery in this manner; and the declivity of a mountain is equally useful towards covering an army in the day of battle.

**ÉTAGES de Fourneaux ou de mines**, *Fr.* the various chambers or excavations which are made, one over the other, for the defence or attack of fortified places.

**ÉTAI** or **ETAIN**, *Fr.* tin. A white metal of a consistency less hard than silver, but firmer than lead. It is used in the casting of cannon. The best quality is found in Cornwall.

**ÉTANÇONNER**, *Fr.* in mining, and in other works of fortification, to put up stays, &c.

**ÉTANÇONS**, *Fr.* stays, supporters. Large pieces of wood which are fixed vertically in the cavities of mines, for the purpose of sustaining the weight of earth that is laid upon the galleries.

**ÉTAPE**, *Fr.* subsistence, or a soldier's daily allowance. See **SCOUTS-TEUCE**.

**ÉTAPIERS**, *Fr.* were military purveyors, who accompanied the French armies, or were stationed in particular places

places to supply the troops on their march.

ÉTAT, *Fr.* roll, or list of names, &c. such as a muster-roll. *Etat* likewise means the pay list.

ÉTAT-MAJOR, *Fr.* Staff. *Etat-major* in the French service, is a more comprehensive term than staff appears to be in our acceptation of the word. As we have in some degree adopted the term, it cannot be superfluous to give a short account of its origin, &c. Among the French, according to the author of the *Recueil Alphabetique de tous les termes propres à l'art de la guerre*, *etat-major* signifies a specific number of officers who are distinguished from others belonging to the same corps. It did not follow, that every regiment was to have its staff, as the king had the power of appointing or suppressing staff officers at pleasure.

The *état-major général de l'infanterie*, or the general staff of the infantry, was created under Francis I. in 1525. That of the light cavalry under Charles IX. in 1565. That of the dragoons under Louis XIV. in 1669.

The *état-major* of an infantry regiment, was composed of the colonel, the major, the aid-major, quarter-master, the chaplain, the provost-marshal, the surgeon, and the attendant commissary, who was called *le commissaire à la conduite*. To these were added the lieutenant of the provost-ship, the person who kept the regimental register, or the greffier, the drum-major, six archers, and the executioner. By this establishment it is presupposed, that a provost-ship was allowed in the regiment, which was not a general regulation, but depended upon the king's pleasure.

The *état-major*, or staff of an old French regiment of cavalry, according to the *Ordonnance*, or military regulation which was issued on the 4th of November, in 1651, consisted of the *mestre de camp*, or colonel of the horse, the major and the aid-major. It is therein particularly stated, that the *état-major* of a cavalry regiment shall not have a provostship, a chaplain, a surgeon, nor any other subordinate officer under that denomination.

Every fortified town or place had likewise its appropriate *état-major*, consisting of a certain number of officers,

who were subject to specific and distinct regulations.

By an order dated the 1st of August, 1733, the officers belonging to the *état-major* of a garrison town, or citadel, were strictly forbidden to absent themselves more than four days from their places of residence, without especial leave from the king, nor even for four days, unless they obtained permission from the governor or commandant of the town or citadel. See *STATI-CORPS*.

ÉTAT DE LA GUERRE, *Fr.* the necessary dispositions and arrangements agreed upon between a government, the commander in chief, and such officers as the latter may think proper to consult, in order to carry on a campaign with advantage. Properly speaking, it is the plan which is to be followed relative to the nature and number of the troops that are to be employed.

ÉTENDART, *Fr.* Standard. This word derives its name from the circumstance of its application, being constantly stretched out, (*étendu*) or displayed. This etymology does not appear to hold good with our translation of the word.

ÉTENDRE une armée, *Fr.* to extend the front or advanced posts of an army, for the purpose of appearing formidable to the enemy, or of outflanking him. This is a most critical manœuvre, and requires the nicest judgment. The battle of Marengo would probably never have been lost by the Austrians, had not their General, Melas, weakened his centre, by the extension of his flanks. This ill-judged movement gave the opening which was so dexterously seized upon by Dessaix, to whom the French and Bonaparte stand indebted for the victory.

ÉTENDRE une tranchée, *Fr.* to prolong the parallels or places of arms, either on one side only, or to the right and left of a trench.

ÉTERCILLON, *ou arcloutant*, *Fr.* Buttress. A piece of wood which is placed transverse, or horizontally in the galleries of a mine, in order to sustain the earth on both sides; but most especially to keep the chamber well closed, and to support the corners of the gallery.

ÉTIQUETTE, a French term, primarily denoting a ticket or title affixed to

to a bag or bundle of papers, expressing its contents. It is also used, when applied to the Spanish and some other courts, to signify a particular account of what is to be done daily in the king's household. It likewise denotes those forms that regulate the decorum of conduct towards persons of various ranks and stations. In the Austrian service, military etiquette is punctiliously attended to; and in the old French service the utmost deference was paid to a superior officer by an inferior, at all times, and on all occasions.

**ÉTOILES**, *Fr.* small redoubts, which are constructed by means of angles reentrant and angles sortant, and have from five to eight salient points. Each one of their sides or faces may contain from 12 to 25 toises. This species of fortification has fallen into disuse, not only because etoiles do not possess the advantage of having their angle reentrant effectually flanked, but because they have been superseded, by square redoubts, which are sooner built, and are applicable to the same purposes of defence.

**ÉTOUPILLE**, *Fr.* an inflammable wick, composed of three threads of very fine cotton, which is well steeped in brandy mixed with the best punting gun-powder.

**ÉTRANGERS**, *Fr.* Strangers.

*Règlement militaire relatif aux ÉTRANGERS qui arrivent aux portes d'une ville de guerre*, *Fr.* rules and regulations observed in all garrison towns relative to strangers. It is customary in all garrison towns abroad, not to suffer a stranger to enter the place without being asked at the outward gate, his name, the place he comes from, whither he is going, and at what inn or private house he intends to alight. He is next brought to the officer of the guard, who has him conducted before the governor or commandant, who suffers him to proceed, if his papers are correct: if not, he is put under arrest. The inhabitants and inn-keepers are obliged to send in, within 24 hours, the names of their lodgers. It were to be wished that more circumspection could be observed in our own sea-ports on this head.

The entrance into the camps of Great Britain and Ireland is not sufficiently

guarded in this respect; particularly of those which are opposite the French and Dutch shores.

**ÉTRAPADE**, *Fr.* a sort of crane with a pulley. This machine was formerly used among the French in order to punish military delinquents; it was hence called *l'étrapade*. The unfortunate wretch had his hands tied behind his back, with ropes fastened to them; he was then hauled up, and suddenly let down within one foot of the ground; so that by means of the jerk, and through the weight of his body, every limb must instantly be dislocated. This barbarous and inhuman mode of torturing the human frame was repeated more than once, according to the degree of guilt with which the culprit stood accused or convicted. This punishment has been in use at Rome, for the purpose of correcting disorderly conduct at the opera, &c.

**ÉTRIÈRE**, *Fr.* stirrup.

**ÉTRIVIERES ou courroies**, *Fr.* the straps of leather which hang on each side of a saddle, commonly called stirrup leathers.

To **EVACUATE**, (*evacuer*, *Fr.*) In military history, a term made use of in the articles of capitulation granted to the besieged at the time they surrender to the besiegers, and signifying to quit.

**EVACUATION**, (*évacuation*, *Fr.*) the evacuation of a town or post in consequence of a treaty between the belligerent or neutral powers, in pursuance of superior orders, or from obvious necessity.

**ÉVADER**, *Fr.* to go off clandestinely; to retreat in the night, or under any other cover.

**ÉVASEMENT d'une embrasure**, *Fr.* that part of an embrasure that is facing the rampart.

**ÉVASION**, *Fr.* clandestine retreat.

**ÉVENT**, *Fr.* vent. This word is particularly applicable to the vent or cavity which is left in cannon, or other fire-arms, after they have been proved and found defective. The vent is sometimes round and sometimes long. Vents are frequently so exiguous, that they appear like lines of a small fibre, through which water will ooze, and smoke evaporate. These pieces, whether of ordnance or of musquetry, are of course rejected.

**ÉVERSION**, *Fr.* The ruin, the overthrow of a state, occasioned by a long war, or by continual internal disturbances and seditions.

**EVIDENCE**, a declaration made *virâ voce* of what any person knows of his own knowledge relative to the matter in question. Military men are obliged to attend and give evidence before courts martial, without any expence to the prosecutor or prisoner.

*Hearsay* **EVIDENCE**, the declaration of what one has heard from others. As in all other courts of British judicature, this species of evidence is not admissible in courts martial.

**EVOCATI**, were a class of soldiers among the Romans, who, after having served their full time in the army, entered as volunteers to accompany some favourite general. Hence they were likewise called *emeriti* and *beneficarii*.

**EVOCATION**, a religious ceremony which was always observed among the Romans, at the commencement of a siege, wherein they solemnly called upon the gods and goddesses of the place to forsake it, and come over to them. When any place surrendered, they always took it for granted, that their prayer had been heard, and that the *Di Penates*, or the household gods of the place had come over to them.

**EVOLUTION**, in the art of war, the motion made by a body of troops, when they are obliged to change their form and disposition, in order to preserve a post, occupy another, to attack an enemy with more advantage, or to be in a condition of defending themselves the better. That evolution is best, which, with a given number of men, may be executed in the least space, and consequently in the least time possible.

**EVOLUTION** of the *moderns*, is a change of position, which has always for its object either offence or defence. The essentials in the performance of an evolution are, order, directness, and the greatest possible rapidity.

**EVOLUTIONS** may be divided into two classes, the simple and the compound; simple evolutions are those which consist in simple movements, which do not alter the shape or figure of the battalion, but merely afford a more or less extended front or depth;

keep it more or less closed to its flank or center, turn its aspect to flank or rear, or break it into divisions, subdivisions, sections or files, in order that it may unfold itself, or desile and resume its proper front or order of battle. All the various ways of desiling, forming line, opening to right and left, closing or deploying, doubling the ranks or files, or changing front upon either of the flanks by conversion, are called simple evolutions.

Compound evolutions are those which change the shape and figure of battalions, break them into divisions or companies, separate the companies from the main body, and again replace or rejoin them; in a word which afford the means of presenting a front at every direction.

Compound evolutions are practised either by repeating the same simple evolution several times, or by going through several simple evolutions, which ultimately tend to the same object.

The **EVOLUTIONS** of the *ancients* were formed and executed with uncommon good sense and ability. Considering the depth and size of the Grecian phalanx, it is astonishing how the different parts could be rendered susceptible of the most intricate and varied evolutions. The Roman legion, though more favourable to such changes and conversions, from being more loose and detached, did not execute them upon sounder or better principles.

**EVOLUTION** (*in geometry*) the equal evolution of the periphery of a circle, or any other curve, is such a gradual approach of the circumference to rectitude, as that all its parts do meet together, and equally evolve or unbend; so that the same line becomes successively a less arch of a reciprocally greater circle, till at last they turn into a straight line.

**EVOLUTION** of *powers* (*in algebra*) extracting of roots from any given power, being the reverse of involution.

**EXAGON**. See **HEXAGON**.

**EXAMILIAN**, a famous wall two leagues long, which one of the Grecian Emperors caused to be erected on the Isthmus of Corinth. Amurat II. ordered it to be demolished, but the Venetians had it erected again in 1463, in a fortnight's time.

**EXAMINER**. One who scrutinizes.

**EXAMINER** of the *army accounts*, is a person

person in office, under whose inspection all claims made by the regimental agents fall; to whose office they are transmitted of course, in virtue of a general delegation of that duty to him by the secretary at war; after his examination and report, the secretary at war, in many instances, orders partial issues of money by letter to the pay master general. No final payment is made, except under the authority of a warrant countersigned by the secretary at war, and in most instances by three lords of the treasury. The regimental agents account finally to the secretary at war.

**EXCAVATION**, the act of cutting or otherwise making hollows; also the cavity formed. In military matters, it is generally applied to the place from whence the earth or other substance has been taken by mining.

**EXAMPLE**, any act or word which disposes to imitation. The example of a superior officer has considerable influence over the mind of an inferior; but in no one instance does it appear more important than in the good and bad behaviour of a non-commissioned officer or corporal. These characters, therefore, should be particularly correct in their duties, tenacious of every principle of military honour, and remarkable for honesty. Old soldiers should likewise direct their attention to the strict observance of rules and regulations, as young recruits always look up to them for example.

**EXAMINATION**, a scrutiny or investigation of abilities, conduct, &c. All officers of artillery and engineers are obliged to undergo an examination in mathematics, fortification, and gunnery, prior to their having commissions. Surgeons and assistant surgeons are examined before the medical board.

**EXACTORATIO**, in the Roman military discipline, differed from the *missio*, which was a full discharge, and took place after soldiers had served in the army 20 years; whereas the *exactoratio* was only a partial discharge: they lost their pay indeed, but still kept under their colours or vexilla, though not under the aquila or eagle, which was the standard of the legion; whence instead of *legionarii*, they were called *subsignarii*, and were retained till they had either served their full time, or had

lands assigned them. The *exactoratio* took place after they had served 17 years.

**EXCELLENCY**, a title anciently given to kings and emperors, but now chiefly confined to ambassadors, generals and other persons, who are not entitled to that of highness, and yet are to be elevated above the other inferior dignities.

It is likewise applicable to persons in high command; as his excellency, the commander in chief.

**EXCHANGE**, in a military sense, implies the removal of an officer from one regiment to another, or from full to half pay, and *vice versa*: It is usual on these occasions for individuals belonging to the latter class to receive a pecuniary consideration. See **DIFFERENCE**.

**EXCHANGE of prisoners**, the act of giving up men, that have been taken in war, upon stipulated conditions which are subscribed to by contending powers.

**EXCHANGE**, in a general sense, signifies any contract or agreement whereby persons or things are exchanged for others.

**EXCHEQUER**. The public office from whence all monies are issued for the use of the army. With respect to the militia, it is enacted that the money paid for that particular service, shall be kept apart from all other money.

Officers belonging to the exchequer are not to take any fees for receiving, or issuing such money.

**EXCITE**. See **ANIMATE**.

**EXCUBITE**, in antiquity, the watches and guards kept in the day by the Roman soldiers. They differed from the *vigilæ* which were kept in the night.

**EXCURSION**, *Fr.* irruption or incursion of one nation into another, for hostile purposes.

**EXECUTER**, *Fr.* The French use this verb technically. They say, *exécuteur et servir une pièce*. See the particular method of so doing, under **TIRE le canon**, to fire a gun or cannon.

**EXECUTER**, *Fr.* to execute, to put to death.

**EXECUTION**.—*Military EXECUTION* (*exécution militaire sur pays ennemi*, *Fr.*) the plunder and waste of a country whose inhabitants refuse to submit to the terms imposed upon them.

*Military EXECUTION* also means every kind of punishment inflicted on the

the army by the sentence of a court-martial; which is of various kinds, such as tying up to 3 halberts, and receiving a number of lashes with a whip, composed of 9 whip-cord lashes, and each lash of 9 knots, from the drummer: or running the gantlope through the parade at guard mounting, drawn up in two lines for that purpose; when the provost marches through with twigs or switches, and every soldier takes as many as there are prisoners to be punished: the prisoner then marches through the 2 lines, and each soldier gives him a hard stroke, the major riding up and down to see that the men lay on properly. When a soldier is to be punished with death, a detachment of about 200 men from the regiment he belongs to form the parade, when a file of grenadiers shoots the prisoner to death.

**N. B.** Every nation has different modes of punishment. The cat with nine tails is to punish foot soldiers; dragons and cavalry men are generally picketed.

**EXECUTORS**, persons authorized by will to manage the affairs of one deceased. Paymasters, agents, or clerks, not accounting with the executors of officers or soldiers, forfeit their employment and 100*l*. See *Mutiny Act*, Sect. 71.

**EXEMPT**, men of 45 years of age are exempt from serving in the militia. An aid-de-camp and brigade-major are exempt from all regimental duties while serving in these capacities. Officers on courts-martial are sometimes exempt from all other duties until the court is dissolved.

**EXEMPTION**, the privilege to be free from some service or appearance. Thus officers and principals in the militia who have served during the war, according to prescribed regulations, are exempted from being balloted for.

**EXEMTS**, *Fr.* so called originally, from being exempted from certain services, or entitled to peculiar privileges. The exons of St. James's derive their appellation from exemts. In France they consisted of three classes, viz.

**EXEMTS du ban et arrière ban**, persons exempted from being enrolled for that particular service were so called. They consisted of the domestic attendants belonging to the palace, those attached to the princes and princesses of

the blood; all persons actually serving his majesty, together with the sons of officers who were in the army.

**EXEMTS des gardes du corps**. Exempts belonging to the body guards. They were twelve in number, and held the rank of captains of cavalry, taking precedence of all captains whose commissions were of a younger date to the brevet of the exempts.

These brevet commissions were given away under the old government of France. The exons purchase their places at St. James's, but they do not tack with the army.

**EXEMTS des maillechaussées**. Certain persons employed to keep the public peace. *Maillechaussée* means in a literal sense, marshalcy. But the functions of the exempts were of a nature peculiar to France. They held their situations under commissions, bearing the great seal, which were forwarded to them by the secretary at war. The privileges they enjoyed were to be exempted from all taxes, &c. but they could not institute any species of criminal information without the concurrence of the greffier or sheriff.

**EXERCISE**, in military affairs, is the practice of all those motions and actions, together with the whole management of arms, which a soldier is to be perfect in, to render him fit for service, and make him understand how to attack and defend. Exercise is the first part of the military art; and the more it is considered the more essential it will appear. It disengages the human frame from the stiffness of simple nature, and forms men and horses to all the evolutions of war. The honour, merit, appearance, strength, and success of a corps depend wholly upon the attention which has been paid to the drill and exercise of it, according to prescribed rules and regulations; while on the other hand we see the greatest armies, for want of being exercised, instantly disordered, and that disorder increasing in spite of command; the confusion oversets the art of skilful masters, and the valour of the men only serves to precipitate the defeat: for which reason it is the duty of every officer to take care, that the recruits be drilled as soon as they join the corps.

The greatest advantage derived from

this species of exercise, is the expertness with which men become capable of loading and firing, and then learning an attention to act in conformity with those around them. It has always been lamented, that men have been brought on service, without being informed of the uses of the different manœuvres they have been practising; and that having no ideas of any thing but the uniformity of the parade, they instantly fall into disorder and confusion when they lose the step, or see a deviation from the straight lines they have been accustomed to at exercise. It is a pity to see so much attention confined to show, and so little given to instruct the troops in what may be of use to them on service. Though the parade is the place to form the characters of soldiers, and to teach them uniformity, yet when confined to that alone, it is too limited and mechanical for a true military genius.

The great loss which our troops sustained in Germany, America, and the West-Indies, during a former war, from sickness, and not from the enemy, was chiefly owing to a neglect of exercise. An army whose numbers vanish after the first 4 months of a campaign, may be very ready to give battle in their existing period; but the fact is, that although fighting is one part of a soldier's business, yet bearing fatigue, and being in health, is another, and at least as essential as the first. A campaign may pass without a battle; but no part of a campaign can be gone through without fatigue, without marches, without an exposure to bad weather; all of which have exercise for their foundation; and if soldiers are not trained and enured to these casualties, but sink under them, they become inadequate to bodily fatigue, and eventually turn out a burthen to their country.

It is not from numbers, or from inconsiderate valour, that we are to expect victory; in battle she commonly follows capacity, and a knowledge of arms. We do not see, that the Romans made use of any other means to conquer the world, than a continual practice of military exercises, an exact discipline in their camps, and a constant attention to cultivate the art of war. Hence, both ancients and moderns agree, that there is no other way to form good

soldiers, but by exercise and discipline; and it is by a continual practice and attention to this, that the Prussians have arrived at that point of perfection which has been so much admired in their evolutions, and manual exercise.

Formerly in the British service every commander in chief, or officer commanding a corps, adopted or invented such manœuvres as he judged proper, excepting in the instance of a few regulations for review: neither the manual exercise, nor quick and slow marching were precisely defined by authority. Consequently when regiments from different parts of the kingdom were brigaded, they were unable to act in line till the general officer commanding had established some temporary system to be observed by all under his command.

These inconveniences were at length obviated by the rules and regulations compiled by general Dundas on the system of the Prussian discipline, as established by Frederick the Great.

By His Majesty's orders first issued in 1792, this system is directed to be "strictly followed and adhered to without any deviation whatsoever. And such orders before given, as are found to interfere with, or counteract their effect and operation, are to be considered as cancelled and annulled."

*Infantry* EXERCISE, includes the use of the firelock and practice of the manœuvres for regiments of foot, according to the regulations issued by authority.

When a regiment of foot is drawn up, or paraded for exercise, the men are placed two and sometimes three deep, which latter is the natural formation of a battalion. The grenadiers are on the right, and the light infantry on the left. In order to have the manual exercise well performed, it is in a particular manner requisite, that the ranks and files be even, well dressed, and the file-leaders well covered: this must be very strictly attended to both by the major, and his adjutant: all officers also, on service in general, where men are drawn up under arms, or without, must be careful, that the ranks and files are exactly even; and the soldiers must learn to dress themselves at once, without the necessity of being directed to do it. The beauty of all exercise and marching, consists in seeing a soldier

carry

carry his arms well, keep his fire-lock steady and even in the hollow of his shoulder, the right hand hanging down, and the whole body without constraint.—The musquets when shouldered, should be exactly dressed in rank and file; the men must keep their bodies upright, and in full front, not having one shoulder too forward, or the other too backward. The distances between the files must be equal, and not greater than from arm to arm, which gives the requisite room for the motions. The ranks are to be two paces distant from each other. Every motion must be done with life, and all facings, wheelings, and marchings, performed with the greatest exactness. Hence a regiment should never be under arms longer than two hours. See **FIRING, MANUAL AND MANOEUVRES.**

**Cavalry EXERCISE,** is of two sorts, on horseback, and on foot. The squadrons for exercise are sometimes drawn up three deep, though frequently two deep; the tallest men and horses in the front, and so on. When a regiment is formed in squadrons, the distance of 24 feet, as a common interval, is always to be left between the ranks; and the files must keep boot-top to boot-top. The officers commanding squadrons must, above all things, be careful to form with great celerity, and, during the whole time of exercise, to preserve their several distances. In all wheelings, the flank which wheels, must come about in full gallop. The men must keep a steady seat upon their horses, and have their stirrups at a fit length.

**Cavalry Sword EXERCISE.** See **SWORD EXERCISE.**

**Artillery EXERCISE,** is the method of teaching the regiments of artillery the use and practice of all the various machines of war, viz.

**EXERCISE of the light field pieces,** teaches the men to load, ram, and sponge the guns well; to elevate them according to the distance, by the quadrant and screw; to judge of distances and elevations without the quadrant; how to use the port-fire, match, and tubes for quick firing; how to fix the drag ropes, and use them in advancing, retreating, and wheeling with the field-pieces; how to fix and unfix the trail of

the carriage on the limbers, and how to fix and unfix the boxes for grape-shot on the carriages of each piece.

**EXERCISE of the garrison and battering artillery,** is to teach the men how to load, ram, and sponge; how to handle the hand-spikes in elevating and depressing the metal to given distances, and for ricochet; how to adjust the coils, and work the gun to its proper place; and how to point and fire with exactness, &c.

**Mortar EXERCISE,** is of two different sorts, viz. with powder and shells unloaded, and with powder and shells loaded; each of which is to teach the men their duty, and to make them handy in using the implements for loading, pointing, traversing, and firing, &c. See **PRACTICE.**

**Mortar EXERCISE,** differs but little from the mortar, except that it is liable to various elevations; whereas that of the mortar is fixed to an angle of 15°; but the men should be taught the method of ricochet-firing, and how to practice with grape-shot: each method requiring a particular degree of elevation. See **PRACTICE.**

**EXERCISES,** are also understood, of what young gentlemen or cadets learn in the military academies and riding schools; such as fencing, dancing, riding, the manual exercise, &c. The late establishment at High Wycomb is calculated to render young officers perfectly competent to all the duties of military service, provided they have been previously instructed in the first rudiments. Officers are there taught and exercised in the higher branches of tactics and manoeuvres. We hope, for the sake of the army in general, that this institution will be extended in proportion to the service which a more enlarged scale would unquestionably render.

**EXHORT.** See **ANIMATE.**

**EXPEDITION,** (*expédit*, Fr.) in a general sense, signifies haste, speed, rapidity. In a military sense, it is chiefly used to denote a voyage or march against an enemy, the success of which depends on rapid and unexpected movements. It is out of the nature of the thing itself to lay down fixed rules for the minute conducting of small expeditions; their first principles only can be

be with certainty fixed, and men will often disagree about preparations and differ in their conduct, though they acknowledge the same principles.

One of the principles of many small expeditions, is surprise; and 6 battalions, without much accompaniment, may sometimes do that which 24, and a great fleet, would not succeed in.

There is no part of war so interesting to an insular soldier as an expedition; nor can there be any part more worthy of attention.

EXPEDITIONS hitherto have had no rules laid down for their conduct, and that part of war has never been reduced to a system. The slow rules of a great war will not do in expeditions; the blow must be struck with surprise, and intimidation be produced in the invaded enemy, before succours can arrive. Debate is out of season, and all slow proceedings are ruin. Not to advance, is to recede; and not to be on the road to conquest, is to be already conquered. There must be that glance, which sees certainly, though instantly; that rapidity, which executes on the surest rules, when it seems least to act on any.

In all small expeditions, such as expeditions of surprise, or *coups-de-main*, the favourable side of the proposed action must ever be viewed; for if what *may* happen, what *may* arrive, what *may* fall out, is chiefly thought upon, it will, at the very best, greatly discourage, but in general end in a total failure. Hence the very name of an expedition implies risk, hazard, precarious warfare, and a critical operation.

An expedition is governed by five principal maxims.

1st, A secrecy, if possible, of preparation, and a concealment of design, &c.

2dly, That the means bear proportion to the end. In this there will ever be a difference in opinion.

3dly, A knowledge of the state and situation of the country, where the scene of action is, or the place or object that is to be attacked.

4thly, A commander who has the particular turn of mind, which is most adapted to such particular sort of warfare.

Lastly, The plan of an expedition, great or small, is ever to be arranged

as much as possible before setting out, and then any appearances that may vary a little from what might have been expected, will not perplex.

EXPEDITION, *Fr.* See expedition. The French likewise use this word, to express any particular military quality, which an officer or soldier may possess. As, *cet officier est un homme d'expédition*; this officer is a man of enterprise, is courageous and daring.

EXPEDITIONS, *Fr.* Dispatches.

EXPÉDITIONNAIRE, *Fr.* an officer at the Pope's Court, whose duty it is to attend to the dispatches. The French also use this term as an adjective, viz. *Armée expéditionnaire*, an army collected together for an expedition.

EXPLOIT. See ACHIEVEMENT.

To EXPLODE, to burst or blow up.

EXPLORATEUR, *Fr.* in a military sense, a person sent out to reconnoitre. In plain English an authorized or rather pensioned spy. According to Mr. Sheridan, a genteel reporter. It was usual among the French, (and is so probably at this moment) to give a certain rank with adequate allowances, to divers ingenious men, in order to afford them an introduction at the several courts, for the specific purpose of observing what passed, &c. The French are great adepts in this art.

EXPLOSION, the discharge of a gun, the blowing up of a mine or the bursting of a shell.

S'EXPOSER, *Fr.* to expose one's self to the fire of the enemy, and to all manner of danger.

EXPRESS. A messenger sent with direct and specific instructions.

To send by EXPRESS, to send any thing by extraordinary conveyance.

EXPUGN, } the taking any  
EXPUGNATION, } place by assault.

EXPUNCTUS, a Roman soldier who had been discharged or degraded, and consequently struck off the muster-roll.

EXPERIMENTS, in a military sense, are the trials, or applications of any kind of military machines, in order to ascertain their practical qualities and uses.

EXTEND, when the files of a line, or the divisions of a column are to occupy a greater space of ground, they are said to extend their front or line. Extended

tended order is applicable to the light infantry.

**EXTORTION**, the act of obtaining money or property by violence or unjust means; taking advantage of the ignorance or peculiar circumstances of a purchaser, to demand more than a fair price for an article. All sutlers, or camp followers, who are guilty of extortion in the sale of necessaries, are punishable by a general or regimental court-martial.

**EXTRADOS**, *Fr.* The exterior surface of a regular arch, used in the construction of powder magazines.

**EXTRAORDINAIRE de la guerre**, *Fr.* a fund which is collected for the extraordinary expences of a war.

**EXTRAORDINARIES of the army**. The allowances to troops, beyond the gross pay in the pay-office, come under the head of extraordinaries to the army. Such are the expences for barracks, marches, encampments, staff, &c.

**EXTRAORDINARIJ**, among the Romans, were a body of men consisting of a third part of the foreign horse, and a fifth of the foot, which body was separated from the rest of the forces borrowed from the confederate states, with great caution and policy, to prevent any design, that they might possibly entertain against the natural forces. A more choice body of men was drawn from amongst the extraordinarij, under the name of ablecti. See **ABLECTI**.

**EXTRAORDINARY**. Something out of the common course.

**EXTRAORDINARY couriers**, persons sent with some information or order of great importance.

**EXTRAORDINARY guards**. Guards out of the common routine of duty. They are frequently given as a punishment for military offences.

**EXTRÉMITÉ**, *Fr.* reduced to the last shift. When a besieged town is entirely destitute of provisions and of means of defence, it is said to be reduced to the last extremity.

**EYES center**, a word of command given when the battalion is advancing in line, denoting, that the men are to look to the center in which the colours are placed, and dress by them.

**EYES right**, } Words of command de-  
**EYES left**, } noting the flank to which the soldier is to dress. In casting his eyes to either flank care must be taken that the shoulders are kept square to the front.

**EYES front**, a word of command given after the dressing in line is completed, on which the soldier is to look directly forward, which is the habitual position of the soldier. These motions are only useful on the wheelings of divisions, or when dressing is ordered *&c.* a halt, and particular attention must be paid in the several turnings of the eyes, to prevent the soldier from moving his body, which must invariably be preserved perfectly square to the front. See *Regulations*, p. 1.

**EYE-bolts**. See **BOLTS**.

## F

**FACADE**, in military fortification. See **FACE**.

**FACE**, in fortification, is an appellation given to several parts of a fortress; as the

**FACE of a bastion**, the two sides, reaching from the flanks to the salient angle. These in a siege are commonly the first undermined, because they extend most outwards, and are the least flanked; consequently the weakest.

**FACE prolonged**, } that part of the  
**FACE extended**, } line of defence razant, which is terminated by the curtain and the angle of the shoulder, that is, it is, strictly taken, the line of defence razant, diminished by the face of the bastion.

**FACE of a place**, (*face d'un ouvrage*, *Fr.*) is the front comprehended between the flanked angles of the two neighbouring bastions, composed of a curtain,

two flanks, and two faces; and is sometimes called the *Ténaille of the place*.

**FACE of a gun**, is the superficies of the metal at the extremities of the muzzle of the piece.

**FACE**, (to the right, left, &c.) a word of command on which the soldiers individually turn to the side directed; in performing which, the left heel should never quit the ground, the knees must be kept straight, and the body turned smoothly and gracefully.

*To the right*, **FACE**. 2 motions.—1st, Place the hollow of the right foot smartly against the left heel; 2d, Raise the toes, and turn a quarter of the circle to the right on both heels.

*To the right about*, **FACE**. 3 motions.—1st, Place the ball of the right toe against the left heel; 2d, Raise the toes, and turn half of a circle to the right about on both heels; 3d, Bring the right foot smartly back in a line with the left.

*To the left*, **FACE**. 2 motions.—1st, Place the right heel against the hollow of the left foot; 2d, Turn a quarter of the circle to the left on both heels.

*To the left about*, **FACE**. 3 motions.—1st, Place the right heel against the ball of the left foot; 2d, Raise the toes, and turn half of a circle to the left about on both heels; 3d, Bring up the right foot smartly in a line with the left.

Great precision must be observed in these facings; otherwise the dressing will be lost in every movement.

**FACES of a square**. The different sides of a battalion, &c. when formed into a square, are all denominated faces, viz. the *front face*, the *right face*, the *left face*, and the *rear face*. See **SQUARE**.

**FACE du bataillon**, Fr. See **Front d'une armée**.

**FACE ou pan de bastion**, Fr. See **FACE of a bastion**.

**FACINGS**, are the different movements of a battalion, or of any other body of men, to the right, to the left, or right and left about. All facings must be executed with a straight knee; and the body must be kept firm, and turn steadily, without dropping forward or jerking. The plant of the foot, after facing about, must be sharp.

**FACINGS**, likewise signify the lapels, cuffs, and collar of a military uniform, and are generally different from the colour of the coat or jacket.

**Guerre FACTICE**, Fr. an imaginary contest.

**Bataille FACTICE**, a sham fight! It is also called *guerre simulée*, *guerre de convention*.

**FACTION**, Fr. the duty done by a private soldier when he patrols, goes the rounds, &c. but most especially when he stands centry. The French usually say, *entrer en faction*, to come upon duty; *être en faction*, to be upon duty; *sortir de faction*, to come off duty.

**FACTIONNAIRE**, Fr. *soldat factionnaire*, a soldier that does every species of detail duty.

The term *factionnaire* was likewise applicable to the duty done by officers, in the old French service. *Premier factionnaire du régiment* implied, that the officer, so called, was the fourth captain of a battalion; as the colonel, lieutenant colonel, major, and the captains of grenadiers did not mount the ordinary guards.

**FAGOTS**, in military history, are men hired to muster by officers whose companies are not complete; by which means they cheat the sovereign of so many men's pay, and deprive the country of its regular establishment. See *False return*.

**FAGOTS**. See **FASCINES**.

**Fagot ardent**, Fr. a species of fascine which is made of dry sticks steeped in pitch. The *fagot ardent*, or burning fascine, is used in the defence of fortified places, and serves to annoy the besiegers.

**Fagors de Sappe**, Fr. Fascines instead of bags to fill up the spaces between the gabions; they are at most three feet long and eighteen inches diameter.

**Fagots Goudronnés**, Fr. pitched sticks of wood, or branches tied together, which are first set on fire, and then thrown into the ditches in order to see what is going on.

**FAILURE**, an unsuccessful attempt; as the failure of an expedition.

**FAIRE faux feu**, Fr. to miss fire; to flash in the pan.

**FAIRE la ronde**, Fr. to go the rounds.

**FAISCEAU d'armes**, Fr. a pile of arms; a sort of wooden rack or machine which is used for the different stands of arms belonging to a troop or company.

company. The stakes which support the colours are also called *faisceaux*.

**FALTS GUERRIERS**, *Fr.* warlike deeds; feats of personal valour and discretion.

**FALACQUE**, a bastinado given to the janizaries and other Turkish soldiers on the sole of the foot.

**FALAISE**, *Fr.* Any part of the sea-coast is so called by the French, when it is extremely steep, and broken into precipices.

**FALAISER**, *Fr.* to break upon. *La mer faulse* signifies, the sea breaks upon the shore.

**FALAISES**, *Fr.* those borders of the sea which are formed of high steep rocks, mountains, or sand-hills.

**FALGHION**, a short crooked sword.

**FALCON**, or *Faucon*, an ancient name given to a piece of ordnance. See **CANNON**.

**FALCONET**, an ancient name given to a  $\frac{1}{2}$ -pounder. See **CANNON**.

**FALERIQUE**, *Fr.* but not *Falarique*, a kind of dart composed of fire-work, which the ancients shot against the towers of the besieged, in order to set them on fire; the real *falerique*, however, was a beam loaded with fire-work, contained within iron, pointed on all sides, and which was thrown against the towers of the enemy, by means of the *catapulta* or *balista*.

**FALL**. The fall of a place after it has been besieged. See **SURRENDER**.

**To FALL**. A town or fortified place is said to *fall* when it is so completely invested, that the garrison can no longer be subsisted, and must surrender.

**To FALL back**, to recede from any situation in which you are placed. This phrase is frequently, indeed always, made use of in the drill, or exercise of soldiers; particularly during the formation of a line, when individuals, or whole divisions, are apt to overstep their ground and get beyond the dressing point.

**FALL in**, a word of command for men to form in ranks, as in parade, line, or division, &c.

**To fall in** likewise means the minute arrangement of a battalion, company, guard or squad, by which every man is ordered to take his proper post. The long roll, a peculiar beat of the drum, is the usual signal for soldiers to assemble and fall in,

**To FALL into**, to become the property of another, as, we fell in with a large convoy of the enemy, which, after a short resistance made by the Escort, *fell into our hands*.

**To fall into**, to be within the power of a person; as, to fall into the hands of an enemy. The French use the verb *tomber* in the same sense, viz. *tomber entre les mains de l'ennemi*. It also signifies to get into a dangerous situation, as to fall into an ambush laid by the enemy.

**To FALL in with**. A military technical phrase, signifying any sudden or unlooked for rencontre of an enemy. As *Our light cavalry patrols fell in with a party of foragers belonging to the enemy's army*.

**To FALL off**, to desert; to fail; to relax in exertion.

**To FALL out**, to quit the rank or file in which you were first posted. Dirty soldiers on a parade are frequently ordered to *fall out*, and remain in the rear of their companies. The phrase is applicable in a variety of other instances.

**To FAIL upon**. To attack abruptly. As, *we no sooner came in sight of the enemy, but our advanced guard instantly fell upon his out-posts and beat them in*. According to the celebrated General Monk, it is very fit, that a general should often command his horse and dragons to *fall upon* an enemy's outermost horse quarters; which mode, he says, is one of the easiest, readiest, and surest ways to break an enemy's army.

**FALOTS**, *Fr.* small lanterns fixed upon the end of a stick or pole. Small lamps are likewise used, attached in the same manner, for the purpose of carrying them readily about to light a camp, or besieged town, as occasion may require.

**FALSE alarm**, (*fausse alarme*, *Fr.*) an alarm, or apprehension which is either designedly or unintentionally created by noise, report, or signals, without being dangerous.

**FALSE attack**, (*fausse attaque*, *Fr.*) an approach which is made as a reint for the purpose of diverting your enemy from the real object of attack.

**FALSE fires**, any fire or light which is made use of for the purpose of de-

ceiving an enemy. False fires or lights are frequently resorted to when an army finds it necessary to retreat from an advanced position. On this occasion large fires are lighted in different parts of the camp, and round the lines, previous to the departure of the troops, which generally happens in the night.

**FALSE lights**, in debarkations under cover of the night, may likewise be used as signals of deception, when it is found expedient to attract the attention of the invaded country towards one part of the coast or territory, whilst a real attack is meditated against another.

**FALSE muster**, an incorrect statement of the effective number of men or horses, by which government is defrauded. By the articles of war every officer, paymaster, or commissary, found guilty of false mustering, is ordered to be cashiered.

**FALSE report**. A false report in military matters, may be truly said to be the ground work of a false return and a false muster, and consequently the primary cause of imposition upon the public. The strictest attention should, therefore, be paid to the most trifling report which is made in a troop or company respecting the presence or absence of men or horses, the state of clothing, accoutrements or necessaries. This can only be done by the commanding officer of such troop or company having constantly the general good of the service at heart in preference to his own convenience, or to that of others. Every sergeant or corporal of a regiment should be severely punished when detected in making a false report.

**FALSE return**, a wilful report of the actual state of a brigade, regiment, troop, or company, by which the commander in chief or the war-office is deceived, as to the effective force of such regiment, troop or company.

**FANAUX**, *Fr.* lights at the top of a high tower, at the entrance of a seaport. The appellation of *faux* is given to those that light a camp in certain cases; either to deceive the enemy, or to discover his movements by night.

**FANFARE**, *Fr.* a particular military tune. It in general is short, but very expressive, and executed on the trumpet.

**FANFARON**, *Fr.* a bully; a man

who affects a courage he is not possessed of; and who is inwardly conscious of being a coward.

**FANFARONNADE**, } *Fr.* The act  
**FANFARONNERIE**, } of bullying.

**FANION**, *Fr.* corrupted from the Italian word *gonfanone*, a particular standard which was carried in the front of the ordinary baggage belonging to a brigade in the old French service. It was made of serge, and resembled in colour the uniform or livery of the brigadier, or of the commandant of any particular corps.

**FANON**, *Fr.* the diminutive of *gonfanon*. A banner of less width than that worn by a baron.

**FANONS**, *Fr.* the dressing of broken limbs.

**FANTASSIN**, *Fr.* A foot soldier. The term is derived from the Italian *fante*, which likewise signifies infantry.

**FARALON**, *Fr.* a light-house.

**FARIAL**, *Fr.* a light-house; also a watch-light.

**FARRIER**, in a general acceptation of the term, any person who shoes horses, or professes to cure their diseases. In a practical military sense, a man appointed to do the duty of farrier in a troop of dragoons. Troop farriers are under the immediate superintendence and controul of a veterinary surgeon, to whom they must apply whenever a horse is ill or lame, that he may report the same to the officer commanding the troop. No farrier is to presume to do any thing without having first received directions from his superior.

When the farrier goes round, after riding out, or exercise on horsetack, he must carry his hammer, pincers, and some nails, to fasten any shoe that may be loose.

When horses at out-quarters fall particularly ill, or contract an obstinate lameness, the case must be reported to the head-quarters of the regiment; and if the veterinary surgeon cannot prescribe for him at a distance, he must, if time and distance will permit, be personally sent to examine the horse.

No farrier must presume to make up any medicine or any external application contrary to the receipt given him by the veterinary surgeon.

If any farrier, through carelessness or inatten-

inattention, lames a horse belonging to another troop, he ought to be at all the expence in curing the horse so lamed. In some well-regulated dragoon corps this forms one of the standing regimental orders.

**FARRIERS** are in every respect liable to be tried according to the articles of war. They may be ordered to inflict punishments; and they must constantly recollect, that the circumstance of being a farrier is no extenuation for dirty appearance, or excuse for drunkenness. The guilt of the latter vice, indeed, is aggravated by the responsibility of their situation.

**FARRIER-MAJOR**, a person who was formerly appointed by the colonel of a dragoon regiment, to superintend the farriers of troops, who are named by the several commanding officers of them. He has since been superseded & replaced by a veterinary surgeon, who (as the farrier-major was formerly directed,) is to have free access to every stable of the regiment whenever he chooses. It is his duty to go frequently into the cantonments of the different troops, and examine the horses' feet; and if he finds a shoe contrary to the regimental pattern, or discovers any thing amiss in the management of the troopers' horses, he is to report it immediately to the officer commanding the regiment. In all his duty he is to receive the utmost support from every officer and quarter-master; and any farrier that dares to act contrary to his instructions, should be punished. There ought, in fact, to be a chain of mutual support and co-operation from the veterinary surgeon, up to the commanding officer of every cavalry regiment; each farrier looking to the veterinary surgeon for correct instructions relative to the preservation of every horse's health.

**FASCINAGE**, *Fr.* any bed or floor which is made of fascines.

**FASCINES**, in fortification, are a kind of fagots, made of small branches of trees or brush-wood, tied in 3, 4, 5, or 6 places, and are of various dimensions, according to the purposes intended. Those that are to be pitched over, for burning lodgements, galleries, or any other works of the enemy, should be  $1\frac{1}{2}$  or two feet long. Those that are for making epaulements or chandeliers, or to raise works, or fill up ditches, are 10

feet long, and 1 or  $1\frac{1}{4}$  feet in diameter. They are made in the following manner; 6 small pickets are struck into the ground, 2 and 2, forming little crosses, well fastened in the middle with willow bindings. On these trestles the branches are laid, and are bound round with withes at the distance of every 2 feet. Six men are employed in making a fascine; 2 cut the boughs, 2 gather them, and the remaining 2 bind them. These six men can make 12 fascines every hour. Each fascine requires five pickets to fasten it.

**FASINESSES**, strong places not easily forced.

**FATALISTE**, *Fr.* a man who believes in predestination; which see.

**FATHOM**, in fortification, originally denoted that space which a man could reach when both his arms were extended; but it now means a measure of 6 feet or 2 yards, equivalent to the French word *toise*.

**FACCHION**. See **FALCHION**.

**FALCON**. See **FALCON**.

**FALCON** or **FALCONNET**, *Fr.* a small piece of ordnance.

**FALCONET**. See **FALCONET**.

**FALUX**, *Fr.* an instrument newly resplashing a scythe. It is often used to defend a breach, or to prevent an enemy from scaling the walls of a fortified place. This weapon was first resorted to with some success, when Louis the XIVth besieged M<sup>ons</sup>. On the surrender of that town, the besiegers found large quantities of scythes in the garri-son.

**FAUSSES Attaques**, *Fr.* false attacks. See **ATTACK**.

**FAUSSE-BRAIE**. *Fr.* See **FAUSSE BRAYE**.

**FAUSSE-BRAYE**, in fortification, is a low rampart, encircling the body of the place; its height is about 3 feet above the level ground, and its parapet about three or four toises from that of the body of the place. These works have been entirely rejected by the modern engineers, excepting M. Vauban, who makes them only before the curtains; and then they are called more properly *tenailles*.

**FAUSSE-LANCE**, *Fr.* a wooden piece of ordnance; what is vulgarly called a *sham gun*.

**FAUTEAU**, *Fr.* a sort of batter-  
ing

## F E L

ing ram, which was used in ancient times.

**FAUTEUR**, *Fr.* a person who connives at seditious practices.

**FAUX**, *Fr.* See **FAULX**.

**FAUX BRAVE**, *Fr.* See **FANTARON**.

**FAUX FLUX**, *Fr.* a flash in the pan.

**FAUX IFUX**, *Fr.* signals made with scintillations of gun-powder.

**FAUX SOLDATS**. See **FAGOT**, or **PASSE-VOLANT**.

**FEATHERS**, are ornamental marks worn by officers and soldiers in their caps or hats. The following distinctions are made and directed by authority to be observed in the British service. In the royal artillery, both officers and men, have white feathers. The cavalry and battalion corps scarlet and white; the grenadiers all white, and the light infantry all green.

**FEDERATE**. See **CONFEDERATE**.

**FEEs**, are specific sums of money, which are occasionally claimed by persons in office, and to the payment of which every British officer is subject. Fees are paid at the war office for different commissions, and are charged to their respective owners by the army agents.

**FEINT**, (*fente*, *Fr.*) a mock attack, or assault, often made to conceal the true one.

**FELLOES**, in artillery, are the parts of a wheel which form its circumference, whose dimensions are as follow: for a 24-pounder, 5 inches thick, and 6.5 inches broad; for a 12-pounder, 4.5 inches thick, and 6 inches broad; for a 6-pounder 4 inches thick, and 5.5 inches broad, &c. made of dry elm. There are generally 6 in each wheel. See **WHEEL**.

**FELLOW soldier**, one who fights under the same commander; a comrade. Dr Johnson very properly calls this term an endearing appellation used by officers to their soldiers. The toils and perils, in fact, of a true military life, are so many, that an army fighting under the same banners may be truly called one family; and every officer should look upon himself as the father, the guardian, and the protector of his men.

**FELT'RE**, a piece of defensive armour. It was a kind of cuirass made of wool, well pressed, and dipped in vinegar, to impede the effect of cutting

## F E N

weapons. It was in use among the Romans.

**FENCE**, a guard, security, outwork, &c.

To **FENCE**, to practise with foils; to fight with swords; to secure any place by palisades, &c.

**FENCIBLE**, any thing capable of defence. Such regiments as are raised for limited service, and for a limited time, are called fencible regiments. They rank junior to the line.

**FENCING**, is the art or science of making a proper use of the sword, as well for attacking an enemy, as for defending one's self. Fencing is a genteel exercise, of which no military gentleman should be ignorant. It is learned by practising with steel foils. See **FOILS**.

Fencing is either simple, or compound. Simple is that which is performed nimbly, and off-hand, on the same line. In this the principal intention, in respect to the offensive part, should be to attack the enemy in the most unguarded quarter; and in the defensive, to parry or ward off the enemy's thrusts or blows.

*Attitude*, in **FENCING**, the head upright, though the body hath a forward inclination on a lunge; and all the weight resting on the left haunch when on guard. The feet, hand, body, arm and sword, must be to the line.

*Appel*, in **FENCING**, is a sudden beat of your blade, on the contrary side to that you join your adversary on, and a quick disengagement to that side again.

*Beating*, in **FENCING**, is when you parry with a sudden short beat, to get a quick repost; or when you beat with your foot, to try if you are firm on it, or on both feet.

*Battering*, in **FENCING**, is to strike the feeble of your adversary's blade on the side opposite to that you join, &c.

*Back-quarte*, is a parade of late invention, and is a round quarte over the arm.

*Care*, in **FENCING**, is a tierce on a quarte side, also the thrust of a prime, or a seconde, at the low quarte side.

*Darting*, in **FENCING**, to defend a blow with some contraction of your arm, and to dart a thrust right forward.

*Feint forward*, in **FENCING**, made by advancing.

advancing your point a little from its line, and coming to it again.

*Guard*, in FENCING, is any of the parades you stand on.

*On Guard*, is being placed properly on your feet, and well covered with your weapon.

*Lurching*, in FENCING, to make an opening, to invite your adversary to thrust at you, when you, being ready, may find a favourable riposte at him.

*Locking*, in FENCING, is to seize your adversary's sword arm, by twining your left arm round it, after you close your parade, shell to shell, in order to disarm him.

*Guard in* { *carte*, { implies the putting of the  
                  { *tierce*, { ting of the body  
and sword in such a state of defence, as to prevent the antagonist from wounding you, by either of the thrusts so denominated. These are the principal positions on which to engage. The others, viz. prime, seconde, quarte, half-circle, &c. are termed parades, when used with the small sword.

*Hanging-guard*, one of the broadsword guards. See BROADSWORD.

*Thrusts* are of various denominations, according to the direction of the point, and position of the wrist.

The thrusts directed at the inside of the body, are called prime, carte, and low-carte: those at the outside, are seconde, tierce, carte over the arm, quarte and flancade.

In teaching, the thrusts are not arranged according to the above order; it is usual to begin with carte (or quarte) and tierce, the names of which prove them to have been originally the 4th and 5d positions in the art; but which are now justly considered as the chief and most elegant.

*Parrying*, in FENCING, the action of warding off the blows aimed at each other.

*Flancade*, in FENCING, is the action of dropping the point of your sword under your adversary's hilt, in seizing with force the feeble of his blade; which binding without quitting it, form the parade in octave, and then throw in your thrust.

*Glossade*, in FENCING, is performed by dexterously making your sword slip along your adversary's blade, and forming at the same time your extension, &c.

**FER**, *Fr.* Iron. Figuratively, this word is used for a sword or dagger; as *manier le fer*, to wear the sword, to follow the profession of arms. *Battré le fer*, to fence.

**FER à cheval**, *Fr.* In fortification, a horse-shoe, which see. It further means, according to the French acceptation of the term, a work constructed for the purpose of covering a gate, by having within it a guard-house, to prevent the town from being surprised.

**FERDWIT**, in ancient military history, a term used to denote a freedom from serving upon any military expedition; or, according to some, the being quit of manslaughter committed in the army.

**FERIR sans coup**, *Fr.* to obtain any thing without striking a blow.

**Faire FERME**, *Fr.* to stand your ground; not to give way.

**FERMEZ le bassinet**, *Fr.* Shut pans, a word of command in the platoon exercise.

**FERRAILLEUR**, *Fr.* a person who, without any provocation whatever, delights in fighting, and is always in quest of provocation.

**FFRETTE**, *Fr.* the original term to express a sword.

**FERRIES**, water conveyances, made use of to cross rivers, or branches of the sea. At the regular ones in Scotland, officers may at their option, hire the boat for themselves and parties only, or pass as passengers; in either case paying no more than half the ordinary rate. See MUTINY ACT, sect. 53.

**FERTÉ**, *Fr.* which has the same meaning as *fermete*, was the original appellation of a fortified place, and signified a fortress.

**FERTIL** or **FORTIL**. See ARMY.

**FEU**, *Fr.* fire. *Faire feu*, to discharge any sort of fire arms.

**FEU**, *fl.* is also understood to mean any light combustible, which is kept up in the front of a camp, and at each post during the night, to keep the soldiers alert, and to prevent them from being surprised.

Every species of fire, or light is, however, strictly forbidden on a march, when the object is to surprise an enemy. Soldiers, on these occasions, are not permitted to smoke. Bundles, and large wisps of lighted straw, which are hung

hung out from the tops of steeples, or from any other elevation, frequently serve to give the alarm when an enemy is discovered in the act of passing a river.

Lights are likewise resorted to on various other occasions. See LIGHTS.

*Feu de pelé.* See CANNON-BAT.

*Feu rampant.* Fr. a grazing fire, or a discharge of ordnance or musquetry, so directed, that the shot shall run parallel with the ground they pass over, within 3 or 4 feet of the surface.

That is likewise called a *feu rampant* or grazing fire, which is sent in parallel directions, with the faces of the different works belonging to a fortification.

*Feu de canon.* Fr. the discharge of heavy ordnance or artillery.

*Feu de chemin couvert.* Fr. the musquetry shots which are fired by armed men that are posted in various parts of the covert-way.

*Feu par compagnie.* Fr. the discharge of musquetry by companies.

*Feu direct.* Fr. a discharge of musquetry or ordnance against the face of a work, trench or company.

*Feu fléchi ou oblique.* Fr. oblique firing.

*Feu de mousqueterie.* Fr. musquet-firing.

*Feu de peloton.* Fr. platoon-firing.

*Feu de raspart.* Fr. a discharge of musquetry or ordnance from the ramparts of a fortified town or place.

*Feu roulant.* Fr. the continued alternate firing of a battalion from flanks to center, or from center to flanks.

*Feu de tranchée.* Fr. any discharge of cannon or musquetry which takes place from the trench of a fortified town or place, or from the besieging army's works against a fortified town or place.

*Faire Feu violet.* A man of whom great hopes are entertained, from his immense preparations, and which eventually end in smoke, is said to *faire feu violet*.

*FEUX.* Fr. fires which are frequently lighted up along the front of an encampment, in order to impress the enemy with an idea that every thing is on the alert, and in a state of activity.

*FEUX Grégeois.* Fr. See GREEK FIRE.

*FEUX ou signaux.* Fr. fires which

serve as signal lights in various parts of a country.

*FICHANT.* See LINE OF DEFENCE, FORTIFICATION.

*FICHES.* Fr. small sticks or pieces of wood which serve to mark out the height of angles, and the direction of a movement; by means of which a battle, or a trench may be traced, and the relative position of each troop or company ascertained.

*FIELD.* The ground of battle. A battle, campaign, or the action of an army while in the field.

*FIELD-BED.* A bed-lug used by officers in their tents.

- FIELD-	{	Coverts,	{	Camp
		Officers,		colours.
		Privies,		Officers.
		Staff,		Cannon.
		Hacks,		Lustrocks.
				Field-for-
				tification.

*FIELD-FIRE.* See FORT.

*FIELD-MARCH.* a modern military rank in the line, but superior to all others, except to companies, each having the direct command of the whole army in the field.

*FIEB.* See FANFARON.

*FIEF.* a military instrument of the wind kind, generally used as an accompaniment to the drum.

*FIEBE.* Fr. Fan. In French this word however means fire.

*FIGHT.* See BATTLE.

*FIGHTING-GROUND.* such as are effective, and able to bear arms.

*Running-FIGHT.* that in which the enemy is continually chased.

*FIGURE.* in fortification, the plan of any fortified place, or the interior polygon. Of this there are two sorts, regular, and irregular: a regular figure is that where the sides and angles are equal; an irregular one where they are unequal.

*FILE.* in the art of war is an unlimited term, comprehending any number of men drawn up in a direct line behind each other; as a rank on the other hand includes any number drawn up beside each other; whether, in either respect, they be in close or open order. Or rather, by *file* is meant the line of soldiers standing one behind another, which makes the depth of the battalion; and is thus distinguished from the rank; which

which is a line of soldiers drawn up side by side, forming the length of the battalion. A file is 2 or 3 deep; hence a battalion or regiment drawn up, consists of 2 or 3 ranks, and of as many files as there are men in a rank.

The files of a battalion of foot were formerly 12 and 6 deep; but now only 2 and sometimes 3, which is its natural formation. Those of the cavalry are generally but 2 deep.

A File on horseback occupies in the ranks about 2 feet 8 inches; thus 3 file 8 feet. A file on foot occupies in the ranks 22 inches.

*Close FILES* in cavalry are at the distance which was taken before dismounting, when each man's boot-top touches, but does not press that of his neighbour.

*Loose FILES*, in cavalry recruits, are 6 inches distant from boot-top to boot-top, being calculated for the gallop as well as the walk of a squadron.

*Open FILES* in cavalry, are the full breadth of a horse from boot-top to boot-top. They contain the distance which is left, when from close files, the left files rein back to dismount. Recruits and horses must be frequently exercised at this distance. See Cavalry Regulations, p. 4.

*Flank FILE*, the extreme file on the right or left of a squadron or troop, battalion or company, &c.

*Forming file*, a file, in which the front file leads, and the rest ride up to it at a smart gallop, taking care to fall in time, and not to over-run the ground. In the formation of a double round the front file first advances, then a formation is made to the rear of the march, or to the right, when marched from the right) the files must double round as close and as expeditious as possible.

In all formations from file, the leaders of ranks instantly cover each other, take the ordered front and halt. See Cavalry Regulations, p. 27.

In the covering of files on horseback, the same directions hold good as on foot. In addition it must be scrupulously observed, that every man's horse stands exactly straight to the same front as that of the man before him. Both in the horse and foot drill, the men should be often practised in covering

The former are thereby taught to place their horses straight under them.

*Close FILES* of infantry, are soldiers standing in rank, contiguous to one another, upon any given depth of line or column. Whenever a regiment marches in front, every man should feel his next man which ever way he dissects; but he must not lean on him, nor must he move his arm from the body to feel him, so that close-files mean nothing more than that soldiers in the ranks should touch lightly each other, without crowding or passing.

*Open FILES*, are soldiers standing in rank at given distances without touching one another. The formation at open files is only practised as a preparatory drill for forming at close files, (which is the order for action) in order that every man may be taught to stand and move in a proper position, without getting a habit of leaning upon his neighbour. On this account every intelligent officer who has the management of recruits, will form them sometimes at open files, and march in that order. Soldiers that have been regularly drilled, should likewise be occasionally practised in advancing by open files.

*Double FILES* are formed by the left turn in each rank step, and to the rear of the right files.

*Indian FILE*, a line of men advancing or retreating from either of the flank, from the center, or from any proportion of a line in succession to one another. They are sometimes called cross files; but the term is not familiar, or rather vulgar to the fighting soldier, and derives its origin from a flock or geese, generally following a leader, one by one. A foreign military writer, the Prince de Ligne, says, that men march forward in the order *à l'indienne*, *par un instinct de la nature* meaning, that they follow each other like so many sheep, who move by instinct.

*FILE-leader* is the soldier placed in the front of any file, or the man who is to cover all those that stand directly in the rear of him, and by whom they are to be guided in all their movements.

File leaders must be particularly careful to preserve their proper distances from which ever hand they are to dress

to, and the followers of each file must only be attentive to cover, and be regulated by their proper file leaders. In file the rear rank invariably dresses by, and is regulated by the front rank.

To double the FILES, is to put 2 files into 1, making the depth of the battalion double to what it was, in number of men. Thus four deep are double files.

FILE marching on foot. According to the printed regulations, all recruits must first face, and then be instructed to cover each other exactly in file, so that the head of the man immediately before may conceal the heads of all the others in front. The principal points to be attended to are, that the men move with the lock step, that the front rank men cover exactly, and that the rear rank men keep closed and dressed to the front rank.

File marching may be practised to the front, to the rear, and to either flank; in all which cases the men must be taught to cover well. When recruits are at drill, on the word *march*, the whole are to step off together, gaining at the very first step 30 inches, and so continuing each step without increasing the distance betwixt each recruit, every man locking or placing his advanced foot on the ground, before the spot from whence the preceding man had taken up his. See Regulations, p. 16, sect. 18.

Marching by ranks in front, open files, is when any body of men advances by rank at open order, and dresses to some given object without touching one another. The flank man of the flank the soldiers dress to, must be a non-commissioned officer, and he must take especial care not to incline to one hand or the other. His head must be kept quite straight to the front, his body must be erect, and he must advance without deviating in the most trifling manner to the right or left. In order to execute this essential part of the drill with any degree of accuracy, two persons should be present, one in the front, and the other on the flank, to observe the dressing. Young officers should be ordered to attend, and sometimes should be exercised themselves in the presence of a superior officer; for upon them here-

after will greatly depend the movement of the battalion in line or column.

Marching by ranks in front, close files, is when any number of men advances by ranks at close order, and dresses to some given object, each man lightly touching his next man, without crowding or pressing. The march in front at close files is much easier than that at open files, because every man feels his next man, whichever way the rank dresses, and into whatever direction the line or column moves.

To FILE, is to advance to, or from any given point by files; as to file to the front, to file to the rear, to file from the right or left flank, or to file from any given company. In some of which cases, the leading files must disengage themselves according to the directions given.

To FILE off, } to wheel off from  
To *file*, } marching in a spacious front, and march in length by files. When a regiment is marching in full front, or by divisions or platoons, and comes to a defile or narrow pass, it may file off to the right or left as the ground requires, &c.

FILER, *Fr.* to file off, or march in succession.

Faire FILER, *Fr.* to make troops, &c. file off, or march in regular order.

FILEY (in Yorkshire) is deemed part of the East Riding, and is subject to the county lieutenant with respect to the raising of the militia.

FILERE, *Fr.* a narrow pass.

FILINGS, are movements to the front, rear, or flank by files. These movements must be executed with great quickness. The files in cavalry must go off, at a smart gallop, and continue so till all are in file, the rear rank men dressing well to their front rank; the front rank covering well, and keeping close to the croup. If the filings are to be made from a flank to the front or rear, the whole must keep passaging up to the ground from whence the first file went, before they go off; if to a flank, the horses must be turned as soon as there is room. If the filings are from a flank to march along the front or rear, past the other flank, every file must come off from its own ground as the next gets into file.

General

*General and necessary* **FILINGS**, according to the system published by authority, for the British cavalry, are; filings from either, or both flanks of the squadron to front, flank or rear; filing from the center of the squadron to the front, or to the flank. Filing single men by ranks, or by front or rear rank men alternately, from either flank of the squadron.

In the filings of the squadron, the *serre-files* take their places in the rear of the files, unless the ground will allow them to remain on the flanks of the rear flank; but their general and proper position is in the rear of the files.

In *cavalry filing*, the greatest attention must be paid to keep the squadron as compact together as the nature of the movement will permit. It is a situation in which horses move free, and without confinement, but in which the parts of a squadron are apt to lengthen out, and take up much more ground than what they stand upon in line, and is therefore to be adopted only from necessity, in broken or embarrassed ground. When the word *file* has been given, and the heads of the horses have been turned ready to move off without loss of distance, the leaders of files must go off short and quick in their ordered direction. They are followed close by each man as it comes to his turn, so as to leave no unnecessary interval from one to another, and instantly to get off the ground. After being once in file, a distance of a yard from head to tail may be taken, so as to trot or gallop the easier if required. Every alteration of pace ought to be made as much as possible by the whole file at once; if this is not observed, a crowding and stop in the rear will always attend such alteration. See *Cavalry Regulations*, p. 25.

**FINANCES.** *Fr.* Coin in general, which constitutes the metallic currency of countries.

**FINANCES** *d'une armée*, *Fr.* the pay and allowances which every army requires in offensive or defensive operations.

**FIRE**, in the art of war, a word of command to soldiers of all denominations, to discharge their fire arms, grenades, cannon, &c.

**FIRE**, is also used to denote the dis-

charge of all sorts of fire-arms against the enemy. The fire of the infantry is by a regular discharge of their fire-locks, by platoons, divisions, &c. that of the cavalry, with their fuseses and pistols; and that of a place besieged, from their artillery.

**FIRE** *of the curtain* or *second flank*, is from that part of the curtain comprehended between the face of the bastion prolonged and the angle of the flank: frequently called the line of defence *enchant*

**FIRE** *razant*, is produced by firing the artillery and small arms in a line parallel with the horizon, or parallel with those parts of the works you are defending.

**FIRE-arms**, are all kinds of arms charged with powder and ball; every one of which is mentioned under its respective head.

**Running-FIRE**, is when a rank or ranks of men, drawn up, fire one after another; or when the lines of an army are drawn out to fire on account of a victory; when each squadron or battalion takes it from that on its right, from the right of the first line to the left, and from the left to the right of the second line, &c.

**FIRE-balls.** See **BALLS**.

**FIRE-cross**, an ancient token in Scotland for the nation to take up arms.

**FIRE-ship**, a ship filled with combustibles, to set fire to the vessels of the enemy.

**FIRE-master**, in the royal regiment of artillery, is an officer of rank and dignity, who, besides the post he enjoys in the regiment, has a yearly allowance for this office. He gives the directions and proportions of all ingredients for each composition required in fire-works, whether for the service of war, or for rejoicings and recreations.

**FIRE-master's mate**, is always an officer in the royal regiment of artillery, who, besides the post he bears in the regiment, has a yearly allowance for his office. His duty is, to aid and assist the chief fire-master, and he should be skilled in every kind of laboratory work.

**FIRE-pan** *of a gun*, is the receptacle for the priming powder.

**FIRE-pot**, in the military art, a small earthen pot, into which is put a charged grenade, and over that, powder enough

to cover the grenade; the whole covered with a piece of parchment, and two pieces of quick match across lighted: it breaks and fires the powder, as also the powder in the grenade, which has no fuze, that its operations may be quicker.

**Fire-works**, are particular compositions of different sorts, made with sulphur, salt-petre, and charcoal. They are used in war, and on rejoicing days.

**Fire-workers**, were formerly subordinate to the fire-master and his mate; had afterwards the rank of youngest lieutenant to the royal regiment of artillery; but now that rank is abolished, and they are all second lieutenants. They were supposed to be well skilled in every kind of laboratory work; which knowledge is an essential qualification in every officer of that regiment.

**FIRE-LOCKS**, so called from their producing fire of themselves, by the action of the flint and steel; the arms carried by a foot soldier. They were formerly 3 feet 8 inches in the barrel, and weighed 14lb. at present the length of the barrel is from 3 feet 3 inches to 3 feet 6 inches, and the weight of the piece only 12lb. They carry a leaden bullet, of which 29 make 2lb. its diameter is .550 of an inch, and that of the barrel 1-50th part of the shot. Fire-locks were first made use of in 1690, when match-locks were universally disused; but when invented we cannot ascertain. A fire-lock is called, by writers of about the middle of the last century, *asnaphaan*, which being a low Dutch word, seems to indicate its being of Dutch invention. Formerly both in the manual and platoon exercises, the term fire-lock was always adopted—as, *shoulder your fire-lock, present your firelock*.—At present a more simple and brief mode of expression prevails throughout the army—as, *shoulder arms, present arms*, &c. &c. except in the funeral parties, when the term *firelock* is directed to be used instead of *arms*, until after firing over the grave, bayonets are ordered to be fixed.

**FIRING in line**. According to regulations, the following principal heads constitute firing in line.

The object of fire against cavalry, is to keep them at a distance, and to deter them from the attack; as their move-

ments are rapid, a reserve is always kept up. But when the fire commences against infantry, it cannot be too heavy or too quick while it lasts; and should be continued till the enemy is beaten or repulsed. This may not improperly be called offensive fire.

**Defensive fire**, belongs principally to infantry when posted on heights, which are to be defended by musquetry. As soldiers generally present too high, and as fire is of the greatest consequence to troops that are on the defensive, the habitual mode of firing should therefore be rather at a low level than a high one.

On these occasions the men are generally drawn up 3 deep, in which case the front rank kneeling, being the most efficacious, as being the most razing, should not be dispensed with when it can be safely and usefully employed.

**FIRING by half battalions, the line advancing**. The left wings *halt*, and the right ones continue to march 15 paces, at which instant the word *march* being given to the left wings, the right at the same time are ordered to *halt, fire*, and load, during which the left march on and pass them, till the right wings, being loaded and shouldered, receive the word *march*, on which the left ones *halt, fire*, &c. and thus they alternately proceed.

**FIRING by half battalions, the line retreating**. The right wings are ordered to *halt, front*, and when the left wings have gained 15 paces, and have received the word *halt, front*, the right wings are instantly ordered to *fire, load, face about*, and march 15 paces beyond the left ones, where they receive the word *halt, front*, on which the left wings *fire*, &c. and thus alternately proceed.

It is observed in the official Rules and Regulations, that in addition to the battalion directions, there must be a regulating battalion named, by the half battalions of which each line will move, *halt*, and *fire*; the commander of each line will be with such half battalion, and in giving his several commands must have an attention to the general readiness of the line, especially after loading, that the whole are prepared to step off together at the word *march*. The firing of the advanced wing succeeds the *march*, or the *halt, front*, of the

the retired wing instantly; and each half battalion fires independant and quick, so that no unnecessary pauses being made betwixt the firing words, the fire of the line should be that of a volley as much as possible; and the whole being consequently loaded together, will be ready for the next command of movement. In these firings of the line, advancing or retiring, the two first ranks will fire standing, and the rear rank support their arms.

In this manner also may the alternate battalions of a line advance or retire, and when the whole are to form, and that the last line moves up to the first, every previous help of advanced persons will be given to insure its correctness.

*Fire in line advancing*, is when the infantry marches in line to attack the enemy, and in advancing makes use of its fire. On these occasions it is better to fire the 2 first ranks only, standing, reserving the third, than to make the front rank kneel and to fire the whole; but when it is necessary to fire at a considerable distance, or on a retreating enemy, volleys may be given by the three ranks, the front one kneeling.

*Firing by platoons*, is practised when a line is posted, or arrives at a fixed situation. In this position battalions fire independent of one another, and the fire generally commences from the center of each. The first fire of each battalion must be regular, and at established pauses and intervals; after which each platoon may continue to fire as soon as it is loaded, independent, and as quick as possible.

*Firing by files*, is generally used behind a parapet, hedge, or abatis. In this situation the two first ranks only can fire, and that must be by the 2 men of the same file always firing together, with coolness and deliberation. When however, the parapet, hedge, or abatis is but a little raised, platoon firing may be resorted to.

*Oblique Firing by battalions*, or otherwise, according to the ground, is extremely advantageous when it is found expedient to give an oblique direction to part of a line, or when it is discovered, that their fire can in this manner be thrown against the opening of a débâché, the flanks of a column, or against

cavalry or infantry that direct their attack on some particular battalion or portion of the line.

*Oblique firing*, is either to the right and left, or from the right and left to the centre, depending entirely on the situation of the object to be fired against. The Prussians have a particular contrivance for this purpose: if they are to level to the right, the rear ranks of every platoon are to make two quick but small paces to the left, and the body of each soldier to turn 1-8th of a circle; and are to take the same distance to the right, if they are to level to the left.

When a line halts at its points of firing, no time is to be lost in scrupulous dressing, and the firing is instantly to commence. But when a line halts, and is not to fire, the usual dressings must be attended to; and every thing will depend upon the coolness and attention of the officers and non-commissioned officers.

It should be observed with respect to firings in general, that after the march in front, and halt of the battalion, company or platoon firing ought invariably to begin from the centre, and not from the flank. In other cases, and in successive formations, it may begin from whatever division first arrives, and halts on its own ground. See Infantry Regulations, p. 270.

*Square Firing*, is that method of firing where either a regiment or any body of men is drawn up in a square, each front of which is generally divided into 4 divisions or files; and the flanks of the square, as being the weakest parts, are sometimes covered by 4 platoons of grenadiers who flank the angles. The first fire is from the right division of each face; the second fire from the left division of each face, and so on; the grenadiers making the last fire.

*Street Firing* is the method of firing adopted to defend or scour a street, lane, or narrow pass of any kind; in the execution of which the platoon must be formed according to the width of the place, leaving sufficient room on the flanks for the platoons, which have fired, successively to file round to the rear of the others.

*Street Firing advancing*. When the column has arrived at the spot where the firing is to commence, the commanding

manding officer from the rear gives the word *halt*! and the officer commanding the platoon orders it to *make ready, p'sent, fire, recover arms, outwards face*, (by half platoons), *quick march*.

At the instant the men in the first platoon recover their arms after firing, the second platoon *makes ready*, and waits in that position till the front is cleared by the first platoon having filed round the flanks towards the rear, when the second advances, with recovered arms, until it receives the words *halt, p'sent, fire*.

As soon as the platoon which has fired, has got down the flanks, it must form in front of the colours, and prime and load.

*Street Firing retiring*, is conducted on the same principles, except that the platoons fire without advancing, on the front being cleared by the former platoon filing round the flank.

Another method of *street firing advancing*, generally esteemed more eligible, is, after firing, to wheel out by subdivisions, (the pivots having taken a side step to right and left outwards,) prime and load, and as soon as the last platoon has passed, file inwards and form.

**FISSURE**, a narrow chasm where a small breach has been made.

**FIT**. Qualified, proper; adapted to any purpose or undertaking.

**FIT for service**. Capable of undergoing fatigue. Strong healthy men, from 18 to 45 years of age, of a certain height, and not subject to fits, are considered fit objects for service, and may be enlisted into any of his Majesty's regiments. The principal heads under which every recruit should be rejected, or made soldier be discharged, consist of rupture, venereal lues, or incurable pox, habitual ulcers, sore legs, scurvy, scald head, and fits.

**FIT**, a paroxysm. Any violent affection of the body, by which a man is suddenly rendered incapable of going through the necessary functions of life.

**FITS**, habitual affections of the body, to which men and women are subject, and by which they may be frequently attacked without any other immediate consequences than a temporary suspension of the mental powers, accompanied

by a disordered and painful action of the frame.

**Fix-bayonets**, a word of command in the manual exercise. See **MANUAL**.

**FLAGS**. See **COLOURS**, **STANDARDS**, &c.

**FLAGS**, in the British navy, are either red, white, or blue, and they are hoisted either at the heads of the main-mast, fore-mast, or mizen-mast.

**FLAGS** when displayed from the top of the main-mast, are the distinguishing marks of admirals; when from the fore-mast, of vice-admirals, and when from the mizen-mast, of rear-admirals.

The highest flag in the British navy, is the *anchor and cable*, which is only displayed when the lord high admiral, or lords commissioners of the admiralty are on board; the next is the *union*, the distinction peculiar to the second officer, called admiral of the fleet; and the lowest flag is the *blue* at the mizen-mast.

**FLAG-OFFICER**, a naval officer commanding a squadron. For the compliments paid him, see **HONOURS**.

**FLAGSTAFF**, the staff on which the flag is fixed.

**FLAME**, a word formerly made use of in the British service, signifying a particular tap or beat upon the drum, according to which each battalion went through its firings or evolutions. The practice is laid aside, as it is particularly ordered by the last regulations, that every battalion, troop, or company shall be exercised by specific words of command, delivered in a distinct and audible tone of voice.

**FLAMBEAU**, *Fr.* a wax torch.

**FLAMBER** *un canon, un mortier*, *Fr.* to burn powder in a cannon or mortar, for the purpose of cleansing it, or of destroying dampness.

**FLAMME**, *Fr.* in the old French marine establishment, was a mark of distinction which exclusively belonged to the king's ships, consisting of a long streamer.

**FLAMME, ou pendant**, *Fr.* Bolting cloth or netting. It is a long streamer which generally hangs either from the yards or scuttle of a mast, and serves for ornament or to give signals.

**FLANC**, *Fr.* flank.

**FLANC** { *has*  
*concert,* } See *Retired*  
*retiré,* } **FLANK**.

*FLANC du bastion*, Fr. See **FLANK** of the bastion.

*Prendre en FLANC*, Fr. to take in flank.

*Prêter le FLANC*, Fr. to expose the flanks of a regiment, or wings of an army, &c.

*Être pris en FLANC*, Fr. to be attacked by an enemy in flank.

**FLANKS**, in the art of war and in fortification, are of several denominations, according to their uses, viz.

**FLANKS of an army**, certain proportions of offensive or defensive forces which are extended to the right and left of a main body, and ought to be posted in such a manner, that it would be certain ruin to the enemy were he to attempt any impression between them. In a more confined sense, the troops which are stationed on the right and left of each line of encampment. See **WINGS**.

**FLANK-files**, are the two first men on the right and the two last men on the left, telling downwards from the right, of a line, battalion, company, division, subdivision or section. When a battalion is drawn up three deep, its flank files consist of three men, or as the French call it file and demi-file. When four deep, the flank files are termed double files; so that a column formed from any of these alignments, will have all its relative flank files, be the depth of formation what it will.

**Inward FLANK in manœuvring**. The first file on the left of a division, subdivision or section when the battalion stands at close or open column with the right in front. Upon this flank which is called the proper flank, and on which the pivot rests, the division, &c. wheels backward from line into column, or forward from column into line. When the left is in front, the right becomes the proper flank and pivot.

**Outward FLANK**, of a line or battalion, the extreme file on the right or left of a division, subdivision, or section, according to the given front, when the battalion is at close or open column, and which is the furthest wheeling point from line into column, or from column into line. It is likewise called the reverse flank. The general rule which directs, that leading officers shall march invariably on the inward flank,

where the proper pivot rests, is in one instance dispensed with, when, after marching by, the right in front, the wheeling of the column or guard is to the right. On this occasion the officer who had shifted from the right to his proper flank, instead of being wheeled upon, wheels with the flank and continues his march. It has already been remarked in a military publication (see *Regimental Companion*) that the squareness of the division would certainly be preserved with greater ease, were the officer to remain upon the right, though the right be in front, until the wheel in that direction should be completed, when he might shift to his proper flank. Where the column or guard has only a few paces to proceed beyond the passing or saluting point, this certainly is advisable.

**FLANK-company**, a certain number of men drawn up on the right or left of a battalion. Thus the grenadiers compose the right, and the light infantry the left flank company. When these are detached, the two extreme battalion companies become such.

The grenadiers and light infantry are generally called flank companies, whether attached or not to their several battalions.

**FLANKING-party**, a select body of men on foot or on horseback, whose object is to harass and perplex the enemy, to get upon his wings, or by any manœuvre to hang upon the flank of an opposing force.

**FLANK en retraite**, is any part of the right or left wing formed at a right angle with the line. See **POSTURE**.

**Leading FLANK**, when the line breaks into column in order to attack an enemy, it is the flank which must almost always preserve the line of appui in all movements in front. The first battalion, division or company of every column which conducts, is called the head or leading flank of that column. All the writhings and turnings to which it must unavoidably be subject, are followed by every other part of the body, and such head becomes a flank, right or left, when formed into line. The commander must therefore be on whichever flank directs the operations of the line, and by which he proposes to attack, or to counteract the

the attempts of the enemy. See Infantry Regulations, pages 234, 235.

**Passing FLANK.** the flank of a squadron, troop, battalion, or company, which is next to the general when troops march by. Both in cavalry and infantry movements, at open order, a non-commissioned officer invariably steps up to fill the vacancy occasioned, on the passing flank, by the officer going to the front of his squadron, troop, or company, in order to salute the reviewing General. At closed ranks, when troops march past, the passing flank must always have an officer.

**FLANK** in fortification, in *general*, is any part of a work that defends another work, along the outside of its parapet.

**FLANK of a bastion,** (*flanc d'un bastion*, Fr.) in fortification, that part which joins the face to the curtain, comprehended between the angle of the curtain and that of the shoulder. It is the principal defence of the place. Its use is, to defend the curtain, the flank, and face of the opposite bastion, as well as the passage of the ditch; and to batter the salient angles of the counter-scarpe and glacis, from whence the besieged generally ruin the flanks with their artillery; for the flanks of a fortification are those parts which the besiegers endeavour most to destroy, in order to take away the defence of the face of the opposite bastion.

*Oblique* } **FLANK,** } that part of the  
*Second* } } curtain from  
whence the face of the opposite bastion may be discovered, and is the distance between the lines *razant* and *bevant*, which are rejected by most engineers, as being liable to be ruined at the beginning of a siege, especially when made of sandy earth. The second parapet, which may be raised behind the former, is of no use; for it neither discovers nor defends the face of the opposite bastion: besides, it shortens the flank, which is the true defence; and the continuing fire of the besiegers' cannon will never suffer the garrison to raise a second parapet. This second flank defends very obliquely the opposite face, and is to be used only in a place attacked by an army without artillery.

**Retired FLANK,** (*flank retiré*, Fr.)

**Low Flank,** (*flanc bas*, Fr.) **Covered Flank,** (*flanc orillon ou couvert*, Fr.) The platform of the casemate, which lies hid in the bastion. These retired flanks are a great defence to the opposite bastion and passage of the ditch, because the besiegers cannot see, nor easily dismount their guns.

**FLANK prolonged,** (*flanc prolongé* Fr.) in fortification, is the extending of the flank from the angle of the epaulement to the exterior side, when the angle of the flank is a right one.

**Concave FLANK,** (*flanc concave*, Fr.) is that which is made in the arc of a semi-circle bending outwards.

**FLANKS of a frontier.** Are the different salient points of a large extent of territory, between each of which it would be impolitic for any invading army to hazard an advanced position. The late celebrated General Lloyd (whose accuracy of observation and solidity of conclusion with respect to the iron frontier of France have been universally acknowledged) has furnished military men with a full and succinct account of the relative positions upon it. He divides this long line (which begins at Basel in Switzerland, and runs into various directions from thence to Dunkirk in French Flanders) into three parts, and considers each of them separately. The first part goes from Basel to Landau, and covers Alsatia; it is near 150 miles in length. The second part goes from Landau to Sedan on the Moselle, covers Lorraine on the side of the Electorate of Treves, the Dutchies of Deux-Ponts, Luxemburg, and Lunenburg; it is 120 miles in length. From Sedan down the Meuze to Charlemont in French Flanders, and thence to Dunkirk, goes the third part, and is about 150 miles; so that the whole natural frontier of France is 470 miles. The greatest part, if not the whole of which, is in the shape of a horse shoe, and presents impregnable flanks. An anonymous writer, (See better late than never) after referring the reader to general Lloyd for a specific account of the first and second lines of the French frontier, has made the following observations relative to the third and last, which runs from Sedan down the Meuze to Charlemont, from thence to Dunkirk,

Dunkirk, and is 150 miles in length. His words are.—While the Duke of Brunswick and the king of Prussia were ruining the most formidable armies in Europe by endeavouring to penetrate a few miles into Lorraine and Champagne through the first and second line, (without having previously secured the two flanks,) the French with redoubled activity operated upon the third, and finally subdued all Flanders. Those very difficulties, in fact, which presented themselves to oppose the progress of the allied army into France, facilitated every excursion on her part, as the direction of the line which goes from Sedan to Luxembourg is concave towards that part of Germany.

The remainder of this line, (within which so many faults were committed, or rather could not be avoided, because the impression itself was founded in error,) runs to Dunkirk. "It has been the scene of successive wars for near two centuries, the most expensive, bloody, and durable, of any recorded in the annals of mankind." This line, continues General Lloyd, is stronger by art than nature, having a prodigious number of strong fortresses and posts upon it, moreover it projects in many places, so that an enemy can enter nowhere, without having some of them in front and on his flanks.

Hence the impolicy of taking Valenciennes, or marching towards Quesnoy, without having previously secured *Dunkirk, Lille, &c.*

**FLANKS**, in farriery, a wrench, or any other grief in the back of a horse.

**To FLANK**, in fortification, is to erect a battery which may play upon an enemy's works on the right or left without being exposed to his line of fire. Any fortification, which has no defence but right forward, is faulty; and to make it complete, one part ought to flank the other.

**To FLANK**, in evolutions, to take such a position in action as either to assist your own troops, or to annoy those of your enemy by attacking either of his flanks, without exposing yourself to all his fire.

**To OUT-FLANK**. A manœuvre by which an army, battalion, troop, or company outstretches another, and gets upon both or either of its flanks.

**To OUT-FLANK**, in an extensive acceptation of the term, when applied to locality, means to possess any range of opposite parts, or territory, whence you might invade your neighbour. Thus France, by her present possessions along the Dutch and Flemish coasts, outflanks all the opposite shores of England, properly so called; resting her left flank at Ostend in Flanders, and her right at Breda, in North Holland, in the Province of Friesland. Ireland again is completely outflanked by Great-Britain at Penzance, in Cornwall, and at the Hebrides or Western Isles, independent of the combined part of Scotland.

**FLANKING**, a manœuvring juster out so as to command the side or flank of an enemy manœuvring to the assault or attack. Grenadiers and light infantry are also called flankers.

**FLANKING**, in cavalry manœuvres, the most active men and horses who are selected to do the duty of flankers. The use of course must be perfect manœuvres of their horses. One complete line of each tour must be a file of flankers; it does not signify which file, but if it can conveniently be done, the center file should be taken, as in that case neither the flank men, nor the pulling off of the squadron or division will be affected.

When you manœuvre by *whole squadrons*, six or eight flankers are sufficient in general for the whole squadron.

The word of command, when the flankers come out to the front, is *flankers forward*.

*In flanking* a great deal depends upon the officer or sergeant; he must be extremely active, and not only attend to the movements of the division from which he is detached, but likewise to his flankers.

As horses frequently refuse to quit the ranks and hang back obstinately, the men indiscriminately should be often called out of the ranks one by one, and practised as flankers.

**To FLANKER**, (a French *flanquer*.) To fortify the walls of a city with bulwarks or countermines.

**FLANKING**, is the same in fortification as defending.

**FLANKING party**. Any body of men detached from the main army to get upon the flanks of an enemy so as to secure a line of march.—See **FLANKERS**.

**FLANK-**

**FLANKING angle**, in fortification, that composed of the two lines of defence, and pointing towards the curtain. See **TENAILLE**.

**FLANKING line of defence**. See *line of defence*.

**FLANKING-POINT**. See **POINT**.

**FLANQUE, Fr.** To be defended in such a manner that no attack can be successfully made against a work.

**FLANQUER, Fr.** To flank.

**FLASH**. The flame which issues from any piece of ordnance on its being fired.

**FLASH in the pan**, an explosion of gunpowder without any communication beyond the touch-hole. When a piece is loaded, and upon the trigger being drawn, nothing but the priming takes fire, that piece is said to flash in the pan.

**FLASK**, a measure made of horn, used to carry powder in, with the measure of the charge of the piece on the top of it.

**FLASQUES, Fr.** in the artillery, are two cheeks of the carriage of a great gun. See **AFFUT**.

**FLASQUE** likewise means a gun-powder flask.

**FLAT-bottomed boats**, in military affairs, are made to swim in shallow water, and to carry a great number of troops, artillery, ammunition, &c. They are constructed in the following manner: a 12-pounder, bow chase, an 18 ditto, stern chase; 90 to 100 feet keel; 12 to 24 ditto beam; 1 mast, a large square main-sail; a jib-sail: they are rowed by 18 or 20 oars, and can each carry 400 men. The gun takes up one bow, and a bridge the other, over which the troops are to march. Those that carry horses have the fore parts of the boats made to open.

**FLAW**, any crack or small opening in a gun or its carriage is so called.

**FLEAU, Fr.** the beam, or balance of a pair of scales.

There are some *fleaux* or scales among the French, which hold 6000 lb. weight in one scale, and 6000 lb. weight of ammunition in the other, making together, 12,000 weight.

**FLEAU de fer, Fr.** an iron instrument or wheel, that resembles in shape the sails with which corn is thrashed.

**FLEAU de PORTE, Fr.** an iron, or a strong wooden bar, which falls across the inside of the gates of a town, when shut, so as to prevent their being broken open.

**FLECHE, Fr.** an arrow.

**FLECHE, in field fortification**, a work of two faces, usually raised in the field, to cover the quarter guards of a camp or advanced post.

**FLECHE ARDENTE, Fr.** A particular kind of artificial firework, which is thrown into the works of the enemy; literally a blazing arrow.

**FLECHES de pont-levis, Fr.** Pieces of timber collected at the counterpoise of a draw-bridge, to which are fixed two chains, that raise the apron of the bridge.

**FLECHES pour le pétard, Fr.** Sticks of iron fixed together by means of iron rings, the last of which is armed with strong iron points; to this is fixed the *pétard*, which is to burst open the gates: these engines go upon wheels, and are pushed forward like flying bridges.

**FLETCHER**. See **BOWYER**.

**FLEURET, Fr.** A foil used in learning to fence.

**FLIBUSTIERS, Fr.** Pirates in the West Indies: they cruize in bottoms, called *flibots*. Hence *flibuster* is to go out to plunder.

**FLIGHT**, is used figuratively for the swift retreat of an army or any party, from a victorious enemy.

To put to **FLIGHT**, to force your enemy to quit the field of battle.

**FLIGHT**, is likewise applicable to missile weapons or shot, as a flight of arrows, a flight of bombs, &c.

**FLINT (caillou, Fr.)** A hard semi-pellucid stone of the crystal kind, well known to strike fire with steel. As various accidents happen from the want of proper attention to the method of fixing and enclosing flints in firelocks, particularly among volunteers and raw troops, we think it right to warn every soldier against the use of paper for this purpose. Paper, being naturally absorbent, must necessarily receive, in the course of one or two discharges of the musquet, several particles of gunpowder, and become inflammable. To soldiers (such as light troops and rifle-

men,

ment who prime from a powder-horn,) this mode is peculiarly hazardous. Instances, indeed, have occurred, in which the hand has been blown off. We would recommend sheet lead or leather. But sheet lead, such as may be got from every tea-dealer, is preferable to leather. Leather is elastic, and does not wrap round the flint so well as lead, which collapses at every pressure; and in process of time leather will become dry, and of course susceptible of ignition. Captains of companies might easily afford their men a sufficient quantity of sheet lead, out of the allowance for emery, oil, and brickdust.

**To FLOAT.** A column is said to float when it loses its perpendicular line in march, and becomes unsteady in its movements.

**FLOATING-batteries,** vessels used as batteries, to cover troops in landing on an enemy's coast.

**FLOGGING,** the punishment in general use among the British foot soldiers. It is inflicted with a whip having several lashes.

We shall not presume to give any opinion on this subject in the present work, having expressed our sentiments in the *Regimental Companion* on that head. Sir Robert Wilson, the author of the *Campaign in Egypt*, has since entered considerably into the matter, and we refer the inquisitive to his late pamphlet, entitled, an Inquiry into the state of the British army, &c.

**FLOODGATE,** in fortified towns, is composed of 2 or 4 gates, so that the besieged by opening the gates may inundate the caverns, and keep the enemy out of gun shot.

• **FLOOR.** See **PLATFORM.**

**FLOTTEMENT, Fr.** An undulation or floating in the movements of a battalion whilst marching.

**To FLOURISH,** in a general musical acceptance of the term, is to play some prelude or preparatory air without any settled rule.

**A Flourish,** any vibration of sound that issues from a musical instrument.

**The trumpet Flourish,** in drawing swords, is used regimentally by *corps* of cavalry on their own ground, and is the sounding used in receiving a major general. It is repeated twice for a lieu-

tenant general. Whenever his Majesty, the Commander in Chief, or any of the royal family appear before a body of cavalry, the trumpet flourish is always used.

**FLOWER de Luce,** } The original  
**FLUR de Lys,** } Arms of France when monarchy prevailed in that country. They consisted in three flowers de lis or, in a field azure. These arms were superseded in 1789, by the cap of liberty, and the three coloured flag, when the bastille was taken and destroyed by the inhabitants of Paris.

**FLUSHED,** a term frequently applied when men have been successful, as, flushed with victory, &c.

**FLUTE,** a wind instrument which is sometimes used in military bands; but never on service.

**FILX,** an extraordinary evacuation of the body, to which soldiers are frequently subject on service. Towards the tail of the year this disorder is particularly prevalent, especially in camps. It is of a contagious nature; and the greatest care should be taken to prevent the healthy men in a regiment from frequenting the privies to which those infected by this cruel disorder are permitted to resort. A sentry should always be posted in the vicinity of every hospital for that specific purpose.

**FLYING -** } *Army.* See **ARMY.**  
                  } *Bridge.* See **BRIDGE.**

**FLYING-Camp.** See **CAMP.**

**FOCUS,** in *mining.* See **MINE.**

**FODDER.** See **FORAGE.**

**FOE.** See **ENEMY.**

**FOIBAI, d'une Place, Fr.** The weak side of a fortified place.

**FOIBLESSE d'une Place de guerre, Fr.** Those parts of a fortified town or place in which they are most vulnerable.

**FOIL,** in *fencing,* a long piece of steel of an elastic temper, mounted somewhat like a sword, which is used in fencing for exercise. It is without a point, or any sharpness, having a button at the extremity covered with leather.

**To FOIL,** to defeat.

**FOLLES (pièces) d'ARTILLERIE, Fr.** those pieces of ordnance, the bore of which is not exactly straight.

**FOLLOWERS of a camp,** Officers servants, sutlers, &c. All followers of a camp are subject to the articles of war equally with the soldiery.

**FONCTIONS Militaires**, Fr. the relative duties and occupations to which military men are subject.

**FONDE de cale**, Fr. Hold of a ship.

**FONDELLE**, Fr. An instrument used in the same manner as a sling to throw stones: it was likewise called *bricolle*, owing to the stones, when round, taking an oblique direction.

**FONDEMENTS**, Fr. foundation.

**FONDERIE**, Fr. forge; or furnace. See **FORNERY**.

**FONDEUR d'Artillerie**, Fr. The person who casts the pieces of ordnance.

**FONDRIERE**, Fr. An opening in the surface of the earth occasioned by earthquakes, fire, rain, or a marshy ground, the waters of which growing stagnant are dried up in summer time, and freeze in cold weather.

**FONDS destinés pour le paiement des troupes**, Fr. Monies issued for the service of the army.

**FONTES des pièces d'artillerie**. The metal used in the casting of cannon, which consists of three sorts well mixed together, viz. copper, tin, and brass.

**FOOT**, in a *military sense*, signifies all those bodies of men that serve on foot. See **INFANTRY**.

**FOOT** is also a long measure, consisting of 12 inches. Geometricians divide the foot into 10 digits, and the digits into 10 lines; but we divide the foot into 12 inches, and an inch into 12 lines, and a line into 12 points.

A *square Foot*, is the same measure, both in length and breadth, containing  $12 \times 12 = 144$  square or superficial inches.

A *cubic Foot*, is the same measure in all the three dimensions, length, breadth, and thickness; containing  $12 \times 12 = 144 \times 12 = 1728$  cubic inches. The foot is of different lengths in different countries. The Paris royal foot exceeds the English by 9 lines; the ancient Roman foot of the capital consisted of 4 palms  $= 11 \frac{1}{4}$  English inches; and the Rhyneland or

*Leyden foot*, by which the northern nations go, is to the Roman foot as 950 to 1000. The proportions of the principal feet of several nations are as follow. The English foot divided into 1000 parts, or into 12 inches, the other feet will be as follow;

PLACES.	1000 parts.	feet.	inch.	lines.
London foot	1000	—	12	—
Amsterdam	942	—	11	3
Antwerp	946	—	11	2
Bologna	1201	1	2	4

Venice	1162	1	1	9

To be on the same *footing* with another, is to be under the same circumstances in point of service; to have the same number of men, and the same pay, &c.

To *gain or lose ground foot by foot*, is to do it regularly and resolutely; defending every thing to the utmost extremity, or forcing it by dint of art or labour.

**Foot-bank**, in fortification. See **BANQUETTE**.

**FORAGE**, in the art of war, implies hay, straw, and oats, for the subsistence of the army horses. This forage is divided into rations, one of which is a day's allowance for a horse, and contains 20lb. of hay, 10lb. of oats, and 5lb. of straw.

**Dry FORAGE**, oats, hay, &c. which are delivered out of magazines to a garrison, or to troops when they take the field, before the green forage is sufficiently grown to be cut or gathered.

**Green FORAGE**, oats, hay, &c. that have been recently cut. It likewise means

means meadow pasture, into which horses are turned.

When cavalry is stationed in barracks in Great Britain, the number of rations of forage to be issued to the horses of the officers, non-commissioned officers, and soldiers, is not to exceed what follows, and is to be confined to those which are actually effective in the barracks.

		Rations.
Field officers, having 4 effective horses	- - -	4
Captains, having 3 ditto	- - -	3
Subalterns and staff officers, having 2 ditto	- - -	2
Quartermasters, each	- - -	1
Non-commissioned officers and private men, each	- - -	1

For each of which rations a stoppage is to be made of 8<sup>d</sup>. per diem.

On foreign service this article is governed by circumstances.

**FORBAN, Fr.** A Pirate; a lawless wretch that plunders indiscriminately at sea.

**FORCE**, an armament or warlike preparation.

**FORCE**, in a military sense, any body of troops collected together for warlike enterprise.

**Effective Forces.** All the efficient parts of an army that may be brought into action are called effective, and generally consist of artillery, cavalry and infantry, with their necessary appendages, such as hospital staff, wagon-train, artificers and pioneers: the latter, though they cannot be considered as effective fighting men, constitute so far a part of effective forces, that no army could maintain the field without them.

**Effective Forces of a country.** All the disposable strength, vigor and activity of any armed proportion of native or territorial population. The navy of Great Britain must be looked upon as the effective bulwark of Old England; to which the body of marines adds no inconsiderable weight and importance, from tried courage and unquestionable fidelity. The superiority of our navy efficiently proves its effective value.

**Distribution of the Effective Forces of a country.** Under this head may be considered, not only the effective forces which might engage an enemy, but likewise those included in the several returns that are made from home or for-

rein stations to the war office, and out of which a grand total is formed to correspond with the estimates that are annually laid before the house of commons, by the Secretary at War.

**To FORCE** is to take by storm; also to men the works of a garrison.

**To FORCE an enemy to give battle.** To render the situation of an enemy so hazardous, that whether he attempt to quit his position, or endeavour to keep it, his capture or destruction must be equally inevitable. In either of which desperate cases, a bold and determined general will not wait to be attacked, but resolutely advance and give battle; especially if circumstances should combine to deprive him of the means of honourable capitulation. This can only be safely effected, by having previously disposed your own forces so as to defy any impression on his part, and by subsequent able manœuvres to have it in your power to foil his attack.

**To FORCE a passage.** To oblige your enemy to retire from his fastnesses, and thus open a way into the country which he had occupied. This may be done either by *coup de main*, or renewal of assaults. In either case, the advancing body should be well supported and its flanks be secured with the most jealous attention.

**Force d'une Armée, Fr.** The sinews of an army. According to the French, and indeed according to the experience of all ages, *argent*, or money, constitutes the strength of every army. Hence *point d'argent point de Suisse*, no pay no soldier.

**Prendre une place de Force; à force ouverte, Fr.** To storm a town.

**FORCER, Fr.** To take advantage of superior strength; to levy contributions, &c.

**FORCER une Ligue, Fr.** to act offensively against any line of defence.

**FORCER une Troupe, Fr.** To act vigorously against armed troops; and by means of repeated attacks to get the better of them.

**FORCING an adversary's guard or blade,** a term used in the science of broadsword.

"If at any time your antagonist appears languid and weak on his guard, and barely covers his body on the side he is opposed; by stepping well forward, and striking the fort of your sword

smartly on his blade, you may be enabled to deliver a cut without risk even at the part he intends to secure; taking care to direct your blade in such a manner, that the plate or cross bar of your hilt shall prevent his sword from coming forward." See *Art of defence on foot*.

**FORCEPS**, an instrument used in chirurgery, to extract any thing out of wounds, or to take hold of dead or corrupt flesh, for the purpose of amputation. It is made somewhat in the shape of a pair of tongs or pincers, with grapping ends. Every regimental surgeon, or assistant surgeon, is directed to have a pair among his set of instruments.

**FORD**. The shallow part of a river where soldiers may pass over without injuring their arms.

**FORE-RANK**, first rank, front.

**FOREIGN service**, in a general sense, means every service but our own. In a more confined and native acceptance of the term, it signifies any service done out of the limits of Great Britain, Ireland, the islands of Guernsey, Jersey, &c.

**FOREIGN troops**, in an English acceptance, regiments or companies which are composed of aliens. Before the late war, no foreigner could bear a commission in the British service, or be enlisted as a soldier.

**FORELAND**, in fortification, called by the French, *pas de souris, retrait, berm or lizier*, a confined space of ground between the rampart of a town or fortified place, and the moat. Whenever a fortification can be completed without having recourse to this substitute for stone, (with which the rampart ought to be faced,) it certainly is advisable to go to the expence. For a bold enemy, who has once made his way over the moat, will derive considerable advantage from having this path to stand on. It is generally from 3 to 8 or 10 feet wide. This space serves to receive the demolished parts of the rampart, and prevents the ditch from being filled up. In Holland the foreland is planted with thickset, but it is generally faced with palisades.

**FORELAND**, any point of land or **FORENESS**, which juts out into the sea.

**North Foreland**, a head-land, or promontory which juts out into the sea

from the isle of Thanet. It may not improperly be called a flanking point to the mouth of the river Thames, or to the Great Ouse.

**South Foreland**, a head-land, or promontory which juts out into the sea towards the south at Walmer Castle, and forms a part of that extent of coast which outflanks Dover. The north and south Foreland, are two flanking points to the Downs, having a convex surface of water, between Ramsgate and Walmer, towards the coast.

**FORET, Fr.** A steel instrument used to bore the touch-hole of a piece of ordnance. The same name is given to a very large instrument used by the miners when they want to establish furnaces, or chambers, &c. in a rock or stony substance.

**FORANTE & FORIANFERI, Fr.** See **FANERON**.

**FORGE**, in the *train of artillery*, is generally styled a *travelling forge*, and may not be improperly called a portable smith's shop: at this forge all manner of smith's work is made, and it can be used upon a march, as well as in camp. Formerly these forges were very ill contrived, with wheels only, and wooden supporters to prop the forge for working when in the park. Of late years they are made with 4 wheels, which answers the purpose much better.

**Forge for red-hot balls**, is a place where the balls are made red-hot before they are fired off. It is built about 5 or 6 feet below the surface of the ground, of strong brick work, and an iron grate, upon which the balls are laid, with a very large fire under them. See **REPOUILLAGE**.

**Forge de campagne, Fr.** a moveable forge which accompanies the artillery, or cavalry.

**FORHEAD**. See **BARB**.

**FORLORN-hope**, in the military art, signifies men detached from several regiments, or otherwise appointed to make the first attack in the day of battle; or at a *siege*, to storm the counterscarp, mount the breach, &c. They are so called from the great danger they are unavoidably exposed to.

**FORM**, in a general acceptance of the term, is to assume or produce any shape or figure, extent or depth of line or column, by means of prescribed rules.

rules in military movements or dispositions.

*To Form from file, among cavalry.* The front file halts at a given point: the rest, or remaining files successively ride up at a very smart gallop, taking care to halt in time, and not to over-run the ground. If the formation is by doubling round the front file, (in a formation, for instance, to the rear of the march, or to the right when marched from the right,) the files must double as close round as possible, and with the utmost expedition. In forming from file, particular attention should be given, to make the men put their horses quite straight as they come in. They must keep their bodies square, dress by a slight cast of the eye towards the point of formation, and close and dress in an instant. A dragoon, in fact, must no sooner get into the ranks, than his attention should be given to remain steady, well closed and dressed. It is generally observed in the last printed regulations, that when the cavalry forms, each man must come up in file to his place, and by no means move up to his leader, till that leader has formed to whichever hand the file is forming to. The whole must follow the exact track of the first leader, and come up one by one into their respective places in squadron.

*To Form to the front.* To move nimbly up from file into ranks, and close to your leader, whether on foot, or horse-back.

*To Form to the rear.* To double round your leaders, who have themselves turned and faced.

*To Form to a proper flank.* To turn and close in to your leader.

*To Form to a reverse flank.* To pass, turn and successively close to your leaders.

In all formations from file, the whole, till otherwise directed, dress to the hand to which the squadron, or division forms. See Cavalry Regulations, p. 27.

*To Form by moving in front, and successively arriving in line,* is by divisions, or distinct bodies, to advance forward by word of command towards any given point of alignment. On these occasions the eyes of the whole are turned to the hand to which they are to form, and from which they preserve required dis-

tances. The leading officer must be on the inward flank of his division; he conducts it to its point of junction in line, and from thence dresses and directs it on the person, who is previously placed beyond him, and prolongs the general line. The outward flank of the last formed and halted body, is always considered as the point of conjunction (necessary intervals included) of the succeeding one. Thus the looking and bring of the soldier is always towards that point, and the flank of the line formed to; and the correction of dressing by the officer is always made from that point towards the other flank. Therefore on all occasions of moving up, turning and dressing in line, by the men turning themselves to one hand (*inwards*) and the officers correcting to the other (*outwards*) the most perfect line may be obtained. Commanding officers of regiments, when a considerable line is forming, must take every advantage from *trousing* (or rather opportunely) throwing out intelligent persons to give them true points in the general line. In the French service these persons are called *colonnes*, from *colonnes*, to fix any thing, by which any true direction, perpendicular or otherwise, may be obtained.

*To Form line,* is to wheel to the right or left from open column of divisions, subdivisions, or sections, according to prescribed rules, so as to present one continued front or straight line; or to deploy from close column for the same end, or to file to the front.

*To Form rank entire,* is to extend the front of a battalion or company by reducing it to the least possible depth, from any existing number of ranks.

*To Form two deep,* is from rank entire or from three deep to produce a regular line of files.

*To Form three deep,* is to add the depth of one half file to two deep, and to produce the natural formation of a battalion in line.

*To Form four deep,* is to diminish the natural extent of a battalion formed in line, by adding one half file to its depth.

*To Form echelon,* is, from line, or open column, to wheel a given number of paces forward or backward, so as to produce a diagonal or oblique direction in the different proportions of a line: the outward flank of each succeeding division,

## FOR

sion, company or section, constantly preserving a perpendicular direction, at a regulated distance, from the inward flank of its leader, until it arrive at its point of junction.

To **FORM line by echelon**, is to advance in column towards any given object by a diagonal movement, so as eventually to produce a regular continuity of front. See **ECHELON** or **DIAGONAL movement**.

To **FORM close column**, is to march by files in detached proportions of a line, till each proportion shall arrive in front or in rear of any given body.

To **FORM open column**, is to wheel backwards or forwards, or to march out by files, so that the several proportions of a line may stand in a perpendicular direction to one another, with intervals between them equal to the extent of their front.

To **FORM circle**, is to march a battalion or company, standing in line, from its two flanks; the leading files bringing their right and left shoulders forward, so as to unite the whole in a circular continuity of files. On the word of command—*To the right and left, form circle*, the two flank files bring their right and left shoulders forward; and on the word *quick, march*, the whole advance. The center marks time, each file from the direct central one gradually inclining to right and left till the junction of the two extremes has been completed.

The general use which is made of this formation is to punish offenders, or to convey public orders to the men in such a manner, that every individual may have an equal opportunity of hearing what is read, or delivered to the whole battalion.

To **FORM on**, is to advance forward, so as to connect yourself with any given object of formation, and to lengthen the line.

To **FORM on a front division**, is from close, or open column, or by the march in echelon, to arrive by a parallel movement at the right or left of any given division, by which means a prolongation of the line is produced. When this formation takes place with the right in front, the officer of the second or leading division (the first standing fast, and all the rest facing to the left) having stepped out to the right at the words

## FOR

*quick march!* allows his division led by his serjeant to go on a space equal to its front, and then gives his word *halt, front, dress*; his serjeant still remaining on the left of his division. The officer being still on the right of his division, immediately gives the word *march!* and the division proceeds at the ordinary step towards its place in the alignment. He steps nimbly forward, and obliquely so as to be within the third file of the left flank of the preceding division, and is thus ready to give the words, *halt, dress!* at the instant his inward flank man joins that division. He then expeditiously corrects his men, (who have dressed upon the formed part of the line, on the distant given point) and resumes his proper post in line. Great care should be taken in these movements to prevent the outward flank of every advancing division from over-stepping its ground; as it is a general principle in dressing, to be rather behind the preceding formed division at the word *halt*, than before it; the word *dress* being the final and conclusive direction, and its object being more easily attained by a forward than a backward movement.

In this manner every other division proceeds; each officer advancing, with a firm, steady step, in a perpendicular direction towards his point of formation, while the flank serjeant remains at his point in the line, till the succeeding officer, who has dressed his division, arrives to replace him; after which the serjeant covers his own officer. See *Infantry Regulations*, p. 151.

To **FORM on a rear division**, is to face all the preceding divisions which are in column to the right, (the point of forming having been previously taken in that direction, as far as the prolongation of the head division will extend, and just beyond where the right of the battalion is to come) and to uncover the rear one, so as to enable it to advance forward to a given point on the left, and take up its place in the alignment.

The leader of the front or head division having been shewn the distant point in the alignment on which he is to march, and having taken his interdicta points, if necessary, at the word *march*, the faced divisions step off *quick*, heads of files are dressed to the left, the front one moves in the alignment with scrupulous

scrupulous exactitude, and the others continue in a parallel direction close on its right; each carefully preserving its relative points of prolongation, and being fronted by its officer the instant it gets upon the ground, which is perpendicular to its intended formation in line.

As soon as the rear division is uncovered, and has received the word *march*, it proceeds forward, and when arrived within a few paces of its ground, the officer commanding steps nimbly up to the detached officer or sergeant, who has carefully marked its left in the new position, gives the words, *halt, dress*, and quickly corrects his division on the distant point of formation; after which he replaces his sergeant on the right of his division. As the officer who conducts this division has necessarily the longest extent of ground to march on, he must take especial care to observe his perpendicular direction, constantly keeping the different points of formation in his eye, and preserving a perfect squareness of person. The intermediate divisions will successively proceed and advance as the ground opens before them.

**To Form on a central division.** To execute this manœuvre, the front and rear divisions must deploy, or open, so as to uncover the named division, and enable it to move up to a given point of alignment. A forming point must be given to both flanks in the prolongation of the head division.

When the caution of forming on a central division has been given, the leading officers will shift to the heads of their several divisions, the instant they have been faced according to the hand which leads to their ground. The files during their deployment must be kept close, and well locked up; and when fronted, must instantly be corrected in their dressing before they march forward. The central division, when uncovered, moves up into line to its marked flank. Those that were in front of it proceed as in forming on a rear division; those that were in rear of it proceed as in forming on a front division. By means of these three formations, which are effected by the deployment, or flank march, every battalion in close column, may uncover and extend its se-

veral divisions. The previous formation of close column upon given proportions of a brigade, battalion, &c. is done by facing and moving *inwards*, and thus contracting the original line with any given division for the head; which line may again be restored by the different divisions facing and moving *outwards*, as we have just described. See Infantry Regulations, p. 184.

**To Form line on a rear company of the open column standing in echelon,** that company remains placed; the others face about, wheel back on the pivot flanks of the column, as being those which afterwards first come into line. On the word *march*, they move forward, and then *halt, front*, successively in the line of the rear company.

**To Form line on the rear company facing to the rear of the open column standing in echelon,** the whole column must first countermarch, each company by files, and then proceed as in forming on a front company.

**To Form line on a central company of the open column;** that company stands fast, or is wheeled on its own center into a new required direction. Those in front must be ordered to *face about*. The whole, except the central company, must wheel back the named number of paces. Those in front, on the proper pivot flanks of the column, and those in its rear on the reverse flanks, such being the flanks that first arrive in line. The whole then marches in line with the central company. See Infantry Regulations, S. 161.

**To Form line from close column on a rear company facing to the rear;** the whole of the column changes front by countermarching each company by files. The rear company stands fast, and the remaining companies face to the right, deploy, successively *halt, front*, and move up into the alignment.

**To Form line from close column on a central company facing to the rear;** the central company countermarches and stands fast; the other companies face outwards, countermarch, deploy, and successively march up to the alignment.

Whenever the column is a retiring one, and the line is to front to the rear, the divisions must each countermarch before the formation begins. In which

which case the head would be thrown back, and the rear forward. See Infantry Regulations, p. 207.

*To Form en potence*, to wheel the right or left flank of a body of men, or to march them forward by files, so as to make that proportion of a line face inwards, and resemble a potence or gibbet. A double potence may be formed by running out both flanks, so that they stand in a perpendicular direction facing towards each other. This formation is not only extremely useful on actual service, but it conduces greatly to the accommodation of any body of men which may be marched into a place that has not sufficient extent of ground to receive it in line.

**FORMATION**, in a military sense, the methodical arrangement, or drawing up of any given body of men mounted, or on foot, according to prescribed rules and regulations.

**Cavalry FORMATION**, in conformity to His Majesty's orders, consists of the following proportions, viz.

Squadrons of cavalry are composed each of two troops; regiments are composed each of two, three, or more squadrons; and a line is composed of two or more regiments. The squadron is formed two deep.

**FORMATION of a troop**, is the drawing out of a certain number of men on horseback on their troop parade, in a rank entire, sized according to the size-roll.

**FORMATION of the squadron**, is the military disposition of two troops that compose it closed into each, from their several troop parades. In this situation, the officers move out, and form in a rank advanced two horses length, fronting to their troops. The serjeants and covering corporals rein back, and dress with the quarter-master in the rear. When the formation of a squadron has been completed, and its component parts have been accurately told off, the commanding officer is advanced a horse's length before the standard. Two officers are posted, one on each flank of the front rank, covered by a corporal. One officer is posted in the center of the front rank with the standard, and is covered by a corporal. Three serjeants are placed, one on the right of the front of each of the four divisions, except the right one, and each is covered

by a corporal or private dragoon. The serjeants or supernumerary officers and serjeants, the quarter-masters and trumpeters, are in the rear of their several troops, divided in a line, at two horses distance from the rear rank. Farriers are behind the serjeants a horse's length. Allowance is always made for sick and absent officers and non-commissioned officers; and if a sufficient number of any rank is not present, then serjeants replace officers, corporals replace serjeants, and lance-corporals or intelligent men replace corporals.

**Formation**, considered as to general circumstances, admits of a few deviations from the strict letter of the term. It is observed in the official regulations, that in order to preserve each troop entire, it is not material, if one division be a file stronger than another. The flank divisions indeed, both in cavalry and infantry regiments, will be strongest from the addition of officers. Officers, in the formation of squadrons, are recommended to be posted with their troops. Corporals not wanted to mark the divisions, or to cover officers or serjeants, will be in the ranks according to their size, or be placed in the outward flank file of their troops. Farriers are considered as detached in all situations of manœuvre.

All these general circumstances of formation apply and take place, whether the squadron be composed of two, or more troops, and whether the troops be more or less strong. See Cavalry Regulations, pages 7, 8, and 9.

**General modes of FORMATION**, are when a regiment broken into and marching in open column, must arrive at and enter on the ground on which it is to form in line, either in the *direction* of that line, *perpendicular* to that line, or in a *direction more or less oblique* betwixt the other two. For specific explanations see page 30 Cavalry Regulations.

**Infantry FORMATION**, is the arrangement or disposition of any given number of men on foot according to prescribed rules and regulations. When the companies join, (which are generally ten in number, viz. 1 grenadier, 8 battalion, and 1 light company,) and the battalion is formed, there is not to be any interval between the relative parts, but the whole front must present a continuity of points, and

and one compact regular line from the flank file of the grenadiers to the flank file of the light company.

The formation or drawing up of the companies will be as follows: from right to left; grenadiers on the right, light company on the left;—the four eldest captains are on the right of the grand divisions—officers commanding companies or platoons are all on the right of the front rank of their respective commands.

The eight battalion companies will compose four grand divisions—eight companies or platoons—sixteen subdivisions—thirty-two sections, when sufficiently strong to be so divided, otherwise twenty-four, for the purposes of march. The battalion is likewise divided into right and left wings. When the battalion is on a high establishment, each company will be divided into two equal parts, staffed platoons. When the ten companies are with the battalion, they may then be divided into five grand divisions from right to left. This is done to render the firings more exact, and to facilitate deploy-movements.

The battalion companies will be numbered from the right to the left 1. 2. 3. 4. 5. 6. 7. 8. The subdivisions will be numbered 1. 2. of each. The sections will be numbered 1. 2. 3. 4. of each. The files of companies will also be numbered 1. 2. 3. 4. &c. the grenadier and light companies will be numbered separately in the same manner, and with the addition of those distinctions. No alteration is to be made in these appellations whether the battalion be faced to front or rear.

**FORMATION at close order**, is the arrangement of any given number of men in ranks at the distance of one pace, except where there is a fourth, or supernumerary rank, which has three paces. In firing order the ranks are more closely locked in.

When a battalion is formed in close order, the field officers and adjutant are mounted. The commanding officer is the only officer advanced in front for the general purpose of exercise, when the battalion is single; but in the march in line, and during the firings, he is in the rear. The other mounted field officers are in the rear of each wing. The adjutant's station is in the rear of the bat-

talion, rather to the left of the commanding officer. One officer is on the right of the front rank of each company or platoon, and one on the left of the battalion. All these are covered in the rear by their respective sergeants, and the remaining officers and sergeants are in a fourth rank behind their companies. There are no coverers in the center rank to officers or colours. The colours are placed between the fourth and fifth battalion companies, both in the front rank, and each covered by a non-commissioned officer, or steady man in the rear rank. One sergeant is in the front rank betwixt the colours; he is covered by a second sergeant in the rear rank, and by a third in the supernumerary rank. The sole business of these three sergeants is, when the battalion moves in line, to advance and direct the march according to prescribed instructions. The place of the first of those sergeants, when they do move out, is preserved by a named officer or sergeant, who moves up from the supernumerary rank for that purpose. The music is posted in the rear of the right center company, in a single rank, three paces behind the fourth rank; the pioneers at the same distance in rear of the fourth rank of the left center company, and in a single rank; the drummers of the eight battalion companies are assembled in two divisions, six paces behind the third rank of their second and seventh companies. The grenadier and light company drummers and fifers are six paces behind their respective companies. The staff officers are three paces behind the music.

**FORMATION at open order**, is any open disposition or arrangement of men by ranks at straight lines parallel to each other.

When a battalion is directed to take open order, the rear ranks fall back one and two paces, each dressing by the right the instant it arrives on the ground. The officers in the front rank, as also the colours, move out three paces. Those in the rear, together with the music, advance through the intervals left open by the front rank officers, and divide themselves in the following manner: the captains covering the second file from the right, the lieutenants the second

file from the left, and the ensigns opposite the center of their respective companies. The music form between the colours and the front rank. The serjeant coverers move up to the front rank, to fill up the intervals left by the officers. The pioneers fall back to six paces distance behind the center of the rear rank. The drummers take the same distance behind their divisions. The major moves to the right of the line of officers; the adjutant to the left of the front rank. The staff place themselves on the right of the front rank of the grenadiers. The colonel and lieutenant-colonel dismounted, advance before the colours four and two paces. See Infantry Regulations, Sec. 73.

**FORMER**, *Fr.* To form, to put in order.

**FORMER** *une troupe*, *Fr.* To drill and discipline any number of men, so as to enable them to act in troops or companies.

**FORMERS**, round pieces of wood that are fitted to the diameter of the bore of a gun, round which the cartridge paper, parchment, or cotton is rolled before it is sewed.

**FORMERS**, were likewise used among officers and soldiers to reduce their clubs to an uniform shape, before the general introduction of tails.

**FORMATION** *of* *guards*. See **GUARDS**.

**FORT**, (*Fort*, *Fr.*) a small fortified place, environed on all sides with a ditch, rampart, and parapet. Its use is to secure some high ground, or the passage of a river, or to make good an advantageous post, to defend the lines and quarters of a siege, &c.

Forts are made of different figures and extents, according to the exigency of the service, or the peculiar nature of the ground. Some are fortified with bastions, others with demi-bastions. Some are in form of a square, others of a pentagon. Some again are made in the form of a star, having 5 or 7 angles. A fort differs from a citadel, the last being built to command some town. See **CITADEL**.

**Royal Fort**, one whose line of defence is at least 26 toises long.

**Triangular Forts**, are frequently made with half-bastions; but they are very imperfect, because the faces are

not seen or defended from any other part. If, instead of being terminated at the angle, they were directed to a point about 20 toises from it, they would be much better, as then they might be defended by that length of the rampart, though but very obliquely. The ditch ought to be from 8 to 10 toises. Sometimes instead of half-bastions at the angles, whole ones are placed in the middle of the sides. The gorges of these bastions may be from 20 to 24 toises, when the sides are from 100 to 120; the flanks are perpendicular to the sides, from 10 to 12 toises long; and the capitals from 20 to 24. If the sides happen to be more or less, the parts of the bastions are likewise made more or less in proportion. The ditch round this fort may be 10 or 12 toises wide.

The ramparts and parapets of these sorts of works are commonly made of turf, and the outside of the parapet is fraised: that is, a row of palisades is placed about the middle of the slope, in an horizontal manner, the points declining rather a little downwards, that the grenades or fire-works thrown upon them may roll down into the ditch; and if the ditch is dry, a row of palisades should be placed in the middle of it, to prevent the enemy from passing over it unperceived, and to secure the fort from any surprise.

**Fort de campagne**, *Fr.* a field fortification. See **FORTIFICATION**.

**FORTRESS**, (*Fortresse*, *Fr.*) Any strong place rendered so by art, or originally so by local advantages, or by means of both nature and art. Places which are strong by nature generally stand upon mountains, precipices, in the middle of a marsh, on the sea-coast, in a lake, or on the banks of some large river. Places which are strong by art, owe their strength to the labour of man, whose ingenuity and perseverance substitute ditches and ramparts where mountains and rivers are wanting.

**FORTIFICATION**, is the art of fortifying a town or other place; or of putting it in such a posture of defence, that every one of its parts defends, and is defended by some other parts, by means of ramparts, parapets, ditches, and other out-works; to the end that a small number of men within may be able to defend themselves for a considerable

defable time against the assaults of a numerous army without; so that the enemy, in attacking them, must of necessity, suffer great loss.

*Fortification* may be divided into ancient and modern; offensive, and defensive; regular and irregular; natural and artificial, &c.

*Ancient Fortification*, at first consisted of walls or defences made of the trunks and branches of trees, mixed with earth, for security against the attacks of an enemy. Invention owes its origin to necessity: *fortification* seems to have had few for its basis; for when man had no other enemy but the wild beasts, the walls of his cottage were his security; but when pride, ambition, and avarice, had possessed the minds of the strong and the daring to commit violence upon their weaker neighbours, either to subvert them to new laws, or to plunder their little inheritance, it was natural for the latter to contrive how to defend themselves from such injuries.

Whoever has been in North America, may have seen *fortification* in its infancy.

There are abundance of Indian villages fenced round by long stakes driven into the ground, with moss or earth to fill the intervals; and this is their security (together with their own vigilance) against the cruelty of the savage neighbouring nations.

Nor is *fortification* much less ancient than mankind; for Cain, the son of Adam, built a city with a wall round it upon Mount Liban, and called it after the name of his son Enoch, the ruins of which, it is said, are to be seen to this day; and the Babylonians, soon after the deluge, built cities, and encompassed them with strong walls.

At first people thought themselves safe enough with a single wall, behind which they made use of their darts and arrows with safety: but as other warlike instruments were continually invented to destroy these feeble structures, so on the other hand persons acting on the defensive were obliged to build stronger and stronger; to resist the new contrived forces of the desperate assailants.

What improvements they made in strengthening their walls many ages ago, appear from history. The first walls we

ever read of, and which were built by Cain were of brick; and the ancient Grecians, long before Rome was ever thought of, used brick and rubble stone, with which they built a vast wall, joining Mount Hymetus to the city of Athens. The Babylonian walls, built by Semiramus, or, as others will have it, by Belus, were 32 feet thick; and 100 feet high, with towers 10 feet higher, built upon them, cemented with bitumen or asphaltus. Those of Jerusalem seem to have come but little short of them, since, in the siege by Titus, all the Roman battering-rams, joined with Roman art and courage, could remove but 1 stone out of the tower of Antonia in a whole night's assault.

After *fortification* had arrived at this height, it stopped for many ages, until the use of gunpowder and guns was found out; and then the round and square towers, which were very good flanks against bows and arrows, became but indifferent ones against the violence of cannon; nor did the battlements any longer offer a hiding place, when the force of one shot both overset the battlement, and destroyed those who sought security from it.

*Modern Fortification*, is the way of defence now used, turning the walls into ramparts, and square and round towers into bastions, defended by numerous outworks; all which are made so solid that they cannot be beat down, but by the continual fire of several batteries of cannon. These bastions at first were but small, their gorges narrow, their flanks and faces short, and at a great distance from each other, as are those now to be seen in the city of Antwerp, built in 1540, by Charles V. emperor of Germany; since which time they have been greatly improved and enlarged, and are now arrived to that degree of strength, that it is almost a received opinion, that the art of fortification is at its height, and almost incapable of being carried to a much greater perfection.

*Offensive Fortification* shows how to besiege and take fortified places; it further teaches a general how to take all advantages for his troops; the manner of encamping, and method of carrying on either a regular or irregular  
Ec 2 siege,

siege, according as circumstances may direct.

*Defensive* FORTIFICATION shews a governor how to make the most of a garrison committed to his care, and to provide all things necessary for its defence.

*Regular* FORTIFICATION is that built in a regular polygon, the sides and angles of which are all equal, being commonly a musket-shot from each other, and fortified according to the rules of art.

*Irregular* FORTIFICATION, on the contrary, is that where the sides and angles are not uniform, equi-distant, or equal; which is owing to the irregularity of the ground, vallies, rivers, hills, and the like.

To FORTIFY *inwards*, is to represent the bastion within the polygon proposed to be fortified, and then that polygon is called the *exterior polygon*, and each of its sides the *exterior side*, terminating at the points of the two nearest bastions.

To FORTIFY *outwards*, is to represent the bastion without the polygon proposed to be fortified, and then the polygon is called the *interior polygon*, and each of its sides the *interior side* terminating in the centers of the two nearest bastions.

*Elementary* FORTIFICATION, by some likewise called the theory of fortification, consists in tracing the plans and profiles of a fortification on paper, with scales and compasses; and examining the systems proposed by different authors, in order to discover their advantages and disadvantages. The elementary part is likewise divided into regular and irregular fortification, which see.

*Front* FORTIFICATION, any proposition of the body of a place, consisting of two half bastions and a curtain.

*Practical* FORTIFICATION consists in forming a project of a fortification, according to the nature of the ground, and other necessary circumstances, to trace it on the ground, and to execute the project, together with all the military buildings, such as magazines, store-houses, barracks, bridges, &c.

The following are the names of every part of a FORTIFICATION: and first of lines, which are divided into right lines, and curve lines.

*Line of defence*, is the distance between the salient angle of the bastion, and the opposite flank; that is, it is the face produced to the flank. Common experience, together, with some of the greatest artists in fortification, unanimously agree, that the *lines of defence* may extend (though not exceed) 150 fathom. Some indeed will affirm, that, as a musket does not carry more than 130 fathom point blank, the angle of the bastion should be no further removed from its opposite flank. We agree that a musket carries no further point-blank; but we are sure it will do execution, and kill, at 180 fathom. The enemy generally makes his breaches near the middle of the face; which if granted, the line of fire from the flank to the breach, scarcely exceeds 130 fathom: besides, the cannon of the flank does less execution upon a short *line of defence* than on a long one.

*Line of defence fichtant*, is a line drawn from the angle of the curtain, to the point of the opposite bastion, which is not to exceed 120 fathom; and from the point of the curtain, and flank, to the face of the opposite bastion, which is to be defended. This line may not improperly be called in good English the *hitting-flank*, since it partly sees the opposite faces in reverse; and the shot from it, especially near the orillon, strike against the faces. Authors are numerous both for and against the *fichtant* and *razant* lines: we can only set down as a fixed rule, that the more powerful the active quality is, the more the passive must suffer; that in fortification the active quality is the fire, which discovers the assailants (who are the passive) going to attack the face of the opposite bastion: consequently the more this active quality is augmented, by so much the more must the passive subjects suffer: and from thence we argue for the *fichtant flank*, since it augments this active quality, by all the fire of the curtain added to the flank, which is the principal action in the art of defence.

*Line of defence razant*, is a line drawn from the point of the bastion along the face, till it comes to the curtain, which shews how much of the curtain will clear or defend the face. This line may very justly in our language be called the *sleeping-flank*: because the shot

shot as it were sweeps along the opposite faces. This line, as well as the *sichant*, has many supporters, and as many opponents. In our humble opinion, the line *sichant* is preferable to the line *razant*.

*Line of circumvallation.* See SIEGE. See CIRCUMVALLATION.

*Line of contravallation.* See CONTRAVALLATION.

*Line of counter-approach.* See APPROACHES.

*Capital-line*, is an imaginary line which divides the work into two equal and similar parts, or a line drawn from the point of the bastion to the point where the two demi-gorges meet, &c.

*Line of defence prolonged.* In the square, and most polygons of the lesser fortification, you prolong the line of defence; but in the polygons of the greater and meaner, you draw a line from the angle of the opposite shoulder to the angle of the curtain, upon which you raise a perpendicular, which serves for the first line of the flank.

*Names of the angles in a FORTIFICATION.*

*Angle of the center*, in a polygon, is formed by two radii drawn to the extremities of each side, or from the centre, terminating at the two nearest angles of the figure.

*Angle of a bastion*, } that which is  
*Flanked angle*, } made by the two faces being the outermost part of the bastion, most exposed to the enemy's batteries, frequently called the salient angle or point of the bastion.

*Angle of the polygon* is made by the concurrence of two adjacent sides of a polygon, in the center of the bastion.

*Angle of the triangle*, is half the angle of the polygon.

*Angle of the shoulder*, } is made by  
*Angle of the epaule*, } the face and flank of the bastion.

*Angle of the flank*, } that which is  
*Angle of the curtain*, } made by, and contained between the curtain and the flank.

*Angle of the tenaille*, } made by 2 lines  
*Flanking angle*, } *sichant*, that is, the face of the two bastions extended till they meet in an angle towards the curtain, and is that which always carries its point towards the work.

*Dead-angle.* Every angle is so called

that points inwards, or is not well defended.

*Angle of the ditch*, is formed before the center of the curtain, by the outward line of the ditch.

*Angle reentrant*, } is any angle whose  
*Re-entering angle*, } point turns inwards, or towards the place; that is whose legs open towards the field.

*Salient angle*, is that which points outwards, or whose legs open towards the place.

*Angle of the complement of the line of defence*, is the angle formed by the intersection of the 2 complements with each other.

*Inward flanking angle*, that which is made by the flanking line, and the curtain. See ANGLE.

*Names of the solid works of a FORTIFICATION.*

*Advanced-foss*, } or ditch, made at the  
*Avant-fosse*, } foot of the glacis; it is but very seldom made, because it is easily taken, and serves for a trench to the besiegers.

*Appareille*, is that slope or easy ascent which leads to the platform of the bastion, or to any other work, where the artillery, &c. are brought up and carried down.

*Approaches* are a kind of roads or passages sunk in the ground by the besiegers, whereby they approach the place under cover of the fire from the garrison.

*Area*, the superficial content of a rampart or other work.

*Arroe* is a work placed at the salient angle of the glacis, and consists of two parapets, each about 40 fathoms long; this work has a communication with the covert way, of about 24 or 28 feet broad, called a caponniere, with a ditch before it of about 5 or 6 fathom, and a traverse at the entrance, of 3 fathom thick, and a passage of 6 or 8 feet round it.

*Banquette*, whether single or double is a kind of step, made on the rampart of a work near the parapet, for the troops to stand upon, in order to fire over the parapet; it is generally 3 feet high when double, and 1½ when single, and about 3 feet broad, and 4½ feet lower than the parapet.

*Bastion*, is a part of the inner inclosure of a fortification, making an angle towards

towards the field, and consists of two faces, 2 flanks, and an opening towards the centre of the place, called the gorge; or it is rather a large mass of earth, usually faced with sods, sometimes with brick, but rarely with stone; having the figure described.

With regard to the first invention of bastions, there are many opinions amongst authors. Some have attributed this invention to Zisca, the Bohemian; others to Achmet Bashaw, who having taken Otranto in the year 1180, fortified it in a particular manner, which is supposed to be the first instance of the use of bastions. Those who wrote on the subject of fortification 200 years ago, seem to suppose that bastions were a gradual improvement in the ancient method of building, rather than a new thought, that any one person could claim the honour of. It is certain, however, that they were well known soon after the year 1500; for in 1516. Tartalea published *Questi & intentioni diverse*, in the 6th book of which he mentions, that whilst he resided at Verona (which must have been many years before) he saw bastions of a prodigious size; some finished, and others building; and there is besides, in the same book, a plan of Turin, which was then fortified with 4 bastions, and seems to have been completed some time before.

The great rule in constructing a bastion is, that every part of it may be seen and defended from some other part. Mere angles are therefore not sufficient, but flanks and faces are likewise necessary. The faces must not be less than 50 fathom, nor more than 65. The longer the flanks are the greater is the advantage which can be derived from them. They must therefore stand at right angles with the line of defence. At the same time the disposition of the flanks makes the principal part of a fortification, as on them the defence chiefly depends; and it is this that has introduced the various kinds of fortifying.

The angle of the bastion must exceed  $60^{\circ}$ ; otherwise it will be too small to give room for the guns, and will either render the line of defence too long, or the flanks too short. It must therefore be either a right angle, or some in-

termediate one between that and  $60$  degrees.

*Full bastions* are best calculated for intrenchments, which are thrown up at the gorge, or by means of a cavalier, whose faces are made parallel to those of the bastion at the distance of 15 toises; having its flanks at the distance of 12 toises, and a ditch measuring 5.

*Large bastions* have the advantage of small ones, for this palpable reason; the bastion being considered the weakest part of the body of a place, is always attacked; when there is room for troops, cannon and mortars, its natural weakness is greatly remedied.

*Gorge of a bastion*, the interval between the extremity of one flank and that of the next.

*Flat bastion*. When a bastion upon a right line is so constructed, that its demi-gorges do not form an angle, it is called a flat bastion.

*Gorge of a flat bastion*, is a right line, which terminates the distance between two flanks.

*Solid bastion*. A bastion is said to be

*Full bastion*, § solid or full, when the level ground within is even with the rampart; that is, when the inside is quite level, the parapet being only more elevated than the rest. Solid bastions have this advantage over others, that they afford earth enough to make a retrenchment, in case the enemy lodge themselves on the top of the bastion, and the besieged are resolved to dispute every inch of ground.

*Hollow bastion*, § is that where the *Empty bastion*, § level ground within is much lower than the rampart, or that part next to the parapet, where the troops are placed to defend the bastion. The disadvantage of these kinds of bastions is, the earth being so low, that when an enemy is once lodged on the rampart, there is no making a retrenchment towards the center, but what will be under the fire of the besiegers.

*Detached bastion*, is that which is separated or cut off from the body of the place, and differs from a half moon, whose rampart and parapet are lower, and not so thick as those of the place, having the same proportion with the works of the place. Counter-guards

with

with flanks are sometimes called detached bastions.

*Cut bastion*, is that whose saliant angle or point is cut off, instead of which it has a re-entering angle, or an angle inwards. It is used, either when the angle would, without such a contrivance, be too acute, or when water, or some other impediment, prevents the bastion from being carried to its full extent.

*Composed bastion*, is when two sides of the interior polygon are very unequal, which also renders the gorges unequal: it may not improperly be called a *forced bastion*, being as it were forced into that form.

*Deformed bastion*, is when the irregularity of the lines and angles causes the bastion to appear deformed, or out of shape.

*Deai-bastion*, is composed of one face only, has but one flank, and a demi-gorge.

*Double bastion*, is that which is raised on the plane of another bastion, but much higher; leaving 12 or 18 feet between the parapet of the lower, and the foot of the higher; and is sometimes in the nature of a cavalier.

*Regular bastion*, is that which has its true proportion of faces, flanks, and gorges.

*Irregular bastion*, is that wherein the above equality of just proportion is omitted.

*Barriers*, in fortification, a kind of rails to stop the horse or foot from rushing in upon the benighted with violence. In the middle of the kind of defence there is a moveable bar of wood, which opens or shuts at pleasure.

*Berm*, is a little space, or path, of 6 or 8 feet broad, between the ditch and the talus of the parapet; it is to prevent the earth from rolling into the ditch, and serves likewise to pass and repass. As it is in some degree advantageous to the enemy, in getting footing, most of the modern engineers reject it.

*Bonnet*, in fortification, is a sort of work placed before the saliant angle of the ravelin to cover it: it consists of 2 faces, parallel to the ravelin, or perpendicular to those of the lunette. They are generally made 10 fathom broad at the ends, with a ditch of the same breadth, the covert-way 6, and the glacis 30 fathom.

*Breach*, is an opening or gap made in a wall or rampart, with either cannon or mines, sufficiently wide for a body of troops to enter the works, and drive the besieged out of it.

*Practical breach*, is that where men may mount, and make a lodgement, and should be 15 or 20 feet wide.

*Capital of a work*, is an imaginary line which divides that work into two equal parts.

*Capital of a bastion*, a line drawn from the angle of the polygon to the point of the bastion, or from the point of the bastion to the center of the gorge. These capitals are from 35 to 40 toises in length, from the point of the bastion to the place where the two demi-gorges meet; being the difference between the exterior and the interior radii.

*Couverture* is a passage made in a dry ditch from one work to another: when it is made from the curtain of the body of the place to the opposite ravelin, or from the front of a horn or crown-work, it has a parapet on each side, of 6 or 7 feet high, sloping in a glacis of 10 or 12 toises on the outside to the bottom of the ditch: the width within is from 20 to 25 feet, with a banquette on each side: there is a brick wall to support the earth within, which only reaches within 1½ foot of the top, to prevent grazing ~~the~~ from driving the splinters amongst the defendants.

*Caponnières* with two parapets may properly be called double; as there are some made with one parapet only, in dry ditches of the ravelin, and in that of its redoubt, towards the saliant angles, and to open towards the body of the place.

*Caponnières*, made from the body of the place to the out-works, are sometimes arched over, with loop-holes to fire into the ditch. The single ones in the ditch of the ravelin and redoubt are likewise made with arches open towards the place: for by making them in this manner, the guns which defend the ditch before them, can no other way be dismounted than by mines.

*Casernes*, in fortification, a kind of cellars made under the capital of a fortification: also subterraneous passages or galleries to discover the enemy's mines.

*Casemate*, in fortification, is a work made

made under the rampart, like a cellar or cave, with loop-holes to place guns in it.

*Cavaliers*, are works, raised generally within the body of the place, 10 or 12 feet higher than the rest of the works. Their most common situation is within the bastion, and they are made much in the same form: they are sometimes placed in their gorges, or on the middle of the curtain, and then are in the form of a horse-shoe, only flatter.

The use of cavaliers is, to command all the adjacent works and country round them: they are seldom or never made, but when there is a hill or rising ground which overlooks some of the works.

*Center*, the middle point of any work. From the center of a place are drawn the first lines to lay down the form of a fortification.

*Center of the bastion*, is that point where the two adjacent curtains produced intersect each other.

*Citadel*, is a kind of fort, or small fortification, of 4, 5, or 6 sides; sometimes joined to towns, &c. Citadels are always built on the most advantageous ground. They are fortified towards the city, and towards the country; being divided from the former by an esplanade, or open place: and serving in one case to overawe the inhabitants; and in the other, not only to hinder the approach of an enemy; but to become a retreat to the garrison, should the town be taken.

*Coffers*. See COFFERS.

*Command*, is when a hill or rising ground overlooks any of the works of a fortification, and is within reach of cannon shot; such a hill is said to command that work. See COMMAND.

*Complement of the curtain*, is that part of the interior side which forms the demi-gorge.

*Complement of the line of defence*, is a horn-work with a crown-work before it. See CROWN-WORK.

*Cordon*, in fortification, is a round projection made of stone, in a semi-circular form, whose diameter is about 1 foot, and goes quite round the wall, and within 4 feet from the upper part.

The cordon being placed on the top of the revetment of the escarp, is a considerable obstacle to the besiegers,

when they attempt to storm a place by applying scaling ladders to the escarp.

*Covert-way* is a space of five or six toises broad, extending round the counterscarp of the ditch, and covered by a parapet from six to seven feet and a half high, having a banquette: the superior part of this parapet forms a gentle slope towards the country, which terminates at the distance of twenty to twenty-five toises; this slope is called the glacis.

Sometimes the covert-way is sunk 2 or 3 feet below the horizon of the field; for, as such works are never made to discover the enemy in their trenches, so this method of lowering the covert-way will give room for the fire of the lower curtain (in works that have one) to scour the esplanade; and the expense of it should be the most material objection against it.

*Counter-forts*, in fortification, are by some called *battresses*; they are solids of masonry, built behind walls, and joined to them at 13 feet distance from center to center, in order to strengthen them, especially when they sustain a rampart or terrace.

*Counterguard*, in fortification, is a work placed before the bastions to cover the opposite flanks from being seen from the covert-way. It is likewise made before the ravelin.

When counterguards are placed before the collateral bastions, they are esteemed of very great use, as the enemy cannot batter them without having first secured the possession of the counterguards. They were first invented by Pasmio, in 1579, and greatly improved by Speckle, in 1589.

*Counterscarp*, is properly the exterior talus of the ditch, or that slope which terminates its breadth, and is the further side from the body of the place. It is so called from being opposite to the escarp.

*Crown-work*, in fortification, is a kind of work not unlike a crown: it has 2 fronts and 2 branches. The fronts are composed of 2 half bastions and 1 whole one: they are made before the curtain or the bastion, and generally serve to inclose some buildings which cannot be brought within the body of the place, or to cover the town-gates, or

else

else to occupy a spot of ground which might be advantageous to an enemy. They are so expensive, that they are rarely found in practice. The best use this work can possibly be put to, is to cover 2 joining curtains, when the sides of it will be parallel to the sides of the place, and it should be fortified with the same strength, and in the same manner.

The authors who have written on the subject, have never thought of this useful part; and we often see 2 horn-works put in practice to cover two curtains, where crown-work would do it much cheaper and much better. The crown-work is adopted for the same purposes as the horn-work.

*Crowned horn-work*, is a *horn-work* with a *crown-work* before it. See CROWNWORK.

*Curtain*, is that part of the body of the place, which joins the flank of one bastion to that of another. The straight curtains have always been preferred to the different designs which have been proposed, of which some have diminished the expence, and (at the same time) the strength of the place; others have somewhat augmented the strength, but greatly diminished its area.

*Cunette*, } is a small ditch from 15  
*Cunette*, } to 20 feet broad (more or less), made in the middle of a large dry ditch, serving as a retrenchment to defend the same, or otherwise to let water into it, when it can be had during a siege.

When there is a cunette, there should be a *caponniere* to flank it.

*Defilement*, in fortification, is the art of disposing all the works of a fortress in such a manner, that they may be commanded by the body of the place. It also includes the relative disposition of the works, and the ground within cannon shot, so that the one may be discovered, and the other not observed.

*Demi-gorge*, is half the gorge, or entrance into the bastion, not taken directly from angle to angle, where the bastion joins the curtain, but from the angle of the flank to the center of the bastion, or rather the angle the two curtains would make were they protracted to meet in the bastion. Mr. Landmann determines it to be the line which is formed

by the prolongation of the curtain meeting the oblique radius.

*Demi-lune*. See RAVELIN.

*Descents* in fortification, are the holes, vaults, and hollow places made by undermining the ground.

*Descents into the ditch or fossé*, are *boyaux* or trenches effected by the means of saps in the ground of the counterscarp, under the covert-way. They are covered with *madriers*, or hurdles, well loaded with earth, to secure them against fire. In ditches that are full of water, the descent is made even with the surface of the water; and then the ditch is filled with faggots, fast bound, and covered with earth. In dry ditches the descent is carried down to the bottom; after which, traverses are made either as lodgements for the troops, or to cover the mine. When the ditch is full of water, the descent must be made over its surface; which is done by securing it with blinds or chandebiers, from being enfiladed, or by directing the course of the descent from the point of enfilade in the best way you can.

*Detached bastion*. See BASTION.

*Detached redoubt*. See REDOUBT.

*Ditch*, is a large deep trench made round each work, generally from 14 to 22 fathom broad, and from 15 to 16 feet deep; the earth dug out of it serves to raise the rampart and parapet. Almost every engineer has a particular depth and breadth for ditches; some are for narrow ones and deep, others for broad ones and shallow; and it is most certain that ditches should be regulated according to the situation. In regard to wet and dry ditches, almost all authors have given it in favour of the latter; and we shall only add, that the best of all are those which can either be filled or kept dry at pleasure.

*Wet ditches*, which have stagnant waters, are liable to great inconveniences. They are said to be well calculated to prevent sudden surprises and assaults; but we are convinced of the contrary, especially during a hard frost. Some again assert, that they stop all communication between ill-disposed persons in the garrison and the besiegers. Every man with the least experience, must be of a different opinion.

Wet ditches might certainly be so constructed, as to let the surface of the  
F f water

water remain 12 or 15 feet above the level of the adjacent country; in which case they would serve as larger reservoirs, and not only contribute to the defence of a fortified place, but enrich the grounds by being occasionally let out. The additional value which the neighbouring meadows would bear from these seasonable overflowings, might in some degree compensate for the expence of the fortification. During a siege, these waters, with proper management, must give considerable uneasiness to the enemy that invests the place.

To answer this double purpose, the ditch must be separated into several large basons, which might be filled or emptied at discretion, as often as circumstances would require.

*Dry Ditches.* There are some ditches which may be filled at will; and others which cannot, except by extraordinary means. If they should be intended to answer the purpose of agriculture, aqueducts might be constructed, or the waters poured in through artificial channels. In which case the ditches would not require much depth. The glacis might be raised in such a manner as to serve to dam in the body of water, and to afford a second glacis from whence the besieger might be considerably embarrassed.

*Ditches that are lined.* Ditches whose counterscarp is supported and kept up by a stone or brick wall.

*Ditches that are not lined.* Ditches whose counterscarp is supported by earth covered with sods. These ditches are not so secure as the former, on account of the breadth which must be given to the talus, and by which an enemy might easily surprise a place.

So that ditches in fortification may be briefly distinguished under three separate heads, viz.

*Dry ditches*, which from the facility with which they may be repaired, and their capability of containing other works proper for their security, are in most instances preferable to any others.

*Wet ditches* that are always full of water, and consequently must have bridges of communication which are liable to be destroyed very frequently during a siege.

Wet ditches are subject to many inconveniences, are ill calculated to favour

sallies, and have only the solitary advantage of preventing a surprize.

The third sort of ditch has all the advantages of the other two kinds; if, as we have just observed, it can be so contrived, as to admit occasionally water into the different basons by means of aqueducts, and be drained, as circumstances may require.

*Draw-bridge.* See BRIDGE.

*Embrasures.* See EMBRASURE.

*Enclave*, is a work of earth raised occasionally in the ditch, sometimes like a plain parapet, at others like a small rampart with a parapet to it. Enclaves are generally made before weak places.

*Epaulement.* See EPAULEMENT.

*Epaule*, or the shoulder of the bastion, the angle made by the union of the face and flank.

*Escarp*, is, properly speaking, any thing high and steep, and is used in fortification, to express the outside of the rampart of any work next to the ditch.

*Exterior sole of a fortification*, is the distance, or imaginary line drawn from one point of the bastion to that of the next.

*Face* of the bastion. See BASTION.

*Faces*, of any work, in fortification, are those parts where the rampart is made, which produce an angle pointing outwards.

*Face prolonged*, that part of the line of defence run out, which is terminated by the curtain, and the angle of the shoulder.

*Fascina.* See FASCINE.

*Fausse-bruy*, is a low rampart going quite round the body of the place: its height is about 3 feet above the level ground, and its parapet is about 3 or 4 fathom distant from that of the body of the place. These works are made at a very great expence: their faces are very easily entailed, and their flank of course is seen in reverse: the enemy is under cover the minute he becomes master of them; and a great quantity of shells which may be thrown into them, and must of necessity lodge there, will go near to make a breach, or at worst to drive every one out. Hence, they are liable to do more harm than good, and contribute no way to the defence of the place. M. Vauban only makes them before the curtains, and as such calls them *tenailles*.

*Flanks*

*Flanks* are, generally speaking, any parts of a work, which defend another work along the outsides of its parapets.

*Flanks of the bastion*, are the part between the face and the curtain; the flank of one bastion serves to defend the ditch before the curtain and face of the opposite bastion.

*Flanking*, is the same thing in fortification, as defending.

*Retired flanks*, are those made behind the line which joins the extremity of the face and the curtain, towards the capital of the bastion.

*Concave flanks*, are those which are made in the arc of a circle.

*Direct, or grazing flank*, is that which is perpendicular to the opposite face produced, and oblique or flieant, when it makes an acute angle with that face.

*Second flank*. When the face's location produced does not meet the curtain at its extremity, but in some other point, then the part of the curtain between that point and the flank, is called the second flank. The modern engineers have rejected this method of fortifying. See FLANK.

*Flèche*, a work of two faces, often constructed before the glacis of a fortified place, when threatened with a siege, in order to keep the enemy as long at a distance as possible.

*Gallery*, is a passage made under ground, leading to the mines: galleries are from 4½ to 5 feet high, and about 3½ or 4 feet broad; supported at top by wooden frames, with boards over them.

*Genouilliers*, the undermost part of a battery, or that part from the platform to the embrasures.

*Glacis*, is the part beyond the covert way, to which it serves as a parapet, and terminates towards the field in an easy slope at about 20 fathom distance. Sometimes double glacis are made parallel to the esplanade, and at the distance of 16, or 20 fathoms.

Some authors think these works never answer the expence; however, M. Vauban was so sensible of their goodness, that he never failed to make them when the ground suited; because, when such works are defended by a skilful governor, they will afford the means of being valiantly supported.

*Gorge*, of a bastion, is the interval

between the extremity of one flank and that of the other.

*Gorge*, of any work, is that part next to the body of the place, where there is no rampart or parapet: that is, at the counterscarp of the ditch.

*Half-moon*, (Fr. *Demi-Lune*.) Is an out-work that has two faces which form a salient angle, the gorge of which resembles a crescent. It owes its original invention to the Dutch, who use it to cover the points of their bastions. This kind of fortification, is, however, defective, because it is weak on its flanks. Half-moons are now called ravelins; which species of work is constructed in front of the curtain. See RAVELINS.

*Gorge of a half-moon*, the distance between the two flanks, taken on the right of the counterscarp.

*Head of a work*, its front next the enemy, and farthest from the place.

*Horn-work*, is composed of a front and 2 branches: the front is made into 2 half bastions and a curtain: this work is of the nature of a crown-work, only smaller, and serves for the same purposes. The use of horn-works in general is to take possession of some rising ground advanced from the fortification; the distance of which determines that of the horn-work; and they are placed either before the curtain, or before the bastions, according to circumstances.

*Horse-shoe*, is a small round or oval work, with a parapet, generally made in a ditch, or in a marsh.

*Insult*. A work is said to be *insulted*, when it is attacked suddenly and openly.

*Interior side of a fortification*, an imaginary line drawn from the centre of one bastion to that of the next, or rather the curtain produced till they meet.

*Lodgement*. See STRIKE.

*Loop-holes*, are either square, or oblong holes, made in the wall, to fire through with musquets. They are generally 8 or 9 inches long, 6 or 7 inches wide within, and 2 or 3 without, so that every man may fire from them direct in front, or oblique to right or left, according to circumstances.

*Lunettes* are works made on both sides of a ravelin: one of their faces is perpendicular to half or 2-3ds of the

faces of the ravelin, and the other nearly so to those of the bastion.

There are likewise lunettes, whose faces are drawn perpendicular to those of the ravelin, within 1-3d part from the salient angle; whose semi-gorges are only 20 fathoms.

These kinds of works make a good defence, and are not very expensive; for as they are so near the ravelin, the communication with it is easy, and one cannot well be maintained till they are all three taken.

*Lunettes*, are also works made beyond the second ditch, opposite to the places of arms: they differ from the ravelins only in their situation.

*Lunettes*, are small lunettes.

*Merlon*, is that part of the breast-work of a battery, which is between the embrasures.

*Orillon*, is a part of the bastion near the shoulder, which serves to cover the retired flank from being seen obliquely: it is sometimes faced with stone, on the shoulder of a casemated bastion, to cover the cannon of the retired flank, and hinder them from being dismounted by the enemy's cannon.

Of all the works in a fortification, there is none more capable to defend the passage of the ditch, and to destroy the miner, whosoever he enters himself, than the *Orillon*. Experience has shewn us of what vast advantage it is to have 2 or 3 reserve pieces of cannon, which command the ditch, and the face of the opposite bastion, in such a manner as to destroy the attempts of the miners, and to effect the breach in reverse. Hence the great advantages of a double flank thus concealed weigh so very much with us, and convince us so entirely of their usefulness, that we affirm no place to be well fortified without the orillon, and that the straight flank is fit for nothing but field-works.

The orillon is as old as the bastion, and was first made use of about the year 1480; and we find it frequently mentioned in the works of Pasmio and Speckle, first published in 1579.

*Out-works*, See *WORKS*.

*Palisades* are a kind of stakes made of strong split wood about 9 feet long, fixed 3 deep in the ground, in rows about 6 inches asunder: they are

placed in the covert-way, at 3 feet from, and parallel to the parapet of the glacis, to secure it from being surprised.

*Parapet* is a part of the rampart of a work, 18 or 20 feet broad, and raised 6 or 7 feet above the rest of the rampart; it serves to cover the troops placed there to defend the work against the fire of the enemy.

*Parallels*. See *SILVER*.

*Port-cullise* is a falling gate or door, like a harrow, hung over the gates of fortified places, and let down to keep out the enemy.

*Place*, is commonly used in fortification instead of a fortified town.

*Regular place*, one whose angles, sides, bastion, and other parts are equal, &c.

*Irregular place*, one whose sides and angles are unequal, &c.

*Place of arms*, is a part of the covert-way, opposite to the re-entering angle of the counterscarp, projecting outward in an angle. It is generally 20 fathoms from the re-entering angle of the ditch on both sides, and the faces are found by describing a radius of 25 fathoms.

*Places of arms*. See *SILVER*.

*Pits*, or *ponds*, are little holes dug between the higher and lower curtains, to hold water, in order to prevent the passing from the tenailles to the flanks.

*Profiles* are representations of the vertical sections of a work; and serve to shew those dimensions which cannot be described in plans, and are yet necessary in the building of a fortification: they may be very well executed and constructed upon a scale of 30 feet to an inch. By a profile are expressed the several heights, widths, and thicknesses, such as they would appear were the works cut down perpendicularly from the top to the bottom.

*Rampart*, is an elevation of earth raised along the faces of any work, 10 or 15 feet high, to cover the inner part of that work against the fire of an enemy: its breadth differs according to the several systems upon which it may be constructed: for De Ville makes them  $12\frac{1}{2}$  fathoms, M. Vauban 6, and others 10 fathoms.

*Rams-*

*Rams-horns*, in fortification, are a kind of low work made in the ditch, of a circular arc; they were first invented by M. Belidor, and serve instead of tenailles.

*Ravelin*, in fortification, is a work placed before the curtain to cover it, and prevent the flanks from being discovered sideways: it consists of 2 faces meeting in an outward angle. Some ravelins are counter-guarded, which renders them as serviceable as either the cunettes, or tenailions.

*Gorge of a ravelin*, is the distance between the two sides or faces towards the place.

*Gorges*, of all other out-works, are the interval, or spaces which lie between their several wings or sides towards the main ditch. See *Gorges*.

*Redans*, in fortification, are indented works, consisting of lines or facings that form saluting or re-entering angles, flanking one another, and are generally used on the sides of a river running through a garrisoned town. They were used before bastions. Sometimes the parapet of the covert-way is carried on in this manner.

*Redoubt*, is a kind of work placed beyond the glacis, and is of various forms. Its parapet, not being intended to resist cannon, is only 8 or 9 feet thick, with 2 or 3 banquettes. The length of the sides may be from 10 to 20 fathoms.

*Redoubt*, is also the name of a small work, made sometimes in a bastion, and sometimes in a ravelin, of the same form.

*Redoubt*, is likewise a square work without any bastions, placed at some distance from a fortification, to guard a pass, or to prevent an enemy from approaching that way.

*Detached-redoubt*, is a kind of work much like a ravelin, with flanks placed beyond the glacis: It is made to occupy some spot of ground which might be advantageous to the besiegers; likewise to oblige the enemy to open their trenches farther off than they would otherwise do. Their distance from the covert-way should not exceed 120 toises, that it may be defended by musket-shot from thence.

*Redouts-en-cremaillere*, so called from their similitude to a pot-hook; the in-

side line of the parapet being broken in such a manner, as to resemble the teeth of a saw; whereby this advantage is gained, that a greater fire can be brought to bear upon the *desfilé*, than if only a simple face was opposed to it, and consequently the passage is rendered more difficult.

*Retrenchment* is any work raised to cover a post, and fortify it against an enemy; such as fascines loaded with earth, gabions, sand-bags, &c.

*Revetement* is a strong wall built on the outside of the rampart and parapet, to support the earth, and prevent its rolling into the ditch. When the revetement of a rampart goes quite up to the top, 1 foot of the upper part is a vertical wall of 3 feet thick, with a square stone at the top of it, projecting about 5 or 6 inches, and a circular one below, or where the slope begins, of 8 or 10 inches diameter. They go quite round the rampart, and the circular projection is called the *cordon*.

*Rideau* is a small elevation of earth, extending lengthways on a place, and serving to cover a camp, or to give an advantage to a post. They are also convenient for the besiegers of a place, as they serve to secure the workmen in their approaches to the foot of a fortress.

*Rideau* is also used sometimes for a trench, the earth of which is thrown up on its sides, to serve as a parapet for covering the men.

*Sap*. See *STRONG*.

*Sillon*, a work raised in the middle of a ditch to defend it when too broad. This work has no particular construction, but as it runs, forms little bastions, half-moons, and redans, which are lower than the rampart of the place, but higher than the covert-way. It is not much used at present.

*Sillon* means literally a furrow. In fortification, it is a work raised.

*Scallops-tail*, a kind of out-work, only differing from a single tenaille, in that its sides are not parallel as those of the tenaille, but narrower towards the town than towards the country.

*Talus* signifies a slope made either on the outside or inside of any work, to prevent the earth's rolling down: it is of various denominations, viz.

*Talus*

*Talus of the banquette* is that gentle slope from the top of the banquette to the horizontal line.

*Interior talus of the parapet*, the slope from the top of the parapet to the banquette.

*Talus of the top of the parapet*, that slope which lessens the height of the parapet towards the berm, by which means the troops firing from the banquette can defend the covert-way.

*Exterior talus of the parapet*, the slope of the parapet from the top to the berm.

*Interior talus of the ditch*, the slope from the top of the ditch to the bottom, within.

*Exterior talus of the ditch* is the slope from the top of the ditch to the bottom, without.

*Tenailles* are low works made in the ditch before the curtains; or which there are three sorts. The first are the faces of the bastion produced till they meet, but much lower; the second have faces, flanks, and a curtain; and the third have only faces and flank. Their height is about 2 or 3 feet higher than the level ground of the ravelin. Their use is to defend the bottom of the ditch by a grazing fire, as likewise the level ground of the ravelin, and especially the ditch before the redoubt within the ravelin, which cannot be defended from any other quarter so well as from them.

*Tenallions* are works made on each side of the ravelin, much like the lunettes; with this difference, that one of the faces in a tenallion is in the direction of the ravelin; whereas that of the lunette is perpendicular to it.

*Terre-pleine*, in fortification, the horizontal superficies of the rampart, between the interior talus and the banquette. It is on the *terre-pleine* that the garrison pass and repass; it is also the passage of the rounds.

*Tower-bastions* are small towers made in the form of bastion; first invented by M. Vauban, and used in his second and third method; with rooms or cellars underneath, to place men and artillery in them. As these towers are almost a solid piece of masonry, they must be attended with great expence, though their resistance can be but little; for it has been found by experience,

that the casemates are but of little use, because as soon as they have fired once or twice, the smoke will oblige the defenders to leave them, notwithstanding the smoke-holes: hence it may be concluded, that the strength of these tower-bastions does by no means answer their expence; and that, if small bastions were made instead of them, without casemates, they would be much better, and less expensive.

*Taillonnage* signifies the concealed or hidden guns in a fortification, behind the reverse of the orillon.

*Tracées* are parapets made across the covert-way, opposite to the salient angles of the works, and near the places of arms, to prevent ambuses; they are 13 or 20 feet thick, and as high as the edge of the glacis. There are also traverses made in the capricies, but then they are called *traverses*.

*Traverses* are low works made within other works, when there are several, or many roads, to prevent the entrance of the enemy's approach; circular at top, and about 14 feet diameter; pointed at the bottom like an inverted cone. Traverses that are made to cover the entrances of a ditch in the field, need not be above 8 or 10 feet thick.

*Trous-de-loup*, or wolf-holes, round holes made about 5 or 6 feet deep, with a stake in the middle; they are generally dug round a redoubt, to obstruct the enemy's approach; circular at top, and about 14 feet diameter; pointed at the bottom like an inverted cone. Two or three rows of them are dug chequer-wise, about 6 paces from the edge of the ditch, viz. two rows of holes exactly opposite to each other, and a third row in the middle, covering the intervals.

*Wicket*, a small door in the gate of a fortified place, at which a man on foot may go in, and which may be opened through the gate itself be kept shut.

*Works*. All the fortifications about a place, are called the *works* of a place.

*Out-works*. All detached works in a fortification are so called. See *Dichors*. See *SIEGE*.

*The principal maxims of fortification*, are these, viz. 1. That every part of the works be seen and defended by other parts, so that the enemy cannot lodge any where without being exposed to the fire of the place.

2. A fortress should command all places

places round it; and therefore all the outworks should be lower than the body of the place.

3. The works farthest from the center should always be open to those that are nearer.

4. The defence of every part should always be within the reach of musket-shot, that is, from 120 to 150 fathoms, so as to be defended both by ordnance and small fire-arms; for if it be only defended by cannon, the enemy may dismount them by the superiority of their own, and then the defence will be destroyed at once; whereas, when a work is likewise defended by small-arms, if the one be destroyed, the other will still subsist.

5. All the defences should be as nearly direct as possible; for it has been found by experience, that the soldiers are too apt to fire directly before them, without troubling themselves whether they do execution or not.

6. A fortification should be equally strong on all sides; otherwise the enemy will attack it in the weakest part, where by its strength will become useless.

7. The more acute the angle at the corner is, the stronger will be the place.

8. In great places, dry ditches are preferable to those filled with water, because sallies, retreats, &c. are necessary; but, in small fortresses, wet ditches, that can be drained, are the best, as standing in need of no sallies.

*Field Fortification* is the art of constructing all kinds of temporary works in the field, such as redoubts, half-works, star-forts, triangular and square-forts, heads of bridges, and various sorts of lines, &c. An army intrenched, or fortified in the field, produces, in many respects, the same effect as a fortress; for it covers a country, supplies the want of numbers, stops a superior enemy, or at least obliges him to engage at a disadvantage.

The knowledge of a field-engineer being founded on the principles of *fortification*, it must be allowed, that the art of fortifying is as necessary to an army in the field, as in fortified places; and though the maxims are nearly the same in both, yet the manner of applying and executing them with judgment, is very different.

A project or fortification is commonly the result of military vision; but in the field it is quite otherwise; no regard is to be had to the solidity of the works; every thing must be determined on the spot; the works are to be traced out directly, and regulated by the time and number of workmen, depending on no other materials than what are at hand, and having no other tools than the spade, shovel, pick-axe, and hatchet. It is therefore in the field, more than any where else, that an engineer should be ready, and know how to seize all advantages at first sight, to be fertile in expedients, inexhaustible in inventions, and indefatigably active.

*Quantity and quality of the materials which are required in the construction of field-fortification.*

1. Every common fascine made use of in the construction of field works or fortification, should be 10 feet long and 1 foot thick. A fascine is raised by means of 6 pickets, which are driven obliquely into the earth, so that 2 together form the shape of a cross. These pickets are tied with willows, or birch twigs. It is upon supporters or tressels of this kind, that fascines are made, which are properly taggots bound together with rods, at intervals of 1 foot each in breadth. Six men are required to complete each fascine, viz. 2 to cut the branches, 2 to gather them up, and 2 to bind the fascines. Six men may with great ease, make 12 fascines in an hour. The smaller sort of willows, or birch twigs, are best calculated for this work. The fascines are fastened to the parapet, which would otherwise crumble and fall down. A redoubt, constructed *en crevette*, must have fascines 8 feet long.

2. There must be five pickets for each fascine, and each picket must be 3 or 4 feet long, an inch and a half thick, and sharp at one end; they serve to fasten the fascines to the parapet.

3. When you cannot procure wood for the fascines, the parapet must be covered or clothed with pieces of turf, 4 inches thick, and a foot and a half square; these are fastened to the parapet with 4 small pickets 8 inches long.

4. The fraises, or pointed stakes, must be 8 feet long, 5 inches thick, and be sharp at the top. The lemons upon which they are laid, must be 12 feet long.

long and six inches thick. These beams are spread horizontally along the parapet, and fraises are fixed to them, with nails 7 inches long; after which the beams are covered with earth. Two men will make 12 fraises in an hour.

5. The palisades, by which the ditch or fosse of a work is fortified, must be 9 or 10 feet long, and 6 inches thick; they must, likewise, be sharpened at the end. If you cannot procure them of these dimensions, you must use smaller ones; in which case you will have the precaution to mix a few large stakes.

6. The pickets, which are fixed in wolf-holes, must be 6 feet long, 4 inches thick, and sharp at the top.

7. The beams belonging to a *chevaux-de-frize*, must be 12 feet long, and 6 inches broad. The spokes which are laid across, must be 7 feet long, 1 inches thick, and placed at the distance of 6 inches from each other. These *chevaux-de-frizes* are made use of to block up the entrances into redoubts, to close passages or gates, and sometimes they serve to obstruct the fosse.

8. Gabions are constructed of various sizes. Those which are intended for field-works, must be 3 or 4 feet high, and contain 2 or 3 feet in diameter. These gabions are made by means of long stakes, 3 or 4 feet long, which are placed so as to form a circle, which is 2 or 3 feet in diameter. The pickets must be covered and bound in the same manner as hurdles are. Gabions are chiefly of use in embasures. They are fixed close to each other, and are afterwards filled with earth. There are also gabions of one foot, with 12 inches diameter at the top, and 9 at the bottom. The bank of the parapet is lined with gabions of this construction, behind which troops may be stationed, so as to fire under cover through the intervals. A quantity of large wooden mallets, rammers, batchets, axes, and grappling-irons, is required for this work.

#### *Names of all works used in field Fortification.*

*Bridge heads*, or *têtes de pont*, are made of various figures and sizes, sometimes like a redan or ravelin, with or without flanks, sometimes like a horn or crown-work, according to the situation of the ground, or to the importance of its defence. Their construction depends on various circumstances; for,

should the river be so narrow, that the work may be flanked from the other side, a single redan is sufficient; but when the river is so broad, that the salient angle cannot be well defended across the river, flanks must be added to the redan; but should a river be 100 toises, or more across, half a square may be made, whose diagonal is the river side; and where the river is from 3 to 500 toises broad, a horn, or crown-work should be made. All the different sorts of *heads of bridges*, are to be esteemed as good works against a sudden onset only, and their use is almost momentary, as they sometimes serve but for a few days only, and at most during a campaign.

*Dams* are generally made of earth, but sometimes of other materials, as occasion may require: their use is to confine water.

*Flèche*, in field fortification, a work consisting of two faces, terminating in a salient angle of 90°. the faces are generally 75, or 80 feet long, the parapet 6 feet thick, and the ditch 7 feet broad.

*Forts*, in field fortification, are of various sorts, viz.

*Field forts* may be divided into two kinds; the one defending itself on all sides, as being entirely surrounded; the other, bordering on a river, &c. remain open at the gorge. They have the advantage of redoubts, in being flanked, and the disadvantage in containing less within, in proportion to their extent.

*Star forts* are so called, because they resemble that figure. They were commonly made of 4 angles, sometimes of 5, and very rarely of 6; but we find them now made of 7 and 8 angles. Let their figure however, be what it will, their angles should be equal; if formed of equilateral triangles, so much the better; for then the flanking angle being 120°, the fires cross better and nearer; and as the 2 flanks are on the same line, the space not defended before the salient angle, is reduced to a parallelogram, whose smallest side is equal to the gorge.

*Bastioned forts* differ in nothing from that of places, except that the figure is less, and the attack supposed of another kind. It is reckoned sufficient to flank them with half bastions.

*Triangular*

*Triangular forts*, forts that have only three sides. As these kind of *forts* contain less in proportion than any other, they are consequently used as seldom as possible.

*Square forts* are in many respects preferable to the triangular ones. See *Fort*.

*Lines*, in field fortification, are of several sorts, viz. the front of a fortification, or any other field-work, which with regard to the defence, is a collection of lines, contrived so as reciprocally to flank each other.

*Lines of intrenchment* are made to cover an army; or a place indifferently fortified, and which sometimes contains the principal magazine of an army; or to cover a considerable extent of ground, to prevent an enemy from entering into the country to raise contributions, &c.

*Lines*, of whatever form or shape, should be every where equally strong, and alike guarded.

*Maxims*. 1st. To inclose with the work as much ground as possible, having regard to circumstances. This attention chiefly concerns redoubts and small works.

2d. If there are several works near each other, their lines of defence should be so directed, as to defend each other without being annoyed by their own fire.

3d. Not to depend on the defence of small arms, but where they can fire at right angles; as they generally fire without aim, and directly before them.

4th. Not to have recourse to the 2d flank or fire of the curtain, but when there is an absolute necessity.

5th. That the flanking angle be always a right one, or more obtuse, but never to exceed 100°, if possible; there being no fear here, as in a fortification, of the flank being too much exposed. Besides, it is not necessary to graze the faces, or even to fire obliquely on them; since there is no danger of being exposed to the defence of a breach, or lodgement of the miners. The only thing to apprehend, is a sudden attack.

6th. That the flanking parts be sufficiently extended, so that the interior of their parapets at least may rake the whole breadth of the opposite ditch.

7th. Never to make an advanced ditch in dry ground, unless it can be entailed throughout, and under a proper

angle be defended by the work which it covers, or surrounds.

8th. Not to allow more than from 60 to 80 toises for the lines of defence, when they proceed from two flanks separated by two branches, forming a salient angle, or when not made to cross, though produced.

9th. That the parts most extended, and consequently the weakest in themselves, be as much defended as possible, and have at least the use of two flanks, besides their own direct fire.

*Redans* are a sort of indented works, consisting of lines and faces, that form salient and re-entering angles, flanking one another. Lines are often constructed with redans: their salient angles are generally from 50 to 70°.

*Indented redans* are when the two faces are indented, in that case the face of each indented angle is 8½ feet only.

*Taubeur*, a kind of work formed of palisades, 10 feet long, and 6 inches thick, planted close together, and driven 2 or 3 feet into the ground; so that when finished it has the appearance of a square redoubt cut in two. Loop-holes are made 6 feet from the ground, and 3 feet asunder, for the soldiers to fire through, who are placed on scaffolds 2 feet high. They have often been used by the French with great advantage.

*Tetes-de-pont*. See *Bridge-heads*.

*Trous-de-loup* are holes dug in the ground, circular at top, about 4½ feet diameter, and 6 feet deep, pointed at bottom, like an inverted cone, or sugar-loaf. A stake 6 feet long is fixed in their center, driven 2 feet into the ground, and made sharp at top. Two or three rows of them are dug chequer-wise, about 6 paces from the ditch of a field-work. They prevent the approach of horse, &c.

*Subterraneous Fortifications*.

These consist of the different galleries and branches which lead to mines, to the chambers belonging to them, or to tongsasses, and which are required whenever it is found necessary to explode for the purposes of attack or defence. A subterraneous fortification may be of a permanent or temporary construction, offensive or defensive nature. Whenever this sort of work is adopted to strengthen and secure a fortified place, it is generally

rally built of stone or brick, and made sufficiently solid to last a long time; it is, then called permanent and defensive. Any place which is put in a state to withstand the subterraneous attacks of a besieging enemy, is said to be countermined.

When the besieger wishes to make an impression on a fortification of this sort, he must first construct galleries which he covers with wood, &c. He then practises offensive and temporary fortifications of the subterraneous sort. These works are well calculated to aid him in securing a lodgment for his subterraneous artillery, and in establishing chambers, fougasses, &c.

With respect to fortification in general, different authors recommend different methods; but the principal are those of Pagan, Blondel, Vauban, Coehorn, Belidor, Scheiter, and Muller.

It must, however, be constantly recollected by every engineer, that his views are not to be confined to the mere art of fortification. He ought further to know the use which different generals, in different periods, have made of natural strength and position; without an attention of this sort, he will fall very short of that extensive knowledge, which every military man, who aims at military fame, must be ambitious of acquiring.

Chains of mountains, and volumes of water, together with the influence which different climates have upon the latter element, should always constitute a part of the natural system that ought to form an essential portion of his application. Hydrography will likewise assist him in this pursuit. To enlarge upon this important branch of geography, and to point out the great means which it affords of natural defence and offence in fortification, would be to exceed the limits of our present undertaking. We shall, therefore, refer our military readers to Belair's *Elémens de fortification*, and content ourselves with submitting a short account of the different authors who have either given original systems, or have greatly improved those that were already known. Independent of whom, may be named the following writers, who have likewise contributed to the general knowledge of fortification, viz. Muller, Robins, Belidor, Cormontagne, Folard, Clairac, Le Blond, Dedier, Marshal Saxe, Cugnot, Tielke, Landsbergen, Trincano, Fallio, Rosard, Belair, &c.

FORTIFICATION, according to the method of Pagan, consists in three different sorts, viz. the great, the mean, and the little, whose principal dimensions are contained in the following

TABLE.

The great FORTIFICATION.			The mean		The little	
	for squares	for all other polygons	for squares	for all other polygons	for squares	for all other polygons
Exterior side -	200	200	180	180	160	160
The perpendicular	27	30	24	30	21	30
The face - -	60	60	55	55	45	50
The flank - -	22	24 2	19 1	24	18 3	23 2
The curtain -	73 2	70 5	63 4	60 4	63 5	50 4
The line of defence	141 4	141 2	126 1	126 5	115 5	112 3

Blondel fortifies within the given polygon: he establishes two sorts of fortification; the great one, whose exterior side is 200 toises, and the lesser one 170; because he will not have the line of defence exceed 140 toises, which is the greatest musket-shot, nor less than 120 toises, not to increase the number of bastions. He begins by the diminishing

angle, which may be found by taking 90 degrees from the angle of the polygon, and by adding 15 degrees to the third of the remainder.

Vauban's method is divided into little, mean, and great; the little is chiefly used in the construction of citadels; the mean, in that of all sorts of towns; and the great, in particular cases only.

TABLE.

	Forts.						Little				Mean		Great	
Side of polygon	80	90	100	110	120	130	140	150	160	170	180	190	200	260
Perpendicular	10	11	12 $\frac{1}{2}$	14	15	16	20	21	23	25	30	31	25	22
Faces bastion	22	5	28	30	33	35	40	42	45	47	50	53	55	60
Cap. of Ravel.	25	28	30	33	38	40	45	50	50	52	55	55	60	50

In the first vertical column are the numbers expressing the lengths of the exterior sides from 80 to 260.

In the second, the perpendiculars answering to these sides.

In the third, the lengths of the faces of the bastions; and in the fourth, the lengths of the capitals of the ravelins.

Belidor's method is divided also into little, mean, and great: and in all three the exterior side is 200 toises; the perpendicular of the little is 50, that of the mean 55, and the great 40: the faces of the first 70, the second 70, and the third 55 toises.

Scheiter's method is divided into the great, mean, and small sort. The exterior side of the polygon for the great sort is 200 toises, the mean sort 180, and the small 160. The line of defence in the first is 140 toises, the second 130, and the third 120. This line is always razant. All the other lines are fixed at the same length for all polygons, whose structure chiefly depends upon the knowledge of the exterior side, of the capital, or of the flanked angle, the rest being easily finished.—See the TABLE.

TABLE of Capitals and flanked Angles.

Polygons.	IV	V	VI	VII	VIII	IX	X	XI	XII
The flanked angles in the 3 sorts of fortification.	deg. 64	76	84	90	95	97	99	101	103
Capital for the great sort	toises 46	49	51	52	53	54 $\frac{1}{2}$	56 $\frac{1}{2}$	58	59
Capital for the mean sort	42	44 $\frac{1}{2}$	46 $\frac{1}{2}$	48 $\frac{1}{2}$	50	51	52 $\frac{1}{2}$	54	54
Capital for the small sort.	39	41 $\frac{1}{2}$	42 $\frac{1}{2}$	45	46	47 $\frac{1}{2}$	48 $\frac{1}{2}$	50	50 $\frac{1}{2}$

Errard, of Bois-le-Duc, who was employed by Henry IV. and was the first that laid down rules in France respecting the best method of fortifying a place so as to cover its flank, constructs that flank perpendicular to the face of the bastion; but by endeavouring to cover it effectually, he makes the gorges too exiguous, the embrasures too oblique, and leaves the ditch almost defenceless.

The Chevalier de Ville, who succeeded Errard, draws the flank line perpendicular to the curtain; but here again the embrasures are too oblique, especially in the polygons, and the ditch is necessarily ill guarded. This engineer's method of fortifying is stiled by most authors, the *French method*. His favourite maxim is to make the flank angle straight, and the flank equal to the demi-gorge.

Count Pagan makes the flank perpendicular to the line of defence, which method seems to agree perfectly with this maxim, because by that means the flank so raised covers as much as possible the face of the opposite bastion; but notwithstanding this apparent advantage, the flank becomes too small, and is too much exposed to the enemy's batteries. This engineer acquired great reputation during the several sieges which he assisted in conducting under Louis XIII. His system has been improved upon by *Alain Marisson Mallet*, and his construction in fortification is to this day esteemed the most perfect. It differs very little from Marshal Vauban's first system. Count Pagan has pointed out the method of building casemates in a manner peculiar to himself.

Marshal Vauban has judiciously steered between these different methods. He has drawn his flank in such a manner, that it does not stand too much exposed, nor does its collateral line of defence extend too far from the direct line of defence. He has effected this by lengthening out his flank and giving it a circular form.

It cannot be disputed but that large and extensive flanks and demi-gorges are superior to narrow and confined ones. The more capacious the flank is, the better calculated will it prove for the disposition of a formidable train of artillery. From this conviction many writers in their proposed systems of fortification, have added a second flank, in

order to augment the line of defence; but they did not foresee, that this second flank is not only incapable of covering the face of the opposed bastion, except in a very oblique and insecure direction; but that the right flank, or the flank of the bastion, is thereby more exposed to the enemy's batteries, which, it must be acknowledged on all sides, is a great fault.

The prevailing system of the present day is to make the flanks of the bastion as wide as possible, without having recourse to a second flank, unless it be absolutely necessary. Those gorges are likewise best which are most capacious, because they afford space and ground in the bastion for the construction of entrenchments within, should the enemy have effected a practicable breach.

All parts of a fortification which stand exposed to the immediate attacks of a besieging enemy, must be strong enough to bear the boldest attempts, and the most vigorous impressions. This is a self-evident maxim, because it must be manifest to the most common understanding, that works are erected round a place for the specific purpose of preventing an enemy from getting possession of it. It consequently follows, that flanked angles are extremely defective when they are too acute, since their points may be easily flanked and destroyed by the besieger's cannon.

The Dutch construct at sixty degrees; but according to Vauban's method, no work should be under seventy-five degrees, unless circumstances and situation should particularly require it.

A place to be in a state of defence, should be equally strong in all its relative directions; for the enemy would of course make the weak part his object of attack, and finally succeed in getting possession of the town. The body of the place must have a command towards the country, and no quarter in the outward vicinity of it must overlook, or command either the place itself, or its out-works, as has been the case for several years (and during the whole of the last war), on the North-East side of Dover Castle. Those works which are nearest to the center of the place, must have a greater elevation than the more distant ones.

The first regular system of fortification which appeared and was adopted in France, owed its origin to Errard of Bois-

Bois-le-duc, whom we have just mentioned. His method, however, has been uniformly rejected by able engineers; and if we may give credit to the report of Ozanan, Errard himself never put his own system in practice.

Next to Errard of Bois-le-Duc, came the Chevalier Antoine de Ville, who was engineer under Louis XIII. and published an excellent treatise upon fortification. His method is styled by most authors, the *French method*. Others call it the *Compound System*, or *Système à trait Composé*, because it united the Italian and Spanish methods. He was, indeed, by no means an advocate for new systems; for he generally observed, that any new method, or invention was extremely easy, so long as it was confined to the mere alteration of something in the measure, or in the disposition of those parts of fortification which have been discussed by other authors.

The Count de Pagan followed after, and had the good fortune to propose a system which entirely superseded the other two. We have already mentioned the principal features in his method.

Marshal Vauban, whose reputation rose upon the manifest superiority which his skill gave him over all others that had written upon fortification, likewise proposed three methods, with considerable improvements; viz. The *great*, the *mean*, and the *little*.

The great method, according to Vauban, contains on its exterior side from 200 to 250, or 240 toises. This extent is not uniformly the same throughout all the sides of a place, but is confined to that side which lies along the banks of a river, where he uniformly erects considerable outworks.

Vauban made use of his second method in fortifying Bèfort and Landau. On account of the bad local situation of Bèfort, and the impossibility of fortifying it with common bastions that would not be exposed to an enfilade in almost every direction, in spite of the traverses or *rechutes* which might be made; he invented arched bastions that were bomb proof, which he called *tours bastionnées*, or *towers with bastions*. These arched bastions are covered by counterguards, the height of whose parapet almost equals the elevation of the towers themselves. Although strictly speaking, both these

places are irregularly fortified, nevertheless a method of regular defence may be established from the construction of their works.

Vauban's third system grows out of the second; and for that reason it is called *ordre renforcé*, the *reinforced order* or *method*. It was adopted in the fortifications of Neuf-Brisach. Vauban left nothing untried to bring this system to perfection, and he had the ingenuity to execute his plan at a less expence, than it would otherwise have been effected, by means of half revetments which he threw up in the outward works called the *dehors*.

This system, however, (ingenious and unrivalled, as it certainly is,) has not escaped the censure of some writers. It must nevertheless be acknowledged, that their remarks are either founded in envy, or that they proceed from ignorance.

There are other systems of fortification which have been proposed by the writers of other countries besides France. We shall give a brief detail of them, and leave the inquisitive to go more at length into the nature of their methods, by referring them to the different treatises.

The Italians have furnished several authors who have written variously on the subject of fortification. The method proposed by Sardin has been generally esteemed the best.

The Spaniards in their methods of fortifying, never adopt that which adds a second flank. The obtuse flanked angle is not looked upon by their best engineers as a defective system in fortification.

Both the Italians and the Spaniards speak frequently of the *ordre renforcé*, which was originally invented to lessen the number of bastions in a great town or fortified place, and to render consequently the line of defence equal to the range of musquetry.

The Chevalier St. Julien, a very able engineer, has published a method by which, he asserts, that works may be constructed not only at a less expence than others require, but in a manner that must render his defence or attack more formidable. He has likewise invented a new method for the defence of small places, which is preferable to the

first,

first, although it is not without faults. According to his system, the reach of the musquet is taken from the center of the curtain. To this end he directs, that a covert lodgment, 7 feet high, and 10 toises wide, be constructed from that spot to the gorge of the half-moon or ravelin. Cannon is disposed along the faces, and a gallery is erected for the musquetry, which likewise serves as a passage to the ravelin.

Francis Marchi, a gentleman of Bologna, in his folio edition, has furnished us with upwards of 160 different methods of constructing fortifications.

The Dutch uniformly pursue the system published by Maróllous.

Bombelle has likewise established three sorts of fortification, the great royal, *grand royal*; the mean; and the little royal, *petit royal*. His method agrees with the sound maxims of good fortification much more than any of the preceding ones.

Blondel has published a system of fortification, which he divides into two principal heads; the *great*, whose exterior side contains 200 toises; and the *little*, where the side does not exceed 170 toises. His reason is, because he objects to the line of defence having more than 110 toises, which is the furthest reach of musquetry, or less than 120 toises, to prevent an unnecessary increase of bastions. The principles of Blondel's system resemble, in a great degree, those upon which Pagan's is founded, and chiefly consist in methods of fortifying inward posts. The invention has certainly great merit, but its adoption must prove expensive in all its practical branches. It must, moreover, be manifest, that the four long batteries which are supported by flanks of his construction, must serve as so many scaling ladders, or steps to the besiegers, the instant they have effected a breach by cannon shot or by shells.

In 1689 a work was published, entitled:

*Nouvelle maniere de fortifier les places, tirée de méthodes du Chevalier de Ville, du Comte de Pagan, et de M. de Vauban, avec des remarques sur l'ordre renforcé, sur les desseins du Capitaine Marchy, et sur ceux de M. Blondel.* This work is full of strong reasoning, from the result of which the author has formed

a new method, containing, indeed, nothing original, but giving references to what has already appeared, and disposing the different parts in so judicious a manner, as to shew how a place may be rendered stronger, and be subject at the same time to a less expence. This writer divides fortification into three parts, the great, the mean, and the little.

There is a second and third method proposed anonymously, and containing mere simple designs. That method in which a modern author gives it the preference over the system of Neuf Brisach, contains little useful information, and contributes less to the real art of fortifying places.

Donato Rosetti, a Canon belonging to Livourna, professor of mathematics in the academy at Piedmont, and mathematician to the Duke of Savoy, has written upon a method of constructing works in what he calls *fortification arc-bouts*, or fortification in reverse; so called not only because the re-entering angle of the counterscarp is opposite to the flanked angle; but because in his idea, it will be necessary to attack it from the reverse side of other works. His system is very simple, and does not require a sacrifice of much money, or stand in need of many men to defend the works: although he can, on his side, pour as much fire upon the enemy, as could be furnished by more complicated methods.

Antonio de Herbart, major of artillery, in the Duke of Wurtemberg's service, in 1735, published a treatise on fortifications with square angles, which he calls *angular polygons*.

Monsieur de Montalembert has lately endeavoured to bring riches, which are so much condemned by the Chevalier de Ville, into repute. He treats the subject in a manner, and upon principles so similar to those proposed by Antonio de Herbart, that it is almost impossible to separate the two systems. M. de Montalembert asserts, that the science of fortification, as it is established and taught at present, can only be valued by the public on account of its illusion. He looks upon the use of bastions, as the effect of prejudice; he rejects them wholly, and substitutes in their room a front of *angular tenailles*, polygons with small

*small wings and angular polygons.* The engineers of the present day assert with confidence, that the chief security to be derived in works that are supported by bastions, must depend upon cross and reverse firing directed against the enemy's lodgements on the glacis. Large half moons are made, not only for the purpose of covering the curtains and the flanks of bastions, but principally to obtain a reverse firing, which effectually prevents the enemy from maintaining his ground on the glacis of a bastion, before he has taken the two collateral half-moons.

M. Minno, Baron of Cochoorn, who was general of artillery in the Dutch service, lieutenant-general of infantry, director general of all the fortified places, belonging to the United Provinces, and governor of Flanders and all the fortresses that lay along the Scheldt, has been justly esteemed for his extensive knowledge in the art of fortifying places. He was cotemporary with Vauban. This intelligent and sagacious officer being thoroughly convinced, that, however extensively the rampart of a town may be constructed, it could not long sustain the shock of heavy ordnance, invented three different systems, by which he throws so many obstacles in the way of a besieging enemy, that although the place be not in reality rendered impregnable, it is nevertheless so far secured as to make its conquest a business of considerable hazard and expence. We must however acknowledge, that the three methods which have been pointed out by this Dutch general, can only suit places and grounds that are nearly on a level with the surface of the water; that is to say of 3, 4, or 5 feet; which circumstance plainly indicates, that his attention has been chiefly directed to the soil and ground of the United Provinces; so that his instructions are peculiarly applicable to low and aquatic situations. There is much skill discovered in his manner of treating the subject, and considerable ingenuity in the treatise he has published, which certainly contains several improvements that are exclusively his own. It would be impossible to force a passage, or to penetrate into any of his works, without being exposed on all sides to the fire of the besieged, who are under cover, and from whose dis-

charge of ordnance and musquetry, it is scarcely possible for an assailing enemy to secure himself.

Scheiter, a German writer, describes two kinds of fortification, the *great* or the *superior*, and the *small* or the *inferior species*. It has been erroneously and unjustly stated, that the celebrated Vauban only copied after Scheiter, at Neuf Brisach.

Every man of the least knowledge or penetration must see, that the whole system of that illustrious engineer differs essentially from the author we have quoted.

The defects that are manifest in all these different systems shew the superiority which exists, to this day, in all the fortifications that have been constructed by Vauban.

An anonymous writer in the Sardinian service, proposes two new methods of fortification, in a work entitled *Science de la Guerre*, which was published at Turin in 1744. After having discussed, at considerable length, the art of fortification in general, its utility, the different sciences which must be acquired towards obtaining any degree of perfection in that art, the various systems in its regular and irregular, and the construction of, pallisades, gates, mines, casemates, magazines, &c. &c. he concludes with this extraordinary sentence: "It is not my intention to propose any alteration in the general system, but merely to suggest, that the stile be rendered more intelligible." It must be noticed, that this Italian writer in his preface frankly confesses his deficiency in the French language. We shall however pass over what he says relative to the approbation which his proposed systems, or rather his explanation of methods already known has met with from scientific men, and give his own observations concerning the improvements that might be made. His words are—

"The first method which I propose, consists of a new figure and position that should be given to exterior works in fortification. Having constructed the body of the place after Vauban's manner, my next object is to erect counter-guards with bastions at the head, and flanks upon the wings. I have been induced to adopt this species of work, in order to remedy the inconveniences and

and the dangers which invariably attend works erected at the foot of the glacis. These works contribute very little to the security of the place, and can only be defended by cannon, which eventually do more harm to the garrison than to the besieging enemy, since they serve as an epaulement to the battery, which the latter will naturally erect the instant he obtains footing in that quarter. This was proved during the siege of Turin, where in a very short space of time the French carried the bonnets and fleches, and made use of them for the purpose of bringing up their artillery.

By means of the small bastions which I have proposed, and which must be pushed forward into the country, the enemy's approaches are necessarily checked, the salient angle of the counter-guard is covered, the ditch is completely flanked, and the garrison is impressed with confidence, because the artillery and the troops can always be called in, in cases of exigency. They moreover equal the enemy in the fire which they can furnish, and the whole body of the place is covered by them.

I construct the bastions and flanks out of the sides of the counter-guard which are detached by means of a ditch 4 toises wide. This ditch is covered above by vaults made of brick or timber, and by boards well supported underneath by strong stakes, the whole being strengthened and rendered bomb-proof with earth 3 or 4 feet thick. This earth keeps the upper plan of the bastion compact, and is sufficient to form a parapet to the counter-guard when the bastion is destroyed. If the vaults should be blown up by mines, and the besiegers set fire to the beams that supported them, a fresh work will present itself, together with a ditch which they had not foreseen or expected, and which they must cross before any further impression can be made.

This sort of subterraneous fortification is extremely advantageous, and may be converted to various purposes. It serves for casemates and galleries to the mines, which I would construct along the whole extent of the faces belonging to these bastions; a communication with them is kept up by means of the galleries attached to the counter-guard. These galleries must be blocked up the in-

stant the bastion is demolished. The flanks of the side will be built after the same method, with a ditch as wide as the one dug in front of the bastion, and which according to circumstances, may be covered like that already described. The flanks will be of a round figure, in order to avoid the projection of any angles towards the body of the place, which would be the case, should the work be carried; for the enemy availing himself of the earth in front of the walls, and throwing it up, would derive considerable advantage from these angles.

The principal advantage to be obtained from my system arises out of the double defence which it affords: the salient angles of the bastions, by covering a part of the *demi-lunes mitrées*, or mitred half-moons (which are their chief protection,) and by these means enclosing the body of the place from any outward command or empuce. This cover or defence cannot, in fact, be taken, before the enemy has got complete possession of the outworks.

I have spoken of these sorts of fortification in the chapter that treats of field works, which, in my humble opinion, are more useful, more solid, less expensive, and more easily built than a variety of others that have been adopted to this day.

The demi-lunes or half-moons, which are nearly mitred or crossed, and which I dispose between the counter-guards, have been constructed in that manner for the purpose of stretching as far as possible, beyond the body of the place towards the country. One essential advantage attends this method, which is that the work being more spacious, it is better calculated to hold a greater quantity of artillery, and a larger garrison; that it becomes double by means of the ditch, which separates it from the advanced work, which it covered as described above, and which is joined to the interior revetement by plain walls, separating a whole half-moon from it; in which space a small fort with loopholes may be constructed to enable the garrison to dispute every inch of ground as the enemy advances. Under the main body of the place, I build a subterraneous chamber, to serve as occasion may

may require, either for a powder magazine, or for mines.

Between the half-moons and counter-guards, I construct another kind of ravelins, which are open towards the body of the place, cover the curtains of the counter-guards, and supply a double fire against the enemy and the covert way. These ravelins are not raised so high as the other works, in order to keep them under their fire; and I preserve a communication by means of palisaded caponnières. I leave them empty within, that the besiegers may have as little ground as possible; they are moreover sufficiently thick and solid to withstand the discharge of ordnance, which can only batter in breach from the counter-scarp, which acquires double strength, because, by means of these works, it is enfiladed, and secured against the enemy's attack or attempt to make a lodgment.

If the plan, which I had the honour of laying before the king of Sardinia, be carefully examined, it must be apparent to every military man, that the works I therein describe, are not only more useful, but capable of being constructed at a less expence, than those which are generally practised to this day. It will be clearly seen, that I have done nothing more than add some additional proportions of the flanks and bastions to the counter-guards, which are usually erected; and that I have augmented their double face, by joining it to the half-moons of the curtain. The object of this addition, is to throw obstacles in the enemy's way, should he attempt to make close approaches, to cover the body of the place, to render the siege difficult, to increase the besieger's expence, and to give confidence to the troops of the garrison, who are thereby no longer exposed, as they must be in all out-works erected upon the foot of the glacis.

It is not, however, my design to throw works of this kind into utter disrepute. There are situations and local circumstances, which not only make their adoption useful, but render it absolutely necessary. I cannot pretend to describe the specific nature of such exigencies, as they grow out of existing cases, which an able general and an engineer will know how to discriminate, by examining the ground;

The ditch belonging to the body of the place, be its soil what it may, must be very broad, as the chief security to be derived from it, depends entirely upon its width. The enemy cannot easily fill it up, and he must suffer a considerable loss of men, should he attempt to cross it; being exposed to the discharge of artillery from the flanks, which artillery cannot be dismounted from any quarter or lodgment, before the counter-guards are taken. The storming of the place must depend entirely upon the previous conquest of the side ravelins, and of the center half-moons; for unless the enemy has first effected this, he will not be able to cross the ditch, or make any lodgment, since at every approach he must be annoyed from the flanks, and battered in front; he must, in fact, attack and get the better of five works at once. The execution of any part of so important a task, must be the more dangerous, because in proportion, as he overcomes one line of defence, another presents itself which is equally formidable, and the rest increase in difficulty and hazard.

When I submitted this new method to the consideration of able and intelligent men, only one opponent started to controvert the propriety of its general adoption. This was a celebrated Dutch engineer, who asserted, that it could not be of any essential service, except in hexagons, or figures that had many sides; he further argued, that the method was more faulty in small works, because the angles became more acute, and that no use could be made of them in irregular fortification.

I had the good fortune to satisfy this gentleman, and to convince him, that his objections were not well founded. I stated to him, that by increasing the width of the ditch at the angle of the flanks of the bastion, I reduced that angle to any size I judged necessary; I maintained, that by so doing, I did not weaken the place; but that on the contrary, by cancelling the parallelogram of the counter-guards, I rendered more oblique any battery which the enemy might erect in front of the bastion, whilst the rampart belonging to it fell under a cross fire from the mitred half-moon.

With respect to its uselessness in irregular

regular fortification, after having discussed the subject at some length, I got him to agree with me, that every detached piece of fortification might be constructed any where (and with greater advantage to the ultimate defence of a place) sooner than in plain counter-guards, horn or crown-works, tenailles, and such like fortifications, because, by means of the retreat which was secured under a second line of retrenchment, by means of the regular resistance it afforded, without having one dead angle attached, and by means of the little ground it left for the enemy to lodge on, the main body of the place was more effectually protected, and the approaches of the enemy were considerably checked.

With regard to the construction proposed in this new method, I take all the measurements, and I mark all the essential points upon capital lines; that is to say, I prolong the lines of the salient angles of the bastion, and those of the centre of the curtain; after which I determine the width of the ditch at 23 or 24 toises, in order to make the parallels of the faces of the different bastions for the counterscarp of the counter-guards and of the great half-moon, and finally the thickness of the works, to agree with the ditches in front.

With regard to the cravains which are made between the retired half-moons and the counter-guards, I place the salient angle in the centre of the site, and I construct faces to them in such a manner, that they are under a straight line of defence from the half-moons and counter-guards. I erect the counterscarp and glacis in the usual manner, only with this difference, that I wish to have a ditch of moderate breadth and depth between the covert-way and the glacis: say, two toises broad upon two deep.

In order to clear the ditch of occasional rubbish that may fall in, or of pieces that may drop from the demolished parts of a fortification during a siege, square excavations or wells must occasionally be made along the flanks and faces of the different works; by which means the ditch is always kept clean, and you may at any time repair the fortifications, whilst on the other hand, the enemy, should he attempt to storm the place, must have recourse to

fascines, as he could derive no advantage from the materials that would otherwise be found under the walls."

This ingenious writer has described every part of the method proposed in a clear and perspicuous manner. His plan is particularly valuable, on account of the exact measurements it contains, whereby the most common understanding may become acquainted with the construction. He appears singularly anxious to have it practically proved, that works can be erected according to this method at a less expence than by any other, and that there is no comparison between the advantages it affords in point of real utility. In chap. 16, p. 61, the following account is given of his second system, which he calls the *Great System*.

"After I had thoroughly digested my plan, relative to the best method of covering a town or fortified place by out-works, it naturally occurred, that I had not provided the necessary means of keeping the troops under shelter, of securing a retreat to the artillery, which is always seized whenever a work is taken by assault, nor of furnishing a heavier discharge of ordnance and musketry than the enemy could pour in. These important objects put my invention to work, and I directed all the faculties of my mind towards discovering a kind of fortification which might not only cover the body of the place, and by a new disposition of its relative parts communicate equally with every quarter, without there being any necessity to carry the heavy ordnance into the ditch; but likewise oblige the besieging enemy to increase his means of attack, and make extraordinary efforts. I necessarily saw, that the salient angles of the bastions should be well covered, and that the strongest ought to be raised before the curtain belonging to the body of the place, in order to force the assailants to make their attack on a quarter from whence the concentrated fire of several works, presenting a wide front of artillery, would issue with considerable effect.

After having for several years, directed the whole of my attention to this specific object, and tried the result of my reflexions upon paper by a variety of designs; I had the good fortune to discover a method

a method, whose plan exhibits to the eye several pieces that are joined together by their different walls, and in front of which there are ditches covered in with beams and strong oak boards, and made bomb proof by means of a sufficient quantity of earth that is spread upon the whole. So that it appears evident to me, that there is only one species of fortification, which affords the means of concentrating your line of defence from every quarter, and of lining the parapets with heavy ordnance. By means of this construction, the lines and glacis will be secured against any immediate approaches of the enemy, during which seasonable interruption, the artillery may without risk, be withdrawn and lodged in the interior work; a convenience which cannot be obtained in detached pieces, on account of the difficulty which always attends the first erection, or ultimate demolition of them.

By taking away the beams, or by destroying them at once, and by pulling down the walls which compose the flanks, you suddenly open a new work upon the enemy; which work has the advantage of being considerably larger than the one he has just attacked and taken, and against which he must raise fresh batteries, and prepare the means of crossing a ditch, he had not foreseen, and which he cannot easily pass. This work either communicates with a tenaille that commands it, or is connected with a horned work, flanked by two others of similar construction. The tenaille is open in the center (being divided into two parts by a ditch) in order to leave as little room as possible for the enemy to lodge on, and to multiply the enfilading points of the place.

Between these large works, demi-lunes or half-moons, of three orders, are constructed in the shape of bastions. These have orillons and ditches between the two, which flank the side-works, and are always protected by an enfilade, that the enemy never can lodge without being exposed to a cross and rear fire. In order to cover the whole body of the place, I construct other intermediate demi-lunes, which are equal in elevation to the first works. These contribute greatly towards preventing the enemy's approaches; for they not only enfilade the covert-way, but they

likewise double the defences in such a manner, that the enemy, as has already been observed, cannot attack one place without experiencing a necessity to attack four others at the same time; to which may be added this disheartening circumstance, that as fast as he advances, so fast a retreat is made behind some new work, and he is, of course, obliged to recommence his attack.

The regular communication between the several works must be kept up by means of sleeping bridges, which are well supported underneath by strong beams, or stakes. Those which form a part of the rampart must be covered with four feet of earth, well pressed together. The walls by which the works are connected, must be so built as to be easily demolished, and they must only serve to cover the subterraneous fortifications. These walls are never within the reach of the enemy's cannon, and when they are pulled down, their ruins are thrown into wells, or excavations, which have been previously dug at the foot of the main wall, to prevent the ditch from being filled with them: subterraneous embrasures are opened from within to enfilade the ditch, and to obstruct the passage.

When by dint of perseverance, and after having expended considerable sums of money, lost many lives and consumed much time, the enemy has at last obtained possession of these works, he discovers, that his sacrifices have only led him to an unexpected body of the place which he cannot injure. This new construction he finds flanked on both sides by two double bastions, and a broad curtain lined with a triple front of artillery, having a very wide ditch, traversed by tenailles, batteries from casemates, and defended by flanks with the two cavaliers belonging to the bastions, which keep up an incessant fire upon the artillery that is planted in the carried out-works, and render it almost impossible for him to establish a lodgment."

"I do not pretend," continues the same author, "to have discovered by this new method, any certain means of rendering a place impregnable; such an idea would be chimerical and absurd.

Let a town be ever so well fortified, that town, if properly invested and resolutely attacked, must eventually fall,

unless it be seasonably succoured from without. My chief object is to correct the errors into which former writers seem to have fallen, and by the methods I have proposed, to harass a besieging army, not only by increasing its expence, but by occasioning a considerable loss of men; I thereby prolong the siege, and gain time for the garrison, so that succours may arrive, or such conditions be entered into as will secure the country, which the place attacked is destined to cover.

Counter-guards, ravelins, and demilunes are, in fact, a species of fortification by which they flank one another obliquely, and which only tend to embarrass the troops of the garrison, whenever it is judged expedient to manœuvre under the fire of artillery; a circumstance that invariably causes confusion; whereas the works which I have proposed are capacious enough to admit of every movement and evolution without inconvenience.

Horned and crowned works are extremely expensive in their construction, and of little use when completed; their lines of defence, their faces, and their flanks are so short and limited, that a besieging enemy can, with great ease, attack and carry them by means of an equal front and range of fire; and when he has so far succeeded, he derives considerable advantage from having opened a wide space of ground on which he can erect angles to annoy and batter the place. Whereas in the works of my proposed method, the foundations are broader, the defences are more direct and within musquet shot, and when the garrison retreats towards the body of the place, the ground which it abandons is scarcely sufficient for the erection of a small battery; it is moreover exposed to all the retrenched and flanking points, so that the enemy would be instantly dislodged.

Tenailles and *queues d'hirondelle* contain dead angles which may always be taken advantage of by the besieging enemy. This does not exist in the works I propose. For, at every approach, not only such expences must be incurred by the assailant, but he will remain exposed to several fires at once, without being able to cover himself from the reverse and cross ones.

Double ditches afford the means of creating perpetual uneasiness in the enemy, by uncovering fresh works as he advances. So that the siege is protracted, his expences are increased, and his loss of men, ammunition, stores, and artillery, is proportionably multiplied.

In the examination which was made of the *relief* proposed by me; some persons well acquainted with the particular subject, objected to its adoption on account of the expence. I made an accurate calculation of the amount, and I found that it cost a sixth more than the usual fortification. This does not assuredly form sufficient ground to outbalance the many advantages which can be derived from the construction. Besides, there is no occasion of fortifying all the parts of a town in this manner, since it would be advisable to strengthen the weak points only."

The construction which is proposed in this new method, is simple, and easily understood. The principal objects to be attended to are these; that there be mines under all the works, and that a regular communication be kept up with the chambers, by means of subterraneous galleries, which must be resorted to in proportion as the enemy approaches.

The Piedmontese engineer, from whom we have made these extracts, has added to Vauban's and Voeblorn's systems. We leave the subject to the consideration of those professional men who have made the art of fortification their peculiar study; they must determine whether the theory of the proposed method be susceptible of practice, and if so, whether it can be rendered so generally useful, as the author seems to promise it would.

On a general view of the subject it must, however, be acknowledged, that a situation is not always found which will admit of the improvements and additions that might otherwise be made. There are some old places in which the figure of the fortifications erected for their defence, is so strange and whimsical, that the least correction of its errors must be attended with an enormous expence.

A town may be irregularly fortified, and owe that irregularity either to the figure of the works only, by the angles not being equally distant from the center,

ter, although every one may admit of a good bastion, and the lines be tolerably extensive; or by the figure and the angles differing, from some being too acute, and others being reentrant; or by the inequality of the figure and its sides; some being too long and others too short; or finally by a disparity all together in the figure, in its sides and angles.

If the three first kinds of irregularity are judiciously corrected, the correction of the fourth follows of course, as it is only the natural consequence of the others. Those irregularities may be occasioned by a neighbouring river, by the entrance into a creek or harbour, or by steep rocks beyond which it is impossible to carry the works.

It is a sound and general maxim in the art of fortifying, to reduce the irregular proportions of its lines, &c. of defence to as much regularity as the ground and situation will permit. For by so doing, their strength becomes equally great throughout. If you should not be able to surmount the natural obstacle which may be thrown in your way, you must never deviate from the general rules that are laid down in regular fortification. These are, that all the parts be well flanked, that the angles of the bastions do not fall under sixty degrees, that the line of defence be within musquet-shot, or that outworks be established to bring it within that range; and finally, that the means of resistance be distributed in as many equal proportions as the irregularity of the works will suffer.

You must, however, be careful to avoid an error into which many have fallen. You must not weaken the collective means of defence, in order to strengthen any particular vulnerable quarter; for by so doing you are sacrificing a great line of defence, to the security of a small part which might be strengthened by outworks.

The author of *Oeuvres Militaires*, in his 3d volume, page 45, has given observations and maxims relative to irregular fortification.

Baron d'Espagnac, in consequence of the remarks which are made by Marshal Saxe, in his *Réveries*, has in his supplement to that work amply discussed the subject of fortification, and described the

different means of attack and defence. We refer the inquisitive officer to those works. Before we conclude these interesting remarks upon an art, which is certainly equal to any invention that has employed the skill and ingenuity of man, we must observe that in all periods, productions on that head have been as numerous as the subject has hitherto proved inexhaustible. It must, however, be acknowledged with some regret, that the tendency of the greater part, if not of all, seems to be an indiscriminate and bold attack upon the works of the immortal Vauban. These writers censure the methods of that great engineer by proposing something of their own, which only differs in appearance, and which they think proper to call a *superior system*. Assertious, and promises to afford new lights upon the science of fortification, have always, in fact, been profusely given by authors of this description. Their labours, however, are only so far to be regarded and esteemed, in as much as their different systems tend to point out the necessary calculations which are required to shew the expence attending their construction, and to prove the effects they might produce. The memoirs upon perpendicular fortification, written by M. M. engineers, will throw considerable light upon these observations.

With respect to the knowledge of fortification, it must be manifest to every thinking man, that from a sovereign prince, or head of a country, down to the lowest infantry officer, the acquintment of it is more or less indispensable necessary.

A prince, or chief magistrate of a country, should be well versed in the science of fortification, in order to examine the plans that are laid before him, and to determine upon the execution of proposed projects.

A minister should know it, in order to explain the nature of the plans when questioned by a superior power, to calculate the expences which will attend the construction of works, and to distinguish good ones from those which might be useless and expensive.

Every governor of a town, or fortified place, should be well acquainted with the subject, because it may fall to his peculiar share to construct works in

cases of emergency, or to add to those already erected for the defence of the place entrusted to his care. He likewise ought, at all times, to be able to ascertain how far such a place is capable of holding out.

Every director of fortification should be master of it, in order to discriminate between what is proper, or what is defective, and make his report accordingly.

Every infantry officer, in a word, should be conversant in field fortification at least, if not acquainted with the general system. For without some knowledge of its branches, how will he, in cases of emergency, be capable of throwing up a temporary redoubt, of fortifying a spot of ground which he is ordered to maintain, or of securing a common out-post?

*Field Fortifications, (fortifications de campagne,)* Fr. consist in the art of fortifying, constructing, attacking, and defending all sorts of temporary field works during a campaign.

Although an engineer may be perfectly master of the different methods by which a town can be strengthened and secured by permanent works, he should not remain satisfied with that acquisition, but carefully direct his attention to the distribution of ground, for field fortification. He should be able to ascertain, with geometrical precision, all the relative divisions and corresponding points of any situation in which it might be judged expedient to construct that species of fortification which consists in entrenched lines, fortins, or small forts, and in redoubts of various denominations. The shape or figure of these works is exactly similar to those of the permanent kind. Ditches, ramparts, and parapets, must be dug and thrown up, to secure the former, in the same manner as they are practised for the protection of the latter. They only differ in their measurement and proportions. Entrenched lines are made for the purpose of covering a camp from any sudden insult of the enemy, which should always, on this account, be pitched in the most advantageous manner; contiguous to and facing that quarter where it is probable the attack will be made, a ditch must be dug, having three toises at least in

width and two in depth. This must be defended by a parapet *en redans*, or be occasionally flanked with small bastions, two toises thick, consisting of solid good earth well pressed together, covered and supported with fascines, having likewise banquettes behind them sufficiently high to conceal the soldiers' tents. If water could be conveyed, or drawn into the ditch from any adjacent rivulet, or river, the security would be greater. When the lines of entrenchment are thrown up with an intention to maintain the ground any length of time, a covert-way must be made, which should be regularly lined with palisades.

There is another species of field fortification, which is resorted to in order to keep up a communication between two places; in which case great care must be taken to prevent the lines from being englobed in any quarter; and if they should be exposed in that manner, no time ought to be lost in strengthening the weak points by constructing redoubts, or small forts. The defence of these redoubts and forts must be entrusted to small arms and musketry, but not to cannon, as the range of the latter is always too extensive to prevent an enemy's close approach to the lines of communication from their field works, or forts. Necessary drains must be made to let out the water that collects, as it would otherwise destroy the works, drown the sentries, and cut off all communication with the main body.

When a position is taken upon a steep rock, or a circumstance extremely difficult of access, the lines which surround it do not absolutely require ditches for their safety, as the parapet and banquette may probably be sufficient; but if any vulnerable or weak part be observed, every effort should be used to get at a spring, and to fill up an excavation in front of it, to prevent surprises. An able engineer will be particularly careful in drawing his plan of communication, to ascertain the exact points whereby they may be protected by an enfilade from one fort to another; so that if the enemy should make a lodgment any where, he will not be able to maintain his position on account of his being flanked by other works.

Field works, or small forts, are generally

rally constructed in places the preservation of which is judged to be indispensably necessary. Such, for instance, are necks of land that stretch into a marsh, and are surrounded by it; the passage of a road, *lignes de ponts*, or head- or bridges, and other objects of similar importance in offensive or defensive operations. On these occasions the shape and size of the construction must depend upon the nature of the ground, the importance of the undertaking, and on the number of men by which the works are to be garrisoned.

Many forts in field fortification are built in triangular forms; some are square, some starred, or *en echelle*, some as redoubts, in the shape of demi-lunes, others in crown, or horn-work, and others again in the figures of *tenailles*, or *queues d'heroncelle*.

When the object of defence is a windmill, a castle, or a small dwelling-house, the first step to be taken, is to select a spot of ground upon which you are to build the field-work, so as to check and prevent the enemy's approaches. In order to do this effectually, the shape and adjacent parts of the building must be closely attended to, and the work be thrown up without exposing it to a rear attack; but if the place to be defended stand alone, and be not supported by any ditch or eminence on its flanks, or in its rear, you must then fortify it all round. The earth which is dug out of the ditch will serve to raise the rampart, or parapet. Salient angles, distributed at equal distances, in the shape of bastions, must be erected with good flanks to protect and cover the entrenchment. If, on account of the ground, the work should not be much raised, the parapet must be fraised, in order to prevent the enemy from attempting an easy assault.

An engineer from Piedmont, who has proposed some new methods in field fortification, is decidedly against stone and masonry, in the construction of parapets and field works. His reason is self-evident; for, as he justly observes, the scattered pieces which must naturally be thrown about in all directions by the demolishing of the walls in the discharge of heavy cannon, would do more mischief than the cannon itself.

It is frequently found necessary to fortify a bridge; the means adopted for

this purpose must depend entirely upon the size and current of the river. If the stream should be broad and navigable, and so far from the fortress, that it cannot be defended by the ordinance of the town or fortified place, in that case, a large retrenchment, resembling a place of arms, must be constructed, with strong bastions to support and cover it, curtains and half-moons, a broad and deep ditch, and covert-way that must be well secured by palisades. This retrenchment, or place of arms, must be made sufficiently capacious to hold a garrison that would be capable of opposing the attack of a large detachment from the main army of the enemy. A half-moon must be constructed within the line, with a ditch in front, to serve as a work behind which the garrison might retreat with its artillery, disputing every inch of ground, and by that means affording sufficient time to cut down the bridges.

If the river should be narrow, yet wide enough to prevent any sudden interruption into the country behind it, the bridges that are across must be fortified by works made of earth, which are to be covered by ditches dug in front. Half-moons, *tenailles*, crown and horn-works, and similar constructions, provided they be well fenced with palisades, will answer all the purposes required in such cases. The engineer, by the first glance of his eye, will be able to ascertain the situation of the country, and to fit his plans accordingly. Small redoubts, or wooden recesses, must be made as guard-houses, in which detached parties of men should be stationed to meet the first attacks of the enemy, and to keep him in check while the whole army passes over the river, or is drawn up in order of battle to dispute the passage. These entrenchments must invariably be well furnished with light artillery, for the purpose of annoying the approaching enemy. But the disposition and arrangement of these pieces must always be such as to admit of their being instantly removed, when the entrenchments are carried, under the cover of heavier ordnance, which is kept playing upon the enemy from the opposite side of the river.

FORIN; FORTLETT, or FORTILAGE. See FIELD-FORT.

FORIN,

**FORTIN**, *Fr.* a species of field fortification, which is made of fascines and saucissons, for the purpose of securing a post, &c.

**FORTRESS**, any place strongly fortified.

**FORWARD**, a word of command, which is given when a regiment or company has been interrupted in its regular movement, and the march is continued. On this occasion every succeeding division must preserve its proper distance and mark time until the word *Forward* is given. This frequently occurs in the passage of obstacles, and in the windings of roads, streets, &c.

*Right* } *shoulders Forward*, a word  
or } of command, by which sol-  
*Left* } diers are directed to wheel to  
the right or left, without halting, when a corps is on its march. Whole regiments in open column may move round the different windings of a town or country without losing their relative distances, provided each leading officer and his covering serjeant pay the requisite attention to his preceding division, and at the wheeling point give the words, right (or left) shoulders, *forward!* with accuracy and firmness.

**FOSSE** in fortification. See *Ditch*.

**FOSSES** *pleins d'eau*, *Fr.* wet ditches. See **FORTIFICATION**.

**FOSSES** *secs*, *Fr.* dry ditches.

**FOSSES** *revêtus*, *Fr.* ditches that are lined.

**FOSSES** *non revêtus*, *Fr.* ditches that are not lined.

**FOSSEWAY**, one of the great Roman roads in England, so called from the ditches on both sides.

**FOUCADE**, **FOUGADE**, a small mine.

**FOUDROYER**, *Fr.* to play incessantly against a fortified town or place, *toop* or company, with heavy ordnance or musquetry.

**FOUGASS**, in *mining*, a small mine, from 6 to 8 feet under ground: It is generally placed under the glacis or dry ditches.

**FOUGETTE**, or *Baguette à Feu*, *Fr.* Indian sky-rocket, a species of fireworks which is frequently used by the Indians who inhabit the western peninsula of the Ganges. The author of a late military production in France makes the following observations relative to advantages which might be

be derived from this weapon against cavalry, and for the defence of fortified places or entrenchments. He observes, that the fougette, in shape, resembles a sky-rocket, whose flight is gradually brought to run along an horizontal direction. By throwing several fougettes into parks of artillery and upon the caissons, &c. considerable damage might be occasioned from the fire which would inevitably be communicated to some part. A fougette forces itself immediately forward, cuts as it penetrates, by the formation of its sides, which are filled with small spikes, becomes combustible and on fire at all its points, and possesses within itself a thousand various means by which it can adhere to whatever object it is destined to set on fire or to destroy. This weapon would be more effectual, because it might be more variously applied, to defend the mouth of a harbour against an enemy's shipping, than red-hot balls can ever prove. Fougettes might be used on board ships of war, but there would certainly be some danger in the experiment; although, in my humble opinion, a little experience would effectually remove that difficulty; in which case, ships might run along a coast, and easily destroy the wooden forts that are sometimes erected upon it. They would in the first place occasion more havoc than red-hot balls; and in the next, they might be used whilst the vessel was in full sail, which cannot be done in the first instance. By means of their natural velocity they would do more execution, in a less space of time, than the most active piece of ordnance could effect; and they would require fewer hands, as the only necessary operation would be to light and dart them forward. As a defensible weapon it must naturally be allowed, that, where a small body of men is attacked, the fougette might be adopted with considerable advantage.—The writer of this article, who, we find, is likewise the inventor of a fougette which has been submitted to the French government, continues to argue much in favour of its adoption. He adds he, our enemies should imitate the invention, we must then have recourse, especially in sieges, to those pieces of ordnance which are calculated to do more execution at a distance;

distance; and it will then be our business to contrive fougettes that shall reach their shipping, by means of a greater degree of force and velocity which might be given to them, than they would be capable of attaining.

**FOUILLER, Fr.** to search. In military movements, it signifies to detach small bodies of infantry round the flanks of a column that is marching through a wood, for the purpose of discovering an ambuscade, and of giving timely notice, that it may be avoided. The same precaution is necessary when a body of men advances towards, or enters a village.

**FOUILLER un bois, Fr.** to scour a wood, &c.

**FOULOIR, Fr.** an instrument used by gunners to cleanse the inside of a piece as soon as it has been fired. The *fouloir* has a button at the other extremity of its shaft; it is used to ram down the powder.

**FOUNDATION,** in military architecture, is that part of a building which is under ground, or the mass of stone, brick, &c. which supports a building, or upon which the walls of a superstructure are raised: or it is the collar or bedding below the level of the ground, to raise a building upon; in which sense, the *foundation* either goes to the whole area or extent of the building, as when there are to be vaults, galleries, casemates, or the like; or is drawn in cuts or trenches, as when only walls are to be raised. Sometimes the *foundation* is masonry, and continued under the whole building, as in the antique arches and aqueducts; but it is more usually in spaces, or intervals: in which latter case, insulated pillars, bound together by arches, should be used.

There are several things to be well considered in laying the *foundation* of a military building. We must first examine the bed of the earth upon which we are to build, and then the under-fillings or substruction. We are not to rest upon any seeming solidity, unless the whole mould through which we cut has likewise been solid; and in such cases, allow 1-6th part of the height of the building for the hollowing or under-digging, unless there be cellars under-ground, in which case it may be something less. There are many ways to try the firmness

of the ground; but the following, in our opinion, is the best. Take an iron crow, or such a borer as well-diggers use, which at once will point out the goodness and tenacity of the ground.

Engineers should use the utmost diligence in this point; for, of all the errors that may happen in building, those are the most pernicious which are committed in the foundation, because they bring with them the ruin of the whole building; nor can they be amended without very great difficulty.

**FOUNDATIONS** are either natural, or artificial: natural, as when we build on a rock, or very solid earth; in which case we need not seek for any other strengthening; for these, without digging, or other artificial helps, are of themselves excellent *foundations*, and most fit to uphold the greatest buildings. But if the ground be sandy or marshy, or have lately been dug, in such case recourse must be had to art. In the former case, the engineer must adjust the depth of the *foundation* by the height, weight, &c. of the building: 1-6th part of the whole height is looked upon as a medium; and as to the thickness, double that of the width of a wall is a good rule. If you build upon mossy and loose earth, then you must dig until you find sound ground. This sound ground, fit to support a building, is of divers kinds: in some places so hard, as scarcely to be cut with iron; in other places very stiff; in other places blackish, which is accounted the weakest; in others like chalk, and in others sandy: but of all these, that is the best which requires most labour in cutting or digging, and when wet does not dissolve into dirt.

If the earth to be built upon is very soft, as in moorish grounds, or such that the natural *foundation* cannot be trusted, then you must get good pieces of oak, whose length must be the breadth of the trench, or about 2 feet longer than the wall; these must be laid across the foundation about 2 feet asunder, and being well rammed down, lay long planks upon them; which planks need not be so broad as the pieces are long, but only about four inches on a side wider than the basis, or foot of the wall is to be. But if the ground be so very bad, that this will not do, then you must provide good piles of oak, of such a length

length as will reach the good ground, and whose diameter must be about 1-12th part of their length. These piles must be driven down by an engine for that purpose, and must be placed as close as one can stand by another; then lay planks upon them, and pin them fast. But if the ground be faulty in some parts, and firm in others, you may turn arches over those loose places, which will discharge them of the weight. You must not forget to place the piles under the inner, as well as the outer walls; for if these should sink, it would be a means to make the outer walls crack, and so ruin the whole building.

Having thus far considered the bed of the earth on which the building is to be erected, we shall next consider the substruction, as it was called by the ancients; but our modern engineers call it the *foundation*. This is the groundwork of the whole edifice, which must sustain the walls, and may be termed artificial, as the other was natural; with regard to which, the following things are most necessary to be observed: 1. That the bottom be exactly level; therefore lay a platform of good boards. 2. That the lowest ledge or row be all of stone, the broader the better, laid closely without mortar; which is a general caution for all parts of a building that are contiguous to board or timber, because lime and wood are utter enemies to one another, and, if unit confiners any where, they are more especially so in the foundation. 3. That the breadth of the *foundation* be at least double the breadth of the wall which is to be raised upon it: but even in this case art should give way to discretion: and the foundation may be made either broader, or narrower, according as the ground and the ponderosity of the edifice require. 4. That the *foundation* be made to diminish as it rises, but yet so that there may be as much left on the one side as on the other; so that the middle of that above may be perpendicularly over the middle of that below, which should, in like manner, be observed in diminishing the walls above ground; for by this means the building will become much stronger than it would be if the diminution were made by any other way. 5. That you should never build on the ruins of an

old foundation, unless you are well assured of its depth, and that its strength is sufficient to bear the building.

The stones in the *foundation* should be laid as they naturally lay in the quarry, for they have the most strength in their natural position. This should be observed in all parts of a building, because all stones have a cleaving grain; consequently, if the horizontal position of the stones in the quarry should be placed vertically in the building, the super-incumbent weight would be apt to cleave them, and so render the building ruinous.

**FOUNDER**, a person who casts cannon, &c.

**FOUNDERING**, a disorder in horses, which may be considered under two heads, viz.

**FOUNDERING in the feet**, which is an universal rheumatism, or delusion of humours upon the sinews of a horse's feet; so that in the course of time the hoofs become stiff and callous, and the horse has no sense or feeling of them. This disorder is generally brought on by hard riding. Sometimes it proceeds from sudden heats and colds; and frequently from the horse being watered when he is very hot. Too tight a shoe, or frequent travelling upon hard flinty ground, will likewise produce this disorder.

**FOUNDERING in the chest**, a disorder which may be occasioned by crudities collected in the stomach, or by other infirmities which obstruct the free action of the lungs. It is discovered by the horse not being able to bend his joints, and, when once laid, by not being able to rise again. A swelling in the legs is likewise symptomatic of it.

**FOUNDERY**, } in military matters.  
**FOUNDRY**, } the art of casting all kinds of ordnance, such as cannon, mortars, howitzers, &c. It likewise signifies the place or work-house wherein these operations are performed. At present all pieces of artillery are cast solid, and bored afterwards. Formerly guns were bored perpendicularly, but at present in a horizontal position: the boring instrument is fixed immovably, and forced into the gun or mortar by a mechanical power. The piece of artillery is turned round by a large wheel and horses; and at the same time the gun is bored, the outside is turned and polished,

lished, by another very curious machine for that purpose; invented by the very ingenious Messrs. Verbruggen, founders at Woolwich. Guns were first founded in England in 1537.

**FOUR, Fr.** a place of confinement in Paris, to which vagabonds and persons who could not give a satisfactory account of themselves, were committed; and when once shut up had their names enregistered, and were enlisted for the service of the old French government. A *four* in this acceptation of the term, means a room arched over without leaving the least aperture to receive day-light. There were several such places of confinement in Paris. They owed their invention to a Monsieur D'Argeſson, and were supposed to add annually two thousand men at least to the king's regular army; by which means the capital was relieved from a multitude of thieves, pick-pockets, &c.

**FOUR de campagne, Fr.** A field oven.

**FOURAGE, Fr.** Forage. In the artillery, it is used figuratively to signify hay, straw, or any thing else of vegetable growth, which is used to ram into the bore of a cannon for the purpose of cleansing it.

*Aller au FOURAGE, Fr.* to go a foraging.

**FOURAGER, Fr.** To forage, or look about for provender and provisions.

**FOURAGER** likewise means among the French, to ravage, desolate, pillage, and waste a country, for the purpose of throwing the inhabitants into disorder. The word is derived from *foras agere*, or to sack for forage in the fields. Hence *Fourager un pays*, to ransack and plunder a country.

**FOURAGER au sec, Fr.** To seize upon the granaries, hay-stacks, &c.

**FOURAGER au vert, Fr.** To mow the fields, &c. for the purpose of obtaining stores and provisions.

**FOURAGEURS, The French** say also *Faucheurs, Fr.* foragers, or men employed to procure forage, &c. for an army.

**FOURBISSEUR, Fr.** a sword-cutter. The French familiarly say of two persons who are extremely intimate, *Ces gens sont tête à tête comme des fourbisseurs*, meaning, that, like sword-cutters, (who when they work sit closely opposite to each other) they are putting their heads together.

*Se battre à l'épée qui est chez le fourbisseur, Fr.* to fight with a sword which is still in the curler's hands; signifying figuratively to dispute about any thing that does not concern either party.

**FOURCHETTES, Fr.** *nousquet, Fr.* Rests for a musket. They are sometimes used to relieve men who do duty on the rampart of a town.

*Chemin FOURCHU, Fr.* a cross way.

**FOURGON, Fr.** a sort of waggon. It likewise signifies a poker.

**FOURNEAU, Fr.** furnace; also the chamber of a mine.

**FOURIER, Fr.** A quartermaster belonging to a cavalry or infantry regiment. In France there were *fourriers-majors* of cavalry who composed a part of the cavalry staff.

**FOURIER d'armée, Fr.** A non-commissioned officer who is attached to the general staff of an army.

**FOURIER d'un régiment, Fr.** The quarter-master, or quarter-master serjeant of a regiment, troop or company.

**FOURMILLER, Fr.** to swarm with. *La France fourmille en soldats;—* France swarms with soldiers. *L'Angleterre fourmille en braves marins;—* England swarms with brave seamen.

**FOURNIMENT, Fr.** A horn which holds about one pound of gun-powder to prime cannon. It is likewise used by cavalry and infantry soldiers, who hang it across their shoulder. The cannoners keep it in a belt.

**FOURNIR, Fr.** to supply.

**FOURNITURE d'une armée, &c. Fr.** The necessary stores and provisions for an army.

**FOURNITURES des vivres, Fr.** See STORES, &c.

**FOURREAU de pistolet, Fr.** a holster.

*Faux FOURREAU de pistolet, Fr.* pistol bag.

**FOURREAU d'épée, Fr.** the scabbard of a sword.

**Pays FOURRÉ, Fr.** a country thick set with hedges, &c. properly called a close country.

**Pair FOURRÉ, Fr.** a peace suddenly patched up.

**Coups FOURRÉS, Fr.** Blows given and received at the same time by two antagonists.

**FOURRIER de campement, Fr.** A quarter-master-serjeant, who is assisted by a private, and fixes the different

racks for the stands of arms in the front of an encampment.

**FOURS de boulangerie pour une armée**, Fr. field-ovens for the use of an army.

**FOUTOUER**, Fr. The quick motion which was given to the ram, that battered the walls of a besieged town.

**FOYER**, Fr. Focus, or center of the chamber. See **MOUL**.

**FOY-mentie**, Fr. a breach of trust, a base surrender of any thing. In ancient times, when a governor in trust, a general, or a commandant surrendered shamefully, he was degraded in the following manner: The delinquent was armed cap-à-pied; he next mounted on a scaffold; and as soon as his sentence had been read to him, by which he was declared guilty of a breach of trust, traitorous and disloyal; twelve priests began to sing the psalms of All Souls day. At the conclusion of each psalm, the priests paused, when the herald at arms stripped the criminal of one part of his armour, crying aloud, "this is the helmet, this is the shield of the traitor, &c." When the last psalm was over, a basin of warm water was poured over his head, a rope tied under his arms, and he was let down from the scaffold. He next was laid on a hurdle, covered with a shroud, and carried to the church, where the priests concluded the ceremony of the degradation, by singing the psalm, *Deus laudem meam ne tacueris*, which contains imprecations against traitors. When he had undergone this humiliating ceremony, he was dismissed the service.

**FRAGMENT de bombe, de grenade**, Fr. any piece of a shell or grenade that has burst.

**FRAIS**, Fr. expenses.

**FRAIS de guerre**, Fr. the general expenses to which a country is subjected for the support of an army in time of war.

**FRAISE**, in fortification, a kind of stakes or palisades placed horizontally on the outward slope of a rampart made of earth, to prevent the work being taken by surprise. They are generally 7 or 8 feet long, and about 5 inches thick. When an army intrenches itself, the parapets of the retranchements are often frused in the parts exposed to an attack.

To **FRAISE** a battalion, is to line or co-

ver it every way with pikes, that it may withstand the shock of a body of horse.

**FRAISER**, Fr. To plant, knead, or drill; in military sense to fraise or fence; as *fraiser un bataillon*, is to fraise or fence all the musketry-men belonging to a battalion with pikes, to oppose the irruption of cavalry, should it charge them in a plain. At present it means to secure a battalion by opposing bayonets obliquely forward, at cross-ways in such a manner as to render it impossible for a horseman to act against it.

**FRAISER un Retranchement**, Fr. to fraise an entrenchment by placing palisades horizontally towards the enemy.

**FRAISIS**, Fr. See **FRAISI**, an adopted English term.

**FRAMEA**, a kind of javelin formerly used by the Germans.

**FRANC-aleu**, Fr. Free allegiance, a custom in force under the first kings of France. Every individual who was free, and had no chieftain over him, was at liberty to choose the prince and chieftain, under whom he wished to live. Instances of the kind are recorded under the reign of Louis I. in 817.

**FRANCHES**, Fr. Unattached; independent. *Les compagnies franches*, free companies, were bodies of men detached and separated from the rest of the French army, having each a chief or commandant. They consisted chiefly of dragoons, hussars, &c. and then peculiar duty was to make irruptions into an enemy's country; and may not improperly be called land pirates, as their chief occupation was to harass and plunder the enemy and his adherents, in whatever manner they could, without paying any regard to military forms. The persons who composed these corps were termed partisans. They always accompanied the main army in time of war, and were distributed among the different garrison towns in France during peace. Three were always stationed in Paris, under the command of a colonel, who was created in 1550 with the title of captain-general.

**FRANCHIR un fossé, une palisade, un ravin**, Fr. to get over a fosse, palisade, or ravine.

**FRANCHIR des obstacles**, Fr. To overcome difficulties with prudence and resolution.

**FRANCISQUE**, Fr. an offensive weapon

weapon used by foot soldiers under the reign of *Cotairé*, besides the bow, lance and javeline. It was made in the shape of a double hatchet, with a short handle.

**FRANC-taupin**, *Fr.* a soldier who was employed in excavating the earth, in working at the trenches and mines, &c. &c. was so called. It comes from *taupin*, a mole.

**FRAPPER**, *Fr.* to strike.

**FRATER**, the former appellation of military surgeons mates.

**FRAY**, a battle, combat, or duel.

**FRAYER** *le chemin à une Brèche*, *Fr.* to be foremost in an assault; to be first in entering a breach.

**FRETTES**, *Fr.* Iron ferrils fastened to the ends of sticks, beams, &c. to secure them from impression.

**FRICTION**, in *mechanics*, the rubbing of the parts of engines and machines against each other, by which a considerable part of their effect is destroyed.

It is hardly possible to lay down general rules for computing the quantity of friction, because it depends upon a multiplicity of circumstances, as the structure, firmness, elasticity, &c. of bodies rubbing against each other. Some authors make the friction upon a horizontal plane, equal to  $\frac{1}{3}$  of the weight to be moved; while others have found it to be considerably less. But however this be, the doctrine of friction, as ascertained by the latest experiments, may be summed up in the following manner.

1. When one body rests on another upon a horizontal plane, it presses it with its whole weight, which being equally reacted upon, and consequently the whole effect of its gravity destroyed by the plane, it will be absolutely free to move in any horizontal direction by any the least power applied thereto, provided both the touching surfaces be smooth.

2. But since we find no such thing as perfect smoothness in the surfaces of bodies, arising from their porosity and peculiar texture, it is easy to understand, that when two such surfaces come together, the prominent parts of the one will, in some measure, fall into the concave parts of the other: and therefore, when an horizontal motion is attempted in one, the fixed prominent parts of the other will give more or less resistance to

the moving surface, by holding and retaining its parts; and this is what we call friction.

3. Now since any body will require a force equal to its weight, to draw it over a given obstacle, it follows that the friction arising to the moving body, will always be in proportion to its weight only, and not to the quantity of the surface, by which it bears upon the resisting plane or surface. Thus if a piece of wood 1 inches wide, and 1 thick, be laid upon another fixed piece of the same wood, it will require the same weight to draw it along, whether it be laid on its broad or narrow side.

4. For, though there be 4 times the number of touching particles on the broad side (*actus paribus*) yet each particle is pressed with only  $\frac{1}{4}$  of the weight, that those are on the narrow side, and since 4 times the number multiplied by one-fourth of the weight, it is plain the resistance is equal in both places, and so requires the same force to overcome it.

5. The reason why friction is proportional to the weight of the moving body, is, because the power applied to move the body must raise it over the prominent parts of the surface on which it is drawn; and this motion of the body, as it is not upright, will not require a power equal to its whole weight; but being in the nature of the motion on an inclined plane, it will only require a part of its own weight, which will vary with the various degrees of smoothness and asperity.

6. It is found by experiment, that a body will be drawn along by nearly  $\frac{1}{3}$  of its weight; and if the surfaces be hard and well polished, by less than  $\frac{1}{3}$  of its weight; whereas, if the parts be soft or rugged, it will require a much greater weight.

The ingenious Mr. Emerson, in his principles of Mechanics, has given us the following rules deduced from experiments; but they require some variation under different circumstances, which must be left to the judgment of the artist.

1. Wood and all metals, when greased, have nearly the same friction; and the smoother they are, the less friction they have; yet metals may be so far polished as to increase friction by the cohesion of their parts.

Wood slides easier upon the ground in

in wet weather than in dry, and easier than iron in dry weather; but iron slides easier than wood, in wet weather. Lead makes a great deal of resistance. Iron or steel running in brass, makes the least friction of any. In wood acting against wood, grease makes the motion twice as easy, or rather 2-3ds easier. Wheel-naves, greased or tarred, go 4 times easier than when wet.

Metals oiled make the friction less than when polished, and twice as little as when unpolished.

In general, the softer or rougher the bodies, the less or greater their friction.

2. As to particular cases: a cubic piece of soft wood of 8 pounds weight, moving upon a smooth plane of soft wood, at the rate of 3 feet per second; its friction is about 1-3d of the weight of it; but if it be rough, the friction is little less than 1-half the weight.

Upon the same supposition, other soft wood upon soft wood very smooth, the friction is about 1-4th of the weight.

Soft wood upon hard, or hard wood upon soft, 1-5th or 1-half of the weight. Hard wood upon hard wood, 1-7th or 1-8th of the weight.

Polished steel moving upon steel or pewter, 1-11th of the weight; moving on copper or lead, 1-5th of the weight; on brass, 1-5th of the weight. Metals of the same sort have more friction than different sorts.

The friction, *ceteris paribus*, increases with the weight almost in the same proportion. The friction is also greater with a greater velocity, but not in proportion to it, except in very few cases. A greater surface also causes somewhat more friction, with the same weight and velocity; yet friction may sometimes be increased by having too little surface to move on; as upon clay, &c. where the body sinks.

3. The friction arising from the bending of ropes about machines, differs according to their stiffness, the temper of the weather, degree of flexibility, &c. but, *ceteris paribus*, the force or difficulty of bending a rope is as the square of the diameter of the rope, and its tension, directly; and the diameter of the cylinder or pulley it goes about, reciprocally.

A rope of 1 inch diameter, whose tension or weight drawing it is 5 pounds,

going over a pulley 3 inches diameter, requires a force of 1 pound to bend it.

4. The resistance of a plane moving through a fluid is as the square of the velocity; and putting  $v =$  velocity in feet in a second; it is equal to the weight of a column of the fluid, whose base is the

plane, and height  $\frac{v^2}{64}$ . And in a globe

it is but half so much.

5. As to the mechanic powers, the single lever makes no resistance by friction; but if, by the motion of the lever in lifting, the fulcrum, or place of support, be changed further from the weight, the power will be decreased thereby.

6. In any wheel of any machine, running upon an axis, the friction on the axis is as the weight upon it, the diameter of the axis, and the angular velocity. This sort of friction is but small.

7. In the pulley, if,  $p, q$ , be 2 weights, and  $q$  the greater; and  $w = \frac{pq}{p+q}$ , then

$w$  is the weight upon the axis of the single pulley; and it is not increased by the acceleration of the weight  $q$ , but remains always the same.

The friction of the pulleys is very considerable, when the sheaves rub against the blocks; and by the wearing of the holes and axes.

The friction of the axis of the pulley is as the weight  $w$ , its angular velocity, the diameter of the axis directly, and the diameter of the pulley inversely. A power of 100 pounds, with the addition of 50 pounds, will only draw up 500 with a tackle of 5; and 15 pounds over a single pulley will draw up only 14 pounds.

8. In the screw, there is a great deal of friction: those with sharp threads have more friction than those with square threads; and endless screws have more than either. Screws with a square thread, raise a weight with more ease than those with a sharp thread.

In the common screw the friction is so great, that it will sustain the weight in any position given, when the power is taken off; and therefore the friction is at least equal to the power. From whence it will follow, that in the screw, the power must be to the weight or resistance,

istance, at least as twice the perpendicular height of a thread to the circumference described by one revolution of the power; if it be able to raise the weight, or only sustain it. This friction of the screw is of great use, as it serves to keep the weight in any given position.

9. In the wedge, the friction is at least equal to the power, as it retains any position it is driven into; therefore in the wedge, the power must be to the weight at least as twice the base to the height, to overcome any resistance.

10. To find the friction of any engine, begin at the power, and consider the velocity and the weight at the first rubbing part; and estimate its quantity of friction by some of the foregoing articles; then proceed to the next rubbing part, and do the same for it, and so on through the whole.

And note, that something more is to be allowed for increase of friction by every new addition to the power.

**FRILL.** An ornamental appendage to the shirt, which all officers and soldiers belonging to the British army generally exhibit whenever they appear in regiments. A small aperture is usually made at the top to admit the look and eye of the uniform coat. Detached frills for the privates are certainly preferable to those which are fixed to the shirts, as two per week, at the regular times allotted for a change of linen, would answer every purpose of cleanliness.

**FRISE, Fr.** See *CHEVAL de Frise*.

**FRISUTTER.** An instrument made of iron, and used for the purpose of blocking up an haven, or a river. The following description of it is among General Monk's observations on political and military affairs.

The beams through which the upright bars pass must be twelve feet in length, and the upright bars that go through the beam must be of that length, so that when one of these iron frisutters is let down into an haven or river, the perpendicular bars of this iron instrument shall be deep enough to reach at high water within five feet of the surface.

**FRICK,** the undress regimental coat is very often so called.

**FRONDE, Fr.** a sling. This weapon was used in France by the Huguenots at

Sancerre, as late as the year 1572, in order to save their powder. There are two sorts, one which is used in throwing a stone from the arm, and the other that was fixed to a lever, and was so contrived, that a large quantity of stones might be thrown out of a machine, either from a camp into a besieged town, or from a town into the enemy's camp. This machine has been used since the invention of cannon.

The fronde or sling was used by the Romans on three different occasions, viz. when they sent their light-armed men, called *velites*, forward to skirmish before a general engagement; when they wished to drive the enemy from under the walls of a town which they were preparing to storm, and finally to harass and wound the men in the enemy's works. This weapon, in fact, together with the bow and arrow, may be numbered among the primitive arms of mankind.

**FRONDER, Fr.** to throw stones out of a sling.

**FRONDER une entreprise, une manœuvre, un projet, Fr.** a figurative expression, which signifies, to render any project or plan abortive, and by such conduct to deprive the author of the merit, which might be attached to its execution.

**FRONDEURS, Fr.** slingers. These composed a part of the Roman militia. There were some in the French service under the reign of Philip I.

**FRONT,** a word of command, signifying, that the men are to turn to their proper front; this movement is performed at once by revolving on the left heel, without first planting the right foot, as in the facings. If the battalion has been faced to the right, the men turn on this word a quarter circle to the left; if faced to the left, they turn a quarter circle to the right; if they have been faced to the right, or left about, they turn a half circle to the right. When the battalion is marching by files, or is put through its right or left facings, as, To the Right, Face, To the Left, Face, the word *front* is always practised to restore it to its natural situation in line. In displaying, or, to use the French term, in *deploying*, from close or open column, or in executing either of those movements from line, the word *front* invariably follows *halt*.

## F R O

**FRONT**, (*Front*, Fr.) an extent of ground, &c. which faces something opposite; as the front of a camp, the front of a line of action, the space in a fortification which is comprehended between the capitals of two bastions.

**FRONT** of a regiment, the foremost rank of a battalion, squadron, or any other body of men. To front every way, is when the men are faced to all sides.

*Quatres hommes de front*, four men in front.

**FRONT** of a fortification. See **FACE**.

*Front d'un bataillon*, Fr. The front of a battalion, consisting of the leading man of each file. This term is variously used in the French service, as *Un bataillon qui fait front de tous cotes, et presente les armes par tout*. A battalion which is fronted towards every quarter, and presents arms in every direction. *Un bataillon est sur son front* signifies, that a battalion is drawn up so that it presents its natural front in line.

**FRONT-garde-point**, a movement of the sword used by the cavalry. See **SWORD EXERCISE**.

**REAR-FRONT** is the disposition of a body of men in line, or column, so that the natural formation of the battalion is changed with regard to aspect, but not to shape. The files, which in the first telling off were leaders, become followers. It sometimes happens, that to save time a column is ordered suddenly to face about and retire; in this case the different companies march rear front. In the conversion of a regiment, and during the various manœuvres, the divisions, &c. frequently march rear front. They are restored to their natural order by the countermarch. Thus a battalion standing in open column, the right in front, when faced about stands rear front; when countermarched it resumes its original or natural formation, and stands left in front with its proper leading files. When a battalion retires in line, files by wings or alternate companies, every retrograde movement is made rear front.

**FRONT d'une armée**, Fr. The front of an army. Its extent from the right to left. It also signifies the whole line of communication which an army occupies, whether by divided camps, cantonments, &c. or by columns of troops posted in a country.

## F U E

**FRONT d'attaque**, Fr. That part against which an enemy directs his immediate operations.

**FRONT d'attaque**, Fr. in artillery, that part of a fortress against which an enemy opens his works, &c.

**FRONT de bandière**, Fr. The front rank of a battalion; the advanced line upon which a camp, &c. may be formed.

**FRONT-couvert**, Fr. Any space which serves to cover a town or army against the immediate approaches of an enemy.

**FRONT-decouvert**, Fr. Any space or ground in front of a fortified place or army, which is exposed to the immediate approaches of an enemy.

**FRONT-hérissé**, Fr. Any space or ground in front of a fortified place or army, which is defended by a range of ordnance, line of troops, &c. so as to render it inaccessible.

**FRONTEAU de mire**, Fr. A wedge of wood, which is placed under a piece of ordnance to raise it to a proper point of elevation.

**FRONTIER** (*Frontière*, Fr.), the limit, confine, or boundary of any kingdom. The frontier towns are generally guarded by troops of two or more nations. See **BARRIER TOWNS**.

**FUEL**, the matter or aliment of fire; any thing capable of ignition.

There is a certain and regulated allowance of coals made by government, through the barrack office, to regiments of cavalry and infantry stationed in Great Britain. At the Cape of Good Hope and in our other colonies, the allowance of fuel is generally regulated by the general officer commanding in those quarters.

When there is a sufficient number of rooms in a barrack to allow of one to a subaltern of infantry, a full allowance of fuel and candles may be issued for the same.

The weekly deliveries of coals and candles for every room are not to exceed the following quantities, viz. Three bushels and one quarter of coals, and two pounds and a half of candles, to the cavalry, in November, December, January, February, and March. The same quantity of coals, and one pound and one quarter of candles to the infantry for the same time.

Two bushels and one half of coals, and two pounds of candles, in April, September,

September, and October, to the *cavalry*. The same quantity of coals, and one pound of candles to the *infantry*, for the same time.

One bushel and three quarters of coals, and 1 pound and a half of candles, in May, June, July, and August, to the *cavalry*. The like quantity of coals, and three quarters of a pound of candles to the *infantry*, for the same time.

A commissioned officer's guard, seven bushels of coals, and four pounds of candles, from 1st September to 1st May. A non-commissioned officer's guard, half those quantities of coals and candles for the same time.

N. B. When sea-coal is not used, one Cwt. of coal is considered as equal to a bushel.

When it is found necessary to have lights in the passages and galleries in the several barracks, one pound of candles will be allowed per week for each lantern, from the 1st of September to the 1st of May.

**FUGEL-MAN**, (an incorrect method of pronouncing *flügel-man*) a well drilled intelligent soldier advanced in front of the line, to give the time in the manual and platoon exercises. The word *flügel* is derived from the German, and signifies a wing; the man having been originally posted in front of the right wing.

**FUGITIVE**, one who runs from his post, station, or duty.

**FUITE**, *Fr.* Flight.

**FULMINANTE** (*legion*) *Fr.* The Romans had a legion of this name, composed of christian soldiers, who rendered essential services to the Emperor *Marcus Aurelius*, in his expedition against the Sarmatians, the Quades, and the Marcomani.

To **FUMIGATE**, in a general acceptance of the term, to medicate or heal by vapours; to correct any infected building, or limited circumference of atmosphere, by smoke, impregnated with antiputrescent particles of heat. Hospitals are strictly ordered to be attended to on this head; especially when any contagious disorder has prevailed. But in no instance ought this important precaution to be so scrupulously observed as when troops are embarked for any space of time. The subsequent re-

gulations have been published by authority, under the following word:

**FUMIGATION**, the act of fumigating or conveying smoke into any confined place.

The frequent fumigation of every ship on which troops, or prisoners of war are embarked, is deemed highly material, in order to prevent mischief from confined air. The materials for fumigation may be brimstone with saw-dust; or the brimstone may be thrown over hot coals, Nitre, to which a little vitriolic acid is added; or common salt, with the same addition of vitriolic acid. Gun-powder wetted, or the heated loggerhead in the pitch pot.

This operation should always be performed under the immediate eye of the medical officer on board, to prevent improper quantities of the articles being used.

**FUND**. See Stock Purse.

**FUNERALS**. See BURIALS.

**FUNNEL**, any pipe, or passage of communication from one place to another.

**FUREUR**, *Fr.* Fury, rage.

To **FURL**, in regard to military flags or colours, is opposed to their exposure; and is used, to express the act of folding them so as to be cased.

**FURLOUGH**, a leave of absence. Every non-commissioned officer and soldier, who obtains leave of absence from his regiment, must be provided with a proper voucher to satisfy the commanding officer of any place or party, that he has the sanction of his superiors to pass and repass within a given period.

The following form has been adopted in a regiment of dragoons, to the interior regulations of which very minute attention is paid.

By lieutenant-colonel—commanding the ———quartered at——

“Permit the bearer—private dragon—in the above regiment, and in captain ———troop, to pass to——in the county of——for the space of——ending the ———of——and then to return to his regiment and troop, wherever they may happen to be; as no excuse will be taken but that of sickness, for his overstaying his furlough; and that to be certified by an officer of the army, or civil magistrate; he behaving as becometh. He is——feet——inches high,  
K k ———years

—years of age,—complexion,—  
hair,—eyes, &c.”

All soldiers found half a league from a camp or garrison, going toward an enemy's country, or quarters, without a pass, are deemed and treated as deserters.

**FURNACE.** In a general acceptance of the term, any vessel or utensil for maintaining a strong and searching fire, either of coal or wood.

**FURNACE** is sometimes applied, but improperly so, to that used in the melting of iron, and by some authors it is confounded with iron forges; although there is a considerable difference between them. See **FOUNDRY**.

**FURNACE** in mining, signifies a hollow, or excavation which is made in the earth, and is charged with gun-powder, for the purpose of blowing up a rock, wall, or any part of a fortification.

**Mine Furnaces** must be made under that part of the glacis belonging to the covert way, which faces the quarter from whence the besiegers will make their principal attacks, the instant they can be ascertained by the opening of the trenches. Several small ones must likewise be sunk under the glacis of the outworks, in order to blow up the lodgments which the enemy may have made when he has carried the advanced posts. Mine furnaces are moreover extremely useful in the defence of the covert-way, especially to overthrow the saps and lodgments, together with the batteries that may have been erected by the besieging enemy. For a scientific explanation of this article, see *Foissac's late edition of Traité de la défense des places par le Maréchal Vauban*, tom. ii. pages 202, 224, 240.

**FURNITURE**, in a general sense, means all sorts of moveables made use of for the comfort, or decoration of a house. In a military sense it applies to certain articles which are allowed in barracks, to which are added household utensils, according to the number of rooms.

By the last General Regulations, commissioned and warrant officers' rooms of cavalry and infantry are to have a closet, 1 table, 2 chairs, a coal-box, coal-tray, bellows, fire-irons, and fender.

Non-commissioned officers and private men's rooms of cavalry and infantry

are to be furnished with bedsteads, mattresses, or paillasses, bolsters, blankets, sheets, rugs, round-ravel, closet or shelves, 1 table, rack for arms, set of fire-irons, a fender, and three forms.

The following *utensils* are also allowed for each room: 2 iron pots with wooden lids, 2 pair of iron pot-hooks, 2 iron trivets, 2 wooden ladles; an iron flesh-fork, and a frying-pan, 2 large bowls or platters; 8 small bowls or porringers, 8 trenchers and 8 spoons for cavalry rooms; 12 of each of the three last articles for infantry rooms; a water bucket, coal-tray, candlestick, tin can for beer, large earthen pan for meat, box or basket for carrying coals; 2 drinking horns; a wooden urinal, broom and mop.

The guard rooms of cavalry and infantry are furnished with a water bucket, candlestick, tin can for beer, drinking horns; also with fire-irons and a coal-tray, from 1st Sept. to 1st May, when they are to be taken into store.

N. B. The rooms of the quarter masters and serjeants of cavalry, and the serjeant-major, and quarter-master serjeant of infantry, to be furnished with the necessary bedding and utensils, in the same manner as is allowed to the soldiers' rooms.

Each stable of cavalry for 3 horses is provided with 2 pitchforks, 2 shovels, 1 lantern, 1 wheel-barrow, 2 water buckets; and allowed 4 brooms per month.

**Horse-FURNITURE**, ornaments and embellishments which are adopted by military men when they are mounted for service or parade, consisting chiefly of housings, saddle-cloth, &c. The following distinctions have been abolished,

Field Marshal,	} Saddle cloth or covering leopard skin trimmed with black bear skin.
General,	
Lieutenant-General,	
Major-General,	
Brigadier-General,	
Colonel of Infantry,	} White furniture.
Lt. Colonel of ditto,	
Major of ditto,	
Aid de camp,	} White do. trimmed with black.
Brigade Major,	

And blue furniture has been adopted, with gold or silver lace, according to the epaulette, and more or less broad according to the rank of the wearer.

Cavalry—cloth trimmed with silver,  
or

or gold. Privates in cavalry regiments—large saddle cloths, the center of which is yellow, with a border to agree with the facings of the regiment. The tenth regiment of light dragoons is an exception to this general custom. The privates of that corps have a large piece of broad blue cloth which is thrown over the saddle, and covers the horse's loins.

As the article of horse furniture is by no means an inconsiderable one, it were to be wished, that the utmost regard could be paid to economy; since whenever the ornamental parts of an officer's dress or accoutrements exceed his finances, discontent, or embarrassment must be the consequence. At the commencement of the late war, his Majesty was graciously pleased to dispense with officers wearing furnitures at reviews, because it was judged very properly, that the expence of 14 or 15 guineas for an article which was worn one day in the year, was at such a moment unnecessary.

FUSES, in artillery, according to Capt. George Smith, formerly inspector to the military academy at Woolwich, are chiefly made of very dry beech wood, and sometimes of horn-beam taken near the root. They are turned rough and bored at first, and then kept for several years in a dry place. The diameter of the hole is about  $\frac{1}{4}$  of an inch; the hole does not go quite through, having about  $\frac{1}{8}$  of an inch at the bottom; and the head is made hollow in the form of a bowl.

The composition for fuses is, salt-petre 3, sulphur 1, and mealed powder 3, 4, and sometimes 5. This composition is driven in with an iron driver, whose ends are capped with copper, to prevent the composition from taking fire; and to keep it equally hard; the last shovel-full being all mealed powder, and 2 strands of quick match laid across each other, being driven in with it, the ends of which are folded up into the hollow top, and a cap of parchment tied over it until it be used.

When these fuses are driven into the loaded shell, the lower end is cut off in a slope, so that the composition may inflame the powder in the shell. The fuse must be of such a length as to continue burning all the time the shell is in its range, and to set fire to the powder as soon as it touches the ground, which

occasions the shell instantly to burst into many pieces.

When the distance of the battery from the object is known, the time of the shell's flight may be computed to a second or two; which being ascertained, the fuze may be cut accordingly, by burning two or three, and making use of a watch, or of a string, by way of a pendulum, to vibrate seconds.

FUSÉE, *Fr.* according to the French acceptation of the word, is applied to various purposes, and belongs to various instruments of destruction which are used in war. The fusée is differently made by different artificers. Some make it consist of one pound of gun-powder, and two or three ounces of charcoal well mixed together; others of four pounds of gun-powder, two of salt-petre, and one of sulphur. It must be generally remarked, that the time a bomb, or grenade will take to burst after it has been thrown out of the mortar, must depend entirely upon the length and quality of the fusée.

FUSERS *à bombes*, *Fr.* bomb fuses. The intent and object of these fuses, are to communicate fire to the gun-powder, with which the bomb is filled, in order to force it to burst and separate in broken pieces on any given spot. These fuses are usually made in the shape of a wooden pipe or tap, out of the linden tree, the alder, or any other dry and solid wood, and are afterwards filled with a slow combustible composition. The materials are increased, or diminished, according to the nature of their application. Fuses are sometimes made of copper, and they must not have the least aperture or fissure.

There are fuses for bombs of 12, of 10, and of 8 inches diameter. Fuses for bombs of 12 inches diameter, are 8 inches 4 lines long, being 1 inch 3 lines broad at the thick, and 1 inch 2 lines broad at the thin end; the breadth, or diameter of the light, or aperture is 3 lines. Fuses decrease nearly 1 inch in length and 2 lines in diameter, according to the caliber of the bomb. The diameters of the lights or apertures, only diminish one half line.

The composition for bomb fuses consists of seven parts of priming powder to four of salt-petre, and three of sulphur. These different materials are (each separately) first passed through a

silk sieve; and after they have been well mixed together, the whole mass is thrown into a moderate sized hair sieve, and again passed through.

The fuse is gradually filled with this composition, each proportion being well pressed in, without violence. Iron ramrods, fitted to the bore of the fuse are used for this purpose. Every time the materials are poured in, the ramrod is inserted, and by means of a small mallet, with which it is struck 14 or 15 times, the composition is pressed into a hard consistency.

When fuses have been well loaded, and the materials have previously been properly mixed, they will naturally burn with an equal steady fire, preserving in general an even length of flame, without spitting, or irregularly shaking.

In order to preserve fuses for a length of time, the composition, when thoroughly prepared, must be covered with a mastic or cement made of 2-3ds bees-wax and 1-3d rosin, well mixed together. Bomb fuses prepared in this manner, will burn either in water, or in earth, nearly 70 seconds, without being extinguished.

The usual method of priming fuses, is to grate about one-third of a French inch of composition. Two small matches about 5 or 6 inches long, with the ends bent inwards, are then well fixed with pounded composition to the eye of the fuse, by which last operation it is completely filled and closed. This part is finally covered over with cartridge paper, that is tied, and remains so till there is occasion to use it. Before the fuse is driven into the bomb, the thin or small end must be cut off, in order that the fire may be easily communicated to the mass of gunpowder, which is lodged in the bomb.

*Fuses à bombes, à feu-mort*, bomb-fuses with dead light. There is a species of bomb-fuse, which is distinguished by the term *feu-mort*, or dead-light. The difference between these fuses and the ordinary ones consists in this, that the eye, instead of being pierced and hollow, is full, and of a half-spherical shape. In both cases, however, the composition is introduced through the small end.

The composition for fuses, *à feu-mort*, consists of 16 parts of pounded gunpowder, and 9½ parts of ashes. The ashes must be baked over again, and

run through a silk sieve. Potter's earth, or clay, will produce the same effect as ashes.

In proceeding to charge a bomb-fuse that is made of ordinary wood, the eye, or aperture is first closed with pipe-clay, which is well beaten and pressed against the fuse in a small platter; the thin end of the fuse being held upwards. Three lines (or 3-12ths of a French inch) of this earth, will be sufficient to stop the communication of any fire. A tube, or trundle, filled with pounded gunpowder for the purpose of setting fire to the composition called *feu-mort*, is thrust into the fuse, by which it is finally charged. If this charge of pounded gunpowder were to be omitted, the fuse might not be susceptible of ignition; but the quantity never ought to exceed 3 lines, as the fuse would split by the explosion.

When the grains of gunpowder have been well pounded, a trundle, or tube filled with the aforementioned composition must be applied, and it is finally loaded like the rest.

It must be recollected, that 2 inches of this composition will last as long as one of the quality with which common fuses are charged. Before the fuse is driven into the bomb, it must be pierced through with a gimblet of one line diameter, taking care, that the hole is made precisely through the charge of pounded gunpowder. One end of a priming match must be forced in, and three others be tied to it, which three are to fall upon the bomb when it lies in the mortar.

The particular object to be obtained from this sort of fuse, is to prevent the least trace of fire or light being visible in its projection; so that the enemy may remain ignorant of the range, or direction of the bomb, and not be able, of course, to get out of the way when it falls, or to avoid the effects of its explosion.

These fuses were made use of at the siege of Nam in 1761. The experiments which were made in 1792, with this composition, by an artificer belonging to the ordnance-board at Douay, have proved, that it answers every purpose for which it is invented.

The author of the *Manuel de l'Artilleur*, from whose treatise these observations are taken, concludes this article by stating, that the advantages to be derived

rived from this invention are not so great as they at first appear.

He remarks, that with respect to the real utility of the fuze à feu mort, if it be considered as tending materially to the defence of any besieged place, the argument cannot be very forcible, when we reflect, that to gain time constitutes one of the principal means of defence, and that the only way to obtain it, is by retarding the besiegers' operations. These ends are gained by various expedients. Among others, the common lighted fuze conduces not a little: since during the whole direction of the bomb against the works of the assailants, the attention of the workmen is diverted from their immediate labour, and as long as it continues in its range, much uneasiness is created, because its ultimate explosion, and concomitant destruction are unknown.

Add to this, that independent of the confusion which is occasioned among the assailants by repeated projectiles, the bombardier by means of the lighted fuses, is enabled to correct his aim during the darkest night. The same principles must certainly hold good in attacks; and from a conviction of their solid utility in both instances, the common fuses have been hitherto adopted, although the kind in question has been known for several years.

**FUSES à grenades**, Fr. fuses for grenades. These fuses are made of the same quality of wood as those adopted for bombs. Their length is 2 inches 6 lines; their diameter at the head is 10 lines; 7 lines in diameter 1 inch from the head, and 2 lines in diameter to the sight or aperture. The composition of these fuses consists of 5 parts of priming gunpowder, 3 parts of sulphur, and 2 of saltpetre; or 3 parts of priming powder, 2 of saltpetre, and 1 of sulphur.

These fuses must be loaded with the same care and precision as are required in bomb-charges; that is, the thick end of the fuze must be placed downwards, so that it stands upright; the composition must then be introduced by means of a trundle, which the French call *lanterne*, made for that specific purpose; the composition must, after that, be well pressed in with an iron ramrod, fitted to the bore of the fuze, and gradually

forced in by gentle taps with a mallet. Great precaution must be observed during this operation, as too much violence might split the fuze. When the fuze has been half filled, a shorter ramrod must be used, with which the charge is completed. In making bomb-fuses great care must be taken to strike equal blows with the mallet, until you get to the three last, when the strength of each blow must be increased.

**FUSÉES d'obus**, Fr. howitzer fuses. These are generally made of the same composition and wood, as serve for bombs, and are loaded in a similar manner. They have the same dimensions when applied to calibres of 8 or 6 inches diameter; that is, they contain 5 inches 4 lines in length; 15 lines diameter at the small end, 3 lines diameter at the thick end; 13 lines diameter 1 inch from the head; the eye, or vent is 10 lines. These fuses do not exceed the vent of an howitzer, so much as bomb fuses do the vent of bombs. They are, in fact, shorter.

**FUSÉES volantes**, Fr. sky-rockets. These fuses are made of various dimensions, and serve for signals in time of war. They are sometimes 2 inches and more in diameter. The cartridges with which they are loaded, contain in thickness the sixteenth part, or more of the diameter.

The composition which is used for fuses of this description, consists of 16 parts of saltpetre,  $7\frac{1}{2}$  of charcoal, and 1 of sulphur; or of 16 parts of saltpetre, 6 of charcoal, 4 of sulphur, and 2 of priming gunpowder. The materials must be carefully pounded and well mixed together. Hollow rods of various lengths are used to charge these fuses. They must have cavity enough to admit the stick.

Fuses are tied to long sticks, or rods made of very light wood, such as hazel tree, which must have been cut some time, and be perfectly dry. They must likewise be straight, and contain from 7 to 8 feet in length; the thick end of the rod, in which two notches are made to fix it to the fuze, must be 7 or 8 lines in diameter, and at the small end 3 to 4 lines diameter. When the rod is rather heavy, it takes a more upright direction than when it is light; but it does not

not require so many degrees of elevation.

It must be generally remarked, that as soon as a fuse is fixed to a grenade, which is not intended for immediate use, you must melt some pitch and immerse the head of the fuse, instantly dipping it into cold water, by which precaution the composition will remain unaltered; unless the wood be rotten.

**FUSÉE, FUSIL, or FUZÉE**, a light musquet.

**FUSIL sur épaule**, Fr. A word of command in the manual exercise. *Shoulder arms.*

**FUSILIER** *quelqu'un*, Fr. to shoot any body.

**FUSILS à l'épée**, Fr. fusils with long bayonets, shaped like a cut and thrust sword. These weapons have been proposed by the writer of *Mélanges Militaires*, as being extremely useful in the rear rank of a battalion, or in detached bodies that are stationed for the defence of baggage, &c.

Something similar to this invention has been adopted by the dismounted light horse volunteers in London, who have in addition temporary sword-hilts made to fit the sockets of their bayonets.

**FUSILS mousquets**, Fr. a sort of fusil which was invented by Marshal Vauban, and which was so contrived, that in case the flint did not strike fire, the powder might be inflamed by means of a small match which was fixed to the breech.

**FUSILS à chevauets**, a species of fusils upon rests, which is recommended by Marshal Vauban, to be used at the commencement of a siege, about 50 or 100 toises in front of the glacis, at the entrances of narrow passes, &c.

**FUSILIERS** in the British service, are soldiers armed like the rest of the infantry, with this difference only, that their musquets are shorter and lighter than those of the battalion and the grenadiers. They wear caps which are somewhat less, in point of height, than common grenadier caps. There are three regiments in the English service; the 7th regiment of foot (or Royal Fusiliers) raised in 1685; the 21st regiment of foot (or Royal N. British Fusiliers) raised in 1678; and the 23d (or Royal Welsh Fusiliers) raised in 1688.

It is always presumed, that these corps, like the guards, possess an *esprit de corps*, which is peculiar to themselves.

As the fusileer regiments upon the British establishment are distinguished from other corps by some peculiarities, we shall briefly state what has occurred to us on the subject. In former times the officers of these regiments did not carry spontoons, but had fusils like the officers of flank companies throughout the line. At present they wear swords. It is necessary to remark, that there are not any ensigns in fusileer regiments; their junior officers rank as second-lieutenants, taking precedence of all ensigns, and those of the 7th or Royal Fusiliers, have no second lieutenants; so that they rank with the rest of the army according to the dates of their several commissions, as lieutenants. On account of this difference, the first commission in the fusiliers was, by a regulation issued from the War-Office in 1773, rated 50l. higher than that of an ensign; whilst the first commission in the 7th having the pay of lieutenant attached to it, was rated at 550l. that of the other two, having only the pay of ensign annexed, was 450l.

When the estimates of the British army were made out for the year 1755, the extra sum of 164l. 5s. per annum was charged against the 7th regiment. This surplus however was easily explained when it came to be understood, that that regiment being a fusileer corps, had 20 lieutenants, instead of 11 lieutenants and 9 ensigns. The difference between these commissions amounted to 9s. per diem, and the sum total to 164l. 5s. per annum. The 23d, or royal regiment of Welsh fusiliers, wear helmets; and all officers belonging to fusileer corps have two epaulets.

**FUSILIERS**, Fr. Fusileers are men armed with fusils or light musquets.—When pikes were in use among the French, each regiment had only four fusiliers, exclusive of ten grenadiers who carried the fusil or musquet. At present fusils or musquets are universally adopted in the European armies. Among the French there was a distinct regiment of fusiliers, under the immediate command of the grand master of the ordnance. The length of a French fusil

fusil was directed to consist of three French feet eight inches from the touch-hole to the muzzle, and the caliber to have the diameter of a ball taking twenty to the pound.

**FUSKIBALAS**, a machine used by the ancients in the defence of their walls, to throw stones and darts at the enemy.

**FUT**, *Fr.* the stock of a musquet; any piece of wood, upon which portable fire-arms are mounted.

**FUYARD**, *Fr.* a run-a-way, a coward.

*Un corps fuyard*, *Fr.* a regiment that has been in the habit of running away,

**FUZE**. See **FUSIL**.

## G

**GABION**, in fortification, is a kind of basket made of ozer twigs, of a cylindrical form, having different dimensions, according to what purpose it is used for. Some gabions are 5 or 6 feet high, and 3 feet in diameter; these serve in sieges to carry on the approaches under cover, when they come pretty near the fortification. Those used in held-works are 3 or 4 feet high, and  $2\frac{1}{2}$  or 3 feet diameter. There are also gabions about 1 foot high, 12 inches diameter at top, and from 8 to 10 at bottom, which are placed along the top of the parapet, to cover the troops in firing over it; they are filled with earth.

In order to make them, some pickets 3 or 4 feet long, are struck into the ground, in form of a circle, and of a proper diameter, wattled together with small branches, in the manner of common fences. Batteries are often made of gabions. See **BATTERY**.

*Stuffed-GABIONS*, in fortification, are made in the same manner as the former: they are only filled with all sorts of branches and small wood, and are 4 or 6 feet long: they serve to roll before the workmen in the trenches, to cover them in front against musket-shot.

**GABION farci**, *Fr.* a stuffed gabion.

**GABIONADE**, *Fr.* a term made use of when a retrenchment is suddenly thrown up and formed of gabions, for the purpose of covering the retreat of troops, who may be obliged to abandon a work, after having defended it to the last extremity. Every parapet that is made of gabions is generally called *gabionade*.

**GABIONNER**, *Fr.* to cover or secure with gabions.

**GADARA**, a Turkish sabre, with a large blade, somewhat curved.

**GAFFLES**, the steel lever with which the ancients bent their cross-bows.

**GAGE**, *Fr.* the gauntlet. The glove that was thrown in defiance at the person one intended to fight, was formerly called *gage de combat*, or *gage de bataille*.

**GAGIS**, *Fr.* wages. Among the French this phrase signified the fruits or compensations which were derived by individuals from appointments given by the crown, whether of a military, civil or judicial nature, or for service done at sea or by land.

**GAGNER bataille**, *Fr.* to overcome an enemy by superior skill and courage in manœuvring.

**GAGNER une marche**, *Fr.* to reach some particular point or position before the enemy, by means of a more active and skilful movement.

**GAGNER du terrain**, *Fr.* To gain ground by making an enemy give way.

To **GAIN**, to conquer; to get the better: as *they gained the day*, &c.

To **GAIN ground**. See **GROUND**.

**GAIN d'une bataille**, *Fr.* The successful issue of an engagement; the act of conquering an enemy.

**GAINÉ de flamme**, *Fr.* a sort of linen sheath or cover, into which the staff of a flag or pendant is put.

**GAINÉ de pavillon**, *Fr.* a cloth, or linen band, which is sewed across the flag, and through which the different ribbons are interlaced.

**GAINES de girouettes**, *Fr.* bands or pieces of linen, with which the vanes are tied to the staff.

**GAITERS**, a sort of spatter-dashes, usually made of cloth, and are either long, as reaching to the knee, or short,

as only reaching above the angle; the latter are termed half-gaiters.

**GALERIES Capitales**, Fr. are those galleries which lie under the capitals in works of fortification.

**GALERIE transversale**, Fr. is a gallery in fortification which cuts the capital in a perpendicular direction.

**GALERIE meurtrière ou de première enveloppe**, Fr. a gallery which runs under the whole extent of the covert-way, and is frequently carried close to the counterscarp, in order to afford a circulation of air.

**GALERIE d'enveloppe**, Fr. a gallery which is constructed at the extremity of the glacis, and is commonly made parallel to the magistral or principal line of fortification. The *enveloppe* is the chief gallery in a fortress, or garrison town, and serves as a path of communication or covered way to all the rest. It is of the utmost consequence to the besieged to secure this gallery from every approach of the enemy; and if any impression should be made, so repair the injury without delay. From this gallery the garrison always direct their attacks, whenever it is necessary to keep the assailants out of the covert-way.

**GALERIE d'écoute**, Fr. a gallery in front of the *enveloppe*. *Ecoute*, which signifies to listen, sufficiently explains the purpose for which these galleries were erected.

**Petites GALERIES, ou rameaux**, Fr. small galleries, branches, or *arraignées*, in fortification, which issue from the countermines, and at the extremities of which the furnace or chamber for the lodgment of gunpowder is constructed. There is not any established or fixed rule to direct the height to which small galleries, branches, or *arraignées* ought to be carried; in general they should have the least possible elevation.

When galleries are built of mason-work, their height is from five to six feet, their breadth from three to four, and sometimes only three.

**GALERIES de mines**, Fr. galleries in mining differ from counter-mines, in as much as that they are supported by culfers resting upon frames, which are covered with earth three feet in depth; that is, two feet and a half from one frame to another. These galleries are

usually built three feet and a half high, and two and a half broad; and whenever there is a necessity to work in the *rambeau* or *arraignée*, the galleries in that case are reduced to smaller proportions.

**GALERIE magistrale**, Fr. a mining, signifies any covered avenue or gallery, which is parallel to the magistral or principal line of the place, and exists under the whole or part of the front of the fortifications. This gallery is usually as thick as the enemy's mason work against which the countermine is directed. By means of this work the besieged generally endeavour to interrupt every attempt which the besiegers may make in the passage of the fosse or ditch.

**GALERIE à passer un fosse**, Fr. a gallery constructed for the purpose of crossing a ditch. It is a small passage made of timber-work, having its beams or supporters driven into the bottom of the ditch, and being covered at the top with boards that are again covered with earth, sufficiently strong to bear the miner, and to withstand the effects of artificial fire, or the weight of stones which the enemy might direct against them. This sort of gallery is sometimes called the *traverse* or *cross-way*.

These galleries have been out of use for some years. The miner gets at the body of the place which is attacked, either through a subterraneous gallery that is practised under the ditch, when the nature of the ground will permit the attempt, or under cover of the epaulement, which covers the passage of the ditch. When the ditch is full of water, and the miner has made considerable progress in it, he instantly makes the best of his way to the breach, either by swimming, or by supporting his body on a raft of timber; as soon as he has reached the spot, he works into the earth among the ruins of the wall, and completes the object of the enterprise.

**GALERIES de communication**, Fr. are subterraneous galleries, by means of which the garrison of a besieged town or place may, without being perceived by the enemy, communicate from the body of the place, or from the counterscarp, with the different outworks.

**GALERIES souterraines des ancients**, Fr. Subterraneous galleries as originally invented by the ancients. The author

of the *Dictionnaire Militaire* in his last edition of that work enters upon the explanation of these galleries, by the following curious assertion:

"I must, he observes, in this place, assert with the Chevalier Folard, that it would be absurd to deny the superiority which the ancients possessed over us in the essential knowledge and requisites of war, and that they pushed the different branches of that science to as high a pitch of perfection as it was possible to raise it.

"The only inventions which the moderns can boast of are those of furnaces, mines and furnaces. But then on the other hand, we stand indebted to them for our lines of circumvallation and of contravallation, our approaches or trenches, which are effected from a camp to its different batteries, together with the construction of those batteries; our parallel entrenchments or places of arms, the descent into or the rising up of the ditch, our covered saps in mining, and our open galleries; we owe to them in fact, the original art of throwing up works, and of creating obstacles, by which we are enabled to secure ourselves, or by various stratagems to annoy our enemies. The ancients were indeed superior to us, in the means of defence.

"The origin of subterraneous galleries or passages in mining, is totally unknown to us; a circumstance which proves their antiquity. We read in the *History of Josephus*, that the Jews frequently made use of them; so that neither the Greeks nor the Romans, who in many instances arrogate to themselves the exclusive glory of invention, were the authors of this discovery.

"The method which was pursued by the ancients in their passages of mines, resembled the one that is invariably followed by the moderns. But the latter possess a considerable advantage over the former in this sort of attack and defence, which had advantage consists wholly in the invention of gunpowder.

"The ancients, it is well known, could only undermine in one way; namely under the terraces or cavaliers, or under the towers and battering testudo-machines (*tortues bélières*;) and in order to do any execution, they were obliged, in the first place, to construct

a spacious high subterraneous chamber to carry away and raise the earth, to support the remainder by powerful props, and afterwards to fill the several chambers with dry wood and other combustible materials, which were set fire to, in order to reduce them, the towers and various machines that were placed above, into one common heap of ruins. But this attempt did not always succeed; for owing to the magnitude of the undertaking and the time it required, the enemy might either leave the miners, out of their communication with the main body of the place, or get into the chambers before they could be finished, or be properly prepared for illumination.

"The ancients constructed their galleries on a larger scale than we adopt. They were wider, but less elevated; whereas those that we use require less trouble; our chamber mines being more contracted, and having an advantage of access by means of the different branches. One or two small chambers are sufficient with us to blow up the whole face of a bastion. But the ancients only sapped in proportion to the extent of wall which they were determined to demolish. This was a tedious operation; for when the besieger had reached the foot of the wall, it became necessary to run a gallery along the whole extent of what he proposed to demolish. Subsequent to this, he had to operate upon the entire front, during which the besieged found time and opportunities to open subterraneous passages, and to discover those which the assailants were practising against them. In the latter, indeed, they seldom failed.

"The Romans were extremely partial to subterraneous galleries. By means of these secret passages they took *Vigdenæ* and *Veia*; and *Darius*, king of Persia, by the same method took *Caldodon*. That species of gallery which is run out under the soil of an encampment, and pushed forward into the very body of a town, has been known from time immemorial. The Gauls were likewise very expert in their management of subterraneous galleries. *Cæsar* mentions the use of them in five or six places of his *Commentaries*.

GALLERIE *de pourtour*, Fr. in architecture. L I ture.

ture, a sort of gallery which is raised either in the inside, or on the outside, and surrounds the whole or part of a building.

**GALEA,** } a low built vessel for the  
**GALLOT,** } conveyance of troops and  
stores, having both sails and oars.

**GALION, Fr.** a name which was formerly given to French ships of war that had three or four decks. The term, however, is in disuse, except among the Spaniards, who call vessels *galions*, that sail to Santa Marguerita, to Terra Firma, Carthagena, Porto-Bello, &c.

**GALIOTE à bombes, Fr.** a bomb-ketch. A vessel built of very strong timber, with flat ribs and half decks. It is used for the carriage of mortars, that are placed upon a false deck which is made in the hold. Chevalier Renau first invented this species of naval battery, and submitted it to the French government. The Dey of Algiers having declared war against France, this ingenious man naturally imagined, that the most effectual method which could be adopted to strike terror into the barbarians, would be to bombard their capital, and this, he knew, could not be done, except from the decks of ships. His proposal was at first treated with extreme neglect, and was considered, in full council, as the project of a visionary madman.

This disheartening circumstance, however, (which, as Monsieur De Belidor has very justly remarked, almost always attends original plans and inventions,) did not check the warm mind of Chevalier Renau. His known abilities had secured some powerful partisans in his favour, and the French government at last consented, that he should construct two *galioles à bombes* at Dunkirk, and three at Havre de Grace. Having completed them, he sailed for Algiers; and after having braved the most tempestuous weather, got before the place with five vessels of that description. The town was bombarded during the whole of the night; and so great was the consternation of the inhabitants, that they rushed out of the gates, to avoid the dreadful effects of so unexpected an attack. The Algerines immediately sued for peace, and as M. De Fontenelle has shrewdly remarked, the Chevalier Re-

nau returned to France with his *galioles à bombes*, having obtained a complete triumph, not only over the Algerines, but over the petty cavillers against his invention.

Orders were instantly issued to construct others after the same model, and the king gave directions, that a new corps of artillery officers should be formed, for the specific purpose of doing duty on board the *galioles* or bomb-ketches.

**GALLERY,** a passage of communication to that part of a mine where the powder is lodged. See **GALLERY**.

**GALLET, Fr.** See **JAIL**.

**GALLIVATS** are large row-boats, used in India. They are built like the grab, but of smaller dimensions, the largest rarely exceeding 70 tons; they have two masts, of which the mizen is very slight; the main-mast bears only one sail, which is triangular and very large, the peak of it, when hoisted, being much higher than the mast itself. In general the gallivats are covered with a spar deck, made for lightness of bamboo split, and these carry only pateraroes, which are fixed on swivels in the gunnel of the vessel, but those of the largest size have a fixed deck, on which they mount six or eight pieces of cannon, from two to four pounders; they have forty or fifty stout oars, and may be rowed four miles an hour. See **History of Indostan**, vol. i. p. 103, 102.

**GALLOGIASSES, Fr.** A corps of Irish cavalry, so called under the French monarchy.

**GALLOPER,** a piece of ordnance or small caliber.

**GAMACHE, Fr.** See **GARTER**.

**GAMBESON, Fr.** a term which the French formerly applied to a coat of mail that was worn under the cuirass. It was likewise called *cotte gambouise*. It was made of two strong cloths interwoven with pointed worsted.

**GAMBLING.** Every species of chance play, such as hazard, &c. is strictly forbidden in the British army. The non-commissioned officers and private soldiers are severely punished when found guilty of this unwholesome practice; and in some services the officers are treated with equal severity.

**GAMBOISÉE, Fr.** See **Gambeson**.

**GAME.** Officers or soldiers killing game without leave of the lord of the manor.

manor, are punishable by fines according to the 51th section of the Mutiny act.

**GAMELLE**, *Fr.* a wooden or earthen bowl used among the French soldiers for their messes. It generally contained the quantity of food which was allotted for three, five, or seven men belonging to the same room. The porridge-pots for the navy were made of wood, and held a certain allowance. During the monarchy of France, subaltern officers and volunteers were frequently punished for slight offences by being sent to the *gamelle*, and excluded their regular mess, and put upon short allowance, according to the nature of their transgression.

**GANGES**, a considerable river of India in Asia. It rises in the mountains which border on Little Thibet, in 32 degrees of east longitude, and 52 degrees, 45 minutes of north latitude. According to the ingenious author of the History of Indostan, it disambogues itself into that country through a pass called the straits of Kupole, which are distant from Delhi, about 30 leagues, in the longitude of 96, and in the latitude of 30° 2'. These straits are believed by the Indians, who look very little abroad, to be the sources of the Ganges; and a rock 15 miles distant from them, bearing some resemblance to the head of a cow, has joined in the same part of the kingdom, two very important objects of their religion; the grand image of the animal which they almost venerate as a divinity, and the first appearance of that immense body of holy water, which is to wash away all their sins.

**GANTLET**, } in ancient military

**GAUNTLET**, } history, a large kind

**GANTELET**, } of glove, made of iron, and the fingers covered with small plates: it was formerly worn by cavaliers, or single knights of war, when armed at all points, but is now in disuse.

**GASTLET** or *gantlope*, denotes a kind of military punishment, in which the criminal running between the ranks receives a lash from each man. See **RUN THE GASTLET**.

**GAOLER** or **JAILER**, (*Geolier*, *Fr.*) The keeper of a prison.

**GAOLERS** are obliged by act of parliament to receive the subsistence of deserters while in custody, but they are not entitled to any fees. They are like-

wise directed to receive into their custody deserters on their route to their regiments. In default whereof they are subject to a penalty of 20 shillings.

**GAP**. See **BREACH**.

**GAR**, the general term used by the Saxons, for a weapon of war.

**GARÇON**-Major, *Fr.* an officer so called in the old French service. He was selected from among the lieutenants of a regiment, to assist the aid-majors in the general detail of duty.

**GARDE d'une Place**, *Fr.* the garrison of a place. See **GARRISON**.

**GARDE de l'armée**, *Fr.* the grand guard of an army. Guards in the old French service were usually divided into three sorts: *Guard of Honour*, *Fatigue Guard*, and the *General's Guard*. That was called a *guard of honour* in which the officers and men were most exposed to danger; for the quintessence of military honour is to be often in peril, and either to fall courageously in the discharge of duty, or to return from the field after having exhibited proofs of valour, prudence, and perseverance. A *fatigue guard* belonged to a garrison or to a camp. A *general's guard* was mounted before the door or gate of the house in which the commanding officer resided. For a more specific account of guards in general, See **GUARD**.

**GARDS du corps**, *Fr.* the body guards. Under the old government of France they consisted of a certain number of gentlemen or cavaliers whose immediate duty was to attend the King's person. They were divided into four companies, under as many captains, whose tour of duty came every quarter. They took rank above the Gens-d'armes and the King's light cavalry.

The first and most ancient of the four companies was called the *Scotch company*.

In 1423 Charles VII. established this body of gentlemen or cavaliers, for the purpose of shewing the great confidence which he placed in the Scots; who were not a little indebted for this mark of distinction to the service which their countryman Lord Buchan, eldest son to the Duke of Albany, rendered the French in 1421 at the battle of Bauge en Anjou, where the English army was completely routed. In order to preserve the remembrance of their behaviour, and in token of their gratitude to the Scotch

nation, the French King gave orders that whenever the roll-call took place in the Scotch company, each individual, instead of answering *Me voila!* should say *I am here!* or *here!*

**GARDE du Général**, Fr. a general's guard.

**GARDES-feur**, Fr. wooden cases or boxes used to hold cartridges.

**GARDES-fous**, Fr. the rails of a bridge.

**GARDE du consulat**, Fr. the consular guard. The only guard of honour which at pre-ent exists in France.

**GARDERS Francoises**, Fr. the French Guards.—In 1563 Charles IX. King of the French, raised a regiment for the immediate protection of the palace. The colonel of the gardes Francoises was on duty throughout the year, and was entitled to the *brton de commandement* in common with the four captains of the body guards. Peculiar privileges were attached to every officer belonging to this body. No stranger, not even a native of Strasburgh, Savoy, Alsace, or Piedmont, could hold a commission in the French guards. The age at which men were enlisted was above 13 and under 50 years. The height 5 French feet 4 inches and upwards. The serjeants were strictly forbidden to exercise any trade or business, and many of them got the *Croix de St. Louis*.

In the revolution of 1789 the French guards took a very active and leading part. Their attachment to the new order of things, however, eventually got the better of the loyalty they owed their sovereign. Nor is it a matter of doubt at this period by what means they were seduced from their allegiance; it being established as a well known fact, that no small proportion of the late duke of Orleans's wealth went towards corrupting them.

**GARDES-magazins**, Fr. In the old French service there were two sorts of magazine guards:—one for the military stores, and the other for the artillery. The first was subject to the grand master, and the second was appointed by the secretary at war.

**GARDE-général d'artillerie**, Fr. A king's officer was so called under the old government of France, who had charge of all the ordnance and stores belonging to his majesty for the land service. He

gave receipts for all ammunition, &c. and his bills were paid by the treasurer general of the artillery.

**GARDES provinciaux**, Fr. Provincial guards, were persons appointed to superintend, take charge of, and be responsible for the artillery belonging to Paris, Metz, Chalons, Lyons, Amiens, Narbonne, and Calais.

**GARDERS particuliers des magazins d'artillerie**, Fr. Officers appointed by the grand master of the ordnance for the specific purpose of attending to the ammunition, &c. Their pay was in proportion to the quantity of stores with which they were entrusted. They enjoyed some particular privileges, and were lodged at the expense of government.

**GARDE magazin d'un arsenal de marine**, Fr. An officer in France appointed to take charge and to keep a register of all warlike stores, &c. for the service of the Navy.

**GARDERS de la porte**, Fr. A company so called during the monarchy of France, and of so ancient a date, indeed, with respect to original institution, that it appears to have been coeval with it. Mention is made of the garde de la porte in the oldest archives or records belonging to the king's household, in which service they were employed, without being responsible to any particular treasurer or other companies were.

This company consisted of one captain, four lieutenants, and fifty guards. The captain and officers received their commissions from the king. The first took an oath of fidelity to the king in person, and received the *baton* from his hands. The duty he did was purely discretionary, and depended upon his own will. The lieutenants served by detachment, and took their tour of duty every quarter. Their specific service consisted in guarding the principal gate belonging to the king's apartments. Their guard-house was within the palace, which they occupied from six o'clock in the morning until six in the evening; when they were relieved by the body guards. They delivered the keys to a brigadier belonging to the Scotch garrison.

**GARDES Suisses**, Fr. The Swiss guards. This body originally consisted of a certain number of companies which

were

were taken into the French service in consequence of the close alliance that subsisted between the Swiss Cantons and France; but they were not distinguished from other troops by the appellation of guards, until a considerable period had elapsed from their first establishment. The zeal, fidelity, and attachment, which they uniformly evinced whenever they were entrusted with this distinguished part of the service, induced the crown in 1616 to bestow upon them this additional name.

The regiment was composed of twelve companies of two hundred effectives each. Some consisted of half companies complete in men. They were commanded by the three following officers, subordinate to each other, and created in 1639, viz. One colonel-general of the nation, one particular colonel of the regiment, and one lieutenant-colonel. The Swiss guards received double the pay which was given to the French guards. It is somewhat remarkable, that one hundred and three years after the regular establishment of the regiment under the three mentioned field officers, this brave body of men should have fallen victims to their attachment to the monarchy of France. On the 10th of August, 1793, they withstood the Parisian populace, aided by a desperate set of men from Marseilles, and defended the palace in the Louvre until almost every man was killed. During the resistance which the Swiss guards made, Louis the XVIth, with his family escaped, and took shelter in the national assembly.

**GARDES (cent) Suisses du corps du Roi, Fr.** One hundred Swiss guards immediately attached to the king's person. They were a select body of men who took an oath of fidelity to the king, and were formed into a regular troop. Louis XIV. during several sieges which he personally attended, gave directions, that the head of the trench should be guarded by a detachment of this troop; so that the hundred Swiss guards might properly be ranked as military men, although their officers did not wear any uniform, and in the last periods of the monarchy of France, the principal duties of the hundred Swiss guards consisted in domestic and menial attendance.

**GARDE qui monte, Fr.** the new guard.

**GARDE qui descend, Fr.** The old guard.

**GARDES ordinaires des lignes, Fr.** ordinary guards.

**GARDE de la tranchée, Fr.** Guard for the trenches. Among the French, this guard usually consisted of four or six battalions. It was entrusted to three general officers, viz. one lieutenant-general on the right, one major-general on the left, and one brigadier-general in the center. All general officers, when on duty for the day in the trenches, retained the succeeding night, and never left them until they were regularly relieved by others of their own rank.

When it came to the tour of any particular battalion to mount the trench guard, it was the duty of the major of that battalion to examine the ground on which it was to be drawn up, to look at the pickets, and to see where the grenadiers were posted, in order to go through the relief with accuracy and expedition.

The battalion was drawn up in front of the camp; the grenadiers being stationed on the right, next to them the pikets, and on its left flank the body of the battalion. The latter was divided into three cent pickets, and formed in order of battle. So that instead of the several companies being posted together, the men were directed out, and distributed in such a manner, that the whole battalion was separated into troops or companies, each consisting of forty-eight men, promiscuously thrown together.

The advantage which was derived from this disposition of the battalion, and from its having been previously told off according to each company's roster, is manifest; for when a second or third battalion picket was wanted in the trenches, the different detachments were already formed without going into the small detail of companies. The officers in conformity to their roster were ordered to march, and the picket moved out without a moment's delay.

Add to this, that whenever it was found necessary to make a sortie, the loss of men did not fall upon one company, but was divided among the whole battalion.

A general rendezvous or parade was fixed for all the regiments who were to

do duty in the trenches; they assembled in that quarter, and were drawn up in line, with all the grenadiers on the right, and the whole of the piquets upon the same alignment. At the hour appointed the latter began to file off, and each regiment followed according to its seniority. The lieutenant-general whose tour of command was in the trenches, placed himself at the head of those troops who were to attack from the right; the major-general at the head of those belonging to the left, and the brigadier-general took the center; the oldest regiment headed the right, the next in seniority stood in front of the left, and the third preceded the center.

As soon as the troops reached the tail of the trench, the men marched by Indian files, or rank entire, and each one took his post. Sentinels were stationed, and the necessary detachments were made. The colours were planted upon the parapet of the trench. At night the adjutants of corps went to head quarters, to receive instructions relative to the projected attack, and got the parole and counter-sign from the general. The senior adjutant communicated his orders to the rest, who conveyed the same, first to their several colonels, and afterwards to the serjeants of each regiment.

When on duty in the trenches, soldiers must not, on any account, quit their fire-arms; and the instant the least noise is heard, it is their duty to throw themselves upon the back of the trench, and there remain till the order is given to march. When an attack is directed to be made, the execution of it is always entrusted to the grenadiers. These are supported by the different piquets, and the main body of the corps follow with the colours.

•When the *chamade* was beat by the besieged, with a view to capitulate, it was a rule among the French, that the battalions which were posted in the trenches, might refuse to be relieved, and could remain at their station until the garrison marched out. When the capitulation was signed, it fell to the oldest regiment belonging to the besieging army to take possession of the gate that was delivered up, and that corps remained in the town until a governor was named, and a regular garrison appointed.

**GARDE du camp, Fr.** See *Quarter-Guard*.

**GARDE avancée, ou Garde folle, Fr.** a small body of cavalry, consisting of 15 or 20 horsemen, under the command of a lieutenant, whose station is beyond, but still in sight of the main guard. The particular duty of those men is to watch the motions of the enemy, for the greater security of the camp.

During the famous crusade to the Holy Land, the Christians having taken the town of Damietta, and finding it impossible to make farther progress, on account of the overflows of the river Nile, effected a passage over, but neglected to retrench themselves according to the custom of those days. The consequence was, that the Arabs insulted them in their camp, and frequently murdered their sentries at their very tents. In order to prevent these incursions, advanced guards of the description just mentioned were resorted to. *Vedettes* were posted round the camp, and from hence most probably was derived their origin.

Many methods have been proposed by the military writers of all ages to secure advanced guards from surprise. Frochetta advises them to be lighted during the night in one quarter, while the rendezvous and station of the guard are in another. His reason is this, if the enemy should approach the quarter which is lighted up, the soldiers belonging to the advanced guard, may readily discover him, without being themselves exposed to a direct attack. Oursander is of the same way of thinking. Silence on these occasions is indispensably requisite. Xenophon, on the other hand, has proposed, that the station should be often changed, and that the guard should consist of different numbers. His object is to form a considerable ambuscade in front of the spot where the guard has been usually posted, so that when the enemy approaches towards it, he may be suddenly surprised by a larger body of men than he expected, and instead of carrying off the ordinary guard, be himself taken prisoner.

**GARDE du pont, Fr.** Guard for the security of a bridge. The same author (Frochetta) proposes, that one or two sentries be posted at each end of the bridge, if it be of any length. His motive

tive is to prevent too heavy loads from being conveyed upon it, and to check bodies of cavalry who might be disposed to gallop or trot across it. If the bridge be constructed upon barges or boats, there must always be a certain number of wooden scoops to drain off the water as it rises, or gets through small apertures upon the surface. The commanding officer of the guard must order frequent rounds to be made, both night and day, lest the enemy should send divers to get under the boats and pierce their bottoms.

Foresti, the historian, relates, that the Emperor Henry III. having ordered several barges to be constructed and stationed in the Danube for the purpose of storming Posonio, his project was defeated by the bold and desperate act of an individual. One Zormonde, a Hungarian, having provided himself with a wimble, swam under the surface of the water, and got beneath the boats, which he bored in several places, without the least suspicion or knowledge of the mariners. The boats gradually filled, and were finally sunk, which circumstance obliged the emperor to raise the siege.

**GARDE des travailleurs**, Fr. A particular guard which is kept among the workmen and artificers during a siege. In France they had a particular roster among themselves; beginning from the eldest downwards, as well among the officers as among the men.

**GARDE relevée**, Fr. the guard that is relieved, commonly called the old guard.

**GARDIES de la marine**, Fr. During the existence of the old French government several young gentlemen received brevet commissions from the king, and were permitted to serve on board ships of war. They were distributed among the fleet, and when they had acquired a knowledge of their profession, were promoted to the rank of officers. Their duty was near the admiral, when he commanded in person; and during his absence they were placed on board the different vessels, in order to assist the several officers, particularly in the discharge of their functions at the batteries.

**GARDIES costes**, Fr. from the Spanish *guarda costa*, signifying ships of war that cruise along the coast to protect

merchants, and to prevent the depredations of pirates.

**GARDES côtes** (*capitaineries*), Fr. The maritime divisions, into which France was formerly divided, were so called.

Each division was under the immediate superintendence of a captain, named *capitaine parades-côtes*, who was assisted by a lieutenant and an ensign. Their duty was to watch the coast, and to attend minutely to every thing that might affect the safety of the division they had in charge.

There were thirty-seven capitaineries *gardes côtes* in Normandy, five in Poitou, two in Guyenne, two in Languedoc, and six in French Flanders, Picardy, Boulonne, Calais, &c.

The establishment of sea-fencibles in Great Britain, which took place during the late war, most probably owes its origin to the *gardes côtes*.

**GARDE** (*garde*), according to the French corps of cavalry, consisting of several troops that are detached in front of a camp, in order to keep the enemy in check while the army is preparing for battle.

**GARDE de Piquet**, Fr. Piquet-guard. It is a guard of *fatigue*, like all others that are mounted in rotation.

**GARDE d'honneur**, Fr. A guard given in time of war to general officers and commanders in chief.

**GARDIES de la Marche**, Fr. Two men belonging to the first company of the King of France's body guards, who, upon certain occasions, stood on each side of his Majesty, dressed in a *haqueton*, and armed with a *poignard*.

**GARDE de Porton**, Fr. A guard or detachment who are on the rounds. It is more properly called *Officiers de nuit*.

**GARDIES-blancs**, Fr. A militia composed of the tallest and best bodied men that could be selected from the legion, during the time of the Roman Emperors.

**GARDIES-de-roy**, Fr. Horse-men who composed the body-guard for the French kings, and who took notice of all the compliments or imperiousness of his Majesty's household. They were first created in 1120, under Charles VII. At first there was but one company, which was entirely composed of Scotsmen. The *gardes du corps* were under the immediate command of the king and of their

their own officers. The life-guards in England are of the same description.

**GARDE du Pavillon Amiral**, Fr. A company of gentlemen who, both at sea and in the sea-ports, were attached to the person of the high admiral of France. These are not to be confounded with the *garces de la marine*, who are also a company of Gentlemen.

**GARDES de la prison de l'Hotel du Roi**, Fr. troops which formerly belonged to the king's household. This company was created under Philip III. in 1271, and Charles VI. was pleased to distinguish it by the title of *prison de l'Hotel du Roi*, in 1421.

**GARDIS de fatigue**, Fr. *Sec Detachemens non armes*.

**GARDE d'epée**, Fr. Sword-balt, a guard.

**GARDE**, Fr. Watch, guard, protection.

**Corps de GARDE du guet**, Fr. Watch-house or rendezvous for the street patrolers.

**GARDE bois**, Fr. a forest-keeper.

**GARDE du corps**, Fr. life-guard.

**GARDE chasse**, Fr. a gamekeeper.

**GARDE pluie**, Fr. literally means a fence, or cover against rain. This machine was originally invented by a Frenchman, who left his native country to avoid persecution or unmerited neglect, and submitted it to the Prussians, who adopted it for the use of their Infantry. Other armies, however, either seem ignorant of the invention, or do not think it worthy of imitation. Belair, the author of *Elements de Fortification*, in his ordinary dictionary, which forms a good part of that interesting work, observes, that "the machines might be rendered extremely useful in the defence of fortresses, camps, redoubts, or retrenchments. Under the cover of them, the besieged, or the troops stationed in the posts attacked, would be able to keep up a brisk and effectual discharge of musquetry during the heaviest fall of rain, and thereby silence, or considerably damp the fire of the enemy. The *garde pluie* is capable of being much improved. Light corps ought to be particularly anxious for its adoption, as the service on which they are generally employed, exposes their arms to every chance of weather; and by means of this cover, both themselves and their rifles, or musquets, would be secured against rain."

**Attaquer la GARDE**, Fr. to make an attempt on the guard.

**Une forte GARDE**, Fr. a strong guard.

**Un piquet de GARDE**, Fr. a piquet guard.

**La GARDE à pied**, Fr. the foot guards.

**La GARDE à cheval**, Fr. the horse guards.

**La GARDE Ecossoise**, Fr. the Scotch guards.

**La GARDE Irlandoise**, Fr. the Irish guards.

**Faire monter la GARDE**, Fr. to set the guard.

**Etre de GARDE**, Fr. to be upon guard.

**Monter la GARDE**, Fr. to mount guard.

**Descendre la GARDE**, Fr. to come off guard.

**Relayer ou changer la GARDE**, Fr. to relieve guard.

**La GARDE montante**, Fr. the guard that mounts, or the new guard.

**La GARDE descendante**, Fr. the guard that comes off, or the old guard.

**GARDE à cour**, Fr. A cantonment, phrase used in the French service. We have it adapted to the term, *take care, or be careful*—at first it we use the word *obedience*, which is usually pronounced *Obeyon*.

**GARDENS**, a word ancient military has been, were of two different kinds, viz.

**Artillery-GARDENS**, about the year 1650, was a place of resort in London, where vast numbers of young people practised every kind of artillery exercise, in such manner, that it was famous through the whole world, and universally styled the great nursery, or academy of military discipline. See **ACADEMY COMPANY**.

**Military-GARDENS** were likewise famous, about the year 1650, in the city of London, for the great improvement of numbers of our nobility and other gentlemen of fashion, in every kind of military exercise. The captains in chief of those academies or gardens were major-general Skippon, and major Tillyer.

**GARDENNERIE**, Fr. The gunners' rooms.

**GARES**, Fr. creeks made in narrow rivers, to facilitate the passage of boats.

**GARGOUILLES**, Fr. the powder with which cannon is charged.

**GARGOUSSE**,

**GARGOUSSE**, *Fr.* a cartouch, a cartridge.

**GARGOUSSIÈRE**, *Fr.* a pouch for cartridges.

**GARLAND**, a sort of chaplet made of flowers, feathers, and sometimes of precious stones, worn on the head in the manner of a crown. The word is formed of the French *guirlande*, and that of the barbarous latin *garlanda*, or Italian *ghirlanda*. Both in ancient and modern times it has been customary to present garlands of flowers to warriors who have distinguished themselves. Among the French the practice is still familiar. A beautiful young woman is generally selected for the purpose.

**GARNIR** *d'artillerie*, *Fr.* to line with artillery. *Un rampart garni de grosse artillerie*, a rampart covered or lined with heavy ordnance.

**Se GARNIR**, *Fr.* to seize.

**GARNISH**-nails, diamond-headed nails, formerly used as ornaments to artillery carriages.

**GARRISON**, *Fr.* See **GARRISON**.

**GARNITURE**. See **EQUIPAGE**, &c.

**GARRISON** *des Janissaires*, *Fr.* The Flag or flower of the Janissaries of Constantinople is frequently sent into garrison on the frontiers of Turkey, or to places where the loyalty of the inhabitants is doubted. The Janissaries do not indeed assist in the immediate defence of a besieged town or fortress, but they watch the motions of all suspected persons, and are subject to the orders of their officers, who usually command the garrison.

**GARRISON**, a body of forces, disposed in a fortress or fortified town, to defend it against the enemy, or to keep the inhabitants in subjection; or even to be subsisted during the winter season: hence garrison and winter-quarters are sometimes used indiscriminately for the same thing; while at others they denote different things. In the latter case, a garrison is a place wherein forces are maintained to secure it, and where they keep regular guards, as a frontier town, a citadel, castle, tower, &c. The garrison should always be stronger than the townsmen.

**Winter-quarters**, places where a number of forces are laid up in the winter season, without keeping the regular guards. See **WINTER-QUARTERS**.

**GARRISON-town**, a strong place in which troops are quartered, and do duty, for the security thereof, keeping strong guards at each port, and a main-guard in, or near the market-place.

**GARROT**, *Fr.* an old word which signified the shooting of an arrow.

**Order of the CARTER**, a military order of knighthood, the most noble and ancient of any lay-order in the world, instituted by king Edward III. This famous order consists of 26 knights companions, generally princes and peers, whereof the king of England is the sovereign or chief. They are a college or corporation having a great and little seal.

Their officers are a prelate, chancellor, register, king at arms, and usher of the black rod. They have also a dean and 12 canons, and petty canons, vergers, and 26 pensioners, or poor knights. The prelate is the head. This office is vested in the bishop of Winchester, and has ever been so. Next to the prelate is the chancellor; which office is vested in the bishop of Salisbury, who keeps the seals, &c. The next is the register, who by his oath is to enter upon the registry, the scrutinies, elections, penalties, and other acts of the order, with fidelity. The fourth officer is Garter, and king at arms, being two distinct offices united in one person. Garter carries the rod and sceptre at the feast of St. George, the protector of this order, when the sovereign is present. He notifies the election of new knights, attends the solemnity of their installation, carries the garter to the foreign princes, &c. He is the principal officer within the college of arms, and chief of the heralds.

All these officers, except the prelate, have fees and pensions. The college of the order is in the castle of Windsor, with the chapel of St. George, and the chapter-house, erected by the founder for that purpose. The habit and ensign of the order are, a garter, mantle, cap, George and collar. The 3 first were assigned the knights companions by the founders; and the George and collar by king Henry VIII. The garter challenges pre-eminence over all other parts of the dress, because from it the noble order is denominated; that it is the first part of the habit presented to foreign princes,

M m and

and absent knights, who, together with all other knights elect, are therewith first adorned; and it is of such honour and grandeur, that by the bare investiture with this noble ensign, the knights are esteemed companions of the greatest military order in the world. It is worn on the left leg, between the knee and calf, and is enamelled with this motto, *Honi soit qui mal y pense*; that is, "Evil be to him who evil thinks." The meaning of which is, that king Edward having laid claim to the kingdom of France, retorted shame and defiance upon him that should dare to think amiss of the just enterprise he had undertaken, for recovering his lawful right to that crown; and that the bravery of those knights whom he had elected into this order, was such as would enable him to maintain the quarrel against those that thought ill of it.

The mantle is the chief of those vestments that are used upon all solemn occasions. The colour of the mantle is by the statutes directed to be blue. The length of the train of the mantle, only, distinguishes the sovereign from the knights companions. To the collar of the mantle is fixed a pair of long strings, anciently wove with blue silk only, but now twisted round, and made of Venice gold and silk, of the colour of the robe, with buttons and tassels at the end. The left shoulder of the mantle is adorned with a large garter and device *Honi soit, &c.* Within this is the cross of the order, which was ordained, by king Charles I. to be worn at all times. At length the star was introduced, being a sort of cross, irradiated with beams of silver.

The collar is composed of pieces of gold in the shape of garters, the ground enamelled blue, and the motto gold.

The garter is of blue velvet bordered with fine gold wire, having commonly the letters of the motto of the same: it is, at the time of installation, buckled upon the left leg, by two of the senior companions, who receive it from the sovereign, to whom it is presented upon a velvet cushion by Garter king at arms, with the usual reverence, whilst the chancellor reads the following adjunction by the statutes.—

"To the honour of God omnipotent, and in memorial of the blessed martyr St. George, tie about thy leg, for thy

renown, this noble garter; wear it as the symbol of the most illustrious order, never to be forgotten or laid aside; that thereby thou mayest be admonished to be courageous, and having undertaken a just war, in which thou shalt be engaged, thou mayest stand firm, valiantly fight, and successfully conquer."

The princely garter being thus buckled on, and the words of its signification pronounced, the knight elect is brought before the sovereign, who puts about his neck kneeling, a sky-coloured ribbon, whereon is appendant, wrought in gold within the garter, the image of St. George on horse-back, with his sword drawn, encountering the dragon. In the mean time the chancellor reads the following admonition: "Wear this ribbon about thy neck, adorned with the image of the blessed martyr and soldier of Christ, St. George, by whose imitation provoked, thou mayest so overpass both prosperous and adverse adventures, that having stoutly vanquished thy enemies both of body and soul, thou mayest not only receive the praise of this transient combat, but be crowned with the palm of eternal victory."

Then the knight elect kisses his sovereign's hand, thanks his majesty for the great honour done him, rises up, and salutes all his companions severally, who return then congratulations.

Since the institution of this order, there have been several emperors and kings, besides numerous sovereign princes, enrolled as companions thereof. Its origin is somewhat differently related. The common account is, that it was erected in honour of a garter of the countess of Salisbury which she dropped dancing with king Edward, and which that prince picked up; but our best antiquarians think it was instituted on account of the victory over the French at Cressy, where the king ordered his garter to be displayed as a signal of the battle.

**GASCONADE**, a boast or vaunt of something very improbable. The term is originally derived from the Gascons, or people of Gascony in France, who, it seems, have been particularly distinguished for extravagant stories.

**GASCONADE**, *Fr.* a lie, a *rodomontade*, an imposition.

**GASCONNER**, *Fr.* to gasconade, to repeat extravagant wild stories.—

Thus

Thus one of the French generals may be said to have gasconaded, when he officially announced to the Convention of France, that after a severe and bloody engagement against the Austrians, the whole amount of the loss in the French army, was a grenadier's little finger!!!

**GASTADOURS**, *Fr.* pioneers; foot soldiers so called, because they dug up, destroyed, and cut down all that opposed the progress of an army.

**GATE**, in a military sense, is made of strong planks with iron bars to oppose an enemy. Gates are generally fixed in the middle of the curtain, from whence they are seen and defended by the two flanks of the bastions. They should be covered with a good ravelin, that they may not be seen or entailed by the enemy. The palisades and barriers before the gates within the town are often of great use. The fewer ports there are in a fortress, the more you are secured against the enemy. At the opening of a gate, a party of horse is sent out to patrol in the country round the place, to discover ambuscades or lurking parties of the enemy, and to see if the country be clear.

**GAUCHE**, *Fr.* the left.

**A GAUCHE**, *Fr.* to the left.

**Gauche d'une rivière, d'un ruisseau**, *Fr.* The left of a river is ascertained by looking at its stream, or standing with your back to its source, and facing the quarter whence it disembogues itself. The bank on your left hand is called the left bank.

**GAUCHE**, *Fr.* This word is used among the French to signify the second post of honour in an army, or in regiments: thus the second battalion of a corps, which is brigaded, and is senior to another, takes the left of the line; and if two battalions of the first regiment of guards were to be brigaded with the Coldstream, the second battalion of the former would be on the left, being the post of honour, and the latter would occupy the center, as being the youngest regiment.

**GUAGE**. See **STANDARD**.

**GAUGES**, in gunnery, are brass rings with handles, to find the diameter of all kinds of shot with expedition.

**GAULS**, the name given by the Romans to the inhabitants of the country that now forms the kingdom of France. The original inhabitants were descended

from the Celtes or Conquerians, by whom the greatest part of Europe was peopled; the name of Galli or Gauls, being probably given them long after their settlement in that country.

**GAUNTELOPE.** } See **GAUNTLET**.  
**GAUNTLET.** }

**GAZETTE**, or newspaper, a printed account of the transactions of all the countries in the known world. This name with us, is confined to that paper of news which is published by authority.

The word is derived from *gazetta*, a Venetian coin, which was the usual price of the first newspaper printed there, and which name was afterwards given to the paper itself.

The first gazette in England was published at Oxford, the court being there, in a folio half sheet, November the 7th, 1665. On the removal of the court to London, the title was changed to the *London Gazette*. The Oxford Gazette was published on Tuesdays, the London on Saturdays. And these have continued to be the days of publication ever since that paper has been confined to London.

All commissions in the regular army, militia, fencible and volunteer corps must be gazetted. The dates specified in the gazette generally agree in every point with those of the original commissions. So that by referring to the gazette, an officer may generally know the precise day on which he is entitled to receive subsistence from the agent, and to assume rank in the British army. Should an erroneous statement, however, get into the gazette, or a commission be wrong dated therein, a reference to the latter (i. e. commission) will always supersede any notification in the former.

**GAZONNER**, *Fr.* to revere or cover with sods.

**GAZONS**, in fortification, pieces of fresh earth or sods, covered with grass, and cut in the form of a wedge, about a foot long, and half a foot thick, to line the outsides of a work made of earth; as ramparts, parapets, banquettes, &c. The first bed of gazons is fixed with pegs of wood; and the second bed is so laid as to bind the former, by being placed over its joints: and so continued till the works are finished. Between those it is usual to sow all sorts

of binding weed or herbs, in order to strengthen the rampart.

GEAR, furniture, equipage, or comparisons.

GEAT, the hole through which the metal is conveyed to the mould in casting ordnance.

GEBEGIS, armourers among the Turks are so called.

GEBELUS. Every Timarist in Turkey, during a campaign, is obliged to take a certain number of horsemen, who are called gebelus, and to support them at his own expence. He is directed to take as many with him as would annually cost three thousand aspres (each aspre being equal to two-pence farthing English) for subsistence.

GELD, in the English old customs, a Saxon word signifying *money*, or tribute. It also denoted fine or a compensation for some crime committed. Hence *wer-geld*, in the old Saxon laws, was used for the value of a man slain; and *orf-geld* for that of a beast.

GELIBACH, a sort of superintendant or chief of the gebegis, or armourers among the Turks. He is only subordinate to the *toppi bachi*, or the grand master of the Turkish artillery.

GENDARME, *Fr.* in the original signification of the term, a man in complete armour. His horse was also shielded by a breast-plate, head-piece, and covers for his sides. The *Gendarmes* were at first called *Hommes d'armes* (men at arms), and were esquires.

GENDARMERIE, *Fr.* the gendarmerie was a select body of cavalry that took precedence of every regiment of horse in the French service, and ranked immediately after the king's household. The reputation of the gendarmerie was so great, and its services so well estimated by the king of France, that when the Emperor Charles V. in 1552, sent a formal embassy to the Court of Versailles to request a loan of money, and the assistance of the gendarmerie to enable him to repulse the Turks; Francis I. returned the following answer: "With respect to the first object of your mission, (addressing himself to the ambassador) I am not a banker; and with regard to the other, as my gendarmerie is the arm which supports my sceptre, I never expose it to danger, without personally sharing its fatigue and glory."

The uniform of the gendarmerie, as well as of the light cavalry, under the old French government, was scarlet with facings of the same colour. The coat was formerly more or less laced with silver, according to the king's pleasure. A short period before the revolution, it was only laced on the cuff. The waistcoat of buff leather, and the bandoulier of the same, silver laced; the hat was edged with broad silver lace. The horse-cloths and holster-caps were red, and the arms of the captain embroidered on the corners of the saddle cloths, and on the front of the holsters. In 1762, a considerable body of men was raised by order of Louis XIV. The soldiers who composed it were called gendarmes. And in 1792 the number was considerably augmented, consisting of horse and foot, and being indiscriminately called gendarmes; but their clothing was altered to deep blue. Their pay was greater than what the rest of the army enjoyed; and while others were paid in paper currency, they received their subsistence in hard cash (*en argent sonnaut*). They possessed these privileges on account of the proofs they were obliged to bring of superior claims to military honour, before they could be enlisted as gendarmes. It was necessary, in fact, that every individual amongst them should produce a certificate of six or eight years service.

GENDARMES *de la garde*, *Fr.* a select body of men so called during the old government of France, and still preserved in that country; but their services are applied to different purposes. They consisted originally of a single company which was formed by Henry IV. when he ascended the throne. He distinguished them from his other troops, by stiling them *hommes d'armes de ses ordonnances*; men at arms under his own immediate orders. They were persons best qualified for every species of military duty, and were to constitute a royal squadron, at whose head the king himself might personally engage the enemy, as necessity should require. He gave this squadron to his son the Dauphin, who was afterwards king of France, under the name and title of Louis XIII. According to Dupain de Montesson, the *gendarmes de la garde*.

*garde* were a body of horse, which formed part of the household guard during the French monarchy. This body consisted of two hundred men, and was divided into two squadrons.

**GENDARMES Anglois**, Fr. In the establishment of the old French army, the English gendarmes formed the second troop or company of the corps.

**GENDARMES d'Injon**, Fr. the eleventh troop belonging to the old French gendarmerie.

**GENDARMES de Berry**, Fr. the thirteenth troop belonging to the old French gendarmerie.

**GENDARMES Bourguignons**, Fr. the third troop belonging to the old French gendarmerie.

**GENDARMES de Bretagne**, Fr. the ninth troop belonging to the old French gendarmerie.

**GENDARMES Dauphin**, Fr. the seventh troop belonging to the old French gendarmerie.

**GENDARMES Ecossois**, Fr. the first troop belonging to the old French gendarmerie.

**GENDARMES de Flandre**, Fr. the fourth troop belonging to the old French gendarmerie.

**GENDARMES d'Orleans**, Fr. the fifteenth troop belonging to the old French gendarmerie.

**GENDARMES de la Reine**, Fr. the fifth troop belonging to the old French gendarmerie.

**GENERAL**, in a military sense, is an officer in chief, to whom the prince or senate of a country have judged proper to intrust the command of their troops. He holds this important trust under various titles, as captain-general in England and Spain, *feldt mareschal* in Germany, or *mareschal* in France.

In the British service the king is constitutionally, and in his own proper right, captain-general. He has ten aids-de-camp; each enjoying the brevet rank of full colonel in the army. Next to his majesty is the commander in chief, whom he sometimes honours with the title of captain general. During the expedition to Holland, his Royal Highness the Duke of York was entrusted with this important charge.

*The natural qualities of a GENERAL.* These should be a martial genius, a solid judgment, a healthy robust constitu-

tion, intrepidity and presence of mind on critical occasions, indefatigability in business, goodness of heart, liberality, and a reasonable age; for if too young he may want experience and prudence; and if too old, he may not have vivacity enough. His conduct must be uniform, his temper affable, but inflexible in maintaining the police and discipline of an army.

*Acquired qualities of a GENERAL.*

These should be society, justice, sobriety, temperance, knowledge of the art of war from theory and practice, the art of commanding, and speaking with precision and exactness; great attention to preserve the lives and supply the wants of the soldiers, and a constant study of the characters of the officers of his army, that he may employ them according to their talents. His conduct appears in establishing his magazines in the most convenient places; in examining the country, that he may not engage his troops too far, while he is ignorant of the means of bringing them off; in subsisting them, and in knowing how to take the most advantageous posts, either for fighting, retreating, or shunning a battle. His experience inspires his army with confidence, and an assurance of victory; and his quality, by creating respect augments his authority. By his liberality he gets intelligence of the strength and designs of the enemy, and by this means is enabled to take the most successful measures. He ought to be fond of glory, to have an aversion to flattery, to render himself beloved, and to keep a strict discipline and regular subordination.

*The office of a GENERAL* is to regulate the march and encampment of the army, in the day of battle to chuse out the most advantageous ground; to make the disposition of the army, to post the artillery, and, where there is occasion, to send his orders by his aids-de-camp. At a siege he is to cause the place to be invested, to regulate the approaches and attacks, to visit the works, and to send out detachments to secure the convoys, and foraging parties.

**GENERALISSIMO**, a supreme and absolute commander in the field. This word is generally used in most foreign languages. It was first invented by the  
absolute

absolute authority of Cardinal Richieu, when he went to command the French army in Italy.

*GENERAL of artillery.* See Ordinance.

*GENERALS of horse* are officers next under the general of the army. They have an absolute command over the horse belonging to an army, above the lieutenant-generals.

*GENERALS of foot* are officers next under the general of the army, having an absolute command over the foot of the army.

*GENERAL officers.* All officers above the rank of lieutenant-colonel in the line are so called. The Board, (which subject to his majesty and the commander in chief) determines every regulation respecting the clothing of the army, is composed of general officers.

*GENERAL.* In the German armies, and among the sovereigns of the North, there are certain generals of cavalry, and others of infantry, who take rank of all lieutenant-generals. Those belonging to the infantry in the imperial service, and who are of this description, are called *general field-marschalls*. In Russia they bear the titles of generals in chief; of which class there are four belonging to the armies of that empire, two for the infantry, and two for the cavalry. They are only subordinate to field-marschalls, which title or dignity is the same in Russia as was formerly that of marshal of France.

In the two imperial armies just mentioned, it is usual for generals, lieutenant-generals, and major-generals to take their routine of duty, and rise progressively in the infantry or cavalry corps, to which they were originally appointed, until they arrive at a chief command; whereas in France (according to the old military system of that country, and according to our own in England) a major-general might be employed to take charge of either infantry or cavalry, without any regard being paid to the particular line of service in which he was bred.

*GENERAL chez les Turcs*, Fr. Turkish generals. Whatever opinion we may be disposed to entertain of the troops of the Ottoman Empire, (and we have recently had some experience of their manner of fighting, especially at St.

Jean d'Acie, which was preserved by a handful of British seamen and marines) we shall wave our own private sentiments on the subject, and give the following curious account of their generals, as faithfully extracted out of a French work.

The Turks, observes that author, have likewise good generals. They possess experience, because from their earliest infancy they become mired to arms; because through the different stages of acknowledged service, they rise by degrees; and because their empire being very extensive, it is necessary that they should over-run several provinces for its protection, and be almost constantly engaged in skirmishes or battles. These, at least, were the original principles upon which the military code of that country was established. But abuses, the natural consequences of corruption, have since crept in amongst them, for there have been persons suddenly raised from subordinate employments under the Porte to the supreme command of armies. The primary cause of this abuse is to be found in the luxury and effeminacy of the grand signor; who are become needless of the Mahometan laws, and never go to war in person.

The acknowledged valour of the Turkish generals may be attributed to the following causes. To a constitution which is naturally robust, to a practical knowledge of war, and to habitual military exercises. To these may be added the confidence with which they are inspired by the recollection of former victories; but they are influenced above all, by the secret dictates of religion, which holds out eternal happiness to those who shall die in battle, and which teaches them to believe, that every Turk bears written on the forehead, not only the hour of his departure from this earth, but the manner of his removal.

A Turkish general possesses a power as absolute and uncontrolled as that which was entrusted to the dictators of the Roman republic. He has no competitor, or equal in the charge he holds, no assistants or colleagues with whom he is directed to consult, and to whose assent or dissent, in matters of consultation, he is to pay the least regard. Not only the army under his command,

but

but the whole country into which he marches, is subject to his orders, and bound implicitly to obey them. Punishments and rewards are equally within his distribution. If an authority so absolute as this be considered in the light of executive effect, nothing most unquestionably can so readily produce it; for the tardiness of deliberation is superseded at once by a prompt decision; before which all sorts of objections, and every species of jealousy, subside. When a project is to be fulfilled, secrecy is the natural consequence of this arbitrary system, and rational plans are not interrupted by a difference of opinion, by prejudice or cabal.

*Général de bataille*, or } a particular  
*General major*, } his rank & appointment, whose functions correspond with those of a *colonel* in the army of France. This situation is entrusted to a general officer, and is only known among the armies of Russia, and some other northern powers. He takes precedence in the same manner that our major generals do, of all brigadier generals and colonels, and is subordinate to lieutenant generals. The rank of brigadier general is only known in Russia, England, and Holland. It does not exist in Austria or Sweden.

*Général des galères*, Fr. Superintendent officer or general of the galleys. This was one of the most important appointments belonging to the old government of France. The officer to whom it was entrusted commanded all the galleys, and vessels which bore what the French call *voiles latines* (a triangle or triangular sail) in the Mediterranean. He had a jurisdiction, a marine police, and an arsenal for constructing ships under his own immediate command, without being in the least subordinate to the French admiralty board. When he went on board he was only inferior in rank to the admiral.

The privileges which were attached to his situation, and the authority he possessed with regard to every other marine or sea-officer, were specifically mentioned in the king's regulations, and were distinguished by the respect and compliments that were paid to the royal standard, which this general bore, not only on board his own galley, but

whenever he chose to hoist it in another.

During the reign of Louis XIV. in 1669, the Duke de Vivonne, marshal of France, raised the reputation of the galley service to a considerable degree of eminence, by gaining several hard fought engagements. His son, the Duke de Mortemart succeeded him in the appointment; and the chevalier d'Orleans, grand page of France, was general of the galleys at his decease.

*Général des stores*, Fr. a sort of chief commissary, or superintendent general of stores, whose particular functions were to provide ammunition bread and biscuit for the army. There were several subordinate commissaries who watched the distribution of these stores, and saw that the bakers gave bread of the quality they contracted for. It was likewise within the department of the superintendent general to attend to the collection of grain and flour, and to see that proper carriages and horses were always at hand to convey them to the several depots or magazines. The different camps were also supplied from the same source. See *MENTIONNAIRE*.

*General and staff officers* are all officers as above described, whose authority extends beyond the immediate command of a particular regiment or company, and who have either separate districts at home, or commands on foreign service.

*Lieutenant General*. This office is the first military dignity after that of a general. One part of the functions belonging to lieutenant generals, is to assist the general with counsel: they ought therefore, if possible, to possess the same qualities with the general himself; and the more, as they often command armies in chief, or succeed thereto on the death of the general.

The number of lieutenant generals have been multiplied of late in Europe, in proportion as the armies have become numerous. They serve either in the field, or in sieges, according to the dates of their commissions. In battle the oldest commands the right wing of the army, the second the left wing, the third the center, the fourth the right wing of the second line, the fifth the left wing, the sixth the center, and so on.

**on.** In sieges the lieutenant-generals always command the right of the principal attack, and direct what they judge proper for the advancement of the siege, during the 24 hours they are in the trenches, except the attacks, which they are not to make without an order from the general in chief. Lieutenant-generals are entitled to two aids-de-camp.

*Lieutenant-GENERAL of the ordnance.*  
See **ORDNANCE.**

*Lieutenant-GENERAL of artillery,* ought to be a very great mathematician, and an able engineer, to know all the powers of artillery, to understand the attack and defence of fortified places, in all its different branches; how to dispose of the artillery, in the day of battle to the best advantage; to conduct its march and retreat; as also to be well acquainted with all the numerous apparatus belonging to the train, laboratory, &c.

*Major-GENERAL,* the next officer to the lieutenant-general. His chief business is to receive orders from the general, or in his absence from the lieutenant-general of the day; which he is to distribute to the brigade-majors, with whom he is to regulate the guards, convoys, detachments, &c. On him the whole fatigue and detail of duty of the army roll. It is the major-general of the day who is charged with the encampment of the army, who places himself at the head of it when it marches; who marks out the ground of the camp to the quarter-master-general, and who places the new guards for the safety of the camp.

The day the army is to march, he dictates to the field-officers the order of the march, which he has received from the general, and on other days gives them the parole.

In a fixed camp he is charged with the foraging, with reconnoitering the ground for it, posting the escorts, &c.

In sieges, if there are two separate attacks, the second belongs to him; but if there be only one, he takes either from the right or left of the attack, that which the lieutenant-general has not chosen.

When the army is under arms, he assists the lieutenant-general, whose orders he executes.

If the army marches to an engage-

ment, his post is at the head of the guards of the army, until they are near enough to the enemy to rejoin their different corps; after which he retires to his own proper post; for the major-generals are disposed in the order of battle as the lieutenant-generals are, to whom, however they are subordinate, for the command of their divisions. The major-general has one aid-de-camp and one brigade major.

*Brigadier GENERAL,* in the British service, is the next in rank to a major-general, being superior to all colonels, and having frequently a separate command. Brigadier-generals are not entitled to aids-de-camp, but they have each one brigade major.—Several brigadier-generals have been made during the present war, in order to render the distribution of line-officers more effectually beneficial to the common cause, by investing them with commands superior to the militia and volunteer establishments. See 5th edition of the *Regimental Companion*, for further particulars on this head.

*GENERAL of a district,* a general officer who has the charge and superintendence of a certain extent of country, in which troops are encamped, quartered or cantoned. He is entitled to have three aids-de-camp and one brigade major.

He receives reports, &c. from the major-general, respecting the troops in his district; reviews and inspects them, likewise orders field days of the whole brigaded, or by separate corps, when and in what part he pleases; making the necessary reports to the war-office, commander in chief, &c.

*Colonel GENERAL,* an honorary title, or military rank which is bestowed in foreign services. Thus the prince of peace in Spain is colonel-general of the Swiss guards.

*Brigade major GENERAL.* When England and Scotland were divided into different districts, each district under the immediate command of a general officer, it was found necessary, for the dispatch of business, to establish an office, which should be solely confined to brigade duties. The first brigade major-general was appointed in 1797. At that period all orders relative to corps of officers, which were transmitted

mitted from the commander in chief to the generals of districts, pass through this channel of intermediate communication.

By the last General Regulations, it is particularly directed, that all general officers commanding brigades, shall very minutely inspect the internal economy and discipline of the several regiments under their order. They are frequently to visit the hospitals and guards. On arriving in camp they are never to leave their brigades till the tents are pitched, and the guards posted; they must always encamp with their brigades, unless quarters can be procured for them immediately in the vicinity of their camp. General officers must not at any time change the quarter assigned them, without leave from head quarters.

All general officers should make themselves acquainted, as soon as possible, with the situation of the country near the camp, with the roads, passes, bridges, &c. leading to it; and likewise with the out-posts, that in case they should be ordered suddenly to sustain, or defend any post, they may be able to march without waiting for guides, and be competent, from a topographical knowledge of the country, to form the best disposition for the service. They should instruct their aids-de-camp in these particulars, and always require their attendance when they visit the out-posts.

All general officers, and others in considerable command, must make themselves thoroughly acquainted with the nature of the country, the quality of the roads, every circuitous access through vallies or openings, the relative height of the neighbouring hills, and the course of rivers, which are to be found within the space entrusted to their care. These important objects may be attained by maps, by acquired local information, and by unremitting activity and observation. And if it should ever be the fate of a country, intersected as Great Britain is, to act upon the defensive, a full and accurate possession of all its fastnesses, &c. must give each general officer a decided advantage over the commanding officer of an enemy, who cannot have examined the ground upon which he may be reduced to fight, and must be embarrassed in every forward movement that he makes. Although

guides may serve, and ought always to be used in the common operations of marches, there are occasions where the eye and intelligence of the principal officers must determine the movements of troops, and enable them to seize and improve every advantage that occurs as the enemy approaches.

General officers on service abroad, or commanding districts at home, may appoint their own aids-de-camp and brigade majors. The latter, however, are to be considered as officers attached to their several brigades, not personally to the officers commanding them. The former are their habitual attendant, and domestic inmates. In the selection of aids-de-camp and brigade majors, too much attention cannot be given to their requisite qualifications; and that general would not only commit an act of injustice against the interests of his country, but deserve the severest censure, and displeasure of his sovereign, who, through motives of private convenience, family connexion, or convivial recommendation, could so far forget his duty, as to prefer an unexperienced stripling, to a character marked by a knowledge of the profession, a zeal for the service, and an irreproachable conduct.

In the day of battle the station of a general is with the Reserve, where he remains so situated, that he can see every thing which is going forward; and by means of his own observation, or through the communications of his aids-de-camp, is enabled to send reinforcements, as the exigencies of the conflict may require.

The celebrated Marshal Saxe has made the following remarks on the necessary qualifications to form a good general. The most indispensable one, according to his idea, is valour, without which all the rest will prove nugatory. The next is a sound understanding with some genius; for he must not only be courageous, but be extremely fertile in expedients; the third, is health and a robust constitution.

"His mind must be capable of prompt and vigorous resources; he must have an aptitude, and a talent at discovering the designs of others, without betraying the slightest trace of his own intentions. He must be *seemingly* communicative, in order to encourage others

to unbosom, but remain tenaciously reserved in matters that concern his own army; he must, in a word, possess activity with judgment, be able to make a proper choice of his officers, and never deviate from the strictest line of military justice. Old soldiers must not be rendered wretched and unhappy, by unwarrantable promotions, nor must extraordinary talents be kept back to the detriment of the service, on account of mere rules and regulations. Great abilities will justify exceptions; but ignorance and inactivity will not make up for years spent in the profession.

"In his deportment, he must be affable, and always superior to pcevishness, or ill-humour; he must not know, or at least seem to know, what a spirit of resentment is; and when he is under the necessity of inflicting military chastisement, he must see the guilty punished without compromise or foolish humanity; and if the delinquent be from among the number of his most intimate friends, he must be doubly severe towards the unfortunate man. For it is better, in instances of correction, that one individual should be treated with rigour (by orders of the person over whom he may be supposed to hold some influence), than that an idea should go forth in the army, of public justice being sacrificed to private sentiments.

"A modern general should always have before him the example of Manlius; he must divest himself of personal sensations, and not only be convinced himself, but convince others, that he is the organ of military justice, and that what he does is irrevocably prescribed. With these qualifications, and by this line of conduct, he will secure the affections of his followers, instil into their minds all the impulses of deference and respect. He will be feared, and consequently obeyed.

"The resources of a general's mind are as various as the occasions for the exercise of them are multiplied and conquered; he must be perfectly master of the art of knowing how to support an army under all circumstances and in all situations, how to apply its strength, or be sparing of its energy and confidence; how to post all its different component parts, so as not to be forced to give, or receive battle in opposition to settled

plans. When once engaged, he must have presence of mind enough to grasp all the relative points of disposition and arrangement, to seize favourable moments for impression, and to be thoroughly conversant in the infinite vicissitudes that occur during the heat of a battle; on a ready possession of which its ultimate success depends. These requisites are unquestionably manifold, and grow out of the diversity of situations, and the chance medley of events that produce their necessity.

"A general, to be in perfect possession of them must, on the day of battle, be divested of every thought, and be inaccessible to every feeling, but what immediately regards the business of the day; he must reconnoitre with the promptitude of a skilful geographer, whose eye collects instantaneously all the relative portions of locality, and feels his ground as it were by instinct; and in the disposition of his troops, he must discover a perfect knowledge of his profession, and make all his arrangements with accuracy and dispatch. His order of battle must be simple and unconfused, and the execution of his plan as quick as if it merely consisted in uttering some few words of command, as: *the first line will attack! the second will support it! or such a battalion will advance and support the line.*

"The general officers that act under such a chief, must be ignorant of their business indeed, if, upon the receipt of these orders, they should be deficient in the immediate means of answering them, by a prompt and ready co-operation. So that the general has only to issue out directions, according to the growth of circumstances, and to rest satisfied, that every division will act in conformity to his intentions; but if, on the contrary, he should so far forget his situation as to become a drill sergeant in the heat of action, he must find himself in the case of the fly in the sable, which perched upon a wheel, and foolishly imagined, that the motion of the carriage was influenced by its situation. A general, therefore, ought on the day of battle to be thoroughly master of himself, and to have both his mind and his eye rivetted to the immediate scene of action. He will by these means be enabled to see every thing; his judgment will be unembarrassed, and

he will instantly discover all the vulnerable points of the enemy. The moment a favourable opening offers, by which the contest may be decided, it becomes his duty to head the nearest body of troops, and, without any regard to personal safety, to advance against his enemy's line.—[By a ready conception of this sort, joined to great courage, General Desaix determined the issue of the battle of Marengo.] It is, however, impossible for any man to lay down rules, or to specify, with accuracy, all the different ways by which a victory may be obtained. Every thing depends upon variety of situations, casualty of events, and intermediate occurrences which no human foresight can positively ascertain, but which may be converted to good purposes by a quick eye, a ready conception and a prompt execution.

“ Prince Eugene was singularly gifted with these qualifications, particularly with that sublime possession of the mind, which constitutes the essence of a military character.

“ Many commanders in chief have been so limited in their ideas of warfare, that when events have brought the contest to issue, and two rival armies have been drawn out for action, their whole attention has devolved upon a straight argument, an equality of step, or a regular distance in intervals of columns. They have considered it sufficient to give answers to questions proposed by their aids-de-camp, to send orders in various directions, and to gallop themselves from one quarter to another, without steadily adhering to the fluctuations of the day, or calmly watching for an opportunity to strike a decisive blow. They endeavour, in fact, to do every thing, and thereby do nothing. They appear like men, whose presence of mind deserts them the instant they are taken out of the beaten track, or are reduced to supply unexpected calls by uncommon exertions. And from whence, (continues the same sensible writer), do these contradictions arise? from an ignorance of those high qualifications without which the mere routine of duty, methodical arrangement and studied discipline must fall to the ground, and defeat themselves. Many officers spend their whole lives in putting a few regiments through a regular set of manoeuvres; and having

done so, they vainly imagine, that all the science of a real military man consists in that acquirement. When, in process of time, the command of a large army falls to their lot, they are manifestly lost in the magnitude of the undertaking, and from not knowing how to act as they ought, they remain satisfied with doing what they have partially learned.

“ Military knowledge, as far as it regards a general, or commander in chief, may be divided into two parts, one comprehending mere discipline and settled systems for putting a certain number of rules into practice; and the other originating in a sublimity of conception, which method may assist, but cannot give.

“ If a man be not born with faculties that are naturally adapted to the situation of a general, and if his talents do not fit the extraordinary casualties of war, he will never rise beyond mediocrity.

“ It is, in fact, in war as it is in painting, or in music. Perfection in either art grows out of innate talents, but it never can be acquired without them. Study and perseverance may correct ideas, but no application, no assiduity, will give the life, and energy of action; those are the works of nature.

“ It has been my fate (observes the Marshal) to see several very excellent colonels become indifferent generals. I have known others, who have distinguished themselves at sieges, and in the different evolutions of an army, lose their presence of mind and appear ignorant of their profession, the instant they were taken from that particular line, and be incapable of commanding a few squadrons of horse. Should a man of this cast be placed at the head of an army, he will confine himself to mere dispositions and manoeuvres; to them he will look for safety; and if once thwarted, his defeat will be inevitable, because his mind is not capable of other resources.

“ In order to obviate, in the best possible manner, the innumerable disasters which must arise from the uncertainty of war, and the greater uncertainty of the means that are adopted to carry it on, some general rules ought to be laid down, not only for the government of the troops, but for the instruction of

those who have the command of them. The principles to be observed, are: that when the line or the columns advance, their distances should be scrupulously observed; that whenever a body of troops is ordered to charge, every proportion of the line should rush forward with intrepidity and vigour; that if openings are made in the first line, it becomes the duty of the second instantly to fill up the chasms.

"These instructions issue from the dictates of plain nature, and do not require the least elucidation in writing. They constitute the A, B, C, of soldiers. Nothing can be more simple, or more intelligible; so much so, that it would be ridiculous in a general to sacrifice essential objects in order to attend to such minutiae. His functions in the day of battle are confined to those occupations of the mind, by which he is enabled to watch the countenance of the enemy, to observe his movements, and to see, with an eagle's, or a king of Prussia's eye, all the relative directions that his opponents take. It must be his business to create alarms and suspicions among the enemy's line in one quarter, whilst his real intention is to act against another; to puzzle and disconcert him in his plans; to take advantage of the manifold openings, which his feints have produced, and when the contest is brought to issue, to be capable of plunging, with effect, upon the weakest part, and of carrying the sword of death where its blow is sure to be mortal. But to accomplish these important and indispensable points, his judgment must be clear, his mind collected, his heart firm, and his eyes incapable of being diverted, even for a moment, by the trifling occurrences of the day.

"I am not, however, an advocate for pitched battles, especially at the commencement of a war. A skilful general might, I am persuaded, carry on a contest between two rival nations during the whole of his life, without being once obliged to come to a decisive action. Nothing harrasses, and eventually distresses an enemy so much as this species of warfare. He must, in fact, be frequently attacked, and, by degrees, be broken and unnerved; so that in a short time he will not be able to shew himself.

"It must not generally be inferred from this opinion, that when an opportunity presents itself, whereby an enemy may be crushed at once, the attack should not be made, or that advantage should not be taken of the errors he may commit; all I mean to prove is, that war can be carried on without leaving any thing to chance; and in this consist the perfection and highest point of ability belonging to a general. But when a battle is risked, the triumphant party ought well to know all the advantages which may be derived from his victory. A wise general, indeed, will not remain satisfied with having made himself master of the mere field of battle. This, I am sorry to observe, is too often the custom; and, strange to say, that custom is not without its advocates.

"It is too much the practice of some governments, and as often the custom of generals, to follow the old proverb, which says, *that in order to gain your ends, you must make some sacrifices, and even facilitate the retreat of your enemy.* Nothing can be more impolitic, or more absurd. An able surgeon might as well tamper with a mortification, and by endeavouring to save an useless limb, run the hazard of destroying all the vital parts.

An enemy, on the contrary, ought to be vigorously pushed, harrassed night and day, and pursued through every winding he can make. By a conduct of this sort, the advancing army will drive him from all his holds and fastnesses, and the conclusion of his brilliant retreat, will ultimately turn out a complete and total overthrow. Ten thousand well trained and disciplined troops, that are sent forward from the main army, to hang upon the rear of a retreating enemy, will be able to destroy an army of an hundred thousand men, when that army has once been forced to make retrograde movements. A want of confidence in their generals, added to many other disheartening circumstances, will naturally possess the minds of the latter, while implicit faith and warm affection must influence the former. A first defeat well followed up, almost always terminates in a total rout, and finishes the contest. But some generals do not wish to bring war to a speedy issue.

Public

Public misfortunes too frequently produce private ennuisements, and the accumulation of the latter is too endearing to suffer itself to be superseded by the former."

In order to substantiate what he thus advances with much good sense, the Marshal cites the following particular instance, from among an infinity of others.

"When the French army, at the battle of Ramillies, was retiring in good order over an eminence that was rather confined, and on both sides of which there were deep ravines, the cavalry belonging to the allies followed its track leisurely, without even appearing to wish to harass or attack its rear. The French continued their march with the same composure; retreating upon more than twenty lines, on account of the narrowness of the ground.

"On this occasion, a squadron of English horse got close to two French battalions, and began to fire upon them. The two battalions naturally presuming, that they were going to be attacked, came to the right about, and fired a volley at the squadron. What was the consequence? the whole of the French army took to its heels; the cavalry went off full gallop, and all the infantry, instead of patiently retiring over the heights, threw itself into the ravines in such dreadful disorder, that the ground above was almost instantly abandoned, and not a French soldier was seen upon it.

Let any military man consider this notorious event, and then praise, if he can, the regularity of a retreat, and the prudent foresight of those who, after an enemy has been vanquished in the field, relax in their exertions, and give him time to breathe. I do not, however, pretend to maintain, that all the forces of a victorious army should be employed to follow up the pursuit; but I am decidedly of opinion, that large bodies should be detached for that purpose, and that the flying enemy should be annoyed as long as the day lasts. This must be done in good order: And let it be remembered, that when an enemy has once taken to his heels in real earnest, you may drive him before you by the mere noise of empty bladders.

"If the officer who is detached in pur-

suit of an enemy, begins to manoeuvre according to prescribed rules and regulations, and to operate with slowness and precaution, he had better be recalled; for the sole purpose of his employment is to push on vigorously, to harass and distress the foe. Every species of evolution will do on this occasion; if any can be defective, the regular system might prove so.

"I shall conclude these observations by saying, that all retreats depend wholly upon the talents and abilities of generals, who must themselves be governed by circumstances and situations; but I will venture to assert, that no retreat can eventually succeed, unless it be made before an enemy who acts with extreme caution; for if the latter follow up his first blow, the vanquished army must soon be thrown into utter confusion."

These are the sentiments of Marshal Saxe, as far as they relate to the qualifications, which the general of an army should indispensably possess. And no man we are persuaded was better enabled to form an opinion upon so important a subject; for as Baron Espagnac has justly observed in his *Supplément aux Réveries de ce Mar.* p. 166, he possessed uncommon courage, was fertile in expedients and resources; he knew how to distinguish and to make use of the abilities of individuals; was unshaken in his determinations; and when the good of the service required chastisement or severity, was not influenced by private feelings, or hurried away by a sanguinary temper; he was uncommonly attentive to his men, watchful of their health, and provident to supply their wants; sparing of their blood in the day of battle, and always inspiring them, by the liveliness of his mind, tempered by experience, with confidence and attachment to his measures. He knew the cast of each man's character, particularly so of his officers; and whilst he directed the former with consummate knowledge and consequent success, he never lost sight of the merits of the latter, when they co-operated with his designs. If the natural vacuity of his mind sometimes led him into temporary neglect, good sense, and a marked anxiety to be just, soon made amends for apparent slights, by rendering the most important services to those whom

whom he had apparently neglected. He was ingenious and subtle in all his manœuvres before an enemy, skilful in his choice of camps, and equally intelligent in that of posts; he was plain in his instructions previous to an engagement, simple in his disposition of the order of battle; and he was never known to lose an opportunity, through the want of prompt decision, whereby a contest might be ended by a bold and daring evolution. When it appeared necessary to give weight to his orders, and to turn the balance of fortune by personal exposure, no man became less fearful of his own destiny than Marshal Saxe. On these occasions he was daring to an extreme, heedless of danger, but full of judgment, and a calm presence of mind. Such, in our humble opinion, are the outlines of a *real* general, how well they were exemplified and filled up by the subject of this article, time and the concurring testimony of events have proved.

**GENERAL'S Guard.** It was customary among the French, and we believe the practice still prevails, for the oldest regiment to give one captain, one lieutenant, one ensign, two sergeants, and fifty privates, as a general's guard. Whenever the marshals of France were on service under the immediate orders of the king, or of the princes belonging to the royal household, they always retained the rank of general.

**GENERAL d'armée, Fr.** the commander in chief of an army.

**Batire la GÉNÉRALE, Fr.** to beat the general. See **DRUM**.

**GENERAL court-martial, See COURTS MARTIAL.**

**GENERAL formations** of the battalion, are from line into column, and from column into line; to either flank, to the front of the march, to the rear of the march.

**GENERAL**, is also used for a particular beat of the drum. See **DRUM**.

**GÉNÉRALAT, Fr.** The rank of a general officer.

**GÉNÉRALISSIMO, Généralissime, Fr.** The chief officer in command.

**GENETTE, Fr.** a particular sort of snaffle, which is used among the Turks; it resembles a large ring, and serves to confine the horse's tongue.

**A la GENÈVE, Fr.** with short stirrups.

**GENIE, Fr.** the art of engineering. It consists in a knowledge of lines, so as to be able to trace out all that is requisite for the attack or defence of places, according to established rules in fortification. Marshal Vauban and the Marquis of Louvois, have particularly distinguished themselves in this art.

**GENIUS**, in a military sense, a natural talent or disposition to every kind of warlike employment, more than any other; or the aptitude a man has received from nature to perform well, and easily, that which others can do but indifferently, and with a great deal of pains.

From the diversity of genius, the difference of inclination arises in men, whom nature has had the precaution of leading to the employment for which she designs them, with more or less impetuosity, in proportion to the greater or lesser number of obstacles they have to surmount, that they may render themselves capable of answering this occasion. Thus the inclinations of men are so very different, because each follows the same mover, that is, the impulse of his genius. This is what renders one officer more pleasing, even though he trespasses against the rules of war; while others are disagreeable notwithstanding their strict regularity.

**GENOUILLIÈRE, Fr.** in fortification, that part of the parapet of a battery which lies under the embrasure, and is within the battery. The genouillière is about 2½ or 3 French feet high from the platform to the opening of the embrasure. It lies immediately under the arch of the fortification. Its thickness, which usually consists of fascines well put together, is of the same dimensions that merlons bear; namely from 18 to 22 feet. The term *genouillière* is derived from *genou*, signifying the knee, to the height of which it is generally raised.

**GENS, Fr.** a word in much desultory use among the French, signifying in a general acception of it, folks, people, servants, soldiers, &c.

**GENS d'armes. See GENDARMS.**

**GENS de guerre, Fr.** men attached to a military profession.

**Mes GENS, Fr.** an affected phrase, which was formerly used among the French, to signify their servants or attendants.

tendants. It seems to have been an arrogant and foolish imitation of *mon peuple*, my people. During the monarchy of France, this term was in much vogue at Paris, and was afterwards adopted by almost all the *petits maitres*, or coxcombs belonging to the church, state, and army.

*GENS de sac et de corde*, Fr. an opprobrious term which the French apply to men that deserve chastisement. In former times, the cord or rope, and the sack, were the common instruments and means of punishment. The rope served to hang up malefactors; and the sack was used to contain their bodies when it was ordained, that they should be thrown into a river.

*GENS de mer*, Fr. sea-faring men.

*GENS de l'equipage*, Fr. men belonging to the train of artillery.

*GENT*, Fr. Nation. It is only used in poetry, viz. *La gent, qui porte le Turban*. The Turkish Nation. In the plural number it is only accepted according to the following significations.

*Le droit des GENS*, Fr. the rights of nations.

*Violier le droit des GENS*, Fr. to infringe or violate the rights of nations.

*Respecter le droit des GENS*, Fr. to respect the rights of nations.

*Un traité du droit des GENS*, Fr. a treatise on the rights of nations.

The following phrases are in familiar use among the French, viz.

*GENS de marque*, Fr. men of distinction.

*GENS de condition*, Fr. men of condition.

*GENS d'honneur*, Fr. men of honour.

*GENS de qualité*, Fr. men of fashion, or quality.

*GENS de cocur*, Fr. men of spirit.

*GENS d'épée*, Fr. this term is used among the French, to distinguish officers, gentlemen, &c. who wear swords, from those that do not, particularly so in opposition to *gens de la robe*, or lawyers.

*GENS de main*, Fr. executive characters.

*GENS de service*, Fr. useful men, persons of exertion.

*GENS de pied*, Fr. the same as *fantassins*, foot soldiers, or men who serve on foot.

*GENS de cheval*, Fr. cavalry, or men who serve on horseback.

*Mille GENS, cent mille gens*, Fr. any considerable number of men.

*GENS*, Fr. this word is likewise used to distinguish bodies of men that are in opposition to each other, viz.

*Nos GENS ont battu les ennemis*, Fr. our men, or people, have overcome the enemy.

*Nos GENS ont été battus*, Fr. our men or people have been beaten.

*Je craignois que ce ne fussent des ennemis, et c'étoient de nos GENS*, Fr. I was apprehensive that they were our enemies, but they proved to be our own people.

*Nos GENS battirent les vôtres*, Fr. our men beat your's.

*GENS*, Fr. when followed by the preposition *de*, and by a substantive, which points out any particular profession, trade, &c. signifies all those persons that belong to one nation, one town, &c. or who are of one specific profession or calling, as

*Les GENS d'église*, Fr. churchmen.

*Les GENS de robe*, Fr. lawyers or gentlemen of the long robe.

*Les GENS de finance*, Fr. men concerned in the distribution of public money.

*Les GENS de loi*, Fr. means generally all persons who have any connection with the law in the way of profession.

*Les GENS du roi*, Fr. Crown lawyers.

*GENTILSHOMMES de la garde*, commonly called *Ju bec de corbin*, or the battle axe, Fr. This company went through many alterations under the monarchy of France. During the last years of that government it consisted of 200 guards under the command of a captain, a lieutenant, and an ensign. The captain had the power of giving away the subaltern commissions, and had moreover the entire management of the rest; every vacancy being in his gift. They marched in file, each holding his battle-axe, before the king on days of public ceremony. These were chiefly at the coronation, and the marriage of the king, or at the reception of the knights of the Holy Ghost.

When the company was first raised, its particular duty was to attend the king's person, and to be constantly near him on the day of battle.

*GENTILHOMME à drapeau établie dans chaque compagnie des gardes Francoises*;

*coises*, Fr. under the old French government, this person ranked as *officier en second*. He did duty in common with the ensigns of the French guards, and took precedence immediately under them. His name always stood upon the muster roll, but his appointment was merely honorary, as he did not receive any pay; his tour of duty in mounting guards, went with that of the ensigns, he was obliged to be present at all field days, and could not absent himself without leave.

**GENTILSHOMMES** *pensionnaires*. Fr. Gentlemen pensioners. See **PLANSIONNERS**.

**GÉODOESIA, GÉODESIE**, Fr. that part of practical geometry, which contains the doctrine or art of measuring surfaces, and finding the contents of all plain figures. Among the French *géodesie* means likewise the division of lands. See **SURVEYING**.

**GEOGRAPHY** is the doctrine or knowledge of the terrestrial globe; or the science that teaches and explains the state of the earth, and parts thereof that depend upon quantity; or it is rather that part of mixed mathematics, which explains the state of the earth, and of its parts depending on quantity, viz. its figure, magnitude, place, and motion, with the celestial appearances, &c. In consequence of this definition, geography should be divided into general and special, or universal and particular.

By *universal GEOGRAPHY*, is understood that part of the science which considers the whole earth in general, and explains its properties without regard to particular countries. This division is again distinguished into three parts, absolute, relative, and comparative. The absolute part respects the body of the earth itself, its parts and peculiar properties; as its figure, magnitude, and motion; its lands, seas, and rivers, &c. The relative part accounts for the appearances and accidents that happen to it from celestial causes; and lastly, the comparative contains an explanation of those properties which arise from comparing different parts of the earth together.

*Special or particular GEOGRAPHY* is that division of the science which describes the constitution and situation of each single country by itself; and is

two-fold, viz. chorographical, which describes countries, of a considerable extent; or topographical, which gives a view of some place, or small tract of land. Hence the object or subject of geography is the earth, especially its superficies and exterior parts.

The *properties of GEOGRAPHY* are of three kinds, viz. celestial, terrestrial, and human. The celestial properties are such as affect us by reason of the apparent motion of the sun and stars. These are 8 in number.

1. The elevation of the pole, or the distance of a place from the equator.

2. The obliquity of the diurnal motion of the stars above the horizon of the place.

3. The time of the longest and shortest day.

4. The climate and zone.

5. Heat, cold, and the seasons of the year; with rain, snow, wind, and other meteors.

6. The rising, appearance, and continuance of stars above the horizon.

7. The stars that pass through the zenith of a place.

8. The celerity of the motion with which, according to the Copernican hypothesis, every place constantly revolves.

The terrestrial properties are those observed in the face of the country, and are 10 in number.

1. The limits and bounds of each country.

2.	} Its	{	figure;
3.			magnitude;
4.			mountains;
5.			waters, viz. springs, rivers, lakes and bays;
6.			woods and deserts;

7. The fruitfulness and barrenness of the country, with its various kinds of fruits.

8.	} The	{	minerals and fossils;
9.			living creatures there;
10.			longitude and latitude of the place.

The third kind of observations to be made in every country is called human, because it chiefly regards the inhabitants of the place. It consists of 10 specific branches.

1. Their stature, shape, colour, and the length of their lives; their origin, meat, and drink.

2. Their

2. Their arts, and the profits which arise from them, with the merchandize they barter one with another.

3. Their virtues and vices, learning, capacities, and schools.

4. Their ceremonies at births, marriages, and funerals.

5. The language which the inhabitants use.

6.	} Their	political government.
7.		religion and church government.
8.		cities and famous places.
9.		remarkable histories and antiquities.

10. Their famous men, artificers, and inventions of the natives.

These are the three kinds of occurrences to be explained in special geography.

The *principles of GEOGRAPHY*, or those from which arguments are drawn for the proving of propositions in that science, are, according to the best authors, of three sorts:

1. Geometrical, arithmetical, and trigonometrical propositions.

2. Astronomical precepts and theorems.

3. Experience, being that upon which the greatest part of geography, and chiefly the special is founded.

In proving geographical propositions, we are to observe, that several properties, and chiefly the celestial, are confirmed by proper demonstrations; being either grounded on experience and observation, or on the testimony of our senses: nor can they be proved by any other means. There are also several propositions proved, or rather exposed to view, by the terrestrial globe, or by geographical maps.

Other propositions cannot be so well proved, yet are received as apparent truths. Thus, though we suppose all places on the globe, and in maps, to be laid down in the same order as they are really on the earth; nevertheless, in these matters, we rather follow the descriptions that are given by geographical writers.

GEOGRAPHY is very ancient, at least the special part thereof; for the ancients scarce went beyond the description of countries. It was a constant custom among the Romans, after they had conquered or subdued any province, to have

a map or printed representation thereof carried in triumph, and exposed to the view of the spectators. Historians relate, that the Roman senate, about 100 years before Christ, sent geographers into divers parts to make an exact survey and mensuration of the whole globe; but they scarcely ever saw the 20th part of it. When Bonaparte went to Egypt, he had this system in view.

Before them, Necho, king of Egypt, ordered the Phœnicians to make a survey of the whole coast of Africa, which they accomplished in 3 years. Darius procured the Ethiopic sea, and the mouth of the Indus, to be surveyed; and Pliny relates, that Alexander, in his expedition into Asia, took two geographers to measure and describe the roads; and that from their itineraries, the writers of the following ages took many particulars. Indeed this may be observed, that whereas most other arts and sciences are sufferers by war, geography, artillery, mining, and fortification, alone have been improved thereby. Geography, however, must have been exceedingly defective, as a great part of the globe was then unknown, particularly all America, the northern parts of Europe and Asia, with the Terra Australis, and Magellanica; and they were also ignorant of the earth's being capable to be sailed round, and of the torrid zone being habitable, &c.

The honour of reducing geography to art and system, was reserved for Ptolemy; who, by adding mathematical advantages to the historical method in which it had been treated of before, has described the world in a much more intelligible manner: he has delineated it under more certain rules, and by fixing the bounds of places from longitude and latitude, has discovered other mistakes, and has left us a method of discovering his own.

GEOLIER *des prisons militaires*, Fr. the superintendent or head jailor of military prisons. Under the old French government, this person had a right to visit all prisoners that were not confined in dungeons. He could order provisions, wood and coal to be conveyed to them; but he had not the power of permitting women to visit, or to have any intercourse with the soldiers; and when their period of imprisonment expired,

he could not detain them on account of debts contracted for food, lodgings, or fees; &c. Half of the prisoner's subsistence for one day, according to his rank, was given on his release.

**GEOMETRICAL** *elevations*, just dimensions of ascent proportionate to a given scale, &c. See **ORTHOGRAPHY**.

**GÉOMÉTRIE**, *Fr.* Geometry.

**GÉOMÉTRIE composée**, *Fr.* compound geometry, which consists in the knowledge of curved lines, and of the different bodies produced by them. The immediate object or intent of compound geometry is confined to conic sections and to lines of that species.

**GÉOMÉTRIE sublime et transcendante**, *Fr.* these terms have been applied by the French to the new system of geometry, which was produced by Leibnitz, and Newton, when they found out the method of calculating *ad infinitum*.

**GEOMETRY**, originally signified no more than the art of measuring the earth, or any distances or dimensions in it; but at present it denotes the science of magnitude in general; comprehending the doctrine and relations of whatever is susceptible of augmentation or diminution, considered in that light. Hence, to geometry may be referred the consideration not only of lines, surfaces, and solids; but also of time, velocity, number, weight, &c.

Plato thought the word geometry an improper name for this science, and accordingly substituted in its place the more extensive one of mensuration; and after him, others gave it the name of pantometry, as demonstrating not only the quantities of all manner of magnitudes, but also their qualities, ratios, positions, transformations, relations, &c. and Proclus calls it the knowledge of magnitudes and figures, and their limitations; also of their motions and affections of every kind.

**Origin and progress of GEOMETRY.** This science had its rise among the Egyptians, who were in a manner compelled to invent it, to remedy the confusion that generally happened in their lands, from the inundations of the river Nile, which carried away all their boundaries, and effaced all the limits of their possessions. Thus, this invention, which at first consisted only in measuring the lands, that every person might have

what belonged him, was called geometry, or the art of measuring land; and it is probable, that the draughts and schemes, which they were annually compelled to make, helped them to discover many excellent properties of these figures; which speculation has continued gradually to improve to this day.

From Egypt geometry passed into Greece, where it continued to receive improvement from Thales, Pythagoras, Archimedes, Euclid, &c. The elements of geometry, written by Euclid in 13 books, are a most convincing proof to what perfection this science was carried among the ancients. However, it must be acknowledged, that it fell short of modern geometry, the bounds of which, by the invention of fluxions, and the discovery of the almost infinite order of curves, are greatly enlarged.

**Division of GEOMETRY.** This science is usually distinguished into elementary, and higher or sublime geometry. The first, or elementary geometry, treats of the properties of right lines, and of the circle, together with the figures and solids formed by them. The doctrine of lines comes first, then that of surfaces, and lastly that of solids. The higher geometry comprehends the doctrine of conic sections, and numerous other curves.

**Speculative and practical GEOMETRY.** The former treats of the properties of lines and figures, as Euclid's Elements, Apollonius's Conic Sections, &c. and the latter shews how to apply these speculations to the use of mensuration, navigation, surveying, taking heights and distances, gauging, fortification, gunnery, &c.

**Usefulness of GEOMETRY.** Its usefulness extends to almost every art and science. By the help of it, astronomers turn their observations to advantage; regulate the duration of times, seasons, years, cycles, and epochs; and measure the distance, motion, and magnitudes of the heavenly bodies. By it geographers determine the figure and magnitude of the whole earth; and delineate the extent and bearings of kingdoms, provinces, harbours, &c. It is from this science also, that architects derive their just measure and construction of public edifices, as well as of private houses.

It is by the assistance of geometry that engineers conduct all their works, take the situation and plans of towns, the distances of places, and the measure of such things as are only accessible to the eye. It is not only an introduction to fortification, but highly necessary to mechanics. On geometry likewise depends the theory of gunnery, mining, music, optics, perspective, drawing, mechanics, hydraulics, pneumatics, &c.

We may distinguish the progress of geometry into three ages; the first of which was in its meridian glory at the time when Euclid's Elements appeared; the second beginning with Archimedes, reaches to the time of Descartes; who by applying algebra to the elements of geometry, gave a new turn to this science, which has been carried to its utmost perfection by our learned countryman Sir Isaac Newton, and by the German philosopher Leibnitz.

**GEORGE**, or *Knight of St. George*, has been the denomination of several military orders, whereof that of the garter is one of the most illustrious. See **GARTER**.

The figure of St. George on horseback, worn by the kings of England, and knights companions of the garter is so called.

**GERBE**, *Fr.* means literally a sheaf, but here it signifies a sort of artificial firework, which is placed in a perpendicular manner, and resembles a sheaf. See *Jets de feu*.

**GERMS**, *Fr.* small coasting vessels employed by the French, to keep up an intercourse with Egypt.

**GÉRTE**, a dart, which is used by the Turks when they go into action. It is about three feet in length.

**GÊSE**, *Fr.* a weapon used in former times; resembling a javelin.

**GESSES** and *Matres* were adopted by the Allobroges (a body of ancient Gauls so called) independently of the broad cut and thrust sword, which the Swiss still wear. These instruments were only one cubit long; half the blade was nearly square, but it terminated in a round point that was exceedingly keen. Virgil in his *Æneid* calls this species of blade, *alpin*, meaning, no doubt, to convey, that it was in general use among the neighbouring inhabitants of the *Alps*. Not only the Romans, but the

Greeks received it into their armies. The former retained the full appellation and called it *gése*, but the latter corrupted it into *yssc*. This is the only weapon which those soldiers wore that escribed malefactors, who were condemned to death, to the place of execution. The term *gése* was also applied to a sort of javelin.

**GESSATES**, a people of whom Polybius speaks in his history of the ancient Gauls, and who inhabited the countries lying adjacent to the Alps, and to the river Rhone. According to some writers, they were so called, because they constantly wore *geses*. The *gese* is said to have been a dart which the ancient Gauls exclusively used, and which some authors have since confounded with the *pertuisant* or *portisan*, a sort of halbert, called by others a *javelin*. This word was used in Provence, as late as the year 1300; for in the inventory which was taken of the goods, furniture, &c. appertaining to the Templars, we find *gessus* or *gesus* particularly specified in the list of weapons and iron instruments, which was understood to mean *gese*, and under that appellation was deposited in the king's archives at Aix. See **BOUCHER**, *Hist. Prov.* liv. ii. c. 4. p. 82. This same author further asserts, that the *Gesi*, and the *Gessates* took their names from that weapon. He quotes Julius Cæsar's account of the word *gesi* in confirmation of his own opinion. Many authors have mentioned the same term: among others, Justus, Lipsius, Hugo, Cheves, Vossius, &c.

**GESSATE** or **GENATE**, *Fr.* a knight among the ancient Gauls, who took delight in war, and frequently volunteered his services beyond the boundaries of his native country. Whenever a neighbouring country made a levy of men, it was usual for the gessates to accompany the troops, from a conviction that it would be dishonourable in them to remain inactive at home. These adventurers, or knights-errant, were called gessates, either on account of the gessus or large dart, which they carried, or, as Polybius imagines, on account of the subsistence which was paid them, and was called by that name.

**GESTES**, *Fr.* From the Latin *gestum*, or *res gesta*.—Brilliant actions, memorable

memorable deeds and exploits, performed by great generals.

**GESTURE**, a motion of the body intended to signify some idea, or passion of the mind. All officers and soldiers who make use of any menacing gesture before a commanding or superior officer, or before a court-martial, are liable to be punished by the articles of war.

**GEZE**, *Fr.* a reentrant angle, which is made with slate or lead, and forms a gutter between two roofs. It is likewise called *nauc*, or pantile.

**GHERIAH**, the capital and strongest part of Angria's dominions, which consisted of an extent of coast, from whence this piratical state was a perpetual source of uneasiness to the trading ships of all the European nations in India. It cost the English East-India company 50,000*l.* annually to protect their own ships. Eight or ten grabs, and forty or fifty gallivats, crowded with men, generally composed Angria's principal fleet, destined to attack ships of force or burthen. The vessel no sooner came in sight of the port or bay where the fleet was lying, than they slipped their cables and put out to sea. If the wind blew, their construction enabled them to sail almost as fast as the wind; and if it was calm, the gallivats rowing towed the grabs: when within cannon shot of the chace, they generally assembled in her stern, and the grabs attacked her at a distance with their prow guns, firing first only at the masts, and taking aim when the three masts of the vessel just opened all together to their view; by which means the shot would probably strike one or other of the three. As soon as the chace was dismasted, they came nearer, and battered her on all sides until she struck; and if the defence was obstinate, they sent a number of gallivats, with two or three hundred men in each, who boarded sword in hand from all quarters in the same instant.

The English, trusting to the report of the natives, had, until the year 1756, believed Gheriah to be at least as strong as Gibraltar, and like that situated on a mountain, which was inaccessible from the sea. For this reason it was resolved to send vessels to reconnoitre it; which service commodore James, grandfather to the present Lord Ran-

cliffe) in the Protector, with two other ships, performed. He found the enemy's fleet at anchor in the harbour, notwithstanding which, he approached within cannon shot of the fort, and having attentively considered it, returned at the end of December to Bombay, and described the place, such as it truly was, very strong indeed, but far from being inaccessible, or impregnable. This place was taken by the English troops, under the command of colonel Clive. There were found in it 200 pieces of cannon, six brass mortars, and a great quantity of ammunition, and military and naval stores of all kinds; the money and fleets of other lands, amounted to 120,000*l.* sterling. All this booty was divided amongst the captors, without any reserve either for the nation, or the company. In less than a month the English, with their allies the Morattas, got possession of all the territories wrested from the latter by Angria's predecessors, and which they had for seventy years despoiled of ever being able to recover. See History of Indostan, Book v. page 103 to 117.

**GIBELIN**, *Fr.* The name of a powerful faction in Italy, which opposed itself to that of the *Guelphs*, the ancestors of our present reigning family.— This faction began about the middle of the 13th century, and was occasioned by a difference which existed between the Emperor Frederick II. and Pope Gregory IX.

*Demi-GIBERNE*, *Fr.* a common cartouch-box.

**GIBRALTAR**, a strong town of Andalusia, in Spain. Gibraltar\* was formerly thought to be impregnable; but it was taken by Sir George Rooke in 1704, and has remained in the hands of the English ever since. It has been several times attacked by the Spaniards, who have always been unsuccessful. Their last effort to recover it was made September 13th, 1782, with floating batteries, in which were mounted 212 brass cannon and mortars. The French united with the Spaniards on this memorable occasion; and the brother to the last king of the French, (then Count d'Artois, and now ci-devant Monsieur) commanded the camp at St. Roche, from whence the offensive operations were directed. General Elliot (whom the soldiers

diers humourously called the *Cock of the Rock*, and who was afterwards created Lord Heathfield) had prepared a great number of red-hot balls against the attack; and those so effectually destroyed the floating batteries, that the Spaniards were greatly annoyed, and relinquished the enterprise. For particulars, see Drinkwater's *Siege of Gibraltar*.

**GIN**, in military mechanics, is a machine for raising great weights; it is composed of 3 long legs, 2 of which are kept at a proper distance by means of 2 iron bars fixed on one of the legs by a staple passing through a hole at one end: the other end has a hook which enters into a staple fixed into the other leg, so as to be taken off or put on at pleasure.

At 3 feet from the bottom is a roller, upon which the cable is wound; and the 3 legs are joined together with an iron bolt, about which they move. to this bolt is also fixed an iron half-ring to hook on a windlass: when the gin stands upright, so that the legs stand at a proper distance, one end of the cable is fastened to a gun, mortar, or other weight; and the other passes through the pulleys and about the roller, which is turned round by means of handspikes passing through the holes in the ends of the roller; whilst a man holds the cable tight, the gun is raised to the height required, and the carriage is thus easily placed under it.

**GINCE**, a place in India, situated 35m. N.W. of Pondicherry.

**GINDI**. Expert horsemen among the Turks, who can ride, full gallop, standing upright upon their saddles; suddenly throw themselves off in order to surprize a pursuing enemy, and perform various other feats.

**GINJAULS**, or **GINGAULS**, an Indian game, signifying large muskets used with a rest, somewhat similar to those invented by Marshal Vauban, for the defence of forts.

**GIONULIS**. A volunteer corps of cavalry among the Turks, who are commanded by a colonel, appointed for that purpose, called *Gionuli Agasi*. They are under the immediate orders of the visirs, and are generally distinguished from the rest of the Turkish army, by their daring and intrepidity.

**GIRANDE**, *Fr.* the chief cluster, or assemblage of an artificial firework, with which a shew, or illumination is generally concluded.

The fire-works on St. Peter's day at Rome were terminated by a girande or chest, containing no less a number than from 8 to 10,000 fuses, from which circumstance the name was adopted.

The effect, however, is not more brilliant than what has been produced in France by a smaller quantity of fuses containing larger proportions of composition.

A *girande* may be made by uniting several chests or clusters together, and securing, with a match of communication, a regular inflammation.

**GIRANDOLE**, *Fr.* literally a chandelier; a cluster of diamonds.

**GIRANDOLS**, *Fr.* circles ornamented with fuses. They are used in fire-works. See *SORTIS tournans*.

**GIROUETTE**, *Fr.* this word has been used by the French to signify a sort of ornament which was exclusively placed upon the houses of the ancient nobility. The author of the *Nouveau Dictionnaire Militaire*, makes the following remarks upon the subject. "It is well known, that in ancient times, and even until the last century, noblemen alone could ornament the tops of their dwellings and dove-houses with weather-cocks; but it is not generally known, that in order to be entitled to this privilege, each nobleman must have been the foremost man in entering at the breach of a besieged place, and have planted his banner on the rampart.

**GIROUETTES**, *Fr.* Weathercocks, vanes. They are seldom or ever used on shore, except as weather cocks on tops of church-steeple, &c.

**GIROUETTE** in the singular number, also means, figuratively, light, inconstant, not to be depended upon. As *ce jeune officier est aussi giroquette que de coutume*. This young officer is as light as usual.

**GISTES**, *Fr.* pieces of wood which are made use of in the construction of platforms to batteries, and upon which the madders or broad planks are placed.

**GLACIS**. See **FORTIFICATION**.

**GLACIS d'une corniche**, *Fr.* an insensible slope which is made upon the cymatium (a member of architecture, whereof

whereof one half is convex, and the other concave, of a cornish.

**GLADIATOR, GLADIATEUR, Fr.** a sword-player or prize-fighter. The old Romans were accustomed to make their slaves fight with one another at their public festivals, and the only weapon they used, was a gladius or sword.— This barbarous practice was abolished by the emperor Theodoric in the year of Christ 500; but it prevailed among the ancient Britons, and in England to a much later date.

**GLAIS militaire, Fr.** a military compliment which was paid to the remains of a deceased general. It consisted in a discharge of ordnance. In a civil sense, *glais* means the chiming of bells at the death of a parish priest.

**GLAISE, Fr.** clay, or potter's earth.

**GLAISER, Fr.** to do over with potter's earth or clay.

**GLAIVE, Fr.** a broad-sword or falchion, anciently so called from the Latin word *gladius*. The word is seldom used except figuratively, as, *le glaive de la justice*, the sword of justice.

**GLAIRE, a** kind of halibut, so called by the Saxons.

**GLAS, Fr.** knell.

**GLIB act, a** very ancient act of parliament, which directed, that the Irish nobility and gentry who bore of English or Norman extraction should forfeit the privileges of their original country, if they did not shave the upper lip. This act took place when Ireland was first conquered, and its object was to distinguish the descendants of the invaders from the old Irish nobility that traced its origin to Milesius, who wore a long beard.

**GLIPHE, ou GLYPHE, Fr.** signifies generally every species of canal or hollow, which constitutes any part of ornamental architecture.

**GLOBE.** See GEOGRAPHY.

**GLOBE of compression, globe de compression, Fr.** a globe used in the attack and defence of places. When the chamber of a mine has been established and completed in earth of an homogeneous nature, the powder which is deposited in it, acts, on taking fire, throughout the circumference of the said chamber, and by so doing, dislodges a large quantity of earth, and throws it up to a given distance. A globe of this sort

was used at the siege of Valenciennes, when that place surrendered to his Royal Highness the Duke of York.

**GLOBES ou ballons d'artifices, Fr.** globes or balloons which are filled with artificial fire. They are used to set fire to an enemy's town or works, &c.

**GLORIS de feu, Fr.** a cartouch made of mashed paper, which is laid upon a wooden bowl, and made perfectly round. It is afterwards perforated in several places, and filled with inflammable composition that is used in the making up of *lances à feu*. The instant it catches, a very bright and lively fire issues out of the several holes.

**GLOIRE, Fr.** an artificial fire-work, which resembles a large sun, hence also called *Soleil*. It is made by means of an iron wheel containing four circles, each circle diamishing towards the center, and kept at equal distances from one another. Forty-eight *jets de feu*, or fire spouts, are tied to these circles; each jet is twenty French inches long, and there are twelve of them fixed to each of the four circles. The gloire or soleil is placed in the middle of the prepared fire-work.

**Military GLORY,** honour, reputation and fame, acquired by military achievements. That precarious splendor, which plays round the brows of a warrior, and has been collected by hard service, extraordinary genius, and unblemished integrity; but which may desert the greatest hero through one unfortunate failure, occasioned by the fatality of human imperfection.

**GO.** The verb to go is variously used in a military sense, as to march in a hostile, or warlike manner.

*To Go off,* implies to depart from any post.

*To Go on,* to make an attack.

*To Go over,* to revolt.

*To Go out,* to go upon any expedition, &c.

*To Go out,* is likewise frequently used to signify the act of fighting a duel, as *he went out with a brother officer, and was slightly wounded.*

**GOA,** a strong town on the Malabar coast, belonging to the Portuguese. The chief trade is in arrack. This fort was taken by the English April 2d, 1756.

**GOGGLES.** Glasses, usually worn in warm countries, to defend the eyes from

from the heat of the sun, and the dust of the soil. In order to derive real benefit from these glasses, there should be apertures round the edges to let in the air. The term is rather vulgar, but in general acceptance, and comes from To goggle—To look askint; a derivation not thoroughly appropriate.

**GOLADAR** or **GOLDAR**, an Indian term, signifying a store keeper, or a store-house-keeper.

**GOLANDAZEE**, the Indian term for an artillery man.

**GOLCONDAB**, a province in India, comprehending the nabobships of Arcot, Canoul, Cudapa, Rajamandri and Chicacole, &c. See History of Indostan, pages 158, 162.

**GOLCONDAB**, formerly a city, and the capital of the province. It stood at the foot of the rock and fortress of the same name; but the city has long since been deserted; and its inhabitants removed to Hyderabad; nevertheless its name is still frequently used in Indostan, when in reality the city of Hyderabad is meant.

**GOLDEN Rock**, a spot near Trichinopoly in India, which has been rendered immortal by the victory that was gained by the British troops over the French and their allies in 1753. The following extract from the first volume of the History of Indostan cannot fail to be interesting and gratifying to every English reader. We shall refer him to pages 289, 290, 291, &c. for a detailed account, and remain satisfied with giving the general issue of a bold and daring enterprise.

"The French battalion (to quote the author's own words,) was now arrived behind the rock, and their artillery from the right and left of it were firing upon the English troops; the rock itself was covered by their sepoys, supported by their grenadiers; the whole Mysore army was drawn up in one great body at the distance of a cannon shot in the rear; the Morattoes, were, as usual, flying about in small detachments, and making charges on the flanks and rear of the English battalion, in order to intimidate and create confusion.

"In such circumstances, the officers unanimously agreed in opinion with their general, that it was safer to make a gallant push, than to retreat before

such numbers of enemies; and the soldiers seeming much delighted at this opportunity, of having what they called a fair knock at the Frenchmen on the plain, Major Lawrence took advantage of the good disposition of the whole, and giving due commendations to their spirit, ordered the grenadiers to attack the rock with fixed bayonets, whilst he himself with the rest of the troops, wheeled round the foot of it to engage the French battalion. The soldiers received the orders with three huzzas, and the grenadiers setting out at a great rate, though at the same time keeping their ranks, paid no attention to the scattered fire they received from the rock, nor made a halt until they got to the top of it; whilst the enemy terrified at their intrepidity, descended as they were mounting, without daring to stand the shock of their onset. Some of the best sepoys followed the grenadiers, and all together began a strong fire upon the French troops, drawn up within pistol shot below. In the mean time, Mr. Astruc, perceiving, that the left flank of his battalion would, if it remained drawn up facing the north, be exposed to the English troops, wheeled round the foot of the rock, changed his position, and drew up facing the west, in order to oppose them in front. But this movement exposed his right flank to the fire of the grenadiers and sepoys from the rock, by which his troops had already suffered considerably, when the English battalion executing their evolution with great address, drew up at once directly opposite to the enemy at the distance of 20 yards.

The French troops were struck with consternation upon seeing themselves thus daringly attacked in the midst of their numerous allies, by such a handful of men as 500 Europeans, with 80 belonging to the artillery, and no more than 500 sepoys. Indeed a stranger, taking a view of the two armies from the top of one of the rocks, on the plain, would scarcely have believed, that the one ventured to dispute a province with the other.

Mr. Astruc exerted himself as a brave and active officer, and with difficulty prevailed on his men to keep their ranks with recovered aims, until the English gave their fire, which falling in a well-levelled

levelled discharge from the whole battalion, and seconded by a hot fire from the rock, together with a discharge of grape shot from the first field piece that came up, threw them into irreparable disorder; they ran away with the utmost precipitation, leaving three pieces of cannon, with some ammunition carts behind them. The Morattoes immediately made a gallant effort to cover their retreat by flinging themselves between, and some of the grenadiers who had run forward to seize the field pieces, fell under their sabres. Animated by this success, they attacked the battalion, pushing in several charges up to the very bayonets, and endeavouring to cut down the men, who constantly received them with so much steadiness, that they were not able to throw a single platoon into disorder: at length having suffered much, and lost several of their men by the incessant fire of the line, they desisted from their attacks, and retreated to the main body of the Mysoreans. Amongst their dead was Ballapah, one of their principal officers, brother-in-law to Morari-Rao, a very gallant man, much esteemed by the English, who had often seen him exert himself with great bravery when fighting on their side; he had broke his sword cutting down a grenadier, when another, who was loading his piece, and saw his comrade fall, shot both ball and ramrod through his body. In the mean time the French never halted until they got into the rear of the Mysore army, when their officers prevailed on them to get into order again, and drew them up in line with their allies, from whence they fired their two remaining field pieces with great vivacity, although the shot did not reach above half way.

"The major remained three hours at the foot of the rock, in order to give them an opportunity of renewing the fight; but finding that they shewed no inclination to move towards him, he prepared to return to his camp, leaving them to take possession of the rock again at their peril; for since the loss of the 200 sepoys that defended it at the beginning of the action, he did not think it prudent to expose another detachment to the same risk, at such a distance from his main body. The three

guns with the prisoners were placed in the center, and the troops marching in platoons on each side, the artillery was distributed in the front, rear, and intervals of the column. The rear had scarcely got clear of the rock into the plain, when the whole of the enemy's cavalry set up their shout, and came furiously on, flourishing their swords, as if they were resolved to exterminate at once the handful of men that opposed them. Whosoever has seen a body of 10,000 horse advancing on the full gallop all together, will acknowledge, with the Marshals Villers and Saxe, that their appearance is tremendous, be their discipline or courage what it will; and such an onset would doubtless have disconcerted untried soldiers; but the enemy had to deal with veterans, equal to any who have done honour to the British nation; men convinced by repeated experience, that a body of well disciplined infantry would always prevail against irregular cavalry, let their numbers be ever so great. In this confidence they halted, and without the least emotion, waited for the enemy, who were suffered to come sufficiently near before the signal was given to the artillery officers; the cannonade then began from eight six pounders, loaded with grape, and was kept up at the rate of eight or ten shot in a minute from each piece, so well directed, that every shot went among the crowd, as was visible by the numbers that dropped: this soon stopped their career, and they stood awhile like men astonished by the fall of thunder; but finding no intermission of the fire, and that the battalion and sepoys reserved theirs with recovered arms, they went to the right about and got out of the reach as fast as they had come on; leaving the troops to return quietly to their camp.

"Thus was Trichinopoly saved by a success, which astonished even those who had gained it; nor was the attempt, however desperate it might seem, justified by the success alone; for as the city would inevitably have fallen if the English had remained inactive, so the loss of it would have been hastened only a few days if they had been defeated; and major Lawrence undoubtedly acted with as much sagacity as spirit, in risking every thing to gain a victory, on which

which alone depended the preservation of the great object of the war."

GONDECAMA, *Gondegama*, a river in India, which makes the northern boundary of the province of Arcot; Condavir extends between this and the river Kristna.

GONDOIA, (*Gondole*, Fr.) this word may be taken in two senses, viz. to signify a cup; or a small barge which is flat and long in its construction, and is only moved, or worked by oars. Gondolas are much used upon the canals in Venice; they are very remarkable for their shape, and the great swiftness with which they glide through the water. The middle sized ones are about thirty feet long, and are only four feet broad across the middle, gradually tapering towards each end, and rising in two sharp and narrow points to the ordinary height of a man. Upon the prow is fixed an iron of an uncommon length, which does not exceed half a finger's breadth in thickness; but which is four fingers broad, and is so disposed as to cut the air. The upper part of this iron, which is flatter than the rest, stretches out in the shape of a large hatchet, a full foot in length; so that when the gondola is on her way, it seems to menace every thing before it, and to force its passage.

GONDOLEERS, (*Gondoliers*, Fr.) the men who have the management of the gondolas at Venice are so called. The equipment of a gondola seldom exceeds two persons, even on board of those barges that belong to foreign ambassadors. It sometimes happens that there are four, when persons of distinction go to their country houses. The gondoliers never sit down, but row the barge standing upright, and push forward. One man always plies in the fore part of the gondola, and the other is at the poop.

GONFALON, } an ensign or stand-  
GONFANON, } ard.

GONG, the Persian word for a village.

GONG WALLAS, militia in India so called; from *gong* a village, and *wallas*, a man.

GONG, an instrument of martial music used among the Indians.

GORGE, Fr. means any hollow between a chain of mountains, that affords a passage into an open country.

GORGE, Fr. a sort of concave moulding belonging to ornamental architecture.

GORGE, *gorge*, Fr. the entrance into any piece of a fortification which consists of the distance or space between the extremities of the two faces; as between the faces of a half moon, redoubt, or bastion.

*Coupe-Gorge*, Fr. literally means cut-throat. It is used in a military sense to signify any spot or position which affords an enemy so many advantages, that the troops who occupy it, must either surrender, or be cut to pieces.

*Demi-Gorge*, Fr. Half the distance between the two extreme points of the faces of a piece of fortification inwards.

GORGE *d'un bastion*, Fr. the space or distance between the extreme points of two flanks.

*Prendre un ouvrage par la Gorge*, Fr. to get to and a work and take it in reverse, without having made any direct approaches in front.

GORGERIN, Fr. in ancient times, that part of the armour which covered the neck of a man. Hence our word *gorget*.

GORGONS, in military antiquity, a warlike female nation of Lybia, in Africa, who had frequent quarrels with another nation of the same sex, called *Amazons*.

GOTHIC, (*Gothique*, Fr.) any thing built after the manner of the Goths. Various works and buildings that appear to have been constructed without any particular regard to the rules of art, are so called. All the old cathedrals are in the Gothic taste.

Monsieur de Fenelon has said, that Gothic architecture can support an immense vault upon the slightest pillars. The elevation of it is so wonderful, that although it seems ready to tumble, is perforated and full of windows in every part, and stands as it were suspended in air, it nevertheless lasts out centuries, and almost always proves more durable than the most regular buildings.

*Fronton GOTHIQUE*, Fr. a gothic pediment. In modern architecture, all circular or triangular gable ends are so called, when they are sculptured or three-leaved.

**GOUDRON** ou **GOUDRAN**, *Fr.* pitch and tar.

**GOUDRONS**, *Fr.* small fascines or faggots which are well steeped in wax, pitch, and glue, and then are lighted for the purpose of setting fire to beams, planks, traverses, galleries, pontoons, &c. They are likewise used in various shapes and ways, to convey light into the ditches or upon the ramparts.

**GOVERNOR** of a fortification, is, or should be, a person of great military knowledge; and is a very considerable officer representing the king, whose authority extends not only over the inhabitants and garrison, but over all troops that may be there in winter quarters, cantonments, or quarters of refreshment.

*Duty of a GOVERNOR in time of peace.* He is to order the guards, the rounds, and the patrols; to give the parole and countersign every night after the gates are shut; to visit the posts, to see that both officers and soldiers do their duty, and that every thing goes on regularly, and in good order.

*Duty of a GOVERNOR in time of war.* He should consider the place in such a manner, as if the enemy were on the the of besieging him, not omitting the least thing that may contribute to a long and obstinate defence: he should therefore take particular care to keep the fortifications in good condition; clearing the country round of all hedges, ditches, trees, hollow roads, caverns, and rising grounds, within the reach of cannon shot; not suffering any houses to be built within that distance, nor in general any thing to be done that may favour the approach of an enemy.

He should consider well with himself every minute circumstance that may be of advantage to him during the siege: he should thoroughly examine the several works, and canvas all the different stratagems that may be used, either to defend them, or to give way when overpowered, with an intent to return and dislodge the enemy, after he has got possession of them; in short, how to defend the place entrusted to his care, inch by inch, with the best advantage. He should consider how, and in what manner the works defend each other; whether their communications are safe, or liable to be interrupted by the besiegers; how to incommode

the enemy when he is at a distance, or to dislodge him when near; whether the ground be proper for mines, and when they should be made; whether any part of the country may not be laid under water, by means of dikes or sluices; if there are any already made, how to keep them in constant repair, or to make new ones if they are wanted; taking care to construct them so that the enemy may not have it in his power to destroy them either with his cannon or mortars.

If the governor be not sufficiently skilled in the systems of attack and defence, he should frequently converse with the officers of engineers and artillery who understand them; examine the works together, see what may be done to render the defence of the place as long as the circumstances and nature of the works will admit of; and to make it familiar to himself, he should set down a project of defence on paper, and have it examined by the most skillful officers of artillery and engineers about him. This must be done in private, that spies or deserters may not discover the weak parts to the enemy. In short, nothing should be neglected on the part of the governor.

He should see that the place be well supplied with ammunition, and wholesome provisions; that the hospitals are in good order, and provided with able physicians and surgeons, as likewise with every thing wholesome and necessary, that the sick and wounded may be well taken care of.

The powder magazines, above all things, require his most special care: for though they are built bomb-proof, yet when a great number of shells fall upon them, they seldom resist their shock; for which reason they should be covered 8 or 10 feet thick with earth, and a layer of fascines, dung, and strong planks laid over them.

**GOUJAT**, *Fr.* A soldier's boy. It likewise signifies an ignorant good-for-nothing fellow.

**GOJERES**, according to Hammer, the French disease. From *Gouje*, *Fr.* a camp trull.

**GOINE**, *Fr.* a woman of infamous character.

**GOURDIN**, *Fr.* a flat stick, two fingers in breadth, which was used by the French to punish galley slaves.

**GOUR-**

**GOURGANDINE**, *Fr.* a strumpet of the lowest species; a soldier's trull.

**GOVERNAIL**, *Fr.* a rudder.

**GOVERNEMENT**, *Fr.* anciently meant a certain specific allotment of provinces, towns, &c. under the superintendence and government of one person who received his powers from the king, and had subordinate officers under him. There were twelve governments in France, at the first institution of monarchy, called *grands gouvernements généraux*, which were specifically noticed in all the general sittings of the kingdom. They were first formed by Hugues Capet, in 987. Previous to the revolution in 1789, they were subdivided into 39 general provincial governments with inferior officers, subject to their jurisdiction; such as governors of towns, and commandants of fortified places. Each governor general was entitled to a guard of cavalry, a certain number of halberdiers and armed men on foot.

**GOVERNEUR d'une place de guerre**, the governor of a fortified town or place. See *governor of a Fortification*.

**GOWA**, Indian term for a witness.

**GRABS**. Vessels peculiar to the Malabar coast. They have rarely more than two masts, although some have three; those of three are about 300 tons burthen; but the others are not more than 150 tons; they are built to draw very little water, being very broad in proportion to their length, narrowing from the middle to the end, where instead of bows they have a prow, projecting like that of a Mediterranean galley, and covered with a strong deck level with the main deck of the vessel, from which, however, it is separated by a bulk-head, that terminates the fore-castle. As this construction subjects the grab to pitch violently when sailing against a head sea, the deck of the prow is not enclosed with sides as the rest of the vessel is, but remains bare, that the water which dashes upon it may pass off without interruption. On the main deck, under the fore-castle, are mounted two pieces of cannon of nine or twelve pounders, which point forwards through the port holes, cut in the bulk head, and fire over the prow; the cannon of the broadside are from six to nine pounders.

**GRACE**, *Fr.* pardon, forgiveness. *Faire GRACE*, *Fr.* to pardon, to forgive.

*Demander GRACE*, *Fr.* to ask forgiveness.

**GRACE-honoraire**, *Fr.* any mark of distinction which is conferred upon military men by their sovereign.

**GRACI-pecuniaire**, *Fr.* pecuniary recompenses given to a military man for long service or good conduct.

**GRADE**, *Fr.* This word is applicable to the different ranks among officers, beginning from an ensign to the commander in chief of an army.

**GRADIS Militaires**, *Fr.* the different degrees by which military men rise in their profession.

**GRADINS**, the various small ascents, such as banquettes, &c. by which troops march from the bottom to the top of a fortified place, in order to line the parapet.

**GRAFF**. See *DITCH*, or *MOAT*.

**GRAIN**, *Fr.* a word used in the repairing of damaged cannon.

*Mettre un GRAIN à une pièce*, *Fr.* to fill up the touch-hole of a piece of ordnance; the heating it in such a manner, that the metal which is poured in may assimilate and mix. When it becomes cold, a fresh aperture is made or bored.

**GRAIS**, *Fr.* large stones resembling our Scotch pebbles. They are used in France to pave the high roads, and the corners of streets.

**GRAMEN**, grass, in botany.

**GRAMINE**, *couronne graminé*, *Fr.* a grass, or graminaceous crown, which was made among the Romans. See *OBSDIONAL*.

**GRANADE**. See *GRENADE*.

**GRANADIER**. See *GRENADIER*.

**GRAND**. This word is frequently used both in French and English as a word of title or distinction. *Les grands*, the great.

**Grand division**. The battalion being told off by 2 companies to each division, is said to be told off in grand divisions; hence grand division firing is, when the battalion fires by 2 companies at the same time, and is commanded by one officer only.

**Grand maitre d'artillerie**, *Fr.* grand master of the ordnance, &c. &c. &c.

**Grand soleil brillant**, *Fr.* a sun exhibited in artificial fireworks. See *GLOIRE*.

*GRAND Vizir.* See *VIZIR*.

**GRANITE**, (*granit*, Fr.) a sort of hard marble, which is variegated by spots and streaks, and is rather encrusted. It is very common in Egypt. There is a species of granite, that is of a white and violet colour; and another which is green mixed with white. The most ordinary kind has grey and green spots scattered over a greyish white.

Columns 40 feet high have been seen in Egypt, which consisted wholly of one piece of granite. The Egyptian pyramids are made out of that marble; such indeed is the quantity said to exist about the country, that some authors imagine the whole extent of its foundation to be a solid rock of granite. The French distinguish this sort of marble by calling it *marbre granite* and *marbre granitique*. In natural history it is generally called *granite*, being a distinct genus of stones composed of separate and very large concretions rudely compacted together, of great hardness, and capable of receiving a very fine and beautiful polish.

**GRANOIR**, Fr. a term used in the French artillery, to signify a sort of sieve, in which there are small round holes for moist powder to be passed through, in order to make the grains perfectly round.

**GRAPE shot.** See *SHOT*.

**GRAPE de raisin**, Fr. a piece of wood in which are placed musquet balls; each bullet being enclosed in a small case, and the whole together forming a machine resembling a grape. This species of shot is discharged from ordnance.

**GRAPHOMETER**, (*graphometre*, Fr.) among surveyors, an instrument for taking angles, and generally called a semi-circle. In mathematics it serves to measure heights and elevations, to raise plans, &c.

**GRAPPLING.** The French call it *grapin*, *herisson*, *rison*, or *harpeau*; it is a sort of small anchor, with 4 or 5 flukes or arms, commonly used to ride a boat.

**GRAPPLING-irons**, in the art of war, are composed of 4, 5, or 6 branches, bent round and pointed, with a ring at the root, to which is fastened a rope to hold by, when the grapple is thrown at any thing, in order to bring it near, so as to lay hold of it.

**Fire GRAPPLING**, an instrument which nearly resembles the above, only that it is fitted with strong barbs instead of flukes, and is fixed at the yards of a fire-ship, to grapple her adversary, and set her on fire. The French call this instrument *grapin de brûlot*.

**GRAS-bois**, Fr. in carpentry, a term to signify any piece of wood which is too large to fit the place it was intended to fill, and which necessarily must be diminished.

**GRATER un fusée**, Fr. to uncap or clear a fuse or shell for the purpose of explosion.

**GRATER un vaisseau**, Fr. to clean, or clear a ship.

**GRATER en maçonnerie**, Fr. to restore the original appearance of a wall or building, by grating the superficies with a trowel, or any other iron instrument.

**GRATICULER**, Fr. to divide with a pencil on a sheet of paper, any design or drawing into small equal squares, in order to reduce the original sketch or picture, or to enlarge it by the same process. This word is derived from the Italian, *graticola*, a gridiron.

**GRATIFICATION**, Fr. In a general acceptation of the term this word meant, among the French, certain rewards which generals gave to the troops, after a severe engagement, in testimony of their valour and good conduct. These rewards were distributed according to rank, and were presented in the King's name. This custom was prevalent in the most ancient times. According to Vegetius, all monies distributed by the Romans, as military gratifications or rewards, were deposited in the ensign or standard-bearer's hands, to be occasionally given to the soldiers. Sometimes the generals gave directions that a certain proportion should be sequestered or put apart. By degrees a fund was collected; and the temptations to desert lost their influence in the superior attachment which every soldier felt to his standard, whose bearer was the trustee of his little property, and to whom he was consequently bound by one of the most powerful ties of the human heart—*self-interest*.

By *gratification* was likewise meant the accumulation of a certain sum, which was deposited for the specific purpose

purpose of burying a deceased soldier. We have, indeed, several instances in our own service to prove the wisdom and expediency of a regimental subscription. In the Royal Artillery, gratifications, or voluntary subscriptions, for the relief and support of the wives of deceased officers, are conducted upon the most liberal plan; and in some other corps the serjeants and corporals provide against the accidents of human nature in the same manner.

*Gratification* signified among the French, in a more extended sense of the word, a public reward given to a body of soldiers, on the recommendation of a general, for some signal act of bravery in the day of battle. When this happened the soldiers had a certain sum of money distributed amongst them, and the officers received annual pensions.

GRATIFICATION likewise means a certain allowance in money, which is made to prisoners of war. The British officers in France have been allowed 6d. per day, and the non-commissioned and soldiers 1½d. the officers have also 1s. and 6d. in lieu of rations.

GRATIFICATION *annuelle*, Fr. a certain pecuniary allowance which was annually given during the French monarchy, to some deserving officer, in order to increase his pay, until an opening occurred by which he might be advanced.

GRATIFIER, Fr. to reward an officer or soldier for having behaved gallantly.

GRATOIR, Fr. an iron instrument which is used to clear out a shell before it is charged.

GRAVEURS, Fr. persons employed and paid by the founders of cannon for repairing damaged pieces of artillery: some individual, however, was distinguished by the name of *graveur de l'artillerie*, engraver to the artillery, and was permitted, by the Grand Master of the Ordnance, to exhibit over his shop-door the arms of the Royal artillery.

GRAVIR, Fr. to get up a steep place; to scale a wall, &c.

GRAVOIS, Fr. rubbish.

GREAT *fortification*. One of the divisions of the first system of M. de Vauban.—It consists in a fortification

whose exterior side is from 185 to 260 toises, or from 370 to 520 yards, and is seldom adopted but towards a river or a marsh.

GREAT *radius*. The whole oblique radius. See FORTIFICATION.

GRECIAN *fire*, (*feu Grégeois*, Fr.) a sort of artificial fire, which insinuates itself beyond the surface of the sea, and which burns with increased violence, when it mixes with that element. Its directions are contrary to the course of natural fire; for the flames will spread themselves downwards, to the right or left, agreeably to the movement that is given. It is composed or made up of naphtha, sulphur, bitumen, gum and pitch; and it can only be extinguished by vinegar mixed with urine and sand, or with undressed leather or green hides. Some writers assert, that it was invented by an engineer (belonging to Heliopolis, a town in Syria), whose name was Galimicus, and who used it with so much skill and effect during a naval engagement, that he destroyed a whole fleet belonging to the enemy, upon which were embarked 30,000 men. This combustible matter has retained the name of Grecian fire, because the Greeks first practised the invention. It is asserted, indeed, that the secret of making Grecian fire, which should be unextinguishable, has been long since lost; we say *unextinguishable*, because the ancients did not know, as we do, how to repress or put out the flame. According to the author of *Oeuvres Militaires*, a powerful composition, which could only be extinguished by strong vinegar (a secret unknown to the ancients) might be made of the following combustible materials; viz. pitch, rosin, tallow, camphire, turpentine, salt of nitre, liquid varnish, oil of sulphur, linseed, rock oil, flax, charcoal finely pulverized; the whole of which being boiled together, and before it grows cold, mixed with quick lime, a consistence is formed that will be susceptible of the most subtle and destructive fire.

GRENADES, } in the art of war,  
GRANADES, or } are hollow balls or  
GRENADOES, } shells, of iron or  
other metal, about 2½ inches diameter, which being filled with fine powder, are set on fire, by means of a small fuse, driven

driven into the fuse-hole, made of well seasoned beech wood, and formerly thrown by the grenadiers into places where men stood thick, and particularly into the trenches and other lodgments made by the enemy. As soon as the composition within the fuse gets to the powder in the grenade, it bursts into many pieces, greatly to the injury of all who happen to be in its way. Grenades were first made about the time shells were invented (which see) and first used in 1594. Grenades have unaccountably sunk into disuse; but we are persuaded there is nothing more proper than to have grenades to throw into the midst of the enemy, who have jumped into the ditch. During the siege of Cassel, under the Count de la Lippe, in the campaign of 1762, a young engineer undertook to carry one of the outworks, with a much smaller detachment than had before attempted it without success. He gained his object with ease, from the use of grenades; which is a proof, that they should not be neglected, either in the attack or defence of posts.

**GRENADE, grenade**, Fr. There is a sort of grenade which is thrown out of a mortar.

It is sometimes used for the purpose of annoying the besieging enemy; in which case quantities are rolled down the rampart into the fossé, or ditch, upon the workmen or miners.

A grenade resembles a bomb or shell, with this only difference, that the grenade has not any handles to it.

There are some grenades, called *grenades à main*, hand-grenades, whose caliber is equal to that of a four pounder. The charge is from five to six ounces of gunpowder, or thereabouts. They are extremely serviceable on many occasions; but particularly so to throw among the men that are working in the trenches; numbers of whom they must inevitably wound. The vent of a hand-grenade contains about six lines, or half of a French inch.

The following proportions belong to grenades, according to their several diameters.

Grenades whose caliber is equal to that of a 33 pounder, contain about 6 French inches or more diameter, 8 lines in thickness, and 16 pounds in weight.

Grenades whose caliber is equal to that of a 24 pounder, contain 5 French inches 5 lines diameter, 6 lines in thickness, and 12 pounds in weight.

Grenades whose caliber is equal to that of a 16 pounder, contain 4 French inches 9 lines diameter, 5 lines in thickness and 8 pounds in weight.

Those that weigh 6 pounds, have 3 French inches 5 lines diameter, and are five lines thick.

Those that weigh 5 pounds, have 3 French inches  $2\frac{1}{4}$  lines diameter, and are 5 lines thick.

Those that weigh 3 pounds, have 2 French inches 8 lines diameter, and are  $4\frac{1}{2}$  lines thick.

Those that weigh 2 pounds, have 2 French inches 4 lines diameter, and are  $4\frac{1}{4}$  lines thick.

Those that weigh 1 pound have 1 French inch 10 lines diameter, and are 3 lines thick.

Those that weigh three quarters of a pound, have 1 French inch 8 lines diameter, and are 3 lines thick.

Those that weigh half a pound, have 1 French inch 8 lines diameter, and are 3 lines thick.

Those that weigh a quarter of a pound, have 1 French inch 6 lines diameter, and are  $2\frac{1}{2}$  lines thick.

These proportions were formerly attended to in the old French service, with occasional deviations from the strict measurement of the lines; as it was supposed to be of little consequence whether the grenades fitted the mortars exactly. It was, indeed, generally thought advisable to adapt their sizes, so that they might be thrown out without the least resistance or compression.

Grenades were directed to be thicker at the breech than elsewhere, in proportion to their several diameters.

Theodore D'Urtubie, in his *Manuel de l'Artilleur*, gives the following succinct account of grenades. That writer observes, "that besides bombs or shells, and howitzers, hollow vessels made of iron in globular shapes, which are called grenades, are frequently used; gunpowder is poured in through the cavity or vent, called in French *lumiere*, into which a fuse loaded with a composition of combustible materials is introduced."

There are two sorts of grenades.  
Those

Those distinguished by the name of *grenades de rampart*, are rolled from the top of the parapet into the ditch; they are equal in caliber to that of a 33 and a 16 pounder.

The other species is called *grenades à main*. These are thrown into the covert way, and the trenches, &c. Their caliber is that of a 4 pounder, and they weigh 2 pounds. The ordinary thickness of grenades is 4 lines throughout.

It will occur to our military readers, that by this account a considerable alteration has taken place in the casting of grenades, as the intermediate differences have been consolidated; hand-grenades, instead of being thicker at the breech, are uniformly of the same consistency. It cannot, however, be thought superfluous to preserve the original dimensions.

*GRENADE-Roulante*, Fr. a species of hand-grenade from 15 to 20 pound weight, which is thrown into fosses, &c.

*GRENADES Turques*, Fr. Turkish grenades. A sort of grenade which is made by the Turks. Their grenades are extremely defective, and do little execution.

*GRENADIER*, } a foot soldier,  
*GRANADIER*, } armed with fire-lock, bayonet, and in some services with a hanger: grenadiers carry, besides their arms, a cartridge box that will hold 36 rounds. They are clothed differently from the rest of the battalion they belong to, by wearing a high cap, fronted with a plate of brass, on which the king's arms is generally represented, &c. and a piece of fringed or tufted cloth upon their shoulders, called a wing: in some armies they have more pay than a common soldier. They are always the tallest and stoutest men, consequently the first upon all attacks. Every battalion of foot has generally a company of grenadiers belonging to it, which takes the right of the battalion. Grenadiers were first instituted in France in 1667, by having 4 or 5 to each company; but in the year 1670, they were formed into companies, and in 1685, were first known in the British service.

*Horse-GRENADIERS*, called by the French, *grenadiers volans*, or flying grenadiers, are such as are mounted on horseback, but fight both on foot and horseback. They were first established in France by Lewis XIV. in 1676, and formed into squadrons. We had in Eng-

land two troops of horse-grenadier guards, the first raised in the year 1693, the command of which was given to lieutenant-general Cholmondeley; the second in 1701, which was commanded by lord Forbes.

*GRENADIER March*, a beat on the drum which is practised with the grenadiers, or when the whole line advances to charge an enemy.

*GRENADIERS auxiliaires*, Fr. auxiliary grenadiers. During a siege, and when a place was closely invested, a certain number of grenadiers were chosen out of the battalions belonging to the trenches, for the purpose of making head against the besieged, whenever they might risk a sally, or insult the works. It was the peculiar duty of these men to stand forward on every occasion, to set fire to the gabions attached to the batteries, and to crush every attempt which might be made by the garrison to annoy the men that were posted in the trenches, &c.

It was customary among the French to increase the number of those grenadiers, who went first into danger and did the duty of the trenches. These were called *grenadiers postiches*, or *extra grenadiers*.

*GRENADIERS-Postiches*, Fr. a body of men composed of several battalions of militia, which, during the French monarchy, were trained and exercised for the purpose of augmenting the corps of royal grenadiers, a sort of supplementary corps.

*GRENADIERS-Royaux*, Fr. royal grenadiers. A body of troops under the old French government, which consisted of several battalions or regiments of militia, drawn out of the supplementary grenadiers, and all composed of grenadier companies.

*GRENADIERS, ou GIBERNES*, the bags or haversacks which hold the grenades. They are worn like powder-flasks.

*GRENIER*, Fr. *Mettre en grenier*; to stow any thing loosely.

*GRENOIR*, Fr. a sort of sieve through which gun-powder was passed, and formed into grains of different sizes.

*GREVE*, Fr. any flat space of ground on the bank of a river, or near the sea. A place in Paris is so called, where, during the old government of France, all criminals were executed. *Grève* is also used to signify the gallows.

**GREVE**, *Fr.* armour, or covers for the legs. They were anciently worn by the French; and generally consisted of a piece of steel or stiff leather, which protected the front part of the leg.

**GRIFFE**, *Fr.* means literally a claw, but in a military sense, as accepted by the French, it signifies an iron instrument which is made like a hook, and is used by miners to pick out the small stones that are incorporated with cement, &c.

**GRIGNON**, *Fr.* broken biscuit.

**GRISONS**, a people formerly in alliance with Switzerland, but since annexed to the French republic. They inhabit the mountainous parts of the Alps in Italy, and support a well organized army, called the army of the Grisons, under General Macdonald.

**GROS**, *Fr.* a body of soldiers, a detachment. The French frequently say—*Un gros de cavalerie*, a body of cavalry; *un gros d'infanterie*, a body of infantry.

*Le Gros d'une armée*, *Fr.* the main body of an army; that part which remains after any detachments, &c. have been marched away.

**GROS-CORPS**, *Fr.* a large body of armed men, consisting of horse, foot, and artillery, which are encamped, cantoned, or in garrison together.

*Gros équipages d'une armée*, *Fr.* the heavy baggage, consisting of the train of artillery, &c. which belongs to an army.

**GROUND**, the field or place of action.

**GROUND-work**, in military architecture. See **FOUNDATION**.

**GROUND arms**, a word of command on which the soldiers lay down their arms upon the ground.

This word of command has been exploded since the introduction of the new exercise. Soldiers are now ordered to *pile arms*.

**To take GROUND**. A battalion or company is said to take ground when it extends in any given direction. This term is likewise used in duelling, as—*They took their ground at eight or ten paces from one another*.

**GRUE**, *Fr.* a crane. It is frequently used in the embarkation and debarkation of cannon, &c.

**GUARANTEE**, any person or pow-

er who undertakes for the performance of any stipulations agreed on between two other powers or parties.

**GUARD**, in the military art, is a duty performed by a body of men to secure an army or place from being surprised by an enemy. In garrison the guards are relieved every day; hence it comes that every soldier mounts guard once every 3 or 4 days in time of peace, and much oftener in time of war. See **HONOURS**.

**GUARDS**, also imply the troops kept to guard the king's person, and consist of both horse and foot.

**Horse-grenadier GUARDS**, were divided into two troops, called the 1st and 2d troops of horse-grenadier guards. The first troop was raised in the year 1693, and the command given to lieutenant-general Cholmondeley; the second in 1702, and the command given to Lord Forbes. Each troop has a colonel, lieutenant-colonel, 1 guidon or major, 3 exempts and captains, 3 lieutenants, 1 adjutant, 3 cornets, and 60 private men.

**Life GUARDS**. In consequence of the reduction of the horse grenadier guards, two regiments have been raised for the specific purpose of guarding the metropolis, and of escorting his majesty. They are generally called the First and Second Life Guards. Each regiment consists of six troops of 53, and 1 kettle drum.

Although the Life Guards generally do duty about the metropolis, it must be recollected, that they were not raised for that specific purpose only. They are enlisted for general service, like the men of the line or Foot Guards, and no stipulation of any sort is made with them. During the late war, and in the present contest, both regiments are, by general orders, in constant readiness to march at a moment's notice; having their tents, camp-equipage, and every article fit for service.

With respect to rank, in addition to what has already been said on that subject, it is necessary to state, that the majors in the life guards rank as lieutenant-colonels, and by his Majesty's order, they can only exchange with lieutenant-colonels. The lieutenant-colonels rank as full colonels, and cannot exchange with any one under that rank.

For

For the like reason, that rank should not be obtained by an exchange; a major of the life-guards cannot exchange with a major in the line, nor a lieutenant-colonel with one of the same rank.

**Royal Regiment of Horse Guards.** This regiment, which is commonly called the Oxford Blues, from having originally been raised by the Earl of Oxford, consists of nine troops. The quarter-masters belonging to this corps are an exception to the general regulations that affect the quarter-masters of all cavalry regiments. The latter hold their commissions by warrants, but the former have the sign manual to their appointments. His Majesty holds a troop in this respectable corps.

**Yeomen of the GUARDS**, first raised by Henry VII. in the year 1485: they are a kind of foot-guards to the king's person, and are generally called by a nickname—the beef-eaters, a term derived from *Buffet*, Fr. a sideboard. They were anciently 250 men of the first rank, under gentry, and of a larger stature than ordinary, each being required to be 6 feet high. At present there are but 100 on constant duty, and 70 more not on duty; and when any one of the 100 dies, his place is supplied out of the 70. They go dressed after the manner of King Henry VIII.'s time. Their first commander or captain was the Earl of Oxford.

**Foot GUARDS**, are regiments of foot appointed for the guard of his majesty, and his palace, and for general service. There are 3 regiments of them, called the 1st, 2d, and 3d, regiment of foot-guards. They were raised in the year 1660, when the command of the first was given to Thomas, Lord Wentworth; that of the second to George, Duke of Albemarle; and the third to George, Earl of Linlithgow. The second is always called the Coldstream, from a place named Coldstream, a small market town in Berwickshire, where the men were first raised. This regiment, in point of standing, is older than the first, having been raised sooner, and commanded by General Monk, from whom it originally took its name, viz. Monk's regiment or corps; and in compliment to whom, it was made one of the three Royal regiments by Charles the second. The first regiment is at present commanded by 1 colonel (his

Royal Highness William, Duke of Gloucester); 1 lieutenant-colonel, 3 majors, 27 captains, 1 captain-lieutenant, 62 lieutenants, 24 ensigns, and 3 adjutants, and consists of three battalions. The second regiment, or Coldstream, has 1 colonel (Field Marshal his Royal Highness the Duke of York), 1 lieutenant-colonel, 2 majors, 16 captains, 1 captain-lieutenant, 42 lieutenants, 14 ensigns, and 2 adjutants, and consists of 2 battalions. The third regiment is the same as the second, and is commanded by John, Duke of Argyll. The first regiment of French guards was raised in the reign of Charles IX. in the year 1563.

**Trench GUARD** only mounts in the time of a siege, and consists sometimes of 3, 4, or 6 battalions, according to the importance of the siege. This guard must oppose the besieged when they sally out, protect the workmen, &c.

**Provost GUARD**, is always an officer's guard that attends the provost in his rounds, to prevent desertion, marauding, rioting, &c. See PROVOST.

**Magazine - GUARD.** See STORE-KEMPER.

**Advanced GUARD**, is a party of either horse or foot, or both, that marches before a more considerable body, to give notice of any approaching danger. These guards are either made stronger or weaker, according to the situation or danger that may be apprehended from the enemy, or the country through which an army is to be marched.

**Van GUARD.** See ADVANCED GUARD.

**Artillery GUARD**, is a detachment from the army to secure the artillery when in the field. Their *corps de garde* is in the front of the park of artillery, and their centres are dispersed round the same. This is generally a 48-hours guard; and upon a march this guard marches in the front and rear of the artillery, and must be sure to leave nothing behind. If a gun or wagon breaks down, the officer that commands the guard is to leave a sufficient number of men to assist the gunners and matrosses in raising it.

**Artillery quarter-GUARD**, is frequently a non-commissioned officer's guard from the royal regiment of artillery, whose *corps de garde* is always in the front of their encampment.

*Artillery rear-GUARD* consists of a corporal and 6 men, posted in the rear of the park.

*Advanced or Quarter-GUARD, &c.* (commonly called by the French *Corps de Garde*, which also means a guard or detachment, from which sentries are posted in different directions,) are soldiers entrusted with the guard of a post, under the command of one or more officers. This word also signifies the place where the guard mounts. •

*Counter GUARD.* See FORTIFICATION.

*Grand GUARD.* A guard composed of three or four squadrons of horse, commanded by a field officer, posted about a mile, or a mile and a half from the camp on the right and left wings, towards the enemy, for the better security of the camp.

*Forage GUARD,* a detachment sent out to secure the foragers, who are posted at all places, where either the enemy's party may come to disturb the foragers, or where they may be spread too near the enemy, so as to be in danger of being taken. This guard consists both of horse and foot, who must remain on their posts till the foragers are all come off the ground.

*Main GUARD,* is that from whence all other guards are detached. Those who are to mount guard assemble at their respective private parades, and march from thence to the general parade in good order, where, after the whole guard is drawn up, the small guards are detached to their respective posts: then the subalterns cast lots for their guards, who are all under the command of the captain of the main guard. This guard mounts in garrison at different hours, according to the pleasure of the governor.

*Piquet GUARD,* a given number of horse and foot, always in readiness in case of an alarm: the horses are generally saddled all the time, and the riders booted.

The foot draw up at the head of the battalion, frequently at the beating of the tat-too; but afterwards return to their tents, where they hold themselves in readiness to march upon any sudden alarm. This guard is to make resistance, in case of an attack, until the army can get ready.

*Baggage GUARD,* is always an officer's guard, who has the care of the baggage on a march. The wagons should be

numbered by companies, and follow one another regularly: vigilance and attention in the passage of hollow-ways, woods, and thickets, must be strictly observed by this guard, and flankers should be thrown out.

*Ordinary GUARDS,* such as are fixed during the campaign, or in garrison towns, and which are relieved daily.

*Extraordinary GUARDS,* or detachments, such as are only commanded on particular occasions; either for the further security of the camp, to cover the foragers, or for convoys, escorts, or expeditions.

Soldiers are sometimes ordered to take extraordinary guards, as a punishment for slight misconduct.

*Quarter GUARD* is a small guard commanded by a subaltern officer, posted in the front of each battalion, at 222 feet before the front of the regiment.

*Rear GUARD,* that part of the army which brings up the rear on a march, generally composed of all the old grand-guards of the camp.

The *rear guard* of a party is frequently 8 or 10 horse, about 500 paces behind the party. Hence the advanced guard going out upon service, forms the rear guard in a retreat.

*Rear GUARD* is also a corporal's guard placed in the rear of a regiment, to keep good order in that part of the camp.

*Standard GUARD,* a small guard under a corporal, which is taken out of each regiment of horse, and mounts on foot in front of each regiment, at the distance of 20 feet from the streets, opposite to the main street.

*To be upon GUARD.* See MOUNTING GUARD.

*To relieve GUARD.* See RELIEVE.

*Turn out the GUARD!* A phrase used when it is necessary for the guard to form for the purpose of receiving a general or commanding officer; on the approach of an armed party; on the beat of drum or sound of trumpet, or any alarm.

*Port GUARD,* a guard detached from the main guard. All officers on port or detached guards are to send a report, night and morning, to the captain of the main guard, and at all other times, when any thing extraordinary occurs. Those who command at the ports are to draw up the bridges, or shut the barriers,

barriers, on the approach of any body of armed men, of which they are to give notice to the officer of the main guard, and not to suffer any of them to come into the garrison without leave from the governor or commander. See General Regulations.

**Out-Guards.** Under this head may not improperly be considered *outposts*, *advanced piquets*, and *detachments*. In the last printed Regulations it is observed, that the duties of outposts are so various as usually to require detailed instructions according to circumstances. The following directions are therein stated to be generally applicable, and must be strictly attended to by the British army, especially if there should be any occasion for it to act upon home service. The duty of outposts, &c. is chiefly confined to light troops, who are occasionally assisted and relieved by the line. They are always, in that case, under the immediate direction of some general. But when circumstances render it necessary, that this duty should be done from the line, the outposts fall under the command of the general officers of the day, unless some particular officer be put in orders for that specific command.

All outguards march off without trumpets sounding, or drums beating. They pay no compliments of any kind; neither do their sentries take any complimentary notice of officers passing near their posts. No guards are to presume to stop any persons coming to camp with provisions (unless they be particularly ordered so to do), and are on no account to exact or receive any thing for their free passage.

Any officer, trumpeter, or other person, who comes from the enemy's camp, is to be secured by the first guard he arrives at, till the commander in chief's, or the general's pleasure is known. When a deserter comes in from the enemy, the officer commanding the post, or guard, at which he arrives, is immediately to send him under a proper escort, (without permitting him to be delayed or examined, or any questions asked him) to the officer commanding the outposts, who after enquiring whether he brings any intelligence immediately relating to his own post, will forward him to head-quarters.

The sentries on the outposts are always to be double. No officers, soldiers, or followers of the camp, are on any account to be suffered to pass the outposts, without they are on duty, or present a regular pass from head quarters.

The men on advanced piquets are to carry their provisions with them, ready cooked, when circumstances will permit. The cavalry to carry sufficient forage for the time they are to be out.

It is the duty of officers on all guards to inspect every relief of sentries, both when they go on, and come off their posts; to call the rolls frequently, and by every means in their power to keep the men under their command in the most perfect state of vigilance and preparation.

Officers commanding outposts are to send guides, or orderly men, to the major of brigade of the day, or to the brigade-major of their own brigades, as circumstances require, in order to conduct the new guards, and to carry such orders as may be necessary.

When the army is on a march, the officers must apprise the brigade-majors of the situation of their posts, as soon as they arrive at them. All detachments of brigades, which are ordered to march *immediately*, are to be taken from the piquets, and replaced directly from the line.

Whenever detachments consist of 200 men, or upwards, a surgeon or assistant-surgeon is to be sent from the corps of the officer who commands. On particular duties, the attendance of a surgeon or assistant-surgeon may be requisite with smaller detachments. Detachments of cavalry, of 50 or upwards, will be attended by a farrier.

As soon as an officer commanding an outpost, or advanced piquet, (whether of cavalry or infantry) arrives on his ground, he must endeavour to make himself master of his situation, by carefully examining, not only the space he actually occupies, but the heights within musket-shot; the roads and paths leading to or near his post, ascertaining their breadth and practicability for cavalry and cannon. He should examine the hollow ways that cover the approach of an enemy; and, in short, consider all the points from which he is most likely to be attacked, either by cavalry or infantry. He will, by these means, be

enabled to take measures to prevent the possibility of being surprized; and should he be attacked during the night, from the previous knowledge he has obtained of the ground, he will at once form a just estimate of the nature of the attack, and make his arrangements for defence with promptitude and decision. In order to convey the same alacrity to his men, and to prepare the most unexperienced for sudden and unexpected attacks, an officer upon an outpost will do well to put them upon the alert, by skillfully occasioning false alarms. But these must not be often repeated, nor when practised be made known to his men as having proceeded from himself; since supineness and inactivity might by degrees be the consequences of such a discovery.

An intelligent officer upon an outpost, even unprovided with entrenching tools, will materially strengthen his post, when the unobserver would remain inactive. A tree felled with judgment; brushwood cut to a certain distance; pointed stakes, about breast high, placed on the points most assailable by an enemy, may be attended with the greatest advantages, and can be effected with the common hatchets, which the men carry to cut fire-wood. In short, every impediment which an officer, acting on the defensive, can throw in an enemy's way, ought to be scrupulously attended to. Independently, therefore, of the means which he adopts for the immediate protection of his posts, he must look beyond that point; and as nothing checks the ardour of troops more than an unexpected obstacle, within an hundred yards, more or less, of the place attacked, he must, on his arrival at the outpost, throw up some temporary impediment at that distance. See General Regulations 34 to 37.

**Mounting Guards.** It is indispensable necessary, that every officer should know how to mount and come off guard. The following is the regulation to be observed on that head in the British service.

All guards are to parade with shouldered arms, and unfixed bayonets, without any intervals between them, the ranks open, and the sergeants with pikes carried. The officers with their swords drawn, and non-commissioned officers

commanding guards, to be formed about forty paces in front of the center, in two ranks, facing the line, where they are to receive the old parole and such orders as may be given them.

The major or commanding officer will give the word of command—

“Officers and non-commissioned officers, outward face!—Take post in front of your respective guards!—Quick, March!

As soon as they have taken post, fronting their respective guards, the word of command will be given—

“Officers and non-commissioned officers—to your guards—March!—Halt!—Front!”

“Officers and non-commissioned officers, inspect your guards!”

The several officers and non-commissioned officers will then inspect their guards, as quick as possible. When there is a captain's guard, each officer is to take a rank, followed by a sergeant.

As soon as the inspection is over, the adjutant will go down the line, and receive the report of each guard; the officers return to their posts; and the major, or commanding officer, will then—

“Order arms!—Fix bayonets!—and Shoulder!”

When the colours are brought on the parade, the troop is beat; and the drummers call on the right.

The captain will face inwards, and the lieutenant and ensign will face to the right, and march, *quick time*, to the head of the grenadiers. The captain goes to the head of the right of his remaining men. The field officer then orders the grenadiers to close their ranks, and to march off in *quick time*, the lieutenant being three paces advanced in front of his men, and the ensign one. The colours will be received as usual; and the grenadiers, on their arrival on the left flank of the guards, will file at *ordinary time*, through the ranks; the lieutenant, and the colours, in front of the front rank. The guards are to march off at *ordinary time*, and by divisions, taking care, that when they open their ranks, the front rank of each keeps its exact distance from the front rank preceding it. When there are more officers than one belonging to the same guard, the second in rank is to take post and to march past the commanding officer on the

the parade, at the head of the last division, instead of being in the rear of it. When there is an officer, senior to the field officer of the day, on the parade, the guards are to march by and salute him: the field officer of the day, in that case, marching at their head.

**GUARD-rooms**, (*Corps de Guard*, Fr.) places where guards are stationed for a given time. Although the following articles should properly come under the heads of furniture and utensils, we do not think them entirely out of place under a more ostensible point of observation.

*Cavalry and infantry* **GUARD-rooms** are allowed a water-bucket, candle-stick, tin can for beer, and drinking horns; they are also allowed fire-irons and coal tray, from the 1st of September to the 1st of May, when they are to be taken into store.

**N. B.** The rooms of the quarter-masters and serjeants of cavalry, and the serjeant-major and quarter-master serjeant of infantry, to be furnished with the necessary bedding and utensils in the same manner as is allowed to the soldiers' rooms. For a more specific account, see the General Regulations.

**GUARD**, *in fencing*, implies a posture proper to defend the body from the sword of the antagonist.

The word *guard* is seldom applied among small swordsmen to any position but those of carte and tierce; the other motions of defence are styled parades. See **FENCING**.

**GUARDS of the broad sword**. The positions of defence adopted with that weapon are generally termed guards, and may be comprised under the inside-guard, half-circle guard, hanging guard, half-hanging guard, medium guard, outside guard, St. George's guard, and spadron guard. See **BROAD-SWORD**.

*Prepare to GUARD*, in the cavalry sword-exercise, is performed by bringing the extremity of the sword-hilt up to the pit of the stomach, with the back of the hand outwards; the blade of the sword to be carried perpendicularly, with the flat towards the face. From this position the *guard* is taken by darting the sword hand smartly forwards towards the left ear of the antagonist.

**GUARD**, *in the cavalry sword exercise*, is used to denote one particular position, which consists in holding the sabre near-

ly horizontal across the face, the point rather higher than the hilt, the sword-hand directed towards the left ear of the antagonist. Although this be peculiarly denominated *guard*, yet it is not to be considered as a position calculated to meet every sort of attack, or an eligible position to charge an enemy; but as the central point from which the requisite change for attack or defence may be effected. The other positions of defence in the cavalry exercise are stiled **PROTECTIONS**.

**GUASTADOURS**, Turkish pioneers. Armenians and Greeks are generally employed in the Turkish armies, to do the fatigue-work that is necessary for the formation of a camp, or for conducting a siege.

**GUDDA**, an Indian term for a small fort erected upon a hill or eminence.

**GUDGE**, an Indian measure 24 inches long.

**GUÉRITE**, Fr. this is also called *Echauguette*, cuntry box, small turret. In fortified towns there are several small turrets of this denomination, which are sometimes made of wood, and sometimes built with stone. They are generally fixed on the acute points of bastions, and sentinels are posted within them, for the purpose of watching the ditch, and of preventing any surprize in that quarter.

Those used upon the Continent, particularly in France, contain from 3 to 4 French feet diameter within, and are 7 or 8 feet high. Their general shape or figure is round, pentagonal, hexagonal, &c.

There are apertures made on every side, through which the sentinel can observe every thing that passes in the ditch. A path about 2 or 3 feet broad is cut through the parapet and the banquette, up to the entrance of the *guérite*. Wooden *guérites* are generally used where the rampart is lined with turf only.

The spots best adapted for *guérites*, are at the flanked angles of bastions, and at the angles of epaulements. Sometimes indeed, they are placed in the center of the curtains. They must jut out at the point of the angle, and the ground floor should be upon a line with the cordon, which is a sort of fillet or trace that marks the separation of the rampart from the parapet. They must likewise

likewise project far enough to afford the centinel who is within, a full view of the faces, the flanks and the curtains, and, if possible, a thorough command of all the ditches.

*Gagner la GUÉRITE, Fr.* A familiar phrase to express the escape of a person.

*Enfiler la GUÉRITE, Fr.* to avoid the pursuit of another.

*GUERRE, Fr.* War; which see.

The word *guerre* is indeed so frequently used among the French, that we shall not be thought too minute in specifying some general terms under that head. The principal ones are,

*GUERRE civile, Fr.* See CIVIL WAR.

*Homme de GUERRE, Fr.* a military man.

*Nom de GUERRE, Fr.* a borrowed name.

*Petite GUERRE, Fr.* a harassing species of warfare. A contest for plunder.

*Place de GUERRE, Fr.* a fortified town or place.

*Faire la GUERRE à l'œil, Fr.* in a figurative sense, signifies to watch steadfastly, and without taking the eye from a particular object.

*A la guerre comme à la GUERRE. A* familiar expression among the French, which implies, that things must be taken as they come.

*On ne fait la GUERRE que pour faire enfin la paix, Fr.* War, after all, must end in peace.

*La guerre nourrit la GUERRE, Fr.* figuratively means, that an army always subsists at the expence of the country in which it lies.

*GUERRE de Secours, Fr.* war of alliance or confederacy. This term is more especially applicable to that species of contest in which neighbouring princes or countries embark to defend those with whom they are in alliance, against the aggression or exorbitant demands of a conqueror.

If such a contest or war be entered into upon the faith of settled treaties, the parties are bound not only to supply the stipulated number of soldiers, but even to augment their quota, if necessity should require, and sometimes to march in person against the common enemy.

If the object be to prevent any adjacent country from falling into the

hands of a conqueror, who might afterwards molest the contracting party, the latter should observe many precautions before he withdraws from the contest; the principal one is to demand the possession of some strong places upon the frontiers, to prevent the inhabitants of the country that is attacked from making a separate peace.

The general selected to command an auxiliary army must be endued with wisdom and foresight. He must be wise and intelligent in order to preserve discipline and good order among his troops: and have foresight to provide for the wants of his army in a strange country, and to see that the men are not sent more into action than they ought, and that nothing is done in the prince's cabinet contrary to the interest of his employer.

*GUERRE de montagne, Fr.* a war which is chiefly carried on in a mountainous part of the country. This species of warfare is extremely hazardous, as it cannot be pursued without a thorough knowledge of the country, and by means of able stratagems. Marshal Saxe, in his *Reveries*, lays it down as a rule, that no army or detachment must venture into passes or narrow ways, without having first secured the eminences round them; and if the enemy should defend the gorges or outlets, false attacks must be resorted to, in order to divert his attention from a real one which is made against a weak quarter. It frequently happens that byeways are found out, which have escaped the enemy's observation, and through which detached bodies may penetrate for the purpose of turning his flanks. In a *guerre de montagne*, or mountain-contest, it is essentially necessary, that the advancing body should keep up a regular and safe communication with its rear, as well to secure a retreat if necessary, as to have a free intercourse with its convoys.

*GUERRE de chicane, Fr.* See WAR, of *chicane* or *stratagem*.

*GUERRE Sainte, Fr.* a romantic expedition which was made by the Christians against the infidels in Palestine, for the purpose of re-conquering the Holy Land, from whence it was called holy war, or *guerre sainte*. See CRUSADE.

*Foudre de GUERRE, Fr.* a figurative expression among the French, to mark the character of a man who has distinguished himself in battle, and is acknowledged to possess a superior degree of valour.

*Flambeau de la GUERRE, Fr.* the torch of war. Any person who causes war to be carried on with violence and animosity is so called.

*Aller à la petite GUERRE, Fr.* to go out in detached parties for the direct purpose of plundering an enemy's country.

*Faire bonne GUERRE, Fr.* to carry on hostilities with as much humanity as the laws of war will permit.

*Faire bonne GUERRE à quelqu'un, Fr.* to treat with a man decently, but vigorously, on matters that require explanation and final arrangement.

*GUERRE et pitié ne s'accordent pas ensemble, Fr.* a French proverb, signifying that war and commiseration seldom go hand in hand.

*GUERRE juste, Fr.* a just and necessary war, generally caused by the aggression of a rival nation. Hence the late contest with France has been uniformly called by the British ministers *une guerre juste*, a just and necessary war on the part of England, because they maintain, that the French revolutionists in 1792 were the first aggressors; the French, on the other hand, assert the reverse. With respect to the present contest, we can only say, that both countries may severely feel the effects of national animosity and competition, before the blessings of peace can be restored.

*GUERRE injuste, Fr.* an unjust war.

*Longue GUERRE, Fr.* a long war.

*GUERRE étrangère, Fr.* a foreign war.

*GUERRE d'outre mer, Fr.* a war beyond the seas.

*Gens de GUERRE, Fr.* See GENS.

*Le métier de la GUERRE, Fr.* the profession of arms. Hence it is figuratively said, *les François sont au fait du métier de la guerre de terre, et les Anglois sont au fait du métier de la guerre de mer.* Frenchmen are at the top of the profession of arms on land, and Englishmen are unrivalled at sea.

*Les lois de la GUERRE, Fr.* The laws of war.

*Le droit de la GUERRE, Fr.* the rights of war.

*Ruse de GUERRE, Fr.* a warlike stratagem.

*En temps de GUERRE, Fr.* in time of war.

*Munitions de la GUERRE et de bouche, Fr.* warlike stores, and provisions.

*Préparatifs de GUERRE, Fr.* warlike preparations.

*Place de GUERRE, Fr.* a fortified place.

*Machine de GUERRE, Fr.* a warlike instrument or machine.

*Conseil de GUERRE, Fr.* a council of war. It likewise means a court martial.

*Vaisseau de GUERRE, Fr.* A ship of war.

*Vaisseau armé en GUERRE, Fr.* an armed vessel.

*C'est un grand homme de GUERRE, Fr.* he is a warlike character.

*Les malheurs de la GUERRE, Fr.* the misfortunes of war.

*Avoir GUERRE, Fr.* to commence hostilities.

*Avoir la GUERRE, Fr.* to be in a state of warfare.

*Les fruits de la GUERRE, Fr.* the fruits or consequences of war.

*Entreprendre la GUERRE, Fr.* to enter into a war.

*Déclarer la GUERRE, Fr.* to declare war.

*Soutenir la GUERRE, Fr.* to maintain the war.

*Entretenir la GUERRE, Fr.* to support the war.

*Ces deux princes sont en GUERRE, Fr.* these two potentates are at war.

*Etre en GUERRE ouverte, Fr.* to be at open war.

*Se faire la GUERRE, Fr.* to make war with one another.

*Aller à la GUERRE, Fr.* to go to war.

*Allumer la GUERRE dans un état, Fr.* to light up a war, or excite troubles in any state or country.

*Porter la GUERRE dans le cœur d'un pays, Fr.* to carry war into the heart of a country.

*GUERRE entre les puissances égales, Fr.* war between two powers which are nearly equal in point of strength, and do not act with auxiliary troops.

*Qui terre a GUERRE a, Fr.* a French proverb, signifying, every man who has landed property is exposed to feuds and litigation.

*GUERRES du Roi, Fr.* Wars entered

tered into by the old kings of France against their powerful vassals. Before the consolidation of the French monarchy, as it remained until the revolution in 1789, &c. a distinction was made between what were called the King's forces, and those belonging to the State; so that whenever a difference occurred between the sovereign and the powerful Seigneurs or Lords in the provinces, the contest was called *guerre du Roi*, or the King's war. On these occasions the latter could only force his immediate dependants to accompany him; so that frequently the forces of the insurgents were more numerous than those of the King. Louis, surnamed *Le Gros*, was more than three years in continual warfare, before he could subdue *Bouchard de Montmorency*, whom three other great lords had joined. The war with the barons, amongst us, was of this description.

**GUERRIER**, *Fr.* Warrior.

*Un grand GUERRIER*, *Fr.* a great warrior.

*Les plus fameux GUERRIERS*, the most celebrated warriors.

It is also used as a substantive in the feminine gender, when speaking of an amazon, as, *la vaillante guerriere*.

**GUERRIER**, *Fr.* as an adjective is variously used, viz. warlike, any thing appertaining to war.

*Actions GUERRIERES*, *Fr.* warlike actions.

*Travaux GUERRIERS*, *Fr.* works of a military or warlike nature.

*Exploits GUERRIERS*, *Fr.* warlike exploits.

*Courage GUERRIER*, *Fr.* a warlike disposition.

*Humeur GUERRIERE*, *Fr.* a warlike spirit or temper.

*Nation GUERRIERE*, *Fr.* a warlike nation.

*Il a l'air GUERRIER*, *Fr.* he has a warlike look or appearance.

*Il a la mine GUERRIERE*, *Fr.* he has a warlike aspect.

**GUERROYER**, *Fr.* to make war.

**GUERROYEUR**, *Fr.* a warrior.

**GUET**, *Fr.* This term was particularly attached to those persons belonging to the French body guards, that did duty over the king's person during the night.

*Guet de la mer*, *Fr.* the watch which

the inhabitants belonging to parishes, towns, or fortified places, situated on the sea coast, were bound to keep for their security. On occasions of this sort, the signal of alarm was made during the day by smoke, and during the night by lighted combustibles.

**GUET**, *Fr.* in a military sense, signifies rounds, or those duties of a soldier, or patrolling party, which are prescribed for the security of a town, &c. and to prevent surprises.

*Faire le GUET au haut du beffroi*, *Fr.* to be put upon duty, or stand watch at the top of a church belfry.

*Asseoir le GUET*, *Fr.* to set the watch.

*Poser le GUET*, *Fr.* to post the watch.

*Etre au GUET*, *Fr.* to be upon the watch.

*GUET à pied*, *Fr.* foot patrol.

*GUET à cheval*, *Fr.* horse patrol.

*Ce sont les bourgeois qui font le GUET*, *Fr.* the inhabitants of the place go the rounds.

*Cri au GUET*, *Fr.* the hue and cry.

*Le GUET vient de passer*, the patrol has just passed.

*Avoir l'œil au GUET*, *Fr.* to be minutely watchful and observing. It also signifies to be listening for the direct purpose of acquiring information.

*Maison de GUET*, *Fr.* round-house.

*Mot du GUET*, *Fr.* watch-word.

*Donner le mot de GUET*, *Fr.* to give the watch-word.

*Se donner le mot de GUET*, *Fr.* to understand one another. In familiar intercourse it means likewise to play booty together.

**GUET-apens**, *Fr.* Ambush; any premeditated design to injure another in a clandestine manner. The French frequently use this expression; as

*Ce n'est point un rencontre ni un duel, c'est un GUET-apens*, *Fr.* it is neither an accidental meeting nor a duel, it is a downright plot to murder him.

*Droit du GUET et garde*, *Fr.* a right which was formerly enjoyed in France, by some lords of the manor, and by which they were authorized to call upon their vassals to watch and patrol for the security of their castles.

**GUETRE**, *Fr.* See **GAIER**.

*Tirer vos GUETRES*, *Fr.* Go about your business; a familiar phrase which is used among the French when a person is discarded, or turned away in a

summary

summary manner. It in some degree corresponds with our expression, *to the right about*.

*Il y a laissé ses GUETRES*, Fr. a figurative expression among French soldiers, signifying, that a person died in such a place.

**GUETRER**, Fr. to put on gaiters.

**GUËTTE**, Fr. a name given by the French carpenters to a stake that is fixed sideways, and which serves for various purposes.

**GUETTER**, Fr. a familiar phrase, signifying to watch the motions of any body, for the purpose of circumvention or surprise.

**GUETTER** likewise means to watch for a fit opportunity to get access to any person.

*Il y a des sergens qui le GUËTENT*, Fr. there are sergeants who watch him closely.

*Le soldat GUËTTOIT son colonel pour lui présenter un placet*, Fr. the soldier watched his colonel, in order to lay his petition before him.

**GUESE**, Fr. a rough piece of iron, which has been melted, and has not gone through any further process or purification.

**GUICHET**, Fr. a small door or outlet, which is made in the gates of fortified towns. It is generally four feet high, and two broad; so that a man must stoop to get through. In 1669, the high town of the city of Albulquerque, in Spain, escaped being surprised by means of one of these outlets. In garrison towns, the guichet is left open for the space of one quarter of an hour after the retreat, in order to give the inhabitants time to enter.

**GUICHET d'une porte d'écluse**, Fr. an opening which is made in the gate of a sluice, and which closes by means of a flood-gate. It serves to let in water when wanted.

**GUIDES**, (*guides*, Fr.) are generally the country people in the neighbourhood where an army encamps; they are to give intelligence concerning the country, the roads by which to march, and the route by which the enemy may approach. Guides should be faithful, because in giving false intelligence, or guiding the troops wrong, they may greatly endanger the army. Several guides are requisite, as every corps that marches by night should have one at

least. There is sometimes a captain or chief of the guides, who should be a man of intelligence, active, and attentive to the diligence and fidelity of his people. He should always have a sufficient number with him, and who are well acquainted with the country.

In time of war, particularly in the seat of it, the guides invariably accompany head quarters, and a certain number is allotted not only to general officers, but to all detachments made from the main body, either for the purpose of combating the advanced posts of an enemy, of protecting escorts, or securing convoys. Guides, in an army, may be justly called its principal eyes. They are to a body of men what the eyes are to the human frame. They cannot however, be too jealously watched.

**Corps des Guides**, Fr. the corps of guides. This body was originally formed in France in the year 1756, and consisted of one captain, one 1st lieutenant, one 2d lieutenant, 2 sergeants, two corporals, one ensign, and twenty privates, called *fusiliers-guides*.—Twelve out of the twenty-five (which was the effective number) were mounted. These consisted of one serjeant, one corporal, and ten fusiliers. Their particular duty was to carry orders that required dispatch; and on this account they were always attached to head quarters. The twelve fusiliers were mounted on small active horses, about four French feet, five or six inches high. They were supplied with a saddle, blue saddle-cloth trimmed with white, holster-caps the same; and they were armed with a fusil and cut-and-thrust bayonet, a pistol, sabre, with a cartouch-box, containing 20 rounds. They wore half boots, or bottines. Each man carried, moreover, one field utensil out of the twelve belonging to the company. These utensils consisted of four hatchets, four shovels, and four pick-axes. The thirteen *fusilier guides* on foot were armed with a fusil six inches shorter than the regular musket, with a blade bayonet and a cartouch-box, holding twenty rounds of ball-cartridges. Their uniform was a blue coat, waistcoat and breeches, with flat white metal buttons. The hat was bordered with common white lace for the soldiers, and of a superior quality for the serjeants; which latter had three silver brandenburghs

hanging from each shoulder. The corporals had three made of white worsted, and the unspessade two ditto.—The daily pay of the captain was 4 livres, or 6s. 8d. the 1st lieutenant 1 livre, 7 sols, and 6 deniers, equal to 2s. 4d. the 2d lieutenant 1 livre, or 10d. each serjeant 13 sols, or 6½d. each corporal 10 sols, or 5d. each unspessade 8 sols, 6 deniers, or 4½d. and each private 6 sols, 6 deniers, or 3½d. The establishment of the *Corps de Guides*, under the present dynasty, is much more splendid and expensive. They usually parade in Paris with the consular guard.

**GUIDON, Fr.** See SIGHT.

**GUIDON**, in ancient military history, the name of a sort of standard carried by the king's life-guards; it is broad at one extreme and almost pointed at the other, and slit or divided into two.

**GUIDON** also implies the officer who carries the standard.

**GUIDONS**, in the French service, were exclusively attached to the Gendarmes; and among them the word meant as with us, not only the standard but likewise the officer who carried it.

**GUIGNEAU, Fr.** This word means the same thing as *chevêtre*. It is a piece of wood which joins the joists of a floor, that are cut to make room for the hearth of a chimney-piece.

**GUILLAUME, Fr.** a tool somewhat like a plane, which is used by carpenters, and of which there are several sorts, according to the nature of the work.

**GUINDAS, Fr.** All machines which by means of a wheel and its axis serve to raise heavy loads are so called by the French.

**GUINDER, Fr.** to draw up any weight. Hence the term *guindage*, which is applied to the movement of loads that are raised and let down.

**GUINEA**, a coin well known in Europe, and particularly so in Great Britain and Ireland; once in plentiful circulation, but of late years a very scarce commodity.

**Marching GUINEA**, a sum of money which is given to every soldier in the British Militia when he first marches out of the county. This money is paid to the captains of companies by the agent of the regiment, who receives the same, upon their signatures, from the

receiver general of the county or riding.

**Expiration GRINCA**, the sum of money which is paid to a militiaman when the period for which he was enlisted expires. This money ought more properly to be called the *renewal*, as it is literally given for duties to be performed; or rather for a continuation, instead of expiration, of service. It is also paid by the captains of companies.

**GUISARMERS, Fr.** a body of free archers, or bowmen, who took their name from an offensive weapon called *guisarme* or *jusarme*, somewhat similar to the *roudgar*, a sort of javelin which was used in hunting the wild boar. Its length was equal to that of the halbert, and it had a broad piece of sharp iron fixed to one end.

**GULLY.** Any hollow which has been made by running water. Ambuscades are frequently laid in such places.

**GUN**, a fire-arm, or weapon of offence, which forcibly discharges a bullet through a cylindrical barrel by means of gunpowder. The term is chiefly applied to cannon.

Somnecus derives gun from *mangon*, a warlike machine which was used before the invention of guns. He establishes his derivation by taking away the first syllable.

**Curricie GUNS** are small pieces of ordnance, mounted upon carriages of two wheels, and drawn by two horses. The artillery-man is seated on a box, and the whole can be moved forward into action with astonishing rapidity.—The tumbrils belonging to curricie guns carry 60 rounds of ball cartridges.—Great improvements are daily making in this machine on account of its acknowledged utility.

**Great Gun.** See CANNON.

**Evening Gun** } is generally a 6 or  
**Morning Gun** } 12 pounder, which is fired every night about sun-set, and every morning at sun-rise, to give notice to the drums and trumpets of the army to beat and sound the retreat and the reveille.

**GUN-fire.** The time at which the morning or evening gun is fired.

**GUN-boat**, a boat which is generally made with a flat bottom, and used to form a kind of floating battery, to cover the landing of troops.

**Gover's Gun-carriage**, a machine lately

lately invented by a Mr. Gover of Rotherhithe, the merits of which consist in the following particulars:

*General advantages of the above gun-carriage over the common one.*

1st. It may be worked with one-third the number of men that are necessary to work the common gun-carriage, and with abundant more ease and safety to the men that work it.

2dly. Its motion of traversing is so easy, that it may be always thrown fore and aft and loaded within board (if approved of) clear of the port-hole; which will preserve the men from the enemy's small arms; it is also, when loaded, readily run out again and pointed to the object with ease and certainty.

3dly. As the gun with its carriage, moves on an inclined plane, which may be raised or lowered, as the situation of the ship, or object to be fired at requires, by means of a jack, which enables the captain of the gun (as he is termed) to run the gun out himself by giving the plane a sufficient inclination; the same means which produce this effect do also retard the counteraction of the gun, which circumstance eases the breeching as well as the ship's sides greatly when the gun recoils.

*Advantages in the above carriage over the common carriage, when the lee-guns are engaged.*

When the lee-gun is discharged upon the common carriage, and recoils to the extent of its breeching, if the men are not very attentive to the relieving tackles, which at all times they cannot be, the ship at the same time having a heel, the gun immediately returns to the port, so that the men upon the old plan, are obliged to bouse the gun in again before it can be loaded, which makes it as difficult in fighting the lee guns as the weather guns; but the difficulties are obviated in the above carriage by its having a pole, which, when the lee guns are discharged, drops and prevents the gun returning to the port until loaded again; this also prevents the necessity of relieving tackles.

*Advantages or benefit arising from securing the guns fore and aft when at sea, or out of action.*

When guns are secured fore and aft they stow snug and close to the ship's

side, resting upon two or three beams, and afford more room within board to work and manage the ship, especially on the upper deck; it gives the advantage of keeping all the ports close shut and the guns dry on the lower deck; it also conceals them from the enemy until it is necessary to use them; they can be got ready for action much sooner than in the old way, when secured athwart ship, by the breeching and tackles being frapped together, and muzzle-lashed over the port. When a gun is secured athwart-ship, the muzzle of the gun rests entirely against the short timbers over the port, being the weakest part of the ship's side; and it is the opinion of many experienced mariners, that several ships have foundered, that many have proved very leaky and got damaged from the working of the guns against the sides, when boused in that manner, and often break loose by the strain and working of the ship beyond what the breechings and tackles will allow.

*Advantages of the above carriage over the common one in pointing the gun.*

The captain of the gun (as he is termed) will be capable of running the gun to the port without any assistance, whether to windward or to leeward, by means of the jack, as before-mentioned; he will also be able to traverse it fore and aft, elevate or depress the gun himself, with much more ease and certainty of doing execution than in the common carriage, for the following reasons: the captain of the gun standing at the train of the carriage with a hand of the lock in one hand, and the handle of the screw in the other, he traverses, elevates, or depresses the gun without depending upon other men, and the moment it is pointed at the object, he discharges it, and consequently is the more sure of doing execution; so that at a proper distance for a ship to engage, he must be a very indifferent gunner to miss striking the object; whereas upon the common plan, in action, great part of the powder and shot is expended without doing any execution whatever.

The inventor of this carriage observes, that during the last war, in his majesty's service, he has seen men in action

take nearly five minutes to point the gun, and perhaps not near the object at last; for it must be observed, that before the train of a common carriage can be moved, you must entirely relieve the trucks from the dock: and the men who perform this service, not standing at the breech of the gun, but at the side of the carriage, cannot see the object they are directing the gun at: and this accounts for the great uncertainty of the shot doing execution.

If the ship has a pitching motion, it will be necessary to apply tackles to steady the gun; one man to each tackle-fall will be sufficient for this purpose. The captain of the gun will stand at the train of the gun, with the handle of the screw in his hand, directing these men to train the gun until it comes to the object he is aiming at, he then immediately discharges the gun without being under the necessity of giving these men any signal to drop the tackle-falls. The tackles, moreover, being hooked to the traversing carriage are not affected by the recoil of the gun, therefore the men would not be injured if they had the tackle falls in their hands when the gun is discharged; neither are they in the least danger of being injured by the projection of the trucks or ropes that are applied to the common gun-carriage, as this new carriage acts without those projections.

*Directions how to manage the carriage, in order to point the gun with greater certainty.*

In order to attain the true level of the gun, with the surface of the water, when the ship, or the object of its attack should happen to be surrounded with smoke, and the gunner consequently deprived of any certain mode of pointing the gun by his eye, it will be proper to observe the following rule: let the gunner, when the ship is in smooth water, and the carriage is consequently upon a level with its surface, place the inclined plane in a horizontal position, and the gun point blank, then let him wind up the jack till the plane has inclined enough to give the gun motion towards the port, and observing the number of turns the jack requires for that purpose, which will not exceed three, he will turn the same

back again, which brings the gun point blank, and consequently certain of doing execution.

The common carriages, possessing no such mechanical principles to ascertain the level of the gun with the surface of the water, when the object is obscured from the sight, can be under no certainty (but quite the reverse) of the effect of the shot; whereas, within a moderate distance for ships to engage, this principle insures nearly the certain effect of striking the object, and therefore the proportion of this effect is reasonable, and moderately calculated at three to one in favour of this gun-carriage; and thus a considerable expence in the saving of powder and shot is produced.

*Disadvantages that attend pointing a gun, mounted on the common gun-carriage.*

In training the common carriage you are obliged to apply iron crows and handspikes, which are very dangerous in action; and, although you are obliged to apply those instruments on account of the great power required to move them, it must be considered a very uncertain way of pointing a gun. Suppose the captain of the gun directs these men with crows and handspikes to train the gun fore or aft, as occasion may require, it is probable they may train the gun too far, then it must be trained back again; and after the captain of the gun has laid it, as he supposes, to do execution, it is his duty to see the breeching tackle-falls and men clear before he discharges the gun, as many accidents happen for want of strict attention to the clearing the tackles, ropes, &c. that are applied to the common carriage, and too often, while the captain of a gun is taking these precautions, the position of a ship may be so altered as to make the shot go wide of the object.

Another material advantage, which the new gun carriage possesses, is the preservation of the ship's decks, which by the use of iron crows and handspikes to the common carriage, are very much damaged and torn, particularly in ships that go to sea short-handed, as it is impossible to traverse the guns, or house them to the port (if a weather gun), without the assistance of these prejudicial instruments; therefore a considerable

able expence will be saved in the preservation of ships decks by the principles of this invention.

The new-invented carriage would be a considerable saving by the reduction of men, or an advantage in short complements, as the proportion of 250 men, on the old plan, would not require 100 on the new; and a ship would go to sea much better prepared for fighting than they do with the common carriage with 250 men.

*Comparative statement of the advantages of the patent gun-carriage over the common one in point of expence.*

*The common gun-carriage.*

This carriage used on board a ship of war, or Indianan (upon supposition), carrying 40 guns and 160 men, will require of that number, to be properly managed, 140 men to work her full broadside of 20 twelve-pounders, at the rate of 7, the usual complement of men, to each gun; in which case there are 20 only left to manage the ship.

*The patent carriage.*

With the use of this carriage on board a ship, carrying the same number of guns, and 100 men only, the full complement of men to each gun being 3, it will require only 60 men to work her broadside, consequently 40 are left to work the ship; but if necessity should require both sides of the ship to be engaged at the same time, then the complement of 3 may with propriety be reduced to 2, who will with greater ease and expedition, and considerable more certainty of effect, work the gun than the full complement to the common carriage. In this case the whole 40 guns may be worked with 80 men, and 20 are then left to work the ship. Thus it appears, that a ship carrying 100 men, with the use of this new carriage, will have considerable advantages over one with 160 men upon the common plan.

Allowing, therefore, the superior advantage of the ship with 100 men over the 160 (and so in proportion) the complement of men is reduced to 60; and calculating the expence of that number for 18 months at 5*l.* per month, it will be found to amount to 5100*l.* from which deducting the last additional expence of fitting out a ship of 40 guns with carriages of this construction, amounting to 400*l.* there will remain

5000*l.* saving to every ship fitted out upon this scale.

*Advantages the patent gun-carriage possesses over the common one in throwing the guns overboard.*

The last, though not the least, important advantage that the patent carriage possesses over the common one, is the ease with which the gun may be dismounted and thrown overboard in stress of weather, or to avoid an enemy of superior force, which is sometimes the only expedient left to save the lives of the people, as well as the ship. This service is effected in the following manner, viz.

The carriage, which is supposed to be secured, must be cast loose, and trained athwart-ship, square with the ship's sides, and in the center of the port fore and aft; the jack must then be shipped, and the gun run out (and in case the motion of the ship should be so violent as to cause the gun to run backwards and forwards on the inclined plane, it will be necessary to stop the gun out) the bed and coin must then be taken out, and the cross bar, which supports the inclined plane when the gun is secured, must be laid across the graduations of the upper carriage, resting on the two sides of the same, so as to depress the muzzle of the gun as much as possible; the bed should then be placed upright; with the thick end bearing on the sill of the port, and the thin end to receive the underside of the gun as near the center as possible; the capsquares must then be turned back to let the gun rise; the plane, which is now wound down as low as the train of the carriage will admit, must be wound up as high as the train, as the length of the rack of the jack will allow, which raises the body of the gun considerably above the carriage; and the gun, which now rests with its breech on the cross bar, and the center of the metal on the bed, may, by two men pinching at the breech with a handspike, be thrown overboard, without the assistance of tackles or any thing else but what belongs to the gun. If a roller were laid on the port-sill within the bed, that would facilitate the rolling of the gun out of the port when the bed falls; this service is performed with four men only, being the number quartered to the gun in action, and in the short space of five minutes.

Comparative statement of arming a frigate's main deck with 28 twenty-four-pounders, weight 48 cwt. mounted on common carriages; and one with 28 twenty-four-pounders (medium guns), weight 31 cwt. mounted on patent carriages, together with the number of men necessary to each plan, when either the broadside or the whole of the guns are engaged; to which is added, the charges of powder to each gun, and the expence incurred by each mode of arming.

## Heavy guns and common gun-carriages.

Number of guns to main-deck	-	28
Nature of gun	-	24-pounder
Weight of gun	-	48 cwt.
Number of men to each gun	-	12
Number of men to broadside of 14 guns	-	168
Number of men to both sides, 28 guns	-	336
Charge of powder, weight	-	8 lbs.
Expence of each gun and carriage	-	58/.
Total expence	-	1621/.

It is necessary to observe, that the 24-pounder sea-service gun, weighing 48 cwt. is the lightest 24-pounder at present in his majesty's service.

# G U N

## Medium guns and patent carriages.

Number of guns to main-deck	-	28
Nature of gun	-	24-pounder
Weight of gun	-	31 cwt.
Number of men to each gun	-	4
Number of men to broadside of 14 guns	-	56
Number of men to both sides, 28 guns	-	112
Number of men saved, when both sides are engaged	-	224
Charge of powder, weight	-	4 lbs.
Expence of each gun and carriage	-	60/.
Total expence	-	1680/.
Extra expence	-	56/.

It appears by the above statement, that a frigate carrying 28 twenty-four-pounders (heavy guns and common carriages) on her main-deck, will, if both sides are engaged, require 336 men, which exceeds the complement generally allowed to ships of that force; consequently, there is not a man left for other services; whereas, a ship carrying the same number of guns on her main deck, 24-pounders, of a medium nature (but equally as effectual), mounted on patent carriages, would require but 112 to fight both sides; there are then 224 men left for other purposes of war, two-thirds of which might be spared, if found necessary, for manning the prizes, or for other services; and the frigate thus reduced in men, would be able to make a better defence with her great guns than she could with her full complement on the common plan. The additional expence incurred by arming a ship with medium guns and patent carriages will be about 56/., but if the usual complement of men were reduced ten, that reduction could not be felt, and would lessen the annual expence of a frigate about 700/.. There will also be a considerable saving in the expence of gunpowder, the medium gun requiring but one-sixth of the shot's weight; whereas the heavy gun requires one-third, being double the quantity.

Thus it appears, that a ship armed with medium guns and patent carriages will have considerable advantages over one with the common plan; and from the facility and accuracy with which they are worked, would have a double effect; and by the proposed reduction

of men it will be found, that a considerable saving would be obtained by this mode of arming ships.

*Advantages of the patent carriage when applied to garrison service.*

This carriage is made after the same principle as that intended for sea-service, with this difference only :

As the breeching must be made fast to iron rings in the sides of the lower carriage, it will be necessary to make it about one-third longer than the sea-service carriage, for the purpose of easing the breeching and bolt by which it is fixed to the platform, by giving the gun a longer recoil. Its motion of traversing is the same, and the gun will run over the breastwork or embrasure by means of the jack and inclined plane with one man only instead of six, which are now necessary for the same service, and in one-sixth part of the time. This carriage would be found admirably constructed for a battery *en barbette*, the rollers being set in such a direction as to permit it being traversed to any angle that may be required. The breeching of the gun being dependant on the carriage only, will not impede the recoil of the gun in any direction. Its motion of traversing is so easy and quick, that one artilleryman might angle it to  $90^{\circ}$  in less than half a minute, so that no vessel could possibly pass a battery thus constructed without being damaged; the jack also serves to elevate and depress the gun with the greatest facility as well as accuracy, and is much the best method of elevating or depressing the gun. This carriage may also be transported without the least difficulty from one part of a battery to another, by means of an Hanoverian truck being applied to the train of the carriage, which relieves the rollers at the train, and the carriage is then perfectly adapted to that service. If the battery is erected with stone, the carriage may traverse with a chain in the same manner as at sea; the chain hanging to a hook fastened in the breastwork.

But if the breastwork is formed of earth, and incapable of holding a hook, it will then be necessary to drive a piece of timber of square dimensions, similar to a pile, perpendicularly into the earth, to receive an iron bolt, about  $2\frac{1}{2}$  inches

diameter, which passes perpendicularly through the breast or truck transom of the lower carriage, and then into this pile or timber head, and placed at such a distance from the breast-work as to admit of the carriage being traversed to  $90^{\circ}$ . This is similar to the present method of fixing carronades at sea, which, with the length of the recoil given, together with the resistance the re-action of the gun meets with by recoiling up the ascent of the inclined plane, would be perfectly secure for any length of action, or for guns of any caliber.

As this gun can never move from its given center, and consequently at all times forming one radius, in cases where the battery is *en barbette*, an entrenchment should be formed exactly to the radius of the carriage, and at such a distance from the train as to enable the men who are quartered at the handspikes to walk completely round the platform with ease, and deep enough to keep the men who train the gun under cover of the breast-work; so that one man only is exposed to the fire of the enemy. The use of locks are also recommended to guns thus mounted, as it not only enables the man who points it, to fire the instant it bears on the object, but also keeps the other men from being exposed to danger; which necessarily must be the case when the match or port-fire is applied to discharge the gun. Three men will be sufficient to work a 24-pounder of 48 cwt. and from the facility with which they are worked, 1 gun would be equal to 3 on the present principle; and from the accuracy with which it is traversed, elevated, and depressed, the greatest advantages must result from the certainty there is of the effect of the shot.

GUNNEL, or } the lower part of  
GUNWALE, } any port where ordnance is planted. It likewise means that beam in a pontoon which supports the main waste.

GUNNER, in the artillery, is the second rank of private men in the royal regiment of artillery.

Master GUNNER, one who teaches the men on ship-board to load and fire the guns: he is also a patent officer of the ordnance in garrisons. The master gunner of the Tower has the principal care of the armoury.

GUNNERS.

**GUNNERS.** All gunners under the ordnance are within the meaning of the **military act**. See Section 72.

**GUNNERY**, the art of determining the motions of bodies shot from cannon, mortars, howitzers, &c. See the article **PROJECTILE**.

The late ingenious Mr. Robins, having concluded from experiments, that the force of fired gunpowder, at the instant of its explosion, is the same with that of an elastic fluid of a thousand times the density of common air, and that the elasticity of this fluid, like that of the air, is proportional to its density, proposes the following problem:

The dimensions of any piece of artillery, the weight of its ball, and the quantity of its charge being given; to determine the velocity which the shot will acquire from the explosion, supposing the elasticity or force of the powder at the first instant of its firing to be given.

In the solution of this important problem, he assumes the two following principles: 1. That the action of the powder on the shot ceases as soon as it is got out of the piece. 2. That all the powder of the charge is fired, and converted into an elastic fluid, before the shot is sensibly moved from its place.

These assumptions, and the conclusions above-mentioned, make the action of fired gunpowder to be entirely similar to that of air condensed a thousand times; and from thence it will not be difficult to determine the velocity of the shot arising from the explosion: for the force of the fired powder diminishing in proportion to its expansion, and ceasing when it is got out of the piece; the total action of the powder may be represented by the area of a curve, the base of which represents the space through which the ball is accelerated, while the ordinates represent the force of the powder at every point of that space; and these ordinates being in reciprocal proportion to their distance from the breech of the gun, because when the spaces occupied by the fired powder are as 1, 2, 3, 4, &c. the ordinates representing it will be as 1, 1-half, 1-3d, 1-4th, &c. it appears that the curve will be a common parabola, and that the area intercepted between it and an asymptote; and that the two ordinates repre-

senting the force of the powder at the first explosion, and at the muzzle of the piece, will represent the total action of the powder on the shot: but if the shot were urged through the same space by an uniform force equal to its gravity, the total action of this force would be represented by a rectangle, the base of which would be the base of the curve or intercepted portion of the asymptote above-mentioned, and the height of which would represent the uniform force of gravity. Hence the square of the velocity of the shot resulting from gravity is given, being the velocity it would acquire from a height equal to the space through which the powder accelerates it; and the proportion between the hyperbola and the rectangle is given from the analogy between the hyperbolic spaces and logarithms; therefore the velocity of the ball arising from the action of the fired gunpowder will be given.

Mr. Robins has also given us an ingenious way of determining, by experiments, the velocity with which any shot moves at any distance of the piece it is discharged from.

This may be effected by means of a pendulum made of iron, having a broad part at bottom, covered with a thick piece of wood, which is fastened to the iron by screws; then having a machine like a common artillery-gun, on two of its poles, towards their tops, are screwed sockets, on which the pendulum is hung by means of a cross piece, which becomes its axis of suspension, and on which it should vibrate with great freedom. Somewhat lower than the bottom of the pendulum there should be a brace, joining to which the pendulum is suspended; and to this brace there is fastened a contrivance made with two edges of steel, something in the manner of a drawing-pen; the strength with which these edges press on each other, being diminished or increased at pleasure by means of a screw. To the bottom of the pendulum should be fastened a narrow ribbon, which, passing between the steel edges, may hang loosely down by means of an opening cut in the lower piece of steel.

The instrument being thus fitted, if the weight of the pendulum, the respective distances of its center of gravity,

vity, and of its center of oscillation from the axis of suspension, be ascertained, it may from thence be found what motion will be communicated to this pendulum by the percussion of a body of a known weight, moving with a known degree of velocity, and striking it into a given point; that is, if the pendulum be supposed to rest before the percussion, it will be known what vibration it should make in consequence of such a blow; and if the pendulum, being at rest, is struck by a body of a known weight, and the vibration which the pendulum makes after the stroke is known, the velocity of the striking body may from thence be determined.

Now, the extent of the vibration made by the pendulum may be increased by the ribbon: for if the pressure of the steel edges on the ribbon be regulated by the screw, so as to be free and easy, though with some minute resistance to hinder it from slipping itself; then setting the pendulum at rest, let the part of the ribbon between the pendulum and the steel edges be down straight, but not strained, and fixing a pin in the part of the ribbon contiguous to the edges, the pendulum, swinging back by means of the impulse of the ball, will draw out the ribbon to the just extent of its vibration, which will be determined by the interval on the ribbon between the edges and the space of the pin.

The computation by which the velocity of the shot is determined from the vibration of the pendulum, after the stroke, is founded on this principle of mechanics; that if a body in motion strikes another at rest, and they are not separated after the stroke, but move on with one common motion, then that common motion is equal to the motion with which the first body moved before the stroke; whence, if that common motion and the masses of the two bodies are known, the motion of the first body before the stroke is thence determined. On this principle it follows, that the velocity of a shot may be diminished in any given ratio, by its being made to impinge on a body of weight properly proportioned to it.

It is to be observed, that the length to which the ribbon is drawn, is always near the chord of the arc described by the ascent; it being so placed, as to dif-

fer insensibly from those chords which must frequently occur; and these chords are known to be in the proportion of the velocities of the pendulum acquired from the stroke. Hence it follows, that the proportion between the lengths of the ribbon, drawn out at different times, will be the same with that of the velocities of the impinging shots.

Now from the computations delivered by Mr. Robins, it appears, that if the velocity of the bullet was 1641 feet in one second of time, when the chord of the arc described by the ascent of the pendulum, in consequence of the blow, was 17 $\frac{1}{2}$  inches, the proportion of the velocity with which the bullets impinge, to the known velocity of 1611 feet in one second, will be determined.

Mr. Robins is (till of late) the only author who has attempted to ascertain the velocity of a military projectile by experiment; yet his conclusions seem to be unsatisfactory. Perhaps he was too much attached to the forming of a system, and warped his experiments a little in favour of it. The resisting power he assigns to the air is probably too great; and his notion of the tripling of this power when the velocity of the projectile exceeds that of sound, seems to be rather an ingenious conceit than a well-grounded fact. However, experiment alone must decide these points.

The great importance of the art of gunnery is the reason that we distinguish it from the doctrine of projectiles in general; for in truth it is no more than an application of those laws which all bodies observe when cast into the air, to such as are put in motion by the explosion of guns, or other engines of that sort: and it matters not whether we talk of projectiles in general, or of such only as belong to gunnery; for, from the moment the force is impressed, all distinction, with regard to the power which put the body first in motion is lost, and it can only be considered as a simple projectile.

Every body cast into the air moves under the influence of two distinct forces. By the one it is carried forward with an equal motion, and describes equal spaces in equal times, in the direction in which it was projected; and by the other, which we call gravity, is drawn downwards in lines perpendicular

to the surface of the earth, with a motion continually accelerated, or whose velocity is always increasing. If either of these forces were destroyed, the body would move according to the direction of the other alone, so far as its motion was not hindered by the interposition of other bodies; but as both continue to act, the course of the projectile must be determined by a power compounded of those two forces.

*Definitions of GUNNERY.* 1. The impetus at any point of the curve is the perpendicular height to which a projectile could ascend, by the force it has at that point; or the perpendicular height from which a body must fall to acquire the velocity it has at that point.

2. The diameter to any point of the curve is a line drawn through that point perpendicularly to the horizon.

3. The points where the diameters cut the curve are called vertexes to these diameters.

4. The axis is that diameter which cuts the curve in its highest or principal vertex, and is perpendicular to the tangent at that point or vertex.

5. The ordinates to any diameter are lines drawn parallel to the tangent at the point where that diameter cuts the curve, and intercepted between the diameter and curve.

6. The absciss is that part of the diameter which is intercepted between the ordinate and the curve.

7. The altitude of the curve is the perpendicular height of the principal vertex above the horizon.

8. The amplitude, random, or range, is the distance between the point of projection and the object aimed at.

9. The elevation of the piece is the angle its axis (produced) makes with the horizon, and the axis itself is called the direction.

10. The horizontal distance to which a mortar, elevated to a given angle, and loaded with a given quantity of powder, throws a shell of a given weight, is called the range of that mortar, with that charge and elevation.

11. The inclination of a plane is the angle it makes with the horizon either above or below.

12. The directrix is the line of motion, along which the describing line or surface is carried in the genesis of any plane or solid figure.

### *Laws of motion in GUNNERY.*

1. Spaces equally run through with equal velocities, are to one another as the times in which they are run through, and conversely.

2. Spaces equally run through in the same or equal times, are to one another as the velocities with which they are run through, and conversely.

3. Spaces run through are in the same proportion to one another, as their times multiplied into their velocities, and conversely.

4. A body urged by two distinct forces in two different directions, will in any given time be found at the point where two lines meet that are drawn parallel to these directions, and through the points to which the body could have moved in the same time, had these forces acted separately.

5. The velocities of bodies, which by the action of gravity began to fall from the rest, are in the same proportion as the times from the beginning of their falling.

6. The spaces run through by the descent of a body which began to fall from rest, are as the squares of the times, from the beginning of the fall.

7. The motion of a military projectile is in a curve.

*Gun-powder*, a composition of saltpetre, sulphur, and charcoal, well mixed together, and granulated, which easily takes fire, and expands with amazing force, being one of the strongest propellents known.

*Invention of Gun-powder*, is usually ascribed to one Bartholdus Schwartz, a German monk, who discovered it about the year 1320; it is said to have been first used in war by the Venetians against the Genoese in the year 1380. Thevet says its inventor was one Constantine Anelzen, a monk of Friburg. Peter Mexia says it was first used by Alphonsus XI. king of Castile, in the year 1312. Ducange adds, that there is mention made of this powder in the registers of the chambers of accounts of France, so early as the year 1338; and our countryman, friar Bacon, expressly mentions the composition in his treatise *De Nullitate Magia*, published at Oxford in the year 1216. Some indeed are of opinion, that the Arabians or the latter Greeks were the first

first inventors of gun-powder about the middle ages of our æra; because its Arabic name is said to be expressive of its explosive quality. Considerable improvements have lately been made in the composition of gun-powder by the Chinese.

*Method of making GUN-POWDER.* Take saltpetre, sulphur, and charcoal; reduce these to a fine powder, and continue to beat them for some time in a stone mortar with a wooden pestle, wetting the mixture occasionally with water, so as to form the whole into an uniform paste, which is afterwards reduced to grains, by passing it through a sieve; and in this form, being carefully dried, it becomes the common gun-powder. For greater quantities mills are used, by means of which more work may be performed in one day than a man can do in a hundred. See MILL.

This destructive powder is composed of 75 parts nitre, 9 sulphur, and 16 of charcoal in the 100.

*How to refine saltpetre.* Put into a copper, or any other vessel, 100 weight of rough nitre, with about 14 gallons of clean water, and let it boil gently for half an hour, and as it boils take off the scum; then stir it about in the copper, and before it settles, put it into your filtering bags, which must be hung on a rack, with glazed earthen pans under them, in which sticks must be laid across for the crystals to adhere to: it must stand in the pan for 2 or 3 days to shoot; then take out the crystals and let them dry. The water that remains in the pans, boil again for an hour, and strain it into the pans as before, and the saltpetre will be quite clear and transparent; if not, it wants more refining; to effect which proceed as usual, till it is well cleansed of all its earthy parts.

*How to pulverize saltpetre.* Take a copper kettle whose bottom must be spherical, and put into it 1 lb. of refined saltpetre, with 2 quarts or 5 pints of clean water; then put the kettle on a slow fire; and when the saltpetre is dissolved, if any impurities arise, skim them off; and keep constantly stirring it with 2 large spatles till all the water exhales; and when done enough it will appear like white sand, and as fine as flour; but if it should boil too fast, take the kettle off the fire, and set it on some

wet sand, by which means the nitre will be prevented from sticking to the kettle. When you have pulverised a quantity of saltpetre, be careful to keep it in a dry place.

*Different kinds of GUN-POWDER.* It being proper that every one who makes use of gun-powder should know of what it is composed, we shall give a brief account of its origin and use. Gun-powder, for some time after the invention of artillery, was of a composition much weaker than what we now use, or than that ancient one mentioned by Marcus Græcus: but this, it is presumed, was owing to the weakness of their first pieces, rather than to their ignorance of a better mixture; for the first pieces of artillery were of a very clumsy, inconvenient make, being usually framed of several pieces of iron bars, fitted together lengthways, and then hooped together with iron rings; and as they were first employed in throwing stone shot of a prodigious weight, in imitation of the ancient machines, to which they succeeded, they were of an enormous bore. When Mahomet II. besieged Constantinople in the year 1453, he battered the walls with stone bullets, and his pieces were some of them of the caliber of 1200lb. but they could not be fired more than 4 times in the 24 hours, and sometimes they burst by the first discharge. Powder at first was not grained, but in the form of fine meal, such as it was reduced to by grinding the materials together; and it is doubtful, whether the first graining of it was intended to increase its strength, or only to render it more convenient for the filling it into small charges, and the loading of small arms, to which alone it was applied for many years, whilst meal powder was still made use of in cannon. But at last the additional strength, which the grained powder was found to acquire from the free passage of the fire between the grains, occasioned the meal-powder to be entirely laid aside. The coal for making gun-powder is either that of willow or hazle; but the lightest kind of willow is found to be the best, well charred in the usual manner, and reduced to powder. Corned powder was in use in Germany as early as the year 1568; but it was first generally used in England in the reign of Charles I.

*Government-powder,* } Powder, which  
*Ordnance-powder,* } having under-  
 gone, the customary proof established  
 by the board of ordnance, is so called,  
 and received into the king's magazines.

It has been recommended by a French writer to preserve gun-powder at sea by means of boxes which should be lined with sheets of lead. M. De Gentien, a naval officer, tried the experiment by lodging a quantity of gun-powder, and parchment cartridges, in a quarter of the ship which was sheathed in this manner. After they had been stowed for a considerable time, the gun-powder and cartridges were found to have suffered little from the moisture; whilst the same quantity, when lodged in wooden cases, became nearly half rotted.

*Proof of Gun-powder, as practised by the board of ordnance.* They first take out of the several barrels of gun-powder a measure-full, of about the size of a thimble, which is spread upon a sheet of fine writing paper, and then fired: if the inflammation be very rapid, the smoke rise perpendicular, and if the paper be neither burnt nor spotted, it is then judged to be good powder.

Then 2 drams of the same powder are exactly weighed, and put into an epreuve; which, if it raises a weight of 24 pounds to the height of  $3\frac{1}{2}$  inches, it is received into the king's magazine as proof.

*Gun-powder prover.* See EPROUVETTE.

*GUN-ROOM,* (*Sainte Barbe*, Fr.) the place where arms, &c. are deposited on board a ship.

*GUNSHOT,* (*Portée de Fusil*, Fr.) the reach or range of a gun. The space through which a shot can be thrown.

*GUNSHOT-WOUND,* any wound received from the discharge of cannon or fire-arms.

*GUNSMITH,* (*armurier*, Fr.) a man who makes fire-arms.

*GUNSTICK,* (*baguette*, Fr.) the rammer or stick with which the charge is driven into the gun.

*GUNSTOCK,* (*monture*, Fr.) the wood to which the barrel of the gun is fixed.

*GUNSTONE,* such materials, chiefly stone, as were formerly discharged from artillery.

*GUR,* a house or dwelling in India.

*GURRATY,* cantonments seven coss (or English miles) and a half from Calcutta.

*GURRIES,* mud forts made in India are so called. These forts are sometimes surrounded with ditches.

*GURRY,* an Indian term to express a certain division of time, comprehending 24 minutes; but the word among the Europeans is generally understood to mean an hour.

*GWALLER,* a fort in India, south of Jummah, 28 coss or English miles from Agra.

*GYMNASIUM,* a place in ancient Rome where athletic exercises were performed.

*GYMNASTIC,* (*gymnastique*, Fr.) pertaining to athletic exercises, such as leaping, wrestling, drawing the cross bow, fencing, &c. The Greeks, among whom the art originated, were accustomed to strip whenever they performed any part of it.

*GYMNASTIQUE Militaire*, Fr. the art or method of exercising the body so as to render it supple and capable of much fatigue.

*GYNÉCOCRACY,* (*Gynécocratie*, Fr.) a species of government over which females may preside; of this description is the British government. Under the old French monarchy, women were totally excluded by the Salique Law. But meretricious influence made ample amends to the sex, during several reigns, and ultimately overturned the government.

## H

**HABERGEON**, a small coat of mail, or only sleeves and gorget of mail, formed of little iron rings or meshes linked together.

**HABILIMENTS of war**, in our ancient statutes, signify armour, harness, utensils, or other provisions, without which it is supposed there can be no ability to maintain a war.

**HABILIMENT des troupes**, Fr. properly means the regimental clothing or the uniform of soldiers. The clothing of the French army was not reduced to any regular system before the reign of Louis the 14th. The following observations relative to this important object are too appropriate, and suit all countries too well, to be left unnoticed.

The dress of a soldier should be plain, and made up so as to facilitate every movement of his person, to guard him against the inclemency of the weather, and to be remarkable for its collective uniformity of appearance. Next to these general requisites, the case of each individual should be consulted; particularly with regard to the breeches, trousers, or pantaloons. Regimental surgeons will certainly agree with us, when we say, that in some instances men have suffered as much from an inattention to this part of their dress, as from the most harrassing service in the face of an enemy. The loins should invariably be covered, the stride be made easy, and the bend of the knee be left unembarrassed. Under the old French government, the whole infantry was clothed in white, with facings of various colours; but both the officers and the men were extremely plain in every part of their dress. Since the revolution, the national colour, which was white, has been changed to blue. Not only the soldiers, but the wagon-drivers, &c. had a particular dress to distinguish them from other people. We shall speak more

specifically on this head under the article uniform.

*Un HABIT d'ordonnance,* } regimen-  
*Un HABIT d'uniforme,* Fr. } tal coat,  
or clothing.

**HACHÉ**, Fr. a hatchet.

**HACHE d'armes**, Fr. a hatchet or battle-axe.

In ancient times this weapon was frequently resorted to by whole armies when they engaged. At present it is only used on particular occasions, in sorties, &c.

**HACHÉE**, Fr. a term which was formerly used among the French to express a certain punishment that military delinquents were obliged to undergo. It consisted in being loaded with a pack or saddle, which the guilty person was under the necessity of carrying a specified distance, and which entailed disgrace upon the bearer.

**HACHER**, Fr. to cut to pieces. This word is very frequently used among the French in a military sense, viz.

*Un bataillon, ou un escadron s'est fait HACHER en pièces*, a battalion, or a squadron has suffered itself to be cut to pieces.

They likewise make use of the expression in familiar discourse, as speaking of truth, viz.

*On se feroit HACHER en pièces pour la vérité*; one would be cut to pieces for the support of truth.

**HACHEREAU**, Fr. a small hatchet.

**HACHOIR**, Fr. a chopping board, a knife, &c.

**HACHOIR de Cavalier**, Fr. a chopping board or block; a knife. In the French service every troop of horse is furnished with this machine, in order to prepare or cut the straw for food. These chopping-blocks or boards, &c. are always carried in separate carts, and follow the baggage.

**HACKERY**, an Indian carriage or cart, drawn by oxen.

**HAC-**

**HACQUETON.** See **HATCHER**.

**HACQUET - WAGEN**, a four-wheeled wagon, which is used in the Prussian service to convey pontoons. The under-frame of this carriage is built like that of a chariot, by which means it can turn without difficulty.

**HAIDAMACS.** See **COSACKS**.

**HAIE**, *Fr.* the disposition or distribution of troops in a straight line, either in one or more ranks.

**HAIE morte**, *Fr.* a hedge, or boundary, made of dead branches of trees, &c.

**HAIE vive**, *Fr.* quickset. Any hedge which consists of trees or branches, that interweave with each other as they grow, and thereby form a very strong defence. This sort of hedge is preferable to palisades.

**HAIE-SHOT.** See **GRAPE-SHOT**.

**HAIR-CLOTH**, a stuff made of hair. It is laid on the floor of powder-magazines and laboratories to prevent accidents of fire from the shoes of the men treading or rubbing upon nails, sand, or gravel.

**IAKEM**, or **IAKIM**. A term used in India to signify the governor of a city, a judge, or a king. It sometimes means the government.

**HAKIN**, an Indian word signifying power.

**HALBERD**, } a weapon formerly  
**HALBERT**, } carried by the serjeants of foot and artillery. It is a sort of spear, the shaft of which is about 5 feet long, generally made of ash. Its head is armed with a steel point, edged on both sides. Besides this point, which is in a line with the shaft, there is a cross piece of iron, flat and turned down at one end, but not very sharp, so that it serves equally to cut down or thrust with. This weapon has of late been exchanged for the half-pike. The halbert was first used by the Danes, afterwards by the Scotch, English, and Swiss, and, last of all, by the French.

**HALEBARDE**, (*ou arme Danoise*, *Fr.*) halbert. This weapon, as well as the pike, was first adopted by the French, in imitation of a similar one which was carried by the Swiss troops. It was not known in that country before the reign of Louis XI. and when it fell into disuse among the rank and file, it was confined to the serjeants of infantry. The length of a French halbert was six of their

feet from one extremity to the other. The handle or shaft was a long stick, with a strong, sharp, iron ferrel at the end, and the upper part had a sharp flat blade, with a cross bar attached to it.

**HALF**, is frequently used in military terms. Thus,

**HAIE-BRIGADE**, (*demic-brigade*, *Fr.*) which signifies half the number of men of which a whole brigade is composed. A brigade of cavalry in the French army, consists of three regiments, each of one thousand men, making together three thousand men. Fifteen hundred, of course, constitutes a *demic-brigade*, or half-brigade. In the British service, a brigade of cavalry is various, according to the number of regiments that may be encamped, or lie contiguous to each other. Sometimes two, three, or four regiments form a brigade; so that half the recited number of men which composes a brigade, whether of cavalry or infantry, makes a half-brigade.

**HAIE-COMPANIES.** The same as subdivisions, and equal to two sections.

**HAIE-DISTANCE**, signifies half the regular interval or space between troops drawn up in ranks, or standing in column.

**HAIE-FACED.** Men are frequently half-faced to the right or left, in order to give an oblique direction to the line. In forming echelon, the serjeant who steps out is half-faced.

**HAIE-FILES**, half the given number of any body of men drawn up two deep.

Half-files are so called in cavalry, when the men rank off singly.

**HAIE-FILE leader**, (*Chéf de demi-file*, *Fr.*) the foremost man of a rank entire.

**HAIE-BATTA.** An extra allowance which has been granted to the whole of the officers belonging to the Indian army, except in Bengal, when out of the company's district in the province of Oude. In the upper provinces double batta is allowed. All above full is paid by the *Vizir*, as the troops stationed in that quarter are considered as auxiliaries. The full batta is an allowance granted to both officers and men whenever they are under canvas.

**HAIE-CIRCLE guard**, one of the guards used with the broadsword to parry an inside cut below the wrist, formed

formed by dropping the point of the sword outward in a semicircular direction, with the edge turned to the left, and raising the hand to the height of the face.

**HALF-CIRCLE** *parade*, a parade of the small sword used against the thrust in low carte.

**HALF-HANGER, or HALF-HANGING-GUARD**, a position of defence in the art of broad-sword; differing from the hanging-guard, in the sword-hand not being raised so high, but held low enough to see your opponent over the hilt. See **BROADSWORD**.

**HALF-MOON, or demi-lune, Fr.** See **FORTIFICATION**.

**HALF-PAY**, a certain allowance which is made to officers who have been reduced, in consequence of some general order that affects whole corps, supernumerary companies or individuals.

It may likewise be considered as a compensation to individuals, who have been permitted to retire from the active functions of a military life.

**HALF-PAY officers**, are, to all intents and purposes, out of the reach of military cognizance. They cannot be tried by martial law; nor are they liable to be called upon either as members of a court martial, or for the purposes of actual service. Surgeons and assistant-surgeons, however, who have received their appointments subsequent to 1793, are exceptions to this rule.

**HALF-PIKE, (demi-pique, Fr.)** a small pike, which was formerly carried by officers.

**HALF-SWORD**, close fight, within half the length of a sword.

**HALLEBARDIERS, Fr.** men that carried halberds. In former times they were attached to the several regiments. Hence *Compagnies d'hallebardiers*.

**HALLECRET, Fr.** a breast-plate made of flat pieces of iron, which was worn by the French infantry under Francis the First, and as late as the year 1641. This breast-plate was originally made of leather. It was also called *corcelet*, and afterwards *cuirasse*.

**HALT** [French *halte*], is a discontinuance of the march of any body of men, armed or unarmed, under military directions. It is frequently practised for the purpose of easing troops during their progress through a country, or to

render them fresh and active previous to any warlike undertaking.

Frequent halts are made during the passage of obstacles, and in an intersected country, in order to obviate the inconvenience and danger which must attend a column, whose head is advanced too far to preserve the regular succession of all its component parts. Nothing, indeed, can be more pregnant with mischief than such a chasm; for, if the enemy be in the neighbourhood, both front and rear are exposed. The best way in the passage of defiles, &c. is to proceed to a distance beyond it, which shall be sufficiently extensive to admit of the whole number; there to halt, and not to march forward until the rear has completely cleared the obstacle.

**HALT**, is likewise a word of command in familiar use when a regiment is on its march from one quarter to another. The men are permitted to refresh themselves half-way. It should be generally observed, that to prevent soldiers from straggling about, or getting among persons who might entice them to be disorderly, a strict order ought to be given by the commanding officer of every battalion not to allow any division or detachment to halt in or near a town or village. A convenient midway spot should be chosen for the purpose, and when the men have piled their arms (which may be done in line, or in column) a few steady soldiers should be detached to guard the ground, and to prevent others from straggling beyond certain limits. Among the French it was usual for the commanding officer of a battalion, division, or detachment, in hot weather, to send a serjeant and a few steady grenadiers forward, in order to secure good water for the troops. This practice, in our opinion, ought to be avoided as much as possible; for men are more exposed to suffer from drinking when overheated, than they would be by patiently enduring the thirst until they reached the spot where the day's march is to terminate.

*To HALT in open column for the purpose of wheeling up into line.* When the several companies of one or more battalions have entered the alignment, and marched with their pivot flanks along it, covering each other at their

due distances (for which company officers are answerable), the open column is then in a state to be wheeled into line.

As soon, therefore, as the head or rear division, according to circumstances, arrives at the given point where it is to rest in line, the commander of the battalion gives the word *halt*. No one moves after the delivery of this word, not even a half pace; but the foot which is then off the ground, finishes its proper step, and the other is brought up to it. If that were not done, and one company should stop while another was permitted to make one or two paces, those behind would be obliged to shift anew, and much confusion would arise from officers being deficient in one great principle of their business, *the preservation of proper distances*. The instant the *halt* is ordered, the commanding officer from the head division of each battalion (he taking care that he is himself placed in the true line) makes any small correction on a near point in that line that the pivots may require, although no such correction ought to be necessary.

To *HALT* after having wheeled from open column. The officers commanding companies, &c. having during the wheel turned round to face their men, and inclined towards the pivot of the preceding company, as they perceive their wheeling men make the step which brings them up to their several pivots, they give the word *halt, dress*. The men, on receiving this word of command, halt, with their eyes still turned to the wheeling flank, and each officer being then placed before the preceding pivot, to which his men are then looking, corrects the interior of his company upon that pivot, his own pivot, and the general line of the other pivots. This being quickly and instantaneously done, the officer immediately takes his post on the right of his company, which has been preserved for him by his serjeant. Thus the whole line, when halted, is imperceptibly dressed. See Gen. Reg. page 153.

In cavalry movements, when the open column halted on the ground on which it is to form, wheels up into line, the following specific instructions must be attended to:

Distances being just, and pivot leaders being truly covered, the caution is given, *Wheel into line!* when the then pivot-flank leaders place themselves each on the *reverse* flank of such divisions as by its wheel up brings them to their true place in the squadron. The leading division of each squadron sends out a person to line himself with the pivot files. At the word *march!* the whole wheel up into line, which is marked by the pivot men, also bounded by the horses' heads of the faced markers of it. *Halt! dress!* is then given (as well as the other words by each squadron leader) the instant before the completion of the wheel; the eyes are then turned to the standing flank (to which the correction of the squadron is made), and remain so till otherwise ordered; so that a line formed by wheels to the left, will remain with eyes to the left; and one formed by wheels to the right, will remain with eyes to the right.

During the wheel up, the standard moves to its place in squadron, and at the halt every individual has gained his proper post. See Cavalry Regulations, page 98.

HALTE, *Fr.* See HALT.

HALTER-CAST, in farriery, an excoriation or hurt in the pastern, which is occasioned by the horse endeavouring to scrub the itching part of his body near the head and neck, and thus entangling one of his hinder feet in the halter. The consequence of which is, that he naturally struggles to get free, and sometimes receives very dangerous hurts in the hollow of his pastern.

HALTING, in farriery, a limping, or going lame; an irregularity in the motion of a horse, arising from a lameness in the shoulder leg, or foot, which obliges him to tread tenderly.

HALTING-days. When troops are upon the march, and there is not any particular necessity for exertion or dispatch, two days in the week have been usually allotted for repose. These are Thursday and Sunday. Well regulated corps undergo an inspection of necessities, &c. on the former of these days, and are sometimes put through four or five of the prescribed manoeuvres. During the present war, troops have seldom been allowed any halting days.

HAMLET,

**HAMLET**, a small village.

**Tower-HAMLETS**, a particular district in the county of Middlesex, which is, under the command of the constable of the Tower, or lieutenant of the Tower-hamlets, for the service and preservation of that royal fort.

In the 13th and 14th years of Charles the Second an act of parliament passed, by which the constable of the Tower, or his lieutenant, had authority from time to time, to appoint his deputy lieutenants, and to give commissions to a proper number of officers to train and discipline the militia to be raised within and for the said division or hamlets, and to form the same into two regiments of eight companies each; and in the 26th of his present Majesty, the above act, intituled *an act for ordering the forces in the several counties of this kingdom*, was revived; and the said constable or lieutenant, in order to defray the necessary charges of trophies, and other incidental expences of the militia of the same division or hamlets, were further authorized to continue to raise, in every year, the proportion of a fourth part of one month's assessment of trophy-money within the said division or hamlets, in such manner as he hath been used to do, by virtue and in pursuance of the said act of the 13th and 14th years of the reign of Charles the Second.

Whenever the lieutenant of the Tower-Hamlets shall happen to be out of the kingdom, deputy lieutenants may be appointed to act in his room; and no commissions are to be vacated by the death or removal of the lieutenant.

The constable has the power of appointing a treasurer of the trophy-money, who is to account for the same yearly; and no trophy-money for a succeeding year is to be levied till the account of the former year has been allowed.

**Royal Tower HAMLETS.** The militia raised in the district of the Tower is so called, and is divided into two battalions, viz. first and second, officered in the same manner that other corps are belonging to that establishment, and subject to the same rules and regulations.

**HAMMER**, a well-known instrument with an iron head, for driving nails, &c. Each artillery-man carries one in his

belt, in order to clear the vent from any stoppage.

**HAMMER**, a piece of iron which stands in a perpendicular direction above the cover of the pan, being a part of the same, and serving to produce those sparks of fire that ultimately occasion the explosion of the gun-powder. The Germans call it *pfannen deckel*, the cover of the pan; but this expression does not convey a distinct and clear idea of the use that is made of it. Nothing, however, can be less appropriate than the term as used amongst us. We call the part which is struck against to produce sparks of fire the hammer; and the part which strikes, the cock; whereas that part of the cock which holds the flint is, in fact, the hammer, and the other is without a proper name. The Germans call the cock *hahn*. It is not within our province to propose new terms; we are therefore satisfied in having pointed out the contradiction.

**HAMMER-SPRING**, the spring on which the hammer of a gun-lock works. It is also called *feather-spring*.

**HAMMOCK**, (*hamac*, Fr.) a sort of bed made of cotton or canvas. Those used in America, consist of a broad piece of canvas, which is suspended between two branches of a tree, or between two stakes, and in which the savages are accustomed to sleep.

Among sailors the hammock is about six feet long and three feet broad, drawn together at the two ends, and hung horizontally under the deck for the sailors to repose in. In time of battle, the hammocks are strongly fastened and laid above the rails on the quarter-deck and fore-castle, to barricade, and to prevent the execution of small shot.

**HAMPE**, and not **HANTE**, Fr. a shaft; a long stick to which any thing else is attached; as a sharp blade to form a halbert or pike.

**HANCES**, the ends of elliptical arches.

**HAND**, a member of the body; part of the arm, &c.

**HAND.** Among the Mysoreans the print of a hand is reckoned a form equivalent to an oath. See History of the Carnatic, Book V. p. 348.

**HAND**, a measure of four inches, by which the height of a horse is computed. Thus horses are said to be so many hands high.

According to the regulations for the mounting and remounting of cavalry, the sizes of military horses must run from 15 hands and 1 inch to 15 hands 3 inches, and the age 4 or 5 off, if possible.

**HAND** is also used for the division of a horse into the fore and hind parts. The parts of the fore-hand are the head, neck, and fore-quarters; and those of the hind-hand include all the other parts of his body.

**HAND** is likewise used for the horseman's hand. Thus spear-hand, or sword-hand, is the horseman's right hand, and bridle-hand is his left hand.

**HAND-BARROW**, a machine made of light-wood, of great use in fortification for carrying earth from one place to another; or in a siege, for carrying shells or shot along the trenches.

**HAND-BREADTH**, a measure of three inches, or a space equal to the breadth of the hand, the palm.

**HAND-GALLOP**, a slow and easy gallop, in which the hand presses the bridle to hinder increase of speed.

**HAND-GRENADES**, small iron shells, from 2 to 3 inches diameter, filled with powder, which being lighted by means of a fuse, are thrown by the grenadiers amongst the enemy; now out of use. See **GRENADES**.

**HAND-GUN**, a gun held in the hand.

**HAND-MALLER**, a wooden hammer with a handle, to drive fuses, or pickets, &c. in making fascine or gabion batteries.

**HAND-SCREW**, is composed of a toothed iron bar, which has a claw at the lower end and a fork at the upper: the bar is fixed in a stock of wood, about 2.5 feet high, and 6 inches thick, moved by a rack-work, so that this claw or fork being placed under a weight raises it as far as the bar can go.

**HAND-SPECK**, } a sort of wooden le-

**HAND-SPIKE**, } ver for moving heavy things.

**HAND-SPIKE**, in gunnery, a wooden lever 5 or 6 feet long, flattened at the lower end, and tapering towards the other, useful in moving guns to their places after being fired and loaded again, or for moving other heavy weights.

**HAND-TO-HAND**, close fight; the situation of two persons closely opposed to each other.

**HANDFUL**, used figuratively, in a military sense, to denote a small quantity or number, as a handful of men.

**To HANDLE**, to manage, to wield.

**HANDLE arms**, a word of command (when the men are at ordered arms) by which the soldier is directed to bring his right hand briskly up to the muzzle of his firelock, with his fingers bent inwards. This word of command is frequently used at the private inspection of companies, and always precedes—*Ease arms*.

This term was formerly used in the manual from the *support* to the *carry*. It is, however, totally exploded, and contrary to the Regulations, except in the instance just mentioned.

**To HANG-FIRE**. Fire-arms are said to hang-fire when the flame is not speedy in communicating from the pan to the charge. This defect may arise from the powder being damp or the touch-hole foul.

**To HANG upon**. To hover, to impede.

**To HANG upon the rear of a retreating enemy**. To follow the movements of any body of men so closely as to be a perpetual annoyance to them.

It requires both judgment and activity in the commanding officer of a pursuing army, to execute this business without endangering his troops. For it might happen, that the retreating enemy, seeing an opportunity to make a retrograde flank movement from its front, would practise a feint in its rear, and suddenly appear upon the right or left of his pursuers, especially with cavalry. To prevent a surprise of this sort, constant vedettes and side-patroles must be detached, and the pursuer must never attempt to follow through any considerable length of defile, or cross rivers, without having secured the neighbouring eminences, and been well informed as to the nature of the stream, for some extent on his right and left. Without these precautions he might himself be taken in flank and rear.

**To HANG upon the flanks of an enemy**, to harass and perplex him in a more desultory manner than what is generally practised when you press upon his rear.

Hussars, light dragoons, mounted riflemen, and light infantry detachments are well calculated for this service. Light pieces of artillery are likewise extremely useful; but they should be cautiously resorted to, as ambuscades might be laid, and their removal would require too much time. A perfect knowledge of the

the country in which you fight, aided by intelligent guides and faithful scouts, will be one of the best safeguards in all operations of this kind.

**HANGER**, a short curved sword.

**HANGIAR**, *Fr.* This word has been sometimes written *Haniare*, which is incorrect. It signifies a Turkish poniard, which is worn by the Janissaries in their cross belts or scarfs.

**HANGING-GUARD**, a defensive position in the art of broad-sword; it is formed by raising the sword-hand high enough to view your antagonist under your wrist, and directing your point towards his ribs. See **BROAD-SWORD**.

**HANNIBAL**, a celebrated general among the Carthaginians, who crossed the Alps, and threatened Rome. This able man lost all the fruits of his uncommon exertions and military talents by relaxing from that active conduct, by which he had thrown the Roman legions into confusion. He is a striking example of the propriety of Marshal Saxe's observations on the necessity of vigorous and unremitting operations against a retreating enemy. See **GENERAL**.

**HANOVERIANS**, troops belonging to the electorate of Hanover and once subject to the king of Great Britain. They formerly served upon the continent, in conjunction with British forces, but they did not rank with the English army, nor were they paid from the treasury of Great Britain. A body of refugees from Hanover are now in the service of Great Britain.

**HANSE**, or **HANS**, (*Hans Teuto-nique*, *Fr.*) a body or company of merchants united together for the promotion of trade.

**HANS towns**, (*villes Hansiatiques*, *Fr.*) Certain towns and places in Germany and the north of Europe, in which a commercial compact, or agreement, for the benefit of commerce was entered into by merchants of respectability. The four towns that first united for this purpose were Lubec, Brunswick, Dantzic, and Cologne, and on that account they bore the distinguishing title of mother-towns. After the original establishment of this company had taken place, several towns became anxious to belong to so respectable and useful a company. They were accordingly adopted, and obtained the denomination of god-daughters. The

number of these associated places amounted to 81, and they were generally called the Hanseatic or Anseatic towns. In the year 1372, a treaty of alliance was entered into between Denmark and the Hans towns. Amsterdam and other Dutch cities were included, as may be seen in a copy of that treaty which has been preserved by Boxhoom.

**HAQUE**, a hand gun.

**HAQUEBUT**, a gun, called also a harquebuss.

**HAQUELIN**, a piece of armour.

**HANTE**, and not *Hampe*, *Fr.* a well finished pike which was formerly used, with a banner at the end.

**HAQUET**, *Fr.* a dray; a species of wagon used in the artillery for the conveyance of pontoons, &c. These wagons differ in their sizes and dimensions according to the nature of the service.

**HARANES**, *Fr.* a militia in Hungary, part of which served on foot, and the other on horseback.

**Military HARANGUES**, (*harangues militaires*, *Fr.*) It was usual among the ancients for generals, &c. to harangue their soldiers previous to an engagement. This custom, however, is too old to be traced to its origin. Short harangues, if any are adopted, will always prove the best; for that natural impulse by which the aggregate of mankind are driven into acts of peril and possible destruction, is of too subtle and too volatile a nature to bear suspense.

We find among the ancient historians various instances in which the generals of armies have judged fit to harangue their troops. It must, however, be acknowledged, that the greater part of these harangues have been studiously made out by ingenious writers, and put into the lips of the heroes they have thought proper to celebrate. Those which contain most common sense, and are conveyed in short pithy sentences, will always produce the best effects.

Eloquence is certainly a qualification which every general of an army should possess; but, it is not, in our days, the most essential requisite in his character. Caesar was naturally endowed with a most bewitching talent in the exercise of words; and he used it on many occasions to considerable advantage. The manner in which he was accustomed to address his men became so celebrated,

that several persons, belonging to the army he commanded, carefully selected his *military harangues*; and, if we may believe the Chevalier Folard, the emperor Augustus was particularly pleased and entertained in having them read to him.

In Chevalier Folard's opinion, those speeches which are enlivened by expressions of humour and by occasional railery, will always have the most influence over the minds of common soldiers. War, although apparently dictated by the laws of nature (for war and bloodshed seem to have been the concomitants of man from his first creation) cannot be so far congenial to the feelings of civilized mortality, as to mingle with sober sense and rational reflection. Consequently, those discourses which lead the common mind to think, and which induce the common heart to feel, are ill adapted to acts of violence and mutual rancour. A witticism or humorous expression has sometimes the most happy effect. The answer which Hannibal the Carthaginian made to one of his generals, whose name was *Giscon*, produced a fortunate emotion among his soldiers. The latter observed, *that the enemy's numbers somewhat surprized him*; Hannibal, as Plutarch relates the story, immediately said, with a sort of indignant look—*But there is another circumstance, Giscon, which ought to surprize you much more, and to which you do not seem to pay great attention.* Giscon requested to know what it might be. *It is,* replied Hannibal, *that in so large a multitude there should not be one man whose name is Giscon.* This sarcastic observation created a loud laugh among all who surrounded the general, and the humour of the saying was instantly conveyed through the ranks.

Antigonus, according to the same authority, never adopted any other mode of conveying his sentiments to the troops. The Lacedemonians were even more laconic; but every thing they uttered was full of sound sense and energy of thought. Thucydides, who was not only a good historian, but likewise an able general, makes his heroes speak in a very emphatic and eloquent manner. Tacitus does not appear to possess much excellence that way; and the speeches which we find in Polybius, are copied after what was spoken by the several

generals, whom he celebrates. Titus Livius is too ornamental and too flowery. An active and intelligent general must be a perfect stranger to that species of oratory.

We read in Varillas, a French historian, who was born in 1624, and wrote a history of France, beginning with Louis XI. and ending with Henry III., &c. that Zisca (or Ziska) a gentleman and soldier of Bohemia (who was so called because he happened to lose an eye), made a remarkable speech to his followers. We refer our inquisitive readers to that writer's works for one of the most energetic, most soldier-like, and persuasive pieces of military eloquence that perhaps is extant. Zisca succeeded Huss, who had armed the peasantry of Bohemia to resist the oppressions of the emperor and the Roman pontiff; and although he lost his other eye at the siege of Rabi, his influence and courage were so great, that he obliged the emperor Sigismund to send an embassy to him, and to offer him the government of Bohemia. Such was his power of persuasion, that he could not only animate his men to the most desperate feats of valour, but likewise check them in the full career of victory, to prevent plunder and unnecessary bloodshed. A remarkable instance of this sort may be found in Varillas, where he relates, that nothing but the influence which Zisca possessed over the minds of his followers could have saved the city of Prague from utter destruction.

Several specimens of military eloquence may be found in Procopius. They possess the happy quality of being very short, full of good sense and strength of expression. Since the time of Henry the IVth, of France, we find few instances in which the generals of armies have thought it expedient to harangue their troops, unless we except the battle of Nerva, previous to which Charles the XIIth, king of Sweden, addressed his little army.

It frequently happens, however, that the commanding officers of corps, and of detached parties, feel it necessary to encourage their men by short and appropriate speeches after the manner of the Lacedemonians. At the famous battle of Tury, Henry the IVth, of France, rode down the front of the line, and

and pointing to the white feather which he wore in his hat, spoke in the following emphatic manner to his soldiers:—*Children, cried he, should any mistake or irregularity occur among the standard-bearers, and your colours by any accident be misled, recollect, that this feather will shew you where you are to rally; you will always find it on the road to honour and victory!*

**HARASS**, (*harceler*, Fr.) in a military sense, signifies to annoy, to perplex, and incessantly turmoil any body of men; to hang upon the rear and flanks of a retreating army, or to interrupt its operations at a siege by repeated attacks. The troops best calculated for this duty are hussars, mounted riflemen, and light dragoons. The general most celebrated among the ancients for this kind of warfare was Sertorius. By means of the most subtle and ingenious manoeuvres, aided by a thorough knowledge of military tactics, he disconcerted all the plans, and finally defeated all the attempts which were made by Pompey and Metellus to subdue him. It has been shrewdly remarked by the commentator on Polybius, that had there been one Sertorius within the walls of Lisle, when that city was besieged in 1708, the whole combined force of the allies that was brought before it would have been rendered ineffectual. This wise and sagacious officer was constantly upon the watch; no movement of the enemy escaped his notice; and by being master of his designs, every measure which was attempted to be put into execution, was thwarted in its infancy.

When he received intelligence, that a convoy was on its way to the enemy, such was his activity, that no precautions could save it from his attack; and however seemingly advantageous a temporary position might appear, every possible peril or surprize crouded upon his mind, and the instant he judged it necessary to decamp, such was his sagacity and shrewdness, that no foresight or information of the enemy could circumvent him on his march. He was full of expedients, master of military feints, and indefatigably active. When pursued in his retreats, he had always the ingenuity to avoid his enemy by getting into inaccessible places, or by disposing of his troops in such a manner, as to render it extremely hazardous to

those who might attempt to harass or perplex him.

**HARAU**X, (*donner le harau*, Fr.) the art of carrying off troop-horses when they are at grass, or out foraging.

**HARBOUR**, a port or haven for shipping. The making and inclosing harbours with piers, so as to resist the winds and waves, for the preservation of ships in stormy weather, is one of the most useful and necessary works that can be made in a trading nation; since the security of their wealth and power depends greatly upon it. Hence it should be the particular study of every young engineer, who is desirous of being useful to his country, or of distinguishing himself, to become master of this branch of business. The works principally recommended to his attention are *L'Architecture Hydraulique*, par M. Belidor; *Essai sur la Résistance des Fluides*, par M. d'Alembert, Mac-laurin, and Muller.

**HARCARAS**. In India, messengers employed to carry letters, and otherwise entrusted with matters of consequence that require secrecy and punctuality. They are commonly Bramins, well acquainted with the neighbouring countries; they are sent to gain intelligence, and are used as guides in the field.

**HARCELÉ en flanc et en queue**, Fr. harassed in flank and rear.

**HARDACIUM**. See **HOURDEYS**.

**HARDI**, Fr. In French architecture, an epithet which is frequently attached to those sorts of works that, notwithstanding their apparent delicacy of construction, their great extent and wonderful height, remain uninjured by a succession of years. Gothic churches are of this description.

**HARE**, an old Saxon term for an army.

**HARGNEUX**, Fr. This word literally means morose, peevish, &c. In a late French military dictionary we find the following observation upon it.

The old Greek proverb is brought to our recollection by this term; and, however trifling or familiar it may appear, we shall not hesitate to place it under the eyes, and to recommend it to the attention, of young officers; perhaps some of longer standing might not be injured by a view of the proverb also. *Tout chien hargneux a les oreilles tirées.*

*tirées*. Every snarling cur has his ears pulled.

**HARNES**, armour, or defensive furniture of war. Also the traces for horses of draught.

**HARNOIS**, *Fr.* harness. This word was formerly used among the French to signify the complete armour or equipment of a horseman, including the cuirass, helmet, &c. The term, however, is still adopted in a figurative sense: as, *Cet ancien officier a blanchi sous le har-nois*—This old officer has grown grey beneath his harness, or equipment; signifying, that he has grown old in the service.

**HARNOIS du Cheval**, *Fr.* military equipment for a horse. There are some curious remarks on this subject in the *Réveries du Maréchal Saxe*.

**HARO**, *Fr.* hue and cry.

**HAROI**, an Indian term, signifying the officer who commands the van of an army. It sometimes means the vanguard itself.

**HARPE**, *Fr.* a species of draw-bridge, which was used among the ancients, and which obtained the name of harp from its resemblance to that instrument. This bridge, which consisted of a wooden frame, and hung in a perpendicular direction against the turrets that were used in those times to carry on the siege of a place, had, like the harp, a variety of ropes attached to it, and was let down upon the wall of a town by means of pulleys. The instant it fell, the soldiers left the turret, and rushed across the temporary platform upon the rampart.

**HARQUEBUSS**, a kind of fire-arm, of the length of a musket. It carried a ball of about 3 ounces. Not used at present.

**HARQUEBUSSIER**, a soldier carrying a harquebuss.

**HARROW**, to lay waste, to ravage, or destroy.

**HASARD de la guerre**, *Fr.* the chance of war. It also means the danger to which every military man is exposed in the exercise of his profession. Thus the French say, *Il a essuyé les grands hasards*—he has undergone great risks or dangers. *Il a été nourri parmi les hasards*—he was brought up from his cradle amidst dangers.

**HASE**, a flat staple to catch the bolt of a lock.

**HASSEIN** and **JUSSEIN**, two brothers, and Mahomedan saints, whose feast is celebrated with great pomp and much enthusiasm in Indostan. This festival is kept on the 14th of November, in commemoration of the murder of those two brothers. The Mahomedans of Indostan observe it with a kind of religious madness, some acting and others bewailing the catastrophe of their saints with so much energy, that several die of the excesses they commit. They are likewise persuaded, that whoever falls in battle against unbelievers, during any of the days of this ceremony, shall be instantly translated into the higher paradise, without stopping at any of the intermediate purgatories. On these occasions (continues the ingenious author of the History of the Carnatic), to the enthusiasm of superstition is added the more certain efficacy of inebriation; for the troops eat plentifully of bang. See page 194, Hist. of Carnatic, Book III.

**HASTAIRES**, *Fr.* soldiers armed with spears. See **HASTATI**.

**HASTATI**, from the Latin word *hasta*, a spear; so that they may literally be called spearmen. A body of Roman soldiers who were more advanced in age, and had acquired a greater reputation in arms than the *Velites* possessed, were distinguished by this appellation. They wore a complete set of armour, and always carried a buckler, made convex, measuring two feet and a half in breadth and four in length. The longest contained about four feet nine inches, or a Roman palm. The buckler was made of two boards glued together. These were covered, in the first instance, with a broad piece of linen, which was again covered over with sheep's skin. The edges, both at top and bottom, were fenced with iron, to enable them to meet the broad sword and sabre, and to prevent them from rotting when planted on the ground. The convex part was further covered over with iron plates to resist the impression of hard blows, and to withstand the violent concussion of stones, &c.

The *hastati* likewise wore a sword, which they carried girted to their right thigh, and which was called the Spanish sword. This weapon was calculated both to cut and thrust, the blade being very broad, thick, and pointed. They had each, moreover, two pikes, a brass helmet,

helmet, and half boots. One of the pikes was thick, and the other of a middling size, and they were in general either round or square. The round ones were four fingers diameter, and the square ones contained the breadth of a side. The small pikes were not unlike to the darts which the hastati, or spearmen, were still obliged to carry.

The pole or staff of these pikes, whether large or small, was nearly five cubits long. The iron, which was made somewhat in the shape of a fish-hook, and was fixed to the pole, contained the same length. It reached beyond the middle, and was so well nailed that nothing could loosen it, without at the same time breaking the pole. This iron was one finger and a half thick, both at the bottom, and at the part where it was joined to the wood.

The hastati or spearmen wore upon their heads a red or black plume, consisting of three straight feathers, each measuring one cubit in height. These, added to their other accoutrements, made them appear uncommonly tall, and gave them a bold and formidable look. The lowest class of hastati, or spearmen, had their chests protected by a piece of brass, containing twelve fingers breadth every way. This plate was called a *breast plate*. All that were worth 10,000 drachmæ wore a coat of mail, instead of a breast-plate.

Kennet, in his *R. Ant.* p. 190, gives a similar account of the hastati; and adds, that the spears were afterwards laid aside as inconvenient.

*Armes d'HASTE*, *Fr.* long-hafted weapons.

*HASTE*, *Fr.* The piece of wood or long pole to which the standard is fixed in the royal gallery, was formerly so called in France.

*HAT*, a covering for the head. For a specific description of military hats worn by British officers, according to the last regulations, see the Regimental Companion. Hats are no longer used by the non-commissioned officers or privates, except in some particular regiments of cavalry; but it is directed by the King, that every infantry regiment shall wear caps in conformity to the following shape, &c.

Regimental or battalion caps to be seven inches deep, with a leather peak

two inches broad, a scarlet and white worsted plume or feather to be fixed, with a black leather cockade and regimental button over the trophy.

Grenadiers to wear the same, with this difference, that the plume shall be uniformly white, with a grenade in the center of the cockade.

The light infantry ditto, with this difference, that the plume shall be green worsted, with a bugle-horn in the center of the cockade.

Those regiments which are entitled to a badge, may have it engraved in the center of the trophy in lieu of G. R.

Light infantry officers are ordered to wear caps of the same dimensions as the men, with a gilt trophy and bugle, and a green feather, instead of the worsted plume.

*HATCHET*, used in the army, a small light sort of an axe, with a basil edge on the left side, and a short handle, used by the men for cutting wood to make fascines, gabions, pickets, &c.

*To take up the HATCHET*, among the Indians, to declare war, to commence hostilities, &c.

*HAUBERGEON*, *Fr.* See *HABERGEON*.

*HAUBERGIER*, *Fr.* an individual who held a tenure by knight's service, and was subject to the feudal system, which formerly existed in France, and by which he was obliged to accompany the lord of the manor in that capacity whenever the latter went to war. He was called *fief de haubert*, and had the privilege of carrying a halbert. All vassals in ancient times served their lords-paramount as squires, haubergiers, lancesmen, bow-men, &c.

*HAUBERT*. See *HAUTBERT*.

*HAUBITZ*, *Fr.* the same as *obus*, howitzer.

*HAVERSACK*, a kind of bag made of strong coarse linen, to carry bread and provisions on a march. It is only used in the field and in cantonments; each soldier having one.

*HAVILDAR*, or *HAVILDAUR*, a non-commissioned officer or serjeant among the sepoys. He ranks next to the Jemidar.

*HAVOCK*, carnage, slaughter.

*HAVRE*, *Fr.* a harbour which is enclosed by means of jettys, and can be barred by a chain.

**HAVRE de barre**, Fr. a harbour which is dry at times, and has a bar. Of this description are Calais and Dover harbours.

**HAVRESAC**, Fr. See **HAVERSACK**.

**HAUSSE-col**, Fr. an ornamental plate similar to our gorget. It is worn by infantry officers only.

*Un HAUSSE-col*, Fr. a neck-piece.

**HAUTBERT**, Fr. a coat of mail, which covered the neck and arms, formerly worn by the *seigneurs d'haubert*, or lords paramount, in France, in lieu of the *hausse-col*, *brassarts*, and *cuisarts*.

**HAUTBOY**, (*hautboy*, Fr.), a wind-instrument, now almost universally adopted by the European armies, and which invariably forms a part of the regimental bands belonging to the corps in the British service.

**HAUTES-payes**, Fr. were soldiers selected by the captains of companies to attend them personally, for which service they received something more than the common pay. Under the reign of Louis XIV. this custom was abolished. It was, however, suffered to exist in the royal regiment of artillery and in the companies of miners and artificers, provided the officers received a specific order for that purpose. *Hauts-paye* became afterwards a term to signify the subsistence which any body of men, superior to, or distinguished from the private soldier were allowed to receive.

**HAUTEUR**, Fr. in geometry, signifies elevation.

**HAUTEUR**, Fr. in architecture, the extreme height of any building. Thus, *un bâtiment est arrivé à hauteur*, signifies that the last stones or bricks are laid ready for the roof to be covered in.

**HAUTEUR d'appui**, Fr. breast-height.

**HAUTEUR de marche**, Fr. The usual height which a man takes in stepping, being about 6 or 7 inches above ground.

**HAUTEUR d'un escadron, ou d'un bataillon**, Fr. the depth of a squadron of horse, or battalion of foot. The British infantry is usually drawn up two deep. The word *hauteur* in the French service is equivalent to depth in the English: as—an army consisting of many squadrons of horse, and battalions of foot, one in front of the other and forming several columns, is said to stand that number of columns deep.

This term is applicable to an army, collectively or separately considered, from several columns to a mere rank and file.

**HAUTEURS**, Fr. Heights or commanding eminences round a fortified place.

**HAUT-LE-PIED**, Fr. a term used to distinguish such persons as were formerly employed in the French armies without having any permanent appointment. *Commissaires hauts-le-pied* were known in the artillery during the monarchy of France. They were usually under the quarter-master general.

This word has also another meaning, which see under **HAQUET**.

*Le HAUT Rhin*, Fr. the Upper Rhine.

*Le HAUT Saône*, Fr. Upper Saône.

**HAUTE-marée**, Fr. High-water.

**HAUTS-officiers**, Fr. superior officers. With respect to an army composed of several regiments, the following fall under the description of *hauts-officiers* according to the old French system: generals, lieutenant-generals, colonels, and lieutenant-colonels. The *hauts-officiers*, or superior officers in distinct corps, were majors, aid-majors, captains, lieutenants, sub-lieutenants, and ensigns.

**HAWKIM**, an Indian term, signifying a chief.

**HAYE**, Fr. a military disposition in which soldiers stand aside one another on a straight line. *Se mettre en haie*, is to stand *rank entrain*. *Faire un double haie*, to stand *two deep*. *Border la haye*, is a disposition to which infantry has recourse when attacked by cavalry. See **BORDER LA HAYE**.

**HAZAREE**, an Indian term, signifying the commander of gun-men. *Hazar* in its literal interpretation signifies a thousand.

**HEAD**, in gunnery, the fore part of the cheeks of a gun or howitz carriage.

**HEAD of a work**, in fortification, is the front next to the enemy, and farthest from the place; as the front of a horn-work is the distance between the flanked angles of the demi-bastions: the head of a double tenaille is the salient angle in the center, and the two other sides which form the re-entering angles. See **FORT**.

**HEAD of an army or body of men**, is the front, whether drawn up in lines or on a march, in column, &c.

## H E A

**HEAD** of a double *tenaille*, the salient angle in the center, and the two other sides which form the re-entering angle.

**HEAD-piece**, armour for the head; an helmet, such as the light dragoons wear.

**HEAD of a camp**, the ground before which the army is drawn up.

**HEAD-QUARTERS**, the place where the officer commanding any army or independent body of troops takes up his residence.

**HEADBOROUGH**, a civil officer, whose functions are the same with respect to the militia, as those prescribed to constables and subordinate constables.

**HEADSTALL**, that part of the bridle which goes over the horse's head.

**HEAUME**, *Fr.* A word derived from the German, which formerly signified *casque*, or helmet. The *heaume* has been sometimes called among the French *salade*, *armet*, and *celate* from the Latin word which means *engraved*, on account of the different figures which were represented upon it. The *heaume* covered the whole of the face, except the eyes, which were protected by small iron bars laid cross-ways.

The *heaume* was not only worn by the chevaliers or knights when they went to war, but also at tilts and tournaments. It serves as an ornament or helmet in coats of arms and armorial bearings. Various appellations have been given to this piece of armour, such as *habillement de tête*, covering for the head, casque, helmet; and under Francis I. it was distinguished by the name of *armet*. It does not resemble the *morion*, the *salade* or head-piece, the *pot*, or *bourguignotte*, burganet, which were worn only in the infantry. The *heaume*, as we have observed above, covered the face. There was an opening opposite to the eyes which was guarded by small iron bars, or lattice-work, and was a kind of visor. The *heaume*, or helmet, is still preserved in heraldry, and is a distinguishing mark of nobility. In tournaments the helmet was presented as a prize of honour to the most active champion, because it was the principal piece of defensive armour; but a sword was given to the assailants, as that was an offensive weapon.

*Au HEAUME! Fr.* a term formerly used among the French, in the same manner that they now use the expression *aux armes!* to arms! .

## H E L

**HEAUMIER**, *Fr.* an armourer, or helmet-maker.

**HEBDOMADIER**, *Fr.* The person whose week it is to be on duty.

**HÉGOMENE**, *Fr.* a chief, a leader.

**HEIDUQUE**, *Fr.* an Hungarian foot soldier. See *HEYDUT*.

**HELEN**, (*Hélène*, *Fr.*) A woman celebrated in history for the fatal influence of her charms over Paris, the son of Priam, King of Troy; and the consequent cause of its destruction. A French writer very justly remarks, that many a young officer is exposed in his outset in military life, to the fascinations of the sex, and is liable to fall into the snares of women, whose sole object is to create passions and rivalry, among gallant men, without feeling one spark of honest affection themselves. Hence the many feuds and quarrels that so often deprive the country of brave and meritorious men. An officer ought to recollect, that the first object of his mind, is his country's good; that all private affection is subordinate to public duty, and that his life should never be exposed, except in the defence of liberty, and for the maintenance of good order and discipline.

**HELEPOLIS**, (*Hélépole*, *Fr.*) in the ancient art of war, a machine for battering down the walls of a place besieged. The invention of it is ascribed to Demetrius the Poliorkete. Diodorus Siculus says, that each side of the *helepolis* was 450 cubits broad, and 90 in height; that it had 9 stages or floors, and was carried on 4 strong solid wheels, 8 cubits in diameter; that it was armed with huge battering rams, and had 2 roofs capable of supporting them; that in the lower stages there were different sorts of engines for casting stones; and in the middle, they had large catapultas for lancing arrows.

**HELICOMETRY**, an art which teaches how to draw or measure spiral lines upon a plane, and shew their respective properties.

**HELIOID parabola** is a curve arising from the supposition of the axis of the Apollonian parabola, being bent into the periphery of a circle, and is then a line passing through the extremities of the ordinates, which converge towards the center of the circle.

**HELIOSCOPE**, a prospect glass to  
Uu view

view the sun. The glass is coloured in order to weaken the radiance of light.

•**HELIX**, a spiral line.

**HELIX**, also a machine invented by Archimedes, by means of which a loaded vessel could be easily put to sea.

**HELLANODICES**, according to *Pisticus*, judges who presided at the Grecian games; they were also called *Agonothetes*.

**HELM**, or } an ancient defensive ar-  
**HELMET**, } mour, worn both in war and tournaments. It covered both the head and face, only leaving an aperture in the front, secured by bars, which was called the visor. The Carians first invented the boss of shields and the crest of helmets. In remembrance of this, a small shield and a crest were always buried with them.

**HELMET-CAP**, } a cap, or hat, the  
**HELMET-HAT**, } crown of which is shaped like the dragoon helmet.

**HELVE**, or } the wooden handle of  
**HAFT**, } a hatchet, hammer, or pick-axe.

To **HEM in**, to surround.

**HEMAGUM**, an emperor of India. The word means august.

**HEMERESCOPI**, in ancient history, men detached and posted upon different heights, &c. to watch the movements of an enemy. According to Herodotus, they were first formed among the Persians. They, in some degree, correspond with our vedettes.

**HEMERODROMES**, *Fr.* a French term taken from the Greek, signifying sentries or guards, which were employed among the ancients to protect and watch over fortified towns and places. As soon as the gates were opened they went out, and continued to patrol round the skirts of the town during the whole of the day. Frequently, indeed, they advanced considerably into the country, in order to discover whether any hostile body of men was approaching in order to surprize the garrison.

**HEMISPHERE**, (*Hémisphère*, *Fr.*) the half of the globe, when it is supposed to be cut through its centre in the plane of one of its greatest circles.

**HENDECAGON**, a figure that has 11 sides and as many angles, each capable of a regular bastion.

**HENDOO**, the name by which the natives of India distinguish themselves from the inhabitants of other countries.

**HEPTAGON**, a figure consisting of 7 sides and as many angles. If the sides be all equal, it is called a *regular heptagon*.

**HEPTAGONAL numbers**, are a sort of polygonal numbers, wherein the difference of the terms of the corresponding arithmetical progression is = 5. One of the properties of these numbers is, that if they be multiplied by 40, and 9 be added to the product, the sum is a square number.

**HEPTARCHY**, a government which consisted of seven kings or sovereign princes. Such was the government under which England was ruled by the Saxon kings.

**HERALD**, an officer at arms, whose duty is to declare war, to proclaim peace, or to be employed by the king in martial messages. The heralds in England are judges and examiners of gentlemen's coats of arms. They marshal all solemnities at the coronation of kings, funerals of princes, &c. The origin of heralds is extremely ancient. It is reported that the Greek herald, Stentor, possessed such a powerful voice that it exceeded the united clamour of fifty men.

There are three kings at arms in England, each bearing a name peculiar to himself, and six heralds. The first king at arms is that of Garter, created by Henry V.; next that of Clarenceux, created by Edward IV. and that of Norroy, so called from the exercise of his function North of the river Trent.

The heralds extraordinary are those of Windsor and Chester, created by Edward III. those of Somerset by Henry VIII. and those of York and Lancaster, created by the children of Edward III.

Thomas Tonge was the first Richmond herald, in the time of Henry VI.

**HERALDS College**, a corporation in England which consists of kings at arms, heralds and pursuivants.

**HÉRAUT**, *Fr.* herald. During the old monarchy of France there were thirty heralds, each distinguished by the name of some particular province. The first of these, who was king at arms, bore the title of *Montjoy St. Denis*; he had the privilege of wearing a royal coronet over the fleur de luce. On solemn occasions, the king and the heralds at arms appeared in their coats of arms made

made of violet coloured crimson velvet, with three golden fleurs de luces before and behind, and as many on each sleeve where the name of the province stood, to which the herald belonged. They wore a black velvet cap ornamented with golden strings, and half boots, when they appeared on peaceable occasions, and with whole boots on warlike or martial ones. In solemn funerals they had a long robe of black velvet. The only difference between the king at arms and the heralds, with respect to dress, consisted in the richness of the embroidery; that of the former being very expensive. The coats of arms which were peculiar to the heralds were called *Plaques*, those of the kings at arms were distinguished by the name of *Tunics*. They carried a stick called *Caduceus* (such as Mercury is represented to have borne in ancient history.) But this stick was not ornamented by a crown with fleurs de luces, it was only covered with crimson velvet, having a few fleurs de luces interspersed.

There was likewise a herald, whose particular functions were to carry the king's orders. He was entitled to a coat of arms upon violet coloured velvet interspersed with fleurs de luces and gold embroidered flames, or pendants, together with the arms and collars both before and behind. He likewise wore the cross belonging to the order, which was attached to a black silk cord wore cross-ways.

The author of the *Dictionnaire Militaire* derives the French term *Héraut* from the German *Herald*, which signifies a man at arms, *un Gendarme*. Verstegan derives it from the Saxon. Other French writers derive it from an old Gallic word *harou*, or *haru*, which was used as a challenge, a notification of fresh hostilities, a ban or general assembling of the people, a loud and public proclamation of battles fought, and victories obtained; on which account heralds, according to Ducange, were formerly called *Clarigarvis* as well as *Heraldus*.

**HERCOTECTONIQUE**, *Fr.* a term in fortification signifying that branch of Military architecture which specifically points out the best means of defence and the surest method of providing stores. This word is derived from the Greek.

**HEREFARE**, an old term from the Saxon, signifying the same as warfare.

**HEREGLD**, a term derived from the Saxon, signifying a tax which was formerly levied for maintaining an army.

**HERESLITA**, } a term derived from  
**HERESILLA**, } the Saxon, signifying a soldier who abandons his colours, or quits the army without leave.

**HERETUM**, } a term derived from  
**HERETUM**, } the Saxon, signifying the leader of an army, a Duke, the same as *dux* in the Latin.

**HERETUM**, a court in which the guards or military retinue that usually attended the old British nobility and bishops were accustomed to parade or draw up.

**HERGATE**, a term derived from the Saxon, signifying a tribute which was paid in ancient times to the lord of the soil, to enable him to carry on a war.

**HERISSON**, *Fr.* a turnpike which is made of one stout beam that is fenced by a quantity of iron spikes, and which is fixed upon a pivot, in the manner that our turnstiles are, so that it can turn in every direction.

**HERISSON findroyant**, *Fr.* a sort of artificial firework which has several sharp points attached to it on the outside, and is filled with inflammable composition within. It is frequently used in breaches and retrenchments.

**HERM-HARPOCRATES**, a demigod, in the heathen mythology, that is represented, like Mercury, with wings at his feet, and with his finger on his mouth. This allegorical figure indicates to young officers, that they must in all things, and on all occasions execute the orders of their superiors in command with dispatch and zeal, and without betraying the least symptom of disgust or backwardness, be the orders ever so arduous or unpleasant.

**HERO**, (*Héros*, *Fr.*) This name was given by the ancients to those men who became illustrious in war, and who were stiled demi-gods, from a general notion that their actions entitled them to a place in heaven immediately after their decease. The heroes of antiquity were divided into two classes, the one of mortal genealogy, the other of heavenly descent, being the offspring of some god or goddess, who had had connexion with the human species.

Modern authors make a distinction  
U u 2 between

## H E X

between a hero and a great man; the former appellation being given to one who distinguishes himself by feats of hardihood in military enterprize, and the latter to a person eminent for his virtues and extraordinary talents in civil life.

**HEROINE**, a term generally applied to women who have given exemplary proofs of courage and virtue.

**HERRISON**. See **HERRISON**.

**HERSE**, in fortification, a grated door, formed by strong pieces of wood, jointed cross-ways like a lattice or harrow, and stuck full of iron spikes. It is usually hung by a rope and fastened to a moulinet, which is cut in case of a surprise, or when the first gate is suddenly forced with a petard, to the end that it may fall and stop the passage of a gate or other entrance of a fortress.

These herse are also often laid in the roads, with the points upwards, instead of the chevaux-de-frize, to incommode the march of both horse and foot. Common harrows are sometimes made use of in cases of emergency, with their points upwards.

**HERSILLON**, a strong beam, whose sides are suck full of spikes, which is thrown across the breach made by an enemy, to render it impassable.

**HESSIANS**, troops belonging to the Prince of Hesse-Cassel in Germany. They have been frequently hired by Great Britain, and are never known to serve except as auxiliaries to other powers, who pay a stipulated price for each man to the Landgrave of that part of Germany.

**HÉTÉRIENNES**, *Fr.* See **MÉG-HÉTÉRIARQUE**.

**HETMAN**, *Fr.* sometimes called **ATTAMAN**, a word derived from the German, which signifies the chief of a troop. The chief general or grand general in Poland is called *Hetman Wielki*, and the second general *Hetman Polny*.

The chief or general of the Cossacks is likewise invested with this title by the sovereigns of Russia.

**HEURTEQUINS**, *Fr.* two pieces of iron resembling a knocker, which are placed upon the axis of the frame of a cannon.

**HEURTOIR de Soutien**, *Fr.* See **HUNTER**.

**HEXAEDRON**, (*Hexaedre*, *Fr.*) a

## H I E

solid geometrical figure, consisting of six equal sides.

**HEXAGON**, a figure of 6 sides and as many angles, capable of being fortified with 6 bastions. If the sides and angles be equal, it is called a regular hexagon. The side of a regular hexagon inscribed in a circle is equal to the radius of that circle; hence a regular hexagon is inscribed in a circle, by setting the radius of 6 times upon the periphery: as 1 to 1.672, so is the square of the side of any regular hexagon to the area thereof, usually.

**HEYDUC**. Originally a Hungarian soldier, who was armed with a long sabre and small hatchet. The French kings were accustomed to have men, who were dressed in their livery, placed at the gates of their palaces. These were called heyduc. At Vienna and Berlin, as well as at the subordinate courts in Germany, the princes and noblemen have persons of this description, who are richly clothed, and constantly attend their carriages.

**HIDES** (*tanned*), are always carried along with an army, especially in the laboratory's stores, to protect powder or shells from rain; they are also used in batteries and in laboratories.

**HIE**, *Fr.* a paving beetle, called also **DEMOISELLE**, **MOULON**.

**HIERARCHY**, church government.

**HIERNHUTT**, three missionaries are so called at the Cape of Good Hope. They have considerable influence over a large body of the Hottentots, whom they have in some degree civilized, and over whose minds they possess great power. The hiernhutt missionaries are considered by the English as well-meaning men, rendering the situation of some hundreds of that degraded race much more tolerable than it can possibly be to the aggregate of their oppressed countrymen, who are under the lash and tyranny of the Dutch boors. Should a military corps be established in the colony to consist chiefly of Hottentots, the hiernhutt missionaries may be made the means of attaching those people to the British government.

**HIROGLYPHICKS**, (*hiéroglyphes*, *Fr.*) certain mysterious characters of creatures or letters used among the Egyptians, by which they explained to one another the principles of their religion.

gion and their maxims of philosophy, without divulging them to strangers.

**HIÉRONICÆ**, a name given among the Romans to those who conquered in holy contests.

**HIEROGRAMMATES**. See **HIROGLYPHICKS**.

**HIGHLANDER**, according to Johnson, any person from a mountainous country.

**HIGHLANDERS**, a robust, warlike body of men from the north of Scotland.

They wear a dress peculiar to themselves, which is too generally known to require a minute description here. It may not, however, be superfluous to give the following regulation respecting their clothing when they serve abroad. Each serjeant, corporal, drummer and private man is in that case, to have annually, a scarlet coat, a waistcoat of white serge, a bonnet, and four pair of hose; six yards of plaid once in two years, and a purse every seven years.

**HILT**, the handle of a sword.

**HINGES**, are two iron bands, with a joint, nailed to the doors or lockers of gun carriages to fasten them and move them backwards and forwards.

**HINGUET**, *Fr.* See **GINGUET**.

**HIPPODROME**, *Fr.* a French term derived from the Greek, signifying a spot where horses used to run, properly speaking a race-ground. The Hippodrome or course at Constantinople was much celebrated in ancient days. The spot still exists under that name.

**HIPPORCHIA**, an officer of high rank among the Athenians, who had the command of all their cavalry.

**HIRCARRAH**, or **HIRCARRA**, an Indian term for a messenger, guide, footman or spy.

**HISTORY**, a narration or description of the several transactions, or events of a state, king, or private person, in the order in which they happened.

**Military History**, a narrative of military transactions, campaigns, battles, sieges, marches, &c. of an army: likewise a relation of the heroic actions of great generals, &c.

**HIVER** (*quartier d'*), *Fr.* winter quarters.

**HIVERNER**, *Fr.* a sea phrase among the French signifying to winter.

**HOBITS**. See **HOWITZ**.

**HOCKEBOS**, and not **HOCHEBOS**, *Fr.* pikemen, formerly so called. It al-

so signifies the pike itself, particularly among the inhabitants of Picardy in France. The Flemish people call it *godenhoi*.

**HOGSHEAD**, a vessel capable of containing 63 gallons. Hogsheads filled with earth, sand, &c. are sometimes used in lieu of gabions, to cover men.

**HOLD**. See **FASTNESSES**.

*To HOLD out*, to maintain any place, ground, &c. resolutely against an enemy.

**HOLLOW square**, the form in which a body of foot is drawn up, with an empty space in the middle for the colours, drums, baggage, &c. See **SQUARE**.

**HOLLOW tower**, a rounding made of the remainder of two brisures, to join the curtain to the orillon, where the small shot are played, that they may not be so much exposed to the view of the enemy.

**HOLLOW way**, any pass or road, both sides of which are commanded by heights.

**HOISTERS**, cases for a horseman's pistols, affixed to the pommel of the saddle.

*Order of the HOLY-GHOST*, the principal military order in France, instituted by Henry III. in 1569. It consisted of 100 knights, who were to make proof of their nobility for three descents. The king was the grandmaster, or sovereign, and as such, took an oath, on his coronation-day, to maintain the dignity of the order. The knights wear a golden cross hung about their necks by a blue silk ribband, or collar: but before they received this order of the Holy Ghost, that of St. Michael was conferred, as a necessary degree; and for this reason their arms are surrounded with a double collar.

**HOME-SERVICE** consists in military operations and arrangements for the immediate defence of our native country, should it be threatened by invasion, or by domestic broils, or insurrections.

As there is a great affinity between the following general regulations for home service, and those that are generally prescribed for foreign, we have thought it right to class the whole, including carriages, baggage, &c. under one head.

The carriages allowed, if circumstances will permit, to be with each regiment of infantry, of 10 companies at 80 each, are

2 Bread wagons; each to carry 4 days bread for 400 men, or 2400lb.

1 Ammunition duto.

2 Battalion guns.

1 Wagon.

1 Cart with entrenching tools.

2 Suttler's carts.

1 Wagon for sick, or more as may be permitted.

The carriages allowed to be with each regiment of cavalry, of 8 troops, of 75 each, are

2 Bread wagons, each to carry 1 days bread for 400 men, or 2400lb.

1 Ammunition cart.

2 Suttler's carts.

2 Forge carts.

1 Carriage for sick.

Regiments on lower establishments to be allowed carriages in proportion to their effective strength.

The carriages of the general officers allowed with or near the column of the army will be: for lieutenant-generals, 1 chaise and 2 carts—for major-generals, 1 chaise and 1 cart.

The carriages of head quarters will be exceedingly limited by the commander in chief.

All other private carriages whatever will be considered as belonging to the heavy baggage of the army, will be ordered to a great distance in the rear, and if at any time found near the army, will be ordered to be destroyed by the baggage-master general.

All other baggage therefore, whether tents, blankets, or necessaries for the officers, is to be carried on bat horses.

The number of horses which officers of each rank may have in common situations in the field, is specified by regulation. But as it is impossible in the service that may occur, to calculate for the carriage or use of large tents, or other conveniences, which officers are generally allowed when in the field; it is recommended to each officer to make his arrangements for moving in the lightest manner possible.

The personal baggage of each officer must be contained in a small portmanteau. One small tent is all that the officers of each company or troop can calculate upon. To carry the above, blankets, provisions, 3 or 4 day's corn, and other useful necessary articles, 2 bat horses per troop or company will be sufficient.

The bat horses of each battalion of infantry of 10 companies, at 80 each, will therefore be,

For the tents and poles of the regiment - - - 20

For the company officers - - - 20

Field officers and staff - - - 4

Surgeon's chest - - - 1

Regiments on a lower establishment, allowed bat horses in proportion.

The bat horses of each regiment of cavalry, of 8 troops, of 75 each, will therefore be,

For the tents and poles of the regiment - - - 24

For the troop officers - - - 16

Field officers and staff - - - 4

Entrenching tools - - - 1

Surgeon's chest - - - 1

and in proportion for regiments on a lower establishment.

The infantry will carry tents at the rate of 16 men per tent, and the cavalry 12 men per tent. The necessary outlying guards and detachments, and the readiness of hutting and other cover that a woody country affords, will make this a sufficient number. The troop and company bat horses can therefore easily carry the tents, poles, and pins. The blankets of the cavalry will be divided and carried under the men's saddles. The blankets of the infantry must be divided and carried by the men, unless some other provision is in future made.

The picket ropes of the cavalry will be carried on the bat horses. Half the usual number of pickets must be considered as sufficient, and be carried by the men. The camp kettles will be carried by the men, if horses are not provided for that purpose.

A reduction and critical inspection of what every soldier should carry as his baggage should be made in time, and every thing superfluous destined to be lodged with the heavy baggage, which will remain in the present quarters of the regiment, till otherwise ordered to be disposed of. Two shirts, a pair of shoes and stockings, combs, brushes, (and a horseman what is necessary for the care of his horse) is all a soldier ought to carry.

The heavy baggage of the army, including every thing not mentioned above, under a proper escort, will be ordered to some place of security. Each regiment of infantry will be allowed to send a ser-

a serjeant and 6 men, and each regiment of cavalry 1 corporal and 4 dismounted men as a guard: such men must be the least fit for marching duties, but should be fully adequate to the service, and by no means convalescents recovering from long indisposition. Proper officers will be ordered to command the whole, and no part of this baggage will be allowed to join the army but by public orders. If at any time carriages not allowed in this regulation should be found in the army, they will be conducted to head-quarters, and there destroyed, or confiscated to the advantage of those who make the discovery.

Two battalion guns with one wagon will be attached to each regiment of infantry. Should it be necessary, one bāt horse will be allowed for the artillery detachment.

Such artillery as remains in the park will be limited as to number of guns, carriages, and according to the specification given to the commanding officer of the artillery.

The bāt men allowed are two for each company and troop, also two for the surgeon and staff of each regiment.

Each battalion will give a non-commissioned officer and 8 men; each regiment of cavalry will give a non-commissioned officer and 6 men, as a guard to their bāt horses.

The following number of men on the several after-mentioned duties of the regiment, will never exceed

	Infantry.		Cavalry.	
	Non-com.		Men	
Camp colour-men	2	10	2	8
Bāt horse guard	1	4	1	3
Bread carriage guard	1	4	1	2
Heavy baggage	1	6	1	4
Regimental carriages	1	4	1	3
Allowed bāt men	0	22	0	18
	6	52	6	48

Each regiment of infantry will receive 20 pick-axes, 20 spades, 20 shovels, 40 bill-hooks, 10 axes, amounting in weight to about 400lb. These tools will be carried in the cart allotted for that purpose, and that cart will at all times, and in all situations, march at the head of the regiment.

Each regiment of cavalry will receive 8 pick-axes, 8 spades, 8 shovels, 16 bill-

hooks, and 8 axes. These tools will be carried on horseback, and on a horse with hampers allotted for that purpose, and will at all times march at the head of the regiment.

These tools are meant to be ready at all times for making the openings so necessary in this embarrassed country, consequently should be kept in the front of each regiment or column.

Spare appointments and arms of every kind must of course remain with the heavy baggage.

The battalion guns will always march at the head of the regiment, which ever flank leads. The ammunition wagons and carts will immediately follow the troops of the column.

The place of march of the artillery of the park and carriages will be specified in the order of march.

It is to be wished, that at all times each soldier be provided with 4 days bread in his haversack, and 4 days more carried in the regimental carriages.—When this is delivered out, those carriages, under the guard of a serjeant and 4 men per battalion, and a corporal and 2 men per regiment of cavalry, will be sent to the bakery to be again loaded.

Each infantry soldier will always carry 60 rounds. Each horseman his cartouch box full.

The cavalry will always carry 2 days corn if it can be got, and hay according to circumstances.

#### *Order of March.*

When a corps moves in one column, the following will in general be the order of march, if not otherwise ordered, and exclusive of the more particular van or rear guards.

#### *Advancing.*

Advanced guard consisting of the picquets of the infantry and cavalry, and new grand guard, followed by the camp colour men.

Pioneers.

1 Reg. light dragoons

Infantry.

Cavalry.

Regimental ammunition wagons and carts.

Bāt horses in the order of their regiments, artillery of the park.

General officers' carriages, bread carriages.

Cavalry forge cart and ammunition cart.

Sutlers

Sutlers carts.

Sick carriages.

Squadron of cavalry.

Old grand guard and small out-posts and detachments which will be ordered to join it, will form the rear guard.

#### *Retreating.*

Advanced guard consisting of the new grand guard, guard for head quarters, one infantry picquet, camp colour men.

Pioneers.

Sick carriages.

Sutlers' carriages.

Cavalry forge carts and ammunition cart.

Bread carriages.

General officers' carriages.

Artillery of the park.

Bât horses in the order of their regiments.

Regimental ammunition wagons and carts.

Cavalry.

Infantry.

1 Squadron light dragoons.

Rear guard, consisting of the infantry and cavalry picquets, old grand guard, out-posts of cavalry or infantry ordered to join.

Two or more pieces of cannon will always march with the advanced guard when advancing, and with the rear guard when retiring.

When the tents are ordered to be struck, the advanced guard and camp colourmen will always assemble at the head of the regiment of infantry in advancing, or of the cavalry in retiring, which leads the columns, or of such regiments as will be specified when marching in more columns than one. The general officers will each send a proper person with the camp colourmen, to take possession of quarters when they can be marked.

When the army marches in more than one column, the columns will generally be composed of both cavalry and infantry; the particulars of rear and advanced guards will be specified, the generals who command them will be named, and the particular corps in the manner they follow in each column. It is always the business of general officers leading columns to take care that every part of that column falls properly into its place of march.

When the army marches from its left, every regiment marches from its

left; and when the army marches from its right, every regiment marches from its right.

When the army retires, the carriages, except such artillery ones as are specified, will in general be ordered under a proper escort to precede the march of the army.

When the army is to march, the particular detail and disposition of march will not always be given out in public orders. Should the only notice given be, the army will march the ——— exactly at ——— o'clock; an hour before the time fixed for the march, the tents must be struck; the regiments will then form, and the baggage be loaded and ready in the rear of each.

Guides will be sent to the head of the regiments that lead columns and a scaled disposition of march, there to be opened by the general or oldest field-officer present. In consequence of which by him the advanced guard will be ordered to form; the regiments and carriages to close in to the leading regiments, according to the order of march, and when the whole are ready, the column or columns will move off in the manner then prescribed, and at the appointed hour.

In general a rendezvous will be appointed for the bât horses and carriages, that they may the more readily be directed into the line of march.—One subaltern per brigade will attend the bât horses; one subaltern per brigade will attend the carriages.

The aids-de-camp and majors of brigade will always regulate their watches by head quarters at orderly time, that regularity of movement in the troops may be observed.

Commanding officers of battalions, squadrons, and brigades of artillery, will be responsible that they are formed, tents struck and the baggage loaded in half an hour, from the time that the signal for the march was given them, and for this purpose it is necessary that they should exercise their men to it where they have opportunities.

The battalions are to march by subdivisions, and the cavalry by subdivisions, or ranks by three's or two's. If the narrowness of the route obliges them to diminish this front, they must be ordered to form up again as soon as the route permits.

Every

Every officer must remain with his division, and never quit it on any account. No soldier to be permitted to leave his rank. No horses or carriages suffered to interrupt the march of the column. The distance between divisions never to exceed the front of divisions. Commanding officers of brigades will take care, that the battalions and squadrons march at their proper ordered distance. When the formation in order of battle may be expected to the flank, the divisions will march at wheeling-up distances; when the formation may be expected to the front, the divisions will march at half or quarter distance. Officers on command will remain with their brigades, and punctually observe the order of march, and the execution of every article prescribed.

If a carriage breaks down, it must be drawn aside, the road cleared, and a proper escort left with it, that the march of the column be not interrupted. If it can be repaired in time, it will follow; if not, the loading must be divided among the nearest carriages, who are hereby ordered to give this reasonable assistance.

The troops at most may march three English miles in an hour and a quarter.

The guides serve only to show the way for the columns; pioneers ordered must make the necessary openings and repair the roads. But the generals must not trust to those precautions, they must gain the most exact knowledge of the route they are to march, and themselves reflect on the most proper means to avoid all difficulties that may embarrass the march.

It is always time well employed to halt the head of a column, and enlarge an opening or repair a bad step in the road, rather than to diminish the front and lengthen out the line of march.

No individual is ever to presume to march on a less front than what the leader of the column directs; and all doublings therefore must come from the head only, and the proper closeness of the march on all occasions, is a point of the highest consequence; and it is a most meritorious service in any officer to prevent all unnecessary doublings, or to correct them as soon as made, and on all occasions whatsoever, in an inclosed country, when in column, to march on the greatest front the roads

or overtures will allow, although the regiments or divisions before them may be marching on a narrower front.

The carriages must be obliged to march two a-breast when the roads will allow, and the bāt horses to be as much connected, and to take up as little space as possible. In short, it should be the study and attention of every one to contract the line of march to its just length, for notwithstanding every possible exertion it will be much too extended.

Whenever the baggage is ordered to be sent away, all carriages whatever are comprehended, except such as are particularly specified.

The instant that a regiment comes to its ground, it must make openings of communication both to its front and flanks.

The line of carriages must at no time stop, whatever accident may happen to any individual one, but such carriage must instantly be drawn on one side, and repaired if possible, while the rest proceed. The officers commanding the several divisions of carriages will be answerable for the strict observance of this article; a failure of which might stop and endanger the whole army.

Whenever the regiments encamp, or take up any extended position in front, it will always be the business of commanding officers to find out, and to make the most convenient passages to the great routes by which the column is afterwards to march. And on many occasions, where there will not be time to open and occupy an extensive front, the army will encamp parallel to and along the great route, covered by an advanced corps on the flank next the enemy.

At all times when commanding officers see, that there are likely to be impediments from the nature of the ground to the movements or march of their regiments, they should always detach officers in advance, to reconnoitre and point out the means and passages by which such obstacles are to be avoided, and at no times are such helps so necessary as when regiments are acting in line in broken ground, and when their movements are combined with those of others.

Whenever the army moves, the majors of brigade are hereby made responsible, that all advanced and detached

## H O M

ed posts are called in at the proper times to their places in the column of march.

**HOMME**, *Fr.* a man.

**HOMME de mer**, *Fr.* a seaman.

**HOMME d'armes**, *Fr.* a military phrase among the French, signifying a gentleman or cavalier who belonged to one of the old companies, was armed cap-a-pie, and always fought on horseback. In ancient times, every man of this description was accompanied by two horsemen independent of his servants. One of the mounted attendants was armed with a cross-bow, and the other with a common bow or battle-axe; so that one hundred *hommes d'armes* composed a body of three hundred horse. It was a species of cavalry, which existed from the reign of Louis XI. until the reign of Henry II. Charles VII. had began to form the French nobility into regular corps of cavalry, dividing them into different troops. Out of these he established a body of fifteen hundred *hommes d'armes*, or armed bowmen, and he gave the troops or companies, according to their sizes, to the princes and most experienced captains in his kingdom. For particulars we refer the curious to Le Gendre and Gaia, *Traité des armes*, l. 14, and Fauchet, l. 2. C. 1. de son *Traité de la milice et des armes*.

**HOMMES de cheval**, *Fr.* In all military descriptions which relate to cavalry, the French usually say, *cinquante, cent, deux cents, deux mille, &c. hommes de cheval*, fifty, one hundred, two hundred, two thousand horse, or cavalry.

**Etre HOMME de cheval**, *Fr.* a term in French equitation, signifying, that a man is completely master of his horse, or knows how to manage him thoroughly and according to prescribed rules and regulations. Thus, *Il est suffisamment homme de cheval pour n'être point embarrassé de celui qu'il monte en commandant sa troupe.*—He is sufficiently master of his horse, or he is horseman enough, not to be the least embarrassed by the one he rides in exercising his troop.

**HOMME de corps**, *Fr.* See **SERF**.

**HOMME fidèle**, *Fr.* an individual, who according to the old feudal system, was attached to some lord, to whom his goods and chattels devolved, in case he died without heirs in the line direct. *Homme feudataire* signifies the same.

## H O N

**HOMMES de pied**, *Fr.* In all accounts of infantry the French say *cinquante hommes de pied, &c.* fifty foot or infantry.

**HONDEAAN or HUNDYVEAAN**, an Indian term signifying commission on bills of exchange.

**HONEY-COMB**, (*rayon de miel, Fr.*) in a general acceptation of the term, cells of wax, in which the bee stores her honey. Hence **HONEY-COMB**, (*sente, Fr.*) in gunnery, which is a cavity or flaw resembling one of those cells.

**HONEY-COMBED**, having a flaw.

**HONEY-Combs** in *cannon*, flaws in the metal, a fault in casting, which renders it extremely dangerous in firing. The board of ordnance rejects all guns (on proof) having an honey-comb of 1-9th of an inch deep, as being unfit for service.

**HONI soit qui mal y pense**, *Fr.* Evil be to him who evil thinks. The motto of the most noble order of the Knights of the Garter. It is seen in all the royal arms of Great Britain.

**HONNEUR**, *Fr.* honour.

**HONNEURS Militaires**, *Fr.* military honours. It was directed by a general instruction in the French service, that whenever an officer saluted or paid a military honour to a general officer, he should make his troop or company invariably face towards the enemy. The same practice prevails in our service.

**HONNEURS funèbres**, *Fr.* funeral honours. See **BURIALS**.

**HONORIFIC ABILITY**, a term from the Latin, signifying honourableness, or an assemblage of the several good qualities which constitute a man of honour.

**HONOUR**, in a *military sense*, is an expression to which custom has given different meanings. Honour consists in the constant practice of virtue. Aristotle calls it the recompence of virtue; the testimony of the excellence of a man who distinguishes himself by virtue.—An Italian writer calls it a state of inviolable dignity, above all calumny and all suspicion. Honour gives many advantages: it procures us the consideration of the public; it advances our fortunes. The best recompence of a brave action is, undoubtedly, the satisfaction of having done it; but nevertheless the honour resulting to us from it is a real good, which should be dear to us.

**HONOUR**, in a general acceptation may

may be properly called susceptibility. As a term it is variously used in military life, and frequently misunderstood by young and unexperienced officers in their first outset. As a quality of the mind, it cannot be too much encouraged, or too much cultivated among officers of all ranks and descriptions. The possession of it is a guarantee for good conduct, a bond of fidelity, and a certain barrier against military corruption. Most men are excited to deeds of valour and enterprize by a sense of honour, that would otherwise remain inactive, or only perform the mere drudgery of service. This species of Honour, is in fact, the root of that *Esprit de Corps* which makes a whole body of officers tenacious of reputation, and solicitous to preserve it unsullied from the Colonel down to the lowest Drum Boy.

This term may likewise be considered as esteem, reputation, the glory which is attached by mankind to talents and virtues.

*Affair of Honour.* We have already given a general outline of this term under DUELLING. The propriety or impropriety, as well as the legality or illegality of which mode of terminating human differences is too well explained by the celebrated English lawyer John Selden to be omitted here. His words are under the head *Duel*; we shall quote them under that of *affair of Honour*.

"A duel may still be granted in some cases by the law of England, and only there. That the church allowed it anciently appears by this: In their public liturgies there were prayers appointed for the duellists to say, the judge used to bid them go to such a church and pray, &c. But whether this is lawful? If you make any war lawful, I make no doubt but to convince you of it. War is lawful, because God is the only judge between two that is supreme. Now if a difference happen between two subjects, and it cannot be decided by human testimony, why may not they put it to God to judge between them, by the permission of the prince? Nay, what if we should bring it down, for argument's sake, to the sword men; one gives me the lie: it is a great disgrace to take it; the law has made no provision to give remedy for the injury, (if you can suppose any thing an injury for which the law gives no remedy) why

am not I, in this case supreme, and may therefore right myself?"

"A Duke ought to fight with a gentleman; the reason is this, the gentleman will say to the duke, it is true, you hold a higher place in the state than I; there is a great difference between you and me, but your dignity does not privilege you to do me an injury; as soon as ever you do me an injury, you make yourself my equal; and as you are my equal, I challenge you; and, in sense, the duke is bound to answer him."

In addition to what our learned countryman has said upon duelling, we shall quote a passage from Dr. Robertson's History of the Reign of Charles the V. which will shew, that this mode of determining private disputes is extremely ancient.

"It is evident" observes that author, "from Velleius Paterculus, lib. ii. c. 118, that all questions which were decided among the Romans by legal trial, were terminated among the Germans by arms. The same thing appears in the ancient laws and customs of the Swedes, quoted by Jo. O. Stiernhook de jure Sueonum et Gothorum vetusto, 4to. Holmiæ 1682, lib. i. c. 7. It is probable, that when the various tribes which invaded the empire were converted to Christianity, their ancient custom of allowing judicial combats appeared so glaringly repugnant to the precepts of religion, that for some time, it was abolished, and by degrees, several circumstances which I have mentioned led them to resume it.

"It seems likewise to be probable, from a law quoted by Stierhöök in the treatise which I have mentioned, that the judicial combat was originally permitted in order to determine points respecting the personal character or reputation of individuals, and was afterwards extended not only to criminal cases but to questions concerning property. The words of the law are "If any man shall say to another these reproachful words, "You are not a man equal to other men," or "You have not the heart of a man," and the other shall reply, "I am a man as good as you," let them meet on the highway. If he who first gave offence appear, and the person offended absent himself, let the latter be deemed a worse man even than he was called: let him not

be admitted to give evidence in judgment either for man or woman, and let him not have the privilege of making a testament. If he who gave the offence be absent, and only the person offended appear, let him call upon the other thrice with a loud voice, and make a mark upon the earth, and then let him, who absented himself, be deemed infamous, because he uttered words which he durst not support. If both shall appear properly armed, and the person offended shall fall in the combat, let a half compensation be paid for his death. But if the person who gave the offence shall fall, let it be imputed to his own rashness. The petulance of his tongue hath been fatal to him. Let him lie in the field, without any compensation being demanded for his death. *Lex Upslandica ap. Stiern. p. 76.* Martial people were extremely delicate with respect to every thing that affected their reputation as soldiers. By the laws of the Salians, if any man called another a *hare*, i. e. a runaway, or accused him of having left his shield in the field of battle, he was ordained to pay a large fine. *Leg. Sal. tit. xxii, § 4. 6.* By the law of the Lombards, if any one called another *arga*, i. e. a good-for-nothing fellow, he might immediately challenge him to combat. *Leg. Longob. lib. i. tit. v. § i.* By the law of the Salians, if one called another *cenitus*, a term of reproach equivalent to *arga*, he was bound to pay a very high fine. *tit. xxvii. § 1.* Paulus Diaconus relates the violent impression which this reproachful expression made upon one of his countrymen, and the fatal effects with which it was attended. *De Gestis Longobard. lib. vi. c. 21.*—Thus the ideas concerning the point of honour, which we are apt to consider as a modern refinement, as well as the practice of duelling, to which it gave rise, are derived from the notion of our ancestors, while in a state of society very little improved." See Robertson's history of Charles V. pages 271, 272.

We shall not take leave of our learned author, without giving two or three instances out of his proofs and illustrations relative to the termination of private feuds by judicial or private combat.

This mode of trial was so acceptable, that ecclesiastics, notwithstanding the prohibitions of the church, were constrained not only to connive at the prac-

tice, but to authorize it. A remarkable instance of this is produced by Pasquier, *Recherches lib. iv. chap. i. p. 350.* The abbot Wittikindus considered the determination of a point of law by combat as the best and most honourable mode of decision.

In the year 978, a judicial combat was fought in the presence of the Emperor. The Archbishop Aldebert advised him to terminate a contest which had arisen between two Noblemen of his court, by this mode of decision. The vanquished combatant, though a person of high rank, was beheaded on the spot. *Chron. Ditmar. Episc. Mersb. chez Bouquet Recueil des Hist. tom. x. p. 121.* Questions concerning the property of churches and Monasteries were decided by combat. In the year 961, a controversy concerning the church of St. Medard, whether it belonged to the abbey of Beaulieu or not, was terminated by judicial combat. *Bouquet Recueil des Hist. tom. ix. p. 729. ibid. p. 612, &c.* The Emperor Henry I. declares that this law, authorizing the practice of judicial combats, was enacted with consent and applause of many faithful Bishops. *Ibid. p. 231.* So remarkably did the martial ideas of those ages prevail over the genius and maxims of the canon law, which in other instances was in the highest credit and authority with ecclesiastics. A judicial combat was appointed in Spain by Charles V. A. D. 1522. The combatants fought in the presence of the Emperor, and the battle was conducted with all the rites prescribed by the ancient laws of Chivalry. The whole transaction is described at great length by Pontus Heuterus *Rer. Austriac. lib. viii. C. 17. p. 205.*

The last instance which occurs in the history of France, of a judicial combat authorized by the magistrate, was the famous one between M. Jarnac and M. de la Chastaignerie, A. D. 1547. A trial by combat was appointed in England, A. D. 1571, under the inspection of the judges in the court of Common Pleas; and though it was not carried to the same extremity with the former, Queen Elizabeth having interposed her authority, and enjoined the parties to compound the matter, yet in order to preserve their honour, the lists were marked out, and all the forms, previous to the combat,

combat, were observed with much ceremony. Spelm. Gloss. Voc. *Campus*, p. 103. In the year 1631, a judicial combat was appointed between Donald lord Rea, and David Ramsay, Esq. by the authority of the lord high Constable and Earl Marshal of England; but that quarrel likewise terminated without bloodshed, being accommodated by Charles I. Another instance occurs seven years later. Rushworth in Observation on the Statutes, &c. p. 266.

It manifestly appears from these extracts, that in former times not only the property of individuals was considered, but their feelings, as men of honour, were consulted. Law, however, soon obtained the entire ascendancy, and judicial or private combats were not only laid aside, but were moreover strictly forbidden. The military character alone seems to have retained a sort of innate privilege to make appeals to the sword, in cases where the nice sensibility of the heart breaks through the trammels of legal disquisition, and establishes points of honour which can only be determined by personal exposure. Thus we find that although premeditated Duels were severely punished in France, *Rencontres* or accidental quarrels were always overlooked, whatever their issue might be. Frederic the Great of Prussia seems to have set his face against duelling altogether. Yet it is singular, that notwithstanding his severe prohibition, a Prussian officer was under the necessity either of vindicating his wounded honour by an appeal to the sword or pistol, or was disgraced for having suffered a personal affront. With us the same hardship exists. Lord Kenyon once declared from the bench, that he would personally interfere as expounder of the British laws, should any minister recommend mercy to his Majesty on the conviction of an individual who had murdered his fellow creature in a duel; and we have lately had a most convincing proof, that the practice is not only discountenanced by the King and Commander in Chief, but that every transgression must entail displeasure on the officer.

**Word of Honour**, (*parole d'honneur*, Fr.) a promise or engagement that is made or entered into by word of mouth, the breach of which entails disgrace upon the violator.

**Point of Honour**, (*point d'honneur*,

Fr. a delicacy of feeling, which is generally acquired by education, and strengthened by an intercourse with men of strict integrity and good conduct. It is likewise very frequently the offspring of peculiar habits, received notions, and established etiquettes. The French familiarly say, *Ils se sont battus pour un point d'honneur*, they fought for a point of honour; they likewise say, *Il y va de son honneur*, his honour is at stake. As young Norval emphatically exclaims in Douglas,

*Honour! sole judge and umpire of itself!*

*To die upon the bed of Honour*, (*mourir au lit d'honneur*, Fr.) is a term particularly applied to military men, who die in battle fighting in their country's cause.

**A Court of Honour**. Although a court of honour may be said, in some degree, to resemble a court of enquiry, nevertheless it cannot be strictly so; for a court of honour has not only the power of ascertaining the degree of guilt which may be attached to misconduct, but it can entail ignominy upon the guilty person; whereas a court of enquiry only investigates the matter and circumstance, and determines whether there be sufficient ground to try the accused before a general court martial; which is the last resort of military jurisdiction, and unites within itself all the qualities and powers of the other two courts.

**A debt of Honour**, an obligation which among honourable men, especially officers, is more binding than those engagements or contracts that are guaranteed by law. The reason is manifest.

**Honours by Guards**, as a complement to general officers, &c. with the detail of officers and men they are entitled to in the English army:

The commander in chief, if a field-marshal or captain-general, has 1 captain, 1 lieutenant, 1 ensign, 2 serjeants, 2 drummers, 2 fifers, and 50 privates, with colours.

A general of horse and foot has 1 captain, 1 subaltern, 2 serjeants, 2 drummers, 2 fifers, and 50 privates.

A lieutenant-general of horse and foot has 1 lieutenant, 1 serjeant, 1 drummer, 1 fifer, and 30 privates.

A major-general of horse and foot has 1 ensign, 1 serjeant, 1 drummer, 1 fifer, and 20 privates.

A bri-

A brigadier has 1 serjeant and 12 privates.

A quarter-master general has 1 serjeant and 12 privates.

Majors of brigade, encamped together, have 1 serjeant and 2 privates.

A judge advocate has 1 serjeant and 7 privates.

A provost-marshal has 1 serjeant and 18 privates.

A provost-marshal, when he has prisoners, has 1 lieutenant, 2 serjeants, 1 drummer, 1 lifer, and 48 privates.

*Military Honours.* All armies salute crowned heads in the most respectful manner, colours and standards dropping and officers saluting. Their guards pay no compliment except to princes of the blood, and that by courtesy in the absence of crowned heads.

A field-marshal is to be saluted with the colours and standards of all the forces, except the horse and foot-guards, and excepting when any of the royal family shall be present; but in case a field-marshal is colonel of any regiment, or troop of horse or foot guards, he is to be saluted by the colours or standards of the regiment or troop he commands.

Generals of cavalry and infantry, upon all occasions, are to have the march beat to them, and to be saluted by all officers; those bearing the colours excepted.

Lieutenant-generals of cavalry and infantry are, upon all occasions, to be saluted by all officers. They are to have three ruffles given them, with presented arms.

Major-generals are to have two ruffles with presented arms.

Brigadier-generals are to have one ruffle with presented arms.

To colonels their own quarter-guards in camp turn out, and present their arms, once a day, after which they only turn out with ordered arms.

To majors their own guards turn out with ordered arms once a day; at other times they stand by their arms.

When a lieutenant-colonel or major commands a regiment, their own quarter-guards pay them the same compliment as is ordered for the colonel.

The master-general of the ordnance is to have the same respect and honours paid to him as the generals of horse and foot.

*Honours to be paid by the cavalry.—*

A general of cavalry or infantry is to be received with swords drawn, kettle-drums beating, trumpets sounding the march, and all the officers to salute, except the cornet bearing the standard.

A lieutenant-general is to be received with swords drawn, trumpets sounding twice the trumpet flourish, as in drawing swords; and all the officers to salute except the cornet bearing the standard; but the kettle-drums are not to beat.

A major-general is to be received with swords drawn, one trumpet of each squadron sounding once the trumpet flourish, as in drawing swords; no officer to salute, nor kettle-drum to beat.

A brigadier-general is to be received with swords drawn; no trumpet to sound, nor any officer to salute, nor kettle drum to beat.

All officers in the command of forts or garrisons, have a right to the complimentary honours from the troops under their command, which are due to the rank one degree higher than the one they actually possess.

*Manner of paying honours.*—The king's standard or colour in the guard, is never to be carried by any guard, except that which mounts on his Majesty's person.

The first standard, guidon, or colour of regiments, which is the union colour, is not carried by any guard, but that on the King, Queen, Prince of Wales, or Commander in Chief, being of the royal family; and, except in those cases, it shall always remain with the regiment.

When general officers, or persons entitled to a salute, pass in the rear of a guard, the officer is only to make his men stand shouldered, and not to face his guard to the right about, or beat his drum.

All sentries are to pay a due respect to every officer who passes by their posts, but are to keep their proper front while paying the compliment.

All governors, whose commissions in the army are under the degree of general officers, shall have, in their own garrisons, all the guards turn out with rested arms; the drummers to beat one ruffle; and though the main guard turns out with rested arms every time he passes, yet they give him the compliment of the drum

drum but once a day; but all the other guards beat as often as he appears near them.

If they are general officers likewise, they are then to have the further compliments paid them, by the several beatings of the drum, as practised in the army.

*Regulation of honours to be paid to admirals.*—Admirals, with their flags on the maintop, are to have the same respect from the troops as generals of cavalry and infantry; that is, upon all occasions to have a march beat to them, and to be saluted by all the officers, those bearing the colours excepted.

Vice admirals are to have the same respect as lieutenant-generals of cavalry and infantry; that is, upon all occasions be saluted by all the officers in the garrison, the drummers beating 3 ruffles.

The rear-admirals are to have the same respect as major-generals, who have two ruffles, and not to be saluted by any officer.

Commodores with broad pendants have the same respect as brigadier-generals; which is, to have one ruffle.

*Rank and precedence between sea and land officers.*—The admiral or commander in chief of his majesty's fleet is to rank with a field-marshal of the army.

The admirals with their flags on the main-top-mast-head, are to have rank with generals.

Vice-admirals are to have rank as lieutenant-generals.

Rear-admirals are to have rank as major-generals.

Commodores with broad pendants are to have rank as brigadier-generals.

Captains commanding post ships, after three years from the date of their first commission for a post ship, are to have rank as colonels.

All other captains commanding post ships, are to have rank as lieutenant-colonels.

Captains of his majesty's ships or vessels, not taking post, are to have rank as majors.

Lieutenants of his majesty's ships are to have rank as captains.

The rank and precedence of sea officers, in the classes above-mentioned, are to take place according to the seniority of their respective commissions.

Post captains commanding ships or

vessels that do not give post, rank only as majors during their commanding such vessels.

No land officer is to command any of his majesty's squadrons or ships, nor any sea officer to command at land; nor shall either have a right to demand military honours due to their respective ranks, unless they are upon actual service.

All guards and centinels are to pay the same compliments to the officers of the royal navy, as are directed to be paid to the officers of the army, according to their relative ranks.

The compliments above directed are to be paid by the troops, to officers in the service of any power in alliance with his majesty, according to their respective ranks.

*Turning out of the line.* The line turns out without arms, whenever any part of the royal family, or the general commanding in chief, comes along the front of the camp.

When the line turns out, the private men are to be drawn up in a line with the colours and standards; the corporals on the right and left of their respective companies, the picquet forms behind the colours, accoutred, but without arms.

The officers and non-commissioned officers are to be drawn up with their respective companies. The field officers in their proper posts in battalion, two ensigns taking hold of the colours.

When the commander in chief comes along the line, the camp colours on the flanks of the parade are to be struck, and planted opposite to the bells of arms, and the drums piled up behind the colours; the halberts are to be planted between, and on each side of the bells of arms, the hatchets turned from the colours.

*Honours of war*, in one sense are stipulated terms which are granted to a vanquished enemy, and by which he is permitted to march out of a town, from a camp or line of entrenchments, with all the insignia of military etiquette. In another sense they signify the compliments which are paid to great personages, military characters, &c. when they appear before any armed body of men; or such as are given to the remains of a deceased officer. The particular circumstances attending the latter

ter are well known, and depend greatly upon the usages of different countries; those which regard our own service may be seen under *Lurials*. With respect to the former we think it necessary to observe, that it is extremely difficult, and much beyond the limits of our undertaking, to describe them specifically; as much, indeed almost every thing, depends upon the disposition of the general who grants the capitulation. In some instances, the troops of a besieged garrison are permitted to march out with drums beating, colours flying, &c. others are only allowed to advance silently in front of their works, ground or pile their arms, face to the right and return within their line of entrenchments. Others again (as was the case with lord Cornwallis, at York Town, in Virginia) are permitted to march out, with drums beating, to a given spot, there pile their arms, face to the right about, and march back to their works. In the instance quoted, the officers retained their side arms and baggage, with such horses as they had lawfully obtained by purchase, &c. A sloop of war was allowed to proceed to New York with despatches from the British general to Sir Henry Clinton, who was commander in chief of the forces acting against America; which vessel passed and repassed without being searched. This indulgence proved extremely fortunate to a small number of American Loyalists, who were peaceably transported into the British lines, instead of being sacrificed to the fury of their countrymen in arms.

When the town of Valenciennes surrendered to the present commander in chief, Field Marshal his Royal Highness the Duke of York, the garrison under the orders of General Ferrand was permitted to march out by the gate of Cambray with the honours of war. It was, however, specifically stated, that the troops should lay down their arms at a named spot, viz. at a house called *le Briquet*, where they were to leave their colours and field-pieces without damaging them in the least. They were likewise directed to leave their troop-horses, artillery, provisions, and other military effects. Those belonging to the officers were restored to them, with their swords. It was further agreed, that the garrison should march out on

the 1st of August, in the manner mentioned; and as the troops were prisoners of war, their route to return into France was to be communicated to them 24 hours previous to their departure, in order to receive their parole of honour. The officers and soldiers engaged not to serve during the whole course of the present war against the armies of his majesty the emperor, and of his allies, without having been exchanged conformably to the cartels, under pain of military punishment.

General Ferrand had demanded, that the garrison should march out from the place on the 6th day after the signature of the capitulation, to repair to such part of the French republic as he should judge proper, with arms and baggage, horses, drums beating, matches lighted at both ends, colours flying, and with all the cannon they could carry away. These articles were refused by the Duke of York; and on the 28th of July, 1793, Valenciennes surrendered to the British arms, in trust for the emperor of Germany.

As soon as the capitulation was signed, hostages were sent into the town, namely, a colonel, a major, and a captain, who were exchanged against officers of an equal rank of the garrison; which hostages were restored immediately after the execution of the articles of capitulation.

When Mantua surrendered to Bonaparte, the veteran general Wurmsur, in consideration of his brave defence of the place, was allowed to leave the place with all the honours of war.

Several emigrants, on this occasion, escaped in the covered wagons.

**HONOURABLE**, noble, high spirited, full of rectitude, and beyond the least approach of meanness or corruption. This term is frequently attached to sur-names from courtesy.

**HONOURABLY acquitted**, a term used in naval and military courts-martial. See observations respecting this usage, vol. i. Regimental Companion.

**HOOF**, (*sabot*, Fr.) part of a horse's foot.

**Hoof-boney**, a round boney swelling growing on a horse's hoof.

**Hoof-bound**, (*encastelé*, Fr.) a shrinking of the top of a horse's hoof.

**Hoof-cast**. When the coffin or horn falls clear away from the hoof.

**Hoof**

**Hoor-loosened**, is a loosening of the coffin (or hollow part of a horse's hoof) from the flesh.

**HOOK**, (*crochet, croc, Fr.*) a bended iron to hang things upon. Also a small piece of bent wire, which is used in fastening a coat, to the eye; also a piece of wire.

**HOOKS**, pieces of bent iron fixed to the transom plates of a field-carriage are so called. They serve to fix the dragropes for drawing it occasionally backwards or forwards.

**Hooks and Eyes**. It is directed in all well-disciplined corps, that every officer, non-commissioned officer, and soldier, when regimentally dressed, should have the uniform coat hooked across the chest. This regulation has, in some degree, been dispensed with during the winter months, as far as it regards the officers, who have been permitted to button their coats. In some corps the indulgence is rendered nugatory, as the facings are sewed to the coat. The dressing of a line is certainly rendered more perfect by the use of the hooks and eyes, as they prevent any intermediate obstacle along the line of sight. This nicety is indispensable in parade business; but we shall not pretend to say how far it may be necessary to enforce it strictly on service. The propriety of some general rule being established is manifest, since every soldier knows, that the slightest deviation from the laudable system of uniformity almost always leads to gross neglects.

**HOOKUM**, an Indian word, signifying order or command.

**HOOKUMNAUMAIL**, in India, signifies instruction.

**HOOP of iron**, a circular iron band. Several sorts of hoops are used in the construction of artillery carriages, as nave and axle-tree hoops, &c.

**HOPITAL, Fr.** hospital. During the old French government, there existed 80 military hospitals under the immediate sanction of the king. These hospitals were subject to the war-minister, from whom they received instructions, and they were all originally built for the benefit of sick and disabled soldiers. The chief appointments in each hospital consisted of a comptroller of accounts, a physician, a surgeon-major, and a contractor, whose sole duty

was to provide for the wants and necessities of his majesty's troops. These were permanent establishments. In time of war, every army had a certain number of hospitals attached to its component parts. There were likewise other hospitals, which were under the care of the intendant of each province. They chiefly consisted in those erected on the frontier and in garrison towns.

**HOPITAL sur mer, Fr.** hospital-ship. A particular vessel, which is always attached to a naval armament, and is provided with the necessary accommodations for the sick and wounded belonging to the ships of war. The same precautions (indeed greater if possible) are indispensably necessary to prevent the dreadful consequences of contagion, that are directed to be observed in the fumigation, &c. of transports. During the old government of France, hospital ships were of a particular construction. Independently of the equipage, tackle, &c. belonging to every other navigable ship, these vessels were directed to have their decks extremely high, to have large port-holes, and to have the space between the decks constantly clear, so that the cots and bedding of the sick might be conveniently plated, and a constant circulation of free air be preserved.

**HOPLITAL**, foot soldiers among the Greeks, who bore heavy armour, and engaged with broad shields and long spears. These took precedence of all other foot soldiers.—Potter's Greek Ant. vol. ii. c. 3.

**HOQUETON, Fr.** a sort of garment, which was worn during the old government of France by gentlemen belonging to the king's body guard, who were called *gardes de la manche*. It sometimes signifies a serjeant; but the term is obsolete.

**HOED**, (*horde, Fr.*) a crowd or assemblage of people, who have not any fixed or certain habitation. The term was originally applied to a body of Tartars, who followed a roving life, encamped in different countries, and chiefly lived with their flocks.

**HORDEARIUM**, the money which the Romans gave their cavalry for the sustenance of their horses.

**HORDEUM**, barley. In ancient Rome the horses were fed with barley; and the soldiers were sometimes punished

nished by being confined to that allowance.

**HORION**, *Fr.* a term which formerly signified a helmet, and which in the vulgar acceptation of it now, among the French, means a blow upon the head.

**HORIZON**, (*horizon*, *Fr.*) a circle which divides the invisible from the visible part of the globe.

**HORIZONTAL**, parallel to the horizon; on a level.

**HORIZONTAL superficies**, the plain field lying upon a level, without any rising or falling.

**HORIZONTAL plane**, that which is parallel to the horizon of the place.

In levelling, the chief object to be considered is, whether two points be in the horizontal plane; or whether they deviate; and in what degree.

**HORIZONTAL range**, or *level range of a piece of ordnance*, is the line it describes, when directed parallel to the horizon.

The following useful theorems come from the pen of the ingenious Dr. Halley:—

1. A shot being made on an inclined plane, having the horizontal distance of the object it strikes with the elevation of the piece, and the angle at the gun between the object and the perpendicular, to find the greatest horizontal range of that piece loaded with the same charge of powder, that is, half the latus rectum of all the parabolas made with the same impetus.—Take half the angle contained between the object and the nadir, and the difference of the given angle of elevation from that half; subtract the versed sine of that difference from the versed sine of the angle made by the object and zenith. The difference of those versed sines will be to the sine of the angle last mentioned, as the horizontal distance of the object struck to the greatest range at 45 degrees.

2. Having the horizontal range of a gun, the horizontal distance and angle of inclination of an object to the perpendicular, to find the two elevations necessary to strike that object.—Take half the angle contained between the object and nadir; this half is equal to half the sum of the two angles of elevation sought. Then say, as the horizontal range is to the horizontal distance of the object, so is the sine of the angle of inclination to a fourth proportional;

which fourth, being subtracted from the versed sine of the angle formed by the object and zenith, leaves the versed sine of half the difference of the angles of elevation, whose half sum was before obtained; therefore, by adding and subtracting half the difference of the angles of elevation to and from the said half sum, the elevations themselves will be found.

**HORN**. (*Corne*, *Cor*, *Cornet*, *Fr.*) See **BUGLE horn**.

**HORN-work**. (*Ouvrage à Corne*, *Fr.*) See **FORTIFICATION**.

**HORS de Combat**, a French military phrase, signifying that an individual or body of men are so completely beat by superior skill, &c. as not to be able to maintain the field of battle.

*Mettre Hors de Combat*, to drive your opponent before you; to press him so closely, that he cannot make a stand against you—To put him out of the list, of contest.

**Hors de portée**, *Fr.* (in fencing,) out of distance.

**Hors de mesure**, *Fr.* (in fencing,) out of measure.

**HORSE**, in a military sense, a body of horse. See **CAVALRY**.

**HOUSE-GUARDS**, a public building, situated in Parliament-street, Westminster, which is so called from a guard having been originally mounted there by the House-guards, whose duty is now performed by the Life-Guards.

The Commander in Chief's office, that of the Secretary at War, Adjutant General, Master General, &c. are at the House-Guards; to which place all official communications relating to the British army are transmitted. All applications, personal or otherwise to the Commander in Chief, are likewise made there.

**ASSOCIATED HORSE**—a body of Cavalry so called in the days of Cromwell. At the famous battle of Naseby (fought on the 14th of June, 1645), which decided the fate of Charles the First, the associated horse were posted in the rear of the right wing of the Republican army, and formed a part of the reserve.—There were troops of the association stationed in the rear of the left. Oliver Cromwell commanded the cavalry on the right of the whole, and the associated horse were under his immediate orders.

**HORSE near-side protect**, a guard used in the cavalry sword exercise. See *Sword Exercise*.

**HORSE off-side protect**. See *Sword Exercise*.

**HORSES falsely mustered** are by the 27th section of the Mutiny act to be forfeited, if belonging to the person who lent them for that purpose; if not, the person lending them to forfeit 20/. When officers belonging to cavalry regiments purchase horses for public service, they are to make the best bargain they can for Government, and to account for every saving which has been made, within a limited sum.

**HOUSE**, a wooden machine, which soldiers ride by way of punishment. See *CHEVAL DE BOIS*.

**HORSE**. See *PORTCULLIS*.

**HORSEMAN**. See *CAVALRY*.

**HORSESHOE**. See *FORTIFICATION*.

**HOSF**, breeches or stockings. It is generally taken in the latter sense when mentioned as part of a soldier's necessities.

**Over-HOSF**, mens breeches and stockings together, or Leggings. Dragoons generally wear them when they appear in their watering dresses.

**HOSPITAL**, a place appointed for the sick and wounded men, provided with physicians, surgeons, nurses, servants, medicines, beds, &c.

**HOSPITALS with military superintendants**.—There are four general hospitals of this description, viz. at Plymouth, Deal, Gosport, and Portsmouth, and York Hospital at Chelsea.

The Surgeons at Port-mouth and Deal have not any rank attached to the situation, but they receive five shillings per day extra allowance in addition to their nett pay of ten shillings. At Plymouth a Physician has charge of the hospital; he receives twenty shillings per day, but has no extra allowance. York hospital at Chelsea is attended by an assistant surgeon, being under the immediate direction of the surgeon general.

The military superintendants have five shillings over and above their nett pay, according to the rank they hold in the army.

At Gosport the military superintendant has one guinea allowed per week for lodging money, together with coals, candles, &c.

A fifth military superintendant was appointed in 1800 to take charge of the temporary hospital at Colchester. See James's Regimental Companion.

These are the principal permanent Hospitals in England, for a specific description of whose regulations, &c. as well as for instructions relative to military Hospitals in general, see the last directions which have been published by authority. We cannot, however, dismiss the subject entirely without observing, that the cause of humanity has lately been espoused by the belligerent powers abroad, in a manner which reflects credit on the enlightened age we live in. The following two articles which have been agreed upon between the Austrians and the French are illustrative of our observation.

Hospitals ought to be considered as inviolable.

Art. 1. The military hospitals shall be considered as so many inviolable azyla, where valour shall be respected, shall be assisted, and shall be free, whatever the army may be to which these hospitals belong, and upon whatever ground they may be established.

Art. 2. These hospitals shall be marked out by writings placed on the adjacent roads, in order that the troops may not approach, and that in passing they may observe silence, and cease beating the drums, or sounding the trumpets.

**Camp Hospitals** are either general or regimental. The general hospitals are of two kinds, viz.

*Flying-HOSPITALS*, } The first  
*Stationary-HOSPITALS*, } attends the camp at some convenient distance, and the latter is fixed at one place. In the choice of both Dr. Pringle thinks it better to have them in towns than villages, as the former will afford larger wards, besides more of other conveniences. These wards should be as airy as possible.

**Regimental-HOSPITALS** are frequently in barns, stables, granaries, and other out-houses; but above all, churches make the best hospitals from the beginning of June to October: these hospitals are solely for the use of the regiments they belong to.

Every regiment on the British establishment has an hospital for the reception of the sick belonging to it.

This hospital is under the immediate care of the regimental surgeon, who is subordinate to the general medical Board.

Officers commanding brigades are enjoined frequently to visit the hospitals of the regiments composing their brigades, and minutely to investigate the economy and order therein established; to enquire into the state of the patients, their diet, and attendance of every kind, and to enforce the strictest observance of the hospital regulations.

These attentions are required still more in detail, from commanding officers of regiments, who from personal observation have opportunities of checking every abuse, and whose duty it is to extend to the hospitals the same system of order, regularity and discipline, which should prevail in their regiments.

The captain and subaltern of the day of each regiment are to visit the hospital at different and uncertain hours, to observe the cleanliness of the wards, the regularity of messing and the appearance of the men, who, while they are in the hospital, are by no means to be permitted to contract habits of slovenliness in their dress, but are expected to appear perfectly clean in every particular.

Every species of gaming is strictly forbidden. Any patient convicted of swearing, disorderly behaviour, insolent and provoking conduct towards the attendants, or of any deviation from the hospital regulations, will be severely punished.

The captain of the day is to report all irregularities, he may observe, to the commanding officer of the regiment.

The surgeon is to make a daily report of the sick to the commanding officer, who will make a weekly report to the officer commanding the brigade, who will make a general report of the sick of his brigade once a week to head quarters.

Regimental hospitals are under the immediate direction of their respective surgeons, subject to the general instructions and superintendence of the inspector of regimental hospitals, or other professional persons, having authority for that purpose, from the Commander in Chief. It is the duty of the inspector of regimental hospi-

tals, and of such other officers of the medical staff as shall be ordered for that purpose, to visit regimental hospitals from time to time; to observe whether the hospital regulations are strictly adhered to, to enquire whether any causes of complaint exist among the patients, and to submit to the generals commanding in districts, such local observations as he conceives may tend to the benefit of the sick.

When a regiment is stationed in a barrack, where no detached building is appropriated for the hospital, or in camp and cantonments, it is the business of the surgeon, to procure an airy, and commodious hospital, taking particular care, that it is amply supplied with wholesome water.

In camp, a tent will be allowed, which must be pitched upon the best dry piece of ground, in the vicinity of the regimental hospital, to which it is granted as an aid, but must not, except in cases of absolute necessity, be itself considered as the hospital.

The responsibility for the order, regularity, and cleanliness of the regimental hospital, for the diet and care of the patients, and for the general conduct and economy of the whole establishment, rests entirely with the surgeon; but commanding officers are enjoined to furnish such military assistance, as may be necessary, for the attainment of these objects, and all non-commissioned officers and others placed in the hospital, in aid of the surgeon, are commanded to yield the most implicit obedience to the instructions they may receive from him, and to enforce, in every instance, the most minute observance of the hospital regulations, which are to be fairly written, and fixed on a board in the most conspicuous part of the entrance of the regimental hospital.

The surgeon should be consulted in the selection of the serjeant to be appointed to assist him in the hospital; and it will tend materially to the benefit of the sick, that this non-commissioned officer, and the orderly men acting in the hospital, should be considered as being in a permanent situation, and not liable to be removed except in case of misdemeanour.

A guard is to be constantly furnished

to the hospital, and the surgeon will signify to the commanding officer of the regiment, the particular orders which he wishes to be given to the non-commissioned officer commanding it, and to the sentries.

When a soldier comes into the hospital, his arms and accoutrements are to be taken in charge by the non-commissioned officer attending the hospital, but his ammunition is to be left with his troop or company, and is in no instance to be taken with him to the hospital.

Regimental surgeons are enjoined to take under their care any non-commissioned officers or soldiers of other regiments, (upon the commanding officer's authority for so doing being obtained) who, from the absence of the corps to which they belong, from there being no general hospital in the neighbourhood, or from other unavoidable circumstances, are under the necessity of applying to them for relief and assistance.

It cannot be superfluous to remark in this place, that in the French service there was, and we believe there still is, a specific regulation, which directs, that all soldiers who have contracted a venereal disorder should be received into one of the Royal or Public hospitals, without exception or distinction. They are attended to in a particular quarter or ward, without expence to themselves or to their corps. Particular care is taken not to mix their linen or clothes with others, and they are always washed apart. No soldier, whose disorder has been pronounced incurable was or is received into any of the Public hospitals. The physician or surgeon only gives the incurables a certificate of their state and condition.

It is very desirable, that in every regimental hospital, there should be an apartment appropriated to convalescents, whose diet and mode of living must remain under the direction of the surgeon, and who must themselves be in every respect, subject to the hospital regulations. A trusty non-commissioned officer must be appointed to the superintendence of the messing, and conduct of this particular ward.

Convalescents, on coming out of the hospital, are not to be put on duty, till the surgeon certifies to the adjutant, that they are perfectly recovered; for

which purpose the surgeon, or assistant surgeon, must make a particular inspection of these men, at morning parade, to prevent any remaining longer exempted from duty, than the state of their health renders absolutely necessary. On a march, when circumstances will permit, the packs of such convalescents, as have not yet received certificates of their being fit for duty, should be carried for them.

Convalescents, when discharged from the hospital, should not be put immediately on public duties, but should be employed for a certain time, on regimental guards only, where they are not liable to be so much exposed to the weather, or to fatigue.

It is most positively ordered, that the surgeon, or assistant surgeon, shall attend all parades and field days. No punishment is to be inflicted, but in the presence of the surgeon or assistant surgeon.

In cantonments and barracks, the quarters of the surgeon must be near the hospital; and the assistant surgeon's tent must be pitched in its vicinity when a regiment is in camp.

The instructions for the economy and management of regimental hospitals, framed by the army medical board, having received the approbation of the Commander in Chief, are to be considered as proceeding immediately from that quarter; and all generals commanding brigades and regiments, are enjoined to give them full effect, and by their authority to enforce the strictest observance of them, within their respective commands.

*Chelsea Hospital.* See CHELSEA.

*Greenwich Hospital.* A magnificent building originally instituted by King Charles II. for decayed seamen and mariners. It stands upon the banks of the river Thames, has a delightful park annexed to it, with an astronomical observatory. It is situate 5 miles East of London, in the county of Kent.

*Hospital-mate*, in recruiting districts. According to the last printed regulations, it is directed that an hospital mate should be placed under the orders of each field officer, to examine the recruits when brought for inspection, and to give such medical assistance as may be in his power, to the several recruiting

cruiting parties in the district he belongs to. The actual disbursements of the said mite for medicines, when not supplied from the public stores, will be reimbursed to him by the district paymaster, upon a certified account thereof, vouched by the approving signature of the inspector of regimental infirmaries; such of them, however, as may be incurred for unestablished corps, or for corps of fencibles and militia, are to be stated separately; being, when approved as above, to be defrayed by the regimental paymaster, out of the fixed allowance for medicines, made to corps of the above mentioned description.

**HOSPITAL-fever**, a name given to the malignant catarrhal fever, as being the most frequent in hospitals.

**HOSPODAR**, a dignitary title, which is given to the Prince of Walachia, who is tributary to the Grand Signor, and from whom he receives the investiture.

**HOST**, an army; any large body of men assembled together in arms.

**HOSTAGE**, in the art of war, a person given up to an enemy, as a security for the performance of the articles of a treaty. When two enemies enter into a treaty or capitulation, it is common for them mutually to give hostages as a security for their reciprocally performing the engagement they have entered into. An hostage becomes either an accessory, or principal, according to the state of things. Thus, for example, he is accessory when a prince promises fidelity to another prince, and gives either his son, or some great lord, as a security for his performance, without any further capitulation; for then this hostage is only an additional engagement of the prince; and if he violates his word, the hostage is not in any manner responsible. An hostage becomes a principal, when it is stipulated that he shall be answerable for the event of things. For instance, if a city promise to surrender within a certain time, in case it is not succoured, and, for the security of this article, give hostages (which are in the same nature as bail given to a creditor to secure a debt); so that if the succours arrive in time, the promise becomes void, and the hostages are discharged; but if the succours do not arrive, and the city is guilty of a breach

of faith, by refusing to surrender, then the hostages become principal, and may be punished for a breach of faith.

At the commencement of the present contest between France and Great Britain, the subjects of the latter power were unexpectedly detained by the former, and still remain as hostages in that country. England, on the contrary, gave free egress to every Frenchman who chose to quit the kingdom within a given period.

**HOSTILE**, inimical; suitable to an enemy.

**HOSTILITÉS**, *Fr.* See **HOSTILITIES**.

**HOSTILITIES**, in a military sense, may imply a rupture between the inhabitants of the same country, town, or place; and the first outrage that is committed by either party, as in general matters of warfare, is considered to be the first commencement of hostilities. Between nations, the first act of hostility presupposes a declaration of war. There are, however, certain established laws and regulations by which acts of hostility are governed; without the intervention of these restrictions, war would be conducted upon the most brutal and ferocious principles. Every wise and good general will exert his influence and authority to soften the fury of his victorious men, let the contest be ever so obstinate and bloody. Self-preservation, indeed, suggests this natural precaution; for if soldiers were permitted to ill-treat their prisoners, the sanguinary system of retaliation must prevail.

**HOSTILITY** denotes a state of war or enmity between two nations. During a truce all acts of hostility are to cease on both sides.

**HOSTING**. An obsolete term, formerly signifying the mustering of men in arms.

**HOTEL des Invalides**, *Fr.* a spacious building which was erected by Louis XIV. in Paris, at the extremity of the Fauxbourg St. Germain, upon the river Seine, as a public monument of his charity and magnificence. All disabled, infirm, and wounded officers and soldiers were received, lodged, and subsisted during the remainder of their lives within its walls. The established number upon the foundation was 4000, includ-

including officers and soldiers. All exceeding that number, and who were less incapable of bearing arms, were distributed among the different garrison towns upon the frontiers of the kingdom, in detached and separate companies.

During the old government of France, a particular staff was appointed to superintend the duty at the *Invalids*, and a guard was regularly mounted every morning. Officers and soldiers entitled to this charity, were first received in 1670. M. de Louvois, minister and secretary at war, was the first director and administrator general, and M. Dornoy was the first governor commandant.

The staff consisted of one director and administrator general, one governor commandant, one *lieutenant du Roi*, one major, two adjutants, one *garçon major*, one director and superintendent of the hospital, and one inspector and comptroller general, who did the duty of commissary at the different inspections.

No person could be admitted into the royal hospital of invalids unless he had served twenty years successively and without interruption, or had been dangerously wounded in the service of his country. The necessary certificates were signed by the commanding officers and majors of regiments, which were afterwards examined by the directors or inspectors.

No officer was received with the rank of officer, unless he had served two years in that capacity, and had been dangerously wounded, or was otherwise rendered incapable of doing duty.

The persons belonging to the *Hôtel des Invalides* were divided into three classes:

The first class was composed of officers belonging to the king's troops, to the body-guards, *gens d'armes*, light-horsemen, musqueteers, serjeants of companies in the horse grenadiers, after having served five years in that capacity; of serjeants of the French and Swiss guards, after ten years service in that capacity; of officers attached to the constable's jurisdiction, exempts and *maréchaussés*, after having been ten years with the rank of officers; and of *gens d'armes* and light horsemen belong-

ing to established companies; of quarter-masters from cavalry and dragoon corps, and of infantry serjeants, who bore the brevet rank of lieutenant, after having served five years in the last capacity.

The second class was composed of *gens d'armes*, light horsemen belonging to established companies, quarter-masters belonging to cavalry and dragoon corps, and of serjeants from the infantry, after having served ten years in that capacity; of those likewise who, having left the cavalry to enter into the body-guards, had again returned to the cavalry. Within this class were also comprehended the *gard. magasins*, the captains and conductors of artillery, after thirty years service, ten of which were to be in the last mentioned capacities. All belonging to this class wore an uniform distinguished from the dress of the soldier, and were permitted to wear a sword. They received at the commencement of every month 15 sols, or 7½d. English, for ordinary expences; they were lodged in a particular quarter of the building, which was allotted to their use; they had a separate room to mess in; and they were fed like the common soldier, with this only exception, that each of them was allowed every morning a *demi-septier*, or an English pint of wine. Those belonging to established garrisons in forts or citadels composed companies which were called *compagnies de bas-officiers*, companies of non-commissioned officers.

The third class was composed of private soldiers, heavy horsemen and dragoons, archers attached to the constable's jurisdiction, and *maréchaussés*, or patrols belonging to the police, masters or common workmen and artillery-drivers.

**HOTTE**, *Fr.* a sort of hand-basket, which is often made use of in the construction of batteries and other works, and serves to carry earth from one part to another.

**HOTTENTOTS**, the Aborigines, or native inhabitants of a settlement which took place in 1360, at the Cape of Good Hope. They possessed the whole of the colony, containing a large tract of country to the eastward and northward of Cape Town, until they were subdued and reduced to a wretched state

state of subjection by the Dutch boors.

As this settlement (if regained) must always prove a valuable acquisition to the empire of Great Britain, and will unquestionably become an object of increasing importance to the government, we should be wanting in our duty to the public, and unjust to the merits of a deserving and enterprising officer, were we to omit the insertion of some interesting particulars, with which we have been favoured by Lieut. Col. Fielder King, then of the 91st regiment.

When that officer commanded the light infantry, which was stationed at Stellenbosch in March, 1796, Sir James Craig, who was chief in command, placed a Hottentot under his immediate care, for the purpose of ascertaining (what he had much at heart) the possibility of collecting and keeping together a certain number of those people. In little more than a month 110 were assembled, and marched with the light infantry to the post of Wynberg, where they soon increased to 200, and upwards. Finding them extremely tractable and patient, Col. King represented them in such a favourable manner to Gen. Craig, that he ordered 170 to be armed, and accounted for service. \*

When the Dutch fleet came into Sal-lan-ha Bay, they marched with the light infantry to that place, and, after the capture of the fleet, continued upon duty service for the space of a month or more; during which time they discovered not only a keen disposition to be instructed, but evinced a great aptness to learn, and a most unaffected docility of character. So much so, that their commanding officer conceived an eager wish to rescue upwards of ten thousand of his fellow creatures from an abject state, which was worse than slavery, and in which they were kept by their original oppressors and inhuman masters, the Dutch boors. With this ultimate object in view, Col. King directed much of his attention to the organization of his little corps, and soon succeeded in making the men of it capable of being exercised according to the King's rules and regulations. They were formed under one lieutenant and two British sergeants. Some of the most intelligent and active amongst them became good

drills, and were of considerable use in teaching the rest the manual and platoon exercise, &c. The boys were selected for the purpose of making them drummers and fifers; and they soon acquired a perfect knowledge of their duty. The Hottentots, like the Russians, possess a natural aptitude at learning languages. They are in general well-limbed, though rather under-sized, and might be taught light infantry or rifle service with great ease. As a proof of our assertion respecting the facility which they find in acquiring different languages, we have the best authority to state, that one man, belonging to the corps already mentioned, having been detached on duty with a Highland regiment, obtained a competent knowledge of French and English in a very short period.

The Hottentots, who were formed into a separate body, always acted on general field-days with the light infantry; and when it was found necessary to detach some of the British troops against the insurgents from Caffaria, they not only discovered an eagerness to engage the enemy, but gave the most unequivocal proofs of attachment to the British government. If the general principles of humanity, civilization, and social order were to be overlooked, this insurrection of the Caffres alone (who are a bold athletic people, inhabiting an immense extent of country, numerous among themselves, and closely united) ought to awaken in the British cabinet a political motive for securing the seat of government at Cape Town by a military establishment in the remote part of the colony. A well-regulated corps of Hottentots under the immediate command and superintendence of British officers, occasionally relieved, and always over-awed, by a mixture of British troops, would be sufficient to open a communication with and to preserve order in the most distant parts. They might be stationed at rivers where ferries would be established, where they could mend the roads, and improve the passes over the hills. As the gentleman, to whom we are obliged for this interesting article, very properly remarks, the expediency of keeping a regiment of British cavalry (which might be better employed in India), at a very heavy expence, would be done

done away. In his opinion, the corps of Hottentots, formed in the manner already described, should be stationed in two distant districts of the colony called Zellendam and Graaf Renette.— This establishment (supposing ourselves in possession of the Cape) would supersede the necessity of weakening the regular garrison by large detachments, which the existing circumstances of the times, the political cast of the country, and the possibility of fresh insurrections breaking out, might render unavoidable. In an economical view, the importance and wisdom of the plan are incontrovertible. In a military one, they appear equally well founded, since small detachments might be posted at these two stations, for the purpose of keeping up an easy chain of communication with the seat of government. But in a more enlarged and in a more noble view of the subject, namely that of bringing into social intercourse so large a body of our fellow creatures, common sense, sound policy, and civilized humanity, speak loudly for its adoption. It is well known, that however competent the person might have been whom Government, it was said, intend to send out for the agricultural improvement of the colony, such a system would not only have conducted to the security of the spot, which, under the direction of the Board of Agriculture, might be fixed upon for his residence, to have a military post in its neighbourhood, but the impression that would gradually gain upon the minds of the Hottentots, by having the greatest part of that detachment forlorn from among themselves, would influence in favour of the British settlers. This important object would be rendered the more easy, as it is well known, that there are some hundreds of them under the immediate guidance of three Hiernhutt missionaries, who are well meaning men, and who have made some progress in the cultivation of their minds and manners. In the spot where they at present assemble, these people can be of little public service; but they might be rendered so were the British to communicate with these teachers, and to encourage them to lead their proselytes, who have a blind faith in every thing they suggest, towards the spot fixed upon by the Board of Agriculture, where they would

become useful labourers, and by degrees be taught to feel an interest in society, from which they have hitherto been excluded. On these three grounds (the grand basis of which is humanity linked to social order), the British empire would lay the foundations, in the most important intermediate colony we could possess, of a religious, an agricultural, and a military establishment. Independent of a general spirit of civilization, which would then be introduced among the Hottentots, and eventually among the Caffres, the minds of the refractory boors would be regenerated, by feeling themselves rescued from the caprice of an uncontrolled rapacious Landdroost; sentiments of concord would succeed to principles of vexation towards the Hottentots, and old England would possess the enviable character of having again added to civilization, whilst she extended her territorial property.

We cannot conclude our account of the Hottentots without endeavouring to preserve, in testimony of Col. King's zeal and activity, the following sketch, which he gave in to government on his arrival from the Cape in 1799:

MIXED CORPS FOR THE SERVICE OF  
THE CAPE OF GOOD HOPE.

*Of British soldiers.*

One troop of light dragoons, formed and composed according to the present war establishment. One company of infantry of about 80 rank and file, and 2 serjeants to each company of Hottentots.

*Hottentots.*

Five companies of 100 each.

*State of the officers, who were all to have been of British or Irish extraction.*

- 1 Lieutenant-Colonel, Commander
- 2 Majors
- 7 Captains
- 7 Lieutenants
- 7 Second Lieutenants, or Ensigns
- 1 Adjutant
- 1 Quarter-master
- 1 Paymaster
- 1 Surgeon
- 2 Assistant surgeons.

HOUCKIEN, or *Hæcklen*, Fr. the name given to a faction which rose in the Low Countries, and was opposed to that of *Kabelfjuuv*. The latter term signifies a fish which devours others, and *Houckien* means a hook, whence the

faction in question used to say, that they could catch their enemies with the same ease that fish are caught.

**HOT GUINIS**, *Fr.* flat pieces of iron with which the ancient warriors covered their thighs, legs, and arms.

**HOUELLIER**, *Fr.* an obsolete French term, which meant what is now expressed by *Picqueur des armées*, or a free-booter.

**HOON**, a gold coin of the Mysore country, value about four rupers.

**HOUPPE**, *Fr.* a small tuft or bunch of worsted, worn in the corners of three-cocked regimental hats. The officers in the British service have them made of gold and crimson silk.

**HOURDEYS**, *Fr.* an old French term which signified, first, hurdles with which the tops of the walls belonging to a fortified town were covered, in order to shield them against the concussion of warlike machines; and secondly, a machine formerly used, which was called in Latin *hordacium*.

**HOUSARDER**, *Fr.* to fight with Hussars, or after their method.

**HOUSEHOLD troops**. The Life-Guards, Royal Regiment of Horse-Guards, and the three regiments of Foot-Guards are so styled. It is a peculiar privilege of these regiments, that no officer of the line, fusibles, or militia, can sit upon a court-martial which may be assembled for the trial of any person belonging to them.

**HOUSING**, or *saddle-HOUSING*. cloth, skin, or other ornaments added to saddles, by way of distinction; frequently embroidered with gold or silver, or edged with gold or silver lace.

**HOUSE**. *See* **HOT SING**.

**HOWITZ**, a kind of mortar mounted upon a field-carriage like a gun: the difference between a mortar and a howitz is, that the trunnions of the first are at the end, and of the other in the middle. The invention of Howitzers is of much later date than mortars, as from them they had their origin.

The constructions of howitzers are as various and uncertain as those of mortars, excepting the chambers, which are all cylindric. They are distinguished by the diameter of the bore: for instance, a 10-inch howitz is that, the diameter of which is 10 inches; and so of the larger or smaller ones.

Under this class or description of ord-

nance, may also be mentioned the carronade, a very short piece of iron ordnance, originally made at Carron, a river in Scotland, from whence the Carron company, or foundery, derives its name.

It is different from ordnance in general, having no trunnions, and being elevated upon a joint and bolt. The length of the calibre seldom exceeds three feet; on which account a thin projection of metal is cast upon the muzzle, to carry the explosion of the charge more clear of the sides and rigging of ships. All carronades have chambers, and much less windage than guns, by which means they make a considerable range, and a recoil that is almost ungovernable.

**HOWITZ battery** is made the same as a gun-battery, only the embrasures are at least a foot wider on account of the shortness of the howitz. *See* **BATTERY**.

**Field Howitzer**. The modern French use 6-inch howitzers in the field, which can throw a grenade at 6 degrees elevation, to a distance of 600 toises. The 6-inch howitzer can likewise throw to a smaller distance, a cartridge with 61 balls of seventeen lines diameter. In both instances the effects are extremely fatal. The cavalry, in particular, can be annoyed by the former, in so galling a manner, as to be rendered almost useless.

**HUE AND CRY**, an official Gazette so called, which is published at the expiration of every third week in the year, and serves to advertise deserters from His Majesty's service. That part which immediately relates to descriptions, is divided into several columns, viz. names, corps, age, size, coat, waist-coat, breeches, hair, complexion, eyes, marks and remarks, trade, &c. parish born, county born, time, from whence, agent's names, agent's abodes.

**HUGHLY WACCA**, *Ind.* a newspaper or chronicle which is kept by the officers of the Moor's government.

**HUISSIER d'armes**, *Fr.* tipstaff; an officer formerly so called in France, who was attached to the royal household. They were at first distinguished by the name of *sergens d'armes*, or sergeants at arms. Some were directed to bear the mace before the king during the day, and obtained on that account the appellation of *Huissiers d'armes*; in later times while the monarchy subsisted, they

they were called the *Huissiers de la Chambre*, or tipstaffs of the king's chamber. Others kept watch in the king's bed-chamber during the night, and were sworn to expose their lives for the safety of his person, whence they obtained the name of *Archers de Garde*, which term was changed into *Gardes du Corps*, or Body Guards.

**Death HUNTERS**, followers of an army, who, after the engagement look for dead bodies, in order to strip them. They generally consist of soldiers wives, &c. who, in general, have less feeling than their husbands.

**HUNGARIAN Battalion**, a body of men belonging to the Austrian army, whose dress consists in a white jacket, the buttons straight down to the waist, with blue coloured collar, cuffs and skirts, before and behind, like the rest of the Austrian infantry; with this difference, that the latter have white breeches and long black gaiters, and the former wear light blue pantaloons and half-boots.

**HUNS, GOTHs, and VANDALS**, barbarous tribes that inhabited the various provinces of Germany which had never been subdued by the Romans, or were scattered over those vast countries in the North of Europe, and North West of Asia, which are now occupied by the Danes, the Swedes, the Poles, the subjects of the Russian empire, and the Tartars.

**HURDLES**, in *fortification*, are made of twigs of willows or osiers, interwoven close together, sustained by long stakes. They are made in the figure of a long square; the length being 5 or 6 feet, and breadth 3 or 3½. The closer they are wattled together, the better. They serve to render batteries firm, or to consolidate the passage over muddy ditches; or to cover traverses and lodgements for the defence of the workmen against the fire-works, or the stones, that may be cast at them.

**HURDLE Batteries**. These are the invention of Lieut. (now Colonel) Congreve of the Royal Artillery, and are admirably adapted for temporary fortifications. They consist of hurdles fixed in the ground in a triangular form, the intermediate space being filled with sand or earth, &c. are constructed in a few minutes, and in any figure.

**HURTER**, a flatted iron fixed against the body of an axle-tree, with straps to take off the friction of the naves of the wheels against the body.

**HURTOIR**, a piece of timber, about 6 inches square, placed before the wheels of a carriage, against the parapet of a battery, to prevent the wheels from doing damage to the parapets.

**HURTLE**. See SKIRMISH.

**HUSB ul hookum**, or **HASSAB ul hookum**, Turk a patent or order, under the seal of the Vicer, with these initial words, which signify, *always to command*.

**HUSSARDS**, *Fr.* hussars. They were first introduced into the French service in 1692, and owed their origin to the Hungarian cavalry which was subsidized by France before the reign of Louis XIII.

**HUSSARS** are the national cavalry of Hungary and Croatia. Their regimentals consist in a rough furied cap, adorned with a cock's feather (the officers either an eagle's or a heron's) a doublet, with a pair of breeches, to which the stockings are fastened, and yellow or red boots; besides, they occasionally wear a short upper waistcoat edged with furs, and 5 rows of round metal buttons, and in bad weather a cloak. Their arms are a sabre, cutbang, and pistols. They are irregular troops: hence, before the beginning of an attack, they lay themselves so flit on the necks of their horses, that it is hardly possible to discover their force; but being come within pistol shot of the enemy, they raise themselves with such surprising quickness, and begin the fight with such vivacity on every side, that unless the enemy is accustomed to their method of engaging, it is very difficult for troops to preserve their order. When a retreat is necessary, their horses have so much fire, and are so indefatigable, their equipage so light, and themselves such excellent horsemen, that no other cavalry can come up with them; they leap over ditches, and swim over rivers with surprising facility. They never encamp, consequently are not burdened with any kind of camp equipage, saving a kettle and a hatchet to every 6 men. They always lie in the woods, out-houses, or villages, in the front of the army. The Emperor, Queen of Hungary and the King

of Prussia exceed every country, in this description of troops.

**Death's-head** **HUSSARS**, a regiment of **HUSSARS** in the Prussian service, so called from the emblems of death being exhibited on their caps. They are dressed in black, and ride small active horses. In the seven years war they obtained considerable reputation under the command of the brave and intrepid General Zieten.

**HUT**. The ancient mode of encamping was in little huts. In the American war, hatted camps were not uncommon. Huts may be made of earth, or branches of trees, straw, &c.

For particulars respecting the hutting of troops, see a pamphlet published at the military library, entitled—*'The French considered as a military nation, &c.'*

**HUTTE**, *Fr.* Hut.

**HUZZOOR NOVETZ**, *Ind.* a secretary who resides at an Indian court, and keeps copies of all firmans, records, or letters.

**HYDER**, the Arabic term for lion. This title is often given to men of rank in India.

**HYDER ALI**, the Usurper of the kingdom of Mysore: he is known under the name of Hyder Naik; his son Tipoo succeeded him, and was killed at the storming of Srirangapatam by the British forces, under the command of Lieutenant General Harris.

**HYPER COOLY**, a term of subjection used in India, meaning literally the slave.

**HYDERABAD**, **HYDRABAD**, a city in Asia, which arose from the de-

struction of Golcondah. This term is often used at Indostan when Hyderabad is meant. Hyderabad became the principal spot of rendezvous to the Mahrattas, whose country lies between Bombay and Golcondah. Its limits, (to quote the words of the author of the History of the Carnatic) are not known with any degree of certainty to Europeans, and we are equally ignorant of the origin and history of the people.—See **MAHRATTA**.

**HYDRAULIC**, (*Hydraulique*, *Fr.*) the name of a particular science which points out the method of conducting and raising bodies of water.

**Colonnes HYDRAULIQUES**, *Fr.* columns ornamented by sheets of water or water spouts.

**HYDROGRAPHY**, (*Hydrographie*, *Fr.*) an art teaching how to make sea-charts, giving an account of its tides, bays, gulphs, creeks, rocks, sands, shoals, promontories, harbours, &c.

**HYDROMETER**, (*Hydromètre*, *Fr.*) the name of an instrument which serves to ascertain the dryness or moisture of the atmosphere.

**HYDROSTATIC**, (*Hydrostatique*, *Fr.*) the name of a science, whose principal object is to ascertain the weight of fluids, particularly of water, and of all bodies that are either borne upon the surface or immersed beneath it.

**HYPERBOLA**, the section of a cone made by a plane, so that the axis of the section shall incline to the opposite leg of the cone.

**HYPOTHENUSE**, that line which subtends the right angle of a right angled triangle.

## I

**JACK**. See **GIN**.

**JACK-boots**. Boots formerly worn by cavalry, made of thick firm leather, hardened in a peculiar manner. They were sometimes lined with plates of iron. The only regiments in the British service who wear jack-boots at present are the Life-guards.

**JACK ambusium**, a sort of coat armour, formerly worn by horsemen,

not of solid iron, but of many plates fastened together, which some persons, by tenure, were bound to find upon any invasion.

**JACKET**, a short coat. See **CLOTHING**.

**JACOB's staff**, a mathematical instrument for taking heights and distances, called also a *cross staff*.

**JACQUE**, ou **JAUQUE**, a sort of close

close jacket, which was formerly worn by the *francs-archers*, or free archers, and reached down to the knee. These jackets were stuffed underneath the linen or cloth with which they were made. They sometimes consisted of leather, lined with 20 or 30 pieces of old cloth, rather loosely put together. The ancient horsemen wore these jackets under their coats of mail, and they were called *gobison*.

**JACQUERIE**, *Fr.* the name of a faction, which formerly existed in France, while king John was a prisoner in England.

**JADE**, *Fr.* a very hard stone of an olive colour, with which the handles of swords and sabres are made in Poland and Turkey. This stone is said to possess wonderful virtues for the removal of the gravel or nephritic colic; in these cases it is simply applied to the loins.

**JAFFNAPATAM**. The town of Ceylon is so called by the Indians. The port of Jaffier.

**JAGGENHAUT**, *Ind.* a Gentoo pagoda.

**JAGGIIRDAR**, the person in possession of a jaghire.

**JAGHIRE**, an Indian term, signifying the assignment of the revenues of a district to a servant or dependant of government, who is hence called a *jagg hirdar*. Jaghires are either *mushroot*, which means conditional, or *belashurt*, which signifies unconditional. Jaghires are frequently given in India to persons as a reward and compensation for their military services.

**JAGHIRE ASHAM**, *Ind.* land granted for the support of the troops.

**JAGHIRE ZAT**, *Ind.* lands granted for private maintenance.

**JAM**, *Fr.* which is sometimes written *jaub*, is a thick bed of stone by which the operations of the miners are suddenly interrupted when they are pursuing the veins of ore.

**JAMBIERE**, *Fr.* a piece of flat iron which, during the reign of Charles VII. was worn by the French cavalry.

**JAMBEUX**. An obsolete word which formerly signified boots, covers, or armour for the legs.

**JAMBS**, sometimes written *jaumbs*, *Fr.* the side-posts of a door.

**JALET**, *Fr.* a name given to certain round stones which are cast out of

a bow called *arbalète à julet*, or cross-bow. These stones are more generally called *gâlet*.

**JALONS**, *Fr.* long poles with a wisp of straw at the top. They are fixed at different places and in different roads to serve as signals of observation to advancing columns, when the country is inclosed, &c. They are likewise used as camp-colours, to mark out the ground on days of exercise.

**JALONNEMENT d'une colonne**, *Fr.* is the designation of certain points by which a column is governed on its march.

**JALONNEURS**, *Fr.* are the men selected from a battalion to mark out the ground, or to take up relative points towards which the column may march.

**St. JAMES**, *Knights of*, a military order in Spain, first instituted in the year 1170, by Ferdinand II. king of Leon and Galicia. The greatest dignity belonging to this order is that of grand master, which has been united to the crown of Spain. The knights are obliged to make proof of their descent from families that have been noble for four generations on both sides; they must also make it appear, that their said ancestors have neither been Jews, Saracens, nor heretics, nor have ever been called in question by the inquisition. The novices are obliged to serve six months in the galleys, and to live a month in a monastery. They observe the rules of St. Austin, making no vows but of poverty, obedience, and conjugal fidelity.

**JANIBAR**, *Ind.* an advocate; a defender; it likewise signifies a partial person.

**JANISSAIRES**, *Fr.* See **JANIZARIES**.

**JANIZARIES**. This word signifies new militia. The first establishment of this body of armed men took place when the Sultan Amurat obtained such wonderful success in the inroads that were made into Thrace, and a part of Macedonia, by the Bachas Lala, Saim, and Auranos. Nor was the Sultan satisfied with this good fortune; he pushed his successes into Europe, and took an immense number of prisoners of all ages, but principally children. These were put under military tuition, with the view of hereafter converting them to some

some useful purpose for the Ottoman state.

Amurat took advice of one Agis Bictas, who by dint of hypocrisy had obtained the character and reputation of a very virtuous man. Agis Bictas gave directions in the first instance, that these children should put several Christians to death. He did this with the view of accustoming their young minds to scenes of slaughter, and to inure them to cruelty, as they were hereafter to compose the groundwork of the Turkish infantry, under the appellation of *janizaries*, or *new militia*. He next instructed them to observe an austere and barbarous outside appearance, and to become emulous of acquiring peculiar fame whenever they should be engaged in battle. In order to impress them with ideas of grandeur, he took off a part of his muslin sleeve, and twisting it in the shape of a turban, put it round the head of one of the children, when the corps was first established. This turban or cap was the model which the rest were to imitate. The janizaries wear the same sort to this day, with the addition of some gold lace.

The body of janizaries has been considerably augmented since their first establishment. According to a late account they have been increased to 54,222; these have been divided into three separate corps, viz. into *jahabys*, *bolykys*, and *selmanys*. These were moreover distinguished among themselves by the following names: *corrigys*, *oturakys*, and *jodlalorans*.

They are under chiefs appointed for the specific purpose of superintending their conduct and behaviour, and are subordinate to particular officers, whose charge is confined to corps or companies that are called *odas*: from *oda*, a Turkish word, which properly signifies chamber or room, being thus called from the place in which they were ordered to mess. At Constantinople these chambers are covered with a sort of china ware; and there are recesses, called *sophas*, on which the men may sit or sleep. A kitchen is attached to each room, with every other convenience. When they take the field the same arrangement is attended to. The different companies being distributed in large round tents,

that are distinguished by the figures of beasts and cyphers.

All the january companies consist of 196 men. There are 101 companies of *jahabys*, who form the garrisons of the most important places upon the frontiers. The officers belonging to these companies are permitted to ride in the presence of their general, which is a privilege peculiar to themselves. On this account they wear yellow half boots.

The *bolykys* consist of 61 companies; the commanding officers are obliged to wear red half-boots, which is to shew, that they are not permitted to go through their duty on horseback.

The *selmanys* amount to 34 companies. The officers belonging to them are subject to the same regulations by which the *bolykys* are governed. They must march by their general in red half-boots on foot, with this exception, that 30 supernumerary young men, who are *seconded*, and in expectation of commissions through the influence of their parents, are allowed to ride until they get companies.

A select body of men is indiscriminately chosen out of these three sorts of Janizaries; this chosen body is called *corrigys*, and amounts to 930 men. Their particular duty is to protect the three imperial mansions of Constantinople, Adrianopolis, and Bursa.

Every january is obliged to give one and a half per cent. of all the money he receives in time of peace to the treasurer of his room, or to the treasurer general of the corps, and seven per cent. in time of war. In consideration of this sum he is allowed a space of ground, six feet in length and three in breadth to spread his mattrass; and he is moreover entitled to have every day at dinner and supper one plate of rice, a piece of mutton, and bread and water: so that a january may easily save the greatest part of his pay.

The uniform or clothing of a january is a *doliman*, or long robe with short sleeves. It is tied round the middle with a striped girdle of different colours, fringed at the ends with gold or silver. They wear over the *doliman*, a *saphi*, or blue surtout, in the same loose manner that Europeans wear great coats or cloaks.

Instead.

Instead of a turban the janizaries have their heads covered with a *zarcola*, or cad made of felt, from which hangs a long hood of the same stuff, that reaches to their shoulders, and is worn on parade days. The *zarcola* is decorated with a quantity of long feathers, that are fixed in a small tube, and stand in the front of the cap. The janizaries in Constantinople usually carry a long stick or Indian cane, without any other arms or weapons; but when they are equipped for the field against any European power, they have a sabre and fusil or musquet. They likewise carry a powder-horn, which hangs on the left side suspended from a leathern string that is thrown across the body.

In Asia, the janizaries always go armed with a bow and a quiver full of arrows. They are thus equipped on account of the scarcity of gun-powder.— They have besides a sort of poniard or large knife, which they draw against every person from whom they wish to extort anything. The bows and arrows are regularly delivered out to the janizaries by the *alkitef-tur-dars* or vice treasurers general.

The janizaries seldom marry, or if they do it is at an advanced age; for the Turks, as well as other countries imagine that a married man cannot be so determined and careless of danger, as he must be who has no concerns to attend to besides his own. Matrimony, however, is not forbidden amongst them. On the contrary, when the ceremony is performed with the consent of their officers, they are permitted to take private lodgings, and are only required to appear every Friday at their rooms, and to parade before the *Hekubarg*, or treasurer to the chamber, under pain of forfeiting their subsistence. When they get children, their pay is increased some aspers per day, by order of the Grand Signor.

The body of janizaries is by no means however, so considerable as it formerly was. In 1618, they were so formidable, that they assumed a dangerous influence over the government of the empire. They even went so far as to dethrone the Sultan Ibrahim, and afterwards to strangle him in the castle called the Seven Towers. Since that period the grand viziers have made a point

to lower the pride and arrogance of the janizaries, in order to preserve the authority of their Sovereigns, and to maintain their own: on this account they adopted the barbarous policy of sending the bravest on a forlorn hope at the siege of Candia; and they permitted the rest to marry, and to embrace various trades, contrary to the established rules of the corps, for the sole purpose of enervating the individuals belonging to it. By degrees, persons without experience and addicted to the loosest effeminacy, were entrusted with commands; so that at present the janizaries do not possess either the character or the bravery of their predecessors.

The janizaries consist chiefly of Christian children that have been taken in war, or of debauched Turks who are ignorant of their birth or connection. Whenever any one dies, he leaves what little property or clothing, &c. he possessed to his messmen; even the Turks, from a species of social piety, always bequeath something to their particular *oda* or chamber. The consequence of which is, that the chambers become extremely rich, and their wealth is frequently put out to interest at 25 per cent. Add to this, that the Grand Signor directs, that every thing which is supplied to the janizaries should be rated lower than to the rest of his subjects, which circumstance easily explains why the janizaries can live cheaper than other people in Turkey.

**JANIZAR AGAZI**, a name or military title which is attached to the person who has the chief command of the janizaries. It corresponds, in some degree, with the rank of Colonel General of Infantry in old France, when that body was under the command of the Duke of Epemon, and afterwards under the Duke of Orleans in 1720. This *Aga* takes precedence of all the infantry officers belonging to the Ottoman empire. The name is derived from *Aga*, which, in the Turkish language, signifies a stick. On public occasions the *Aga* always bears a stick in his hand; so indeed do all the janizaries when they appear in any large town or place, as an emblem of service.

This general was originally promoted to the rank of *Aga* out of the corps of janizaries. But as this was the occasion

of much jealousy, and gave rise to various cabals, which frequently rendered the Aga contemptible in the eyes of his followers, the Grand Signor at present appoints him from the *icoglans* belonging to the *seraglio*.

The daily pay of the Aga amounts to one hundred aspers, which are equal to 20 *ecus*, or French half-crowns, making 2l. 10s. of our money; independent of which he receives from 7 to 10 thousand French *ecus* or English half crowns on account of the *Timars* who are attached to his appointment. He moreover gets constant presents from the Sultan, especially when the janizaries have conducted themselves to his satisfaction on any critical emergency. The *douceurs* which are lavished upon the Aga, whenever he has the good fortune to stand well with the Grand Signor, are innumerable; for it is through him, that every application is made for places of emolument. It is customary, however, in Turkey to bestow rank and advantageous posts, not according to merit, but in proportion to the number of purses, (in which manner all large sums are counted) that are produced by the several candidates. A purse in Turkey contains about 250 crowns, or 60l. 10s. English.

The Aga seldom appears in the streets of Constantinople without being followed by a large body of janizaries, most especially when any convulsion or disastrous event has happened in the empire. In these moments of public disturbance and consternation, the janizaries take occasion to demand an increase of pay, threatening, in case of refusal, to pillage the town; which threat they have often put in execution. Whenever these mutinous proceedings take place, the Aga marches at the head of 30 or 40 *mungis* or provost marshals belonging to the janizaries, together with 5 or 600 of this militia, in order to seize the mutineers, and to have them safely conveyed to some prison. He has the power of life and death over every individual of the corps; but he never gives directions to have a janizary executed in open day, lest the sight of their suffering comrade should create a disturbance among the rest. Small crimes and misdemeanours among the janizaries are punished by the *bastinado*, which is

exercised by striking repeated blows upon the sole of the foot: but when the guilt is capital, the aga orders the culprit either to be strangled, or to be sewed up in a sack, and thrown into a pond or river.

When the janizar-Agasi dies, from disease or by violence, the whole of his property devolves to the treasury belonging to the corps of janizaries; nor can the Grand Signor appropriate one asper to his own use.

**JAVELIN**, a sort of spear  $5\frac{1}{2}$  feet long, the shaft of which was of wood with a steel point. Every soldier in the Roman armies had seven of these, which were very light and slender.

The *Velites* or light armed troops among the Romans were armed with javelins. They were two cubits long and one inch thick.

There were several sorts of javelins or darts used among the ancients; some of which were projected by the help of a short strap girt round their middle.

There was likewise another species of javelin, the bottom of which was ornamented with three feathers, in the same manner that arrows and darts are. These javelins have been used by the Poles and other nations, but principally by the Moors, who call them *zogaïs*. In the early days of France, the javelin was likewise adopted in imitation of the Gauls; but it disappeared with many other missile weapons, on the invention of fire-arms.

**JAVELINE**, *Fr.* See **JAVELIN**.

**JAVELOT**, *Fr.* Javelin. A term used among the ancients to express every thing that was missile; it is derived from the Latin, *jaculum à jaculando*.

**JAZERAN**, *Fr.* an obsolete term which was formerly applied to an able veteran.

**IBRAHIM CAWN**, *Ind.* of the Gardee tribe, commander of the artillery in the Mahratta army.

**ICH DIN**, *I serve*. A motto belonging to the badge of the arms of the Prince of Wales, which was first assumed by Edward surnamed the Black Prince, after the battle of Cressy, in 1346. *Dieu et Mon Droit*, in the badge of the King's arms, was used by Richard I. in a victory over the French in 1194.

**ICHNOGRAPHIE**, *Fr.* Ichnography.

**ICHOGRAPHY**, in fortification, denotes the plan or representation of the length and breadth of a fortification, the distinct parts of which are marked out, either on the ground itself, or on paper. By this we are at once acquainted with the value of the different lines and angles which determine the exact breadth of fosses, the depth of ramparts and of parapets. So that, in fact, a plan upon the correct principles of ichnography, represents a work as it would appear if it were levelled to its foundations, and shewed only the expanse of ground upon which it had been erected. But the science of ichnography does not represent either the elevation or the depth of the different parts belonging to a fortification. This properly comes under profile, which does not, however include length. See *Plan*.

**ICOGLAN**, a page in the Grand Signor's service. These pages are always chosen out of the best formed, and best educated children among the Christian slaves. It has been a singular maxim of policy among the Turks to prefer Christian slaves, as confidential servants, to their own countrymen. Their motive originates in an idea, that the former, having lost all recollection of their native spot, and of the tenderness which is innate between child and parent, would have no other interest at heart but that of their employers; whereas freemen in general measure their attachment to their masters by the rule of self-accommodation and personal emolument. From these principles the Grand Signor has established a body of Icoglan, in order that they may be devoted to his service; and as a security for their affection he frequently raises individuals amongst them to the highest posts of trust and dignity in the empire. The rank of *Spahiler Agasi*, or General of Cavalry, has been conferred upon them; which appointment, next to that of Grand Vizier, of Mufti or of Bostangi, is the most considerable belonging to the Ottoman empire.

**JEANATES**, soldiers posted round the outside gates of the palaces belonging to the Greek Emperors.

**JEE**, *Ind.* a title of respect which is used in India, and signifies Sir, Master, Worship.

**JEE POTR**, *Ind.* a statement and decree.

**JEHAUNDER**, *Ind.* a term used in India, signifying the possessor of the world.

**JEHAUN GEER**, *Ind.* a term used in India, signifying the conqueror of the world.

**JEHAUN SHAW**, *Ind.* King of the world.

**JEHOULDAR**, *Ind.* Treasurer.

**JELOUDAR**, *Ind.* belonging to the train or equipage.

**JEMADE**, *Ind.* the Indian word for month.

**JEMIDAR** or **JEMMADAR**, *Ind.* a black officer who has the same rank as a Lieutenant in the Company's service. The author of the History of the Carnatic calls Jemidars or Jemmadaras Captains either of horse or foot.

**JENIZER-EFFENDI**, an appointment among the Turks, which in some degree resembles that of provost-marshal in European armies. The only functions which this officer is permitted so exercise are those of judge to the company. He sits on particular days for the purpose of hearing the complaints of the soldiers, and of settling their differences. If a case of peculiar difficulty should occur, he reports the same to the Aga, whose opinion and determination are final.

**JERSEY**, an island on the coast of Normandy in France, which has belonged to the English, ever since the Norman conquest. Although this island, as well as that of Guernsey, is still governed by the ancient Norman laws, it is nevertheless subject to the Mutiny Act in many particulars.

**JERUMONA**, *Ind.* Mulct, fine or penalty.

**JET**, *Fr.* a term signifying the motion of any body that is urged forward by main force; it likewise means the space which is gone over by any propelled body; and sometimes the instrument from which any thing is thrown or shot, as the cross-bow, &c.

**JET des bombes**, *Fr.* This word has been adopted instead of *Tir*, which formerly expressed the course that a shell took when it was thrown out of a mortar by the power of gunpowder.

We sometimes use the word *flight*, to express the same action and progress.

The jet or flight of a bomb usually forms

forms a curved line; but many engineers assert, that when the mortar is placed horizontally, it describes the three movements that are made by a cannon ball, viz. The violent or straight forward one, the mixed or curved, and the natural one, which is perpendicular.

It is particularly incumbent upon the officer who superintends the mortar duty, to ascertain, by a correct observation of the eye, the exact distance to which he means to throw the bomb.— With this view he must give as many degrees of elevation as may be found necessary by the judgment he has formed.

In order to obtain some degree of certainty, he first throws a bomb, by way of experiment, and he increases or diminishes his degrees of elevation according to the distance it runs, and from the spot on which it falls.

These are the only rules which are generally followed by those officers who have the direction of mortars. However, according to St. Remi, the French bombardiers frequently make use of tables, in order to calculate precisely the different lines of extent according to the different elevations of the mortar, particularly with respect to the degrees of the square rule from 1 to 45.

Although this method has been sanctioned by various and innumerable experiments, it has nevertheless been exposed to some censure. Mr. Blondel has written a treatise on the subject. This engineer asserts, that he has discovered a way of firing true, which exceeds all former inventions.

We are of opinion, that the best method must be that which is founded upon practical and daily experience. Those men who are in the continual habit of exercising in mortar duty, and who can form just calculations, especially with regard to the quality and quantity of gunpowder, will always be esteemed in preference to the most profound theorists.

According to the experiments which have been made by bombardiers with respect to the flight of bombs, a mortar is said to propel or urge forward in proportion to the quantity and quality of the gunpowder, by which it is charged.

A mortar, for instance, which has twelve inches caliber, and which is loaded with two pounds of mealed gunpowder gives a difference in its flight of 48 feet from one degree to another; and 2160 feet in its greatest extent under the elevation of 45 degrees.

The same mortar gives a difference, from one degree to another, of 60 feet, provided there be two pounds and a half of the same powder in its chamber, and it gives 2700 feet for its greatest flight.

It finally gives 72 feet difference from one degree to another, if the charge consists of three pounds of mealed gunpowder, and the elevation be taken at 45 degrees, which, in the opinion of bombardiers, is the greatest flight, taking a range of 3240 feet.

Among the French bombardiers there are tables put out according to this calculation, which may be found in Blondel or St. Remi. These tables are adapted to mortars of 12 inches caliber, which weight we have taken for example.

JET, among the French is likewise applied to the range taken by a fusée, as *jet de la fusée*, the flight of the fusée.

In cannon foundries it is further used to express the different pipes or hollows which are made of clay or of wax, in order to convey the liquid metals into their moulds. In this sense it means *cast*, so that *jet* may be properly called a vent or aperture which is made at the extreme end of the mould, and through which the metal is poured; hence *Un beau Jet*, a fine cast.

JETÉE, *Fr.* a pier. It usually consists of a projection, made with stone, brick, or wood, at the extreme ends of a harbour, for the purpose of resisting the impetuosity of the waves.

JETER, *Fr.* to pour metal into a mould; to cast ordnance; to throw; to impel, &c.

JETER des bombes, *Fr.* to throw bombs, or shells, for the purpose of destroying the walls, &c. of a fortified town or place.

JETER du secours dans une forteresse, &c. *Fr.* to throw succours into a fort; &c.

JETH, *Ind.* the name of a month which, in some degree, coincides with our month of May.

*JEU de hazard*, Fr. chance play. It was our intention to have entered fully into this subject, as far as it concerns the military system, under the head *hazard*; but as the matter has been more particularly adverted to in a French author, we judge it best to quote from that authority, and to shew, that, corrupt as the old government of France most unquestionably was, the character of its army was not neglected. Every species of chance play was strictly forbidden in the French camps and garrisons, and throughout their armies. The prohibitions on this head bear the most ancient dates. On the 24th of July, 1534, Francis I. issued an order, which was again confirmed by Henry II. on the 23d of May, 1557, that no comrade should, under any pretext whatever, obtain money from a brother soldier by play. It was further ordained, that in case of foul play, the persons who should be discovered, were, for the first offence, to be publicly flogged, and for the second to be punished in the like manner, to have their ears cut off, and to be banished for ten years. The delinquents were committed to the charge and custody of the Provost, who was authorized to confiscate every farthing that was played for. Dice and cards were rigorously forbidden under the same penalties, as well as all sorts of games which might create animosities and dissensions among individuals.

On the 15th of January, 1691, Louis XIV. issued an order from the privy council, by which he expressly forbade not only the officers belonging to his army, but likewise all other persons of whatever sex or denomination to play at *Hoca*, *Pharoah*, *Barbacole*, *Basset*, and *Pour et Contre*. The penalties for every infraction or breach of this order were as follow. Those persons who played were fined 1000 livres or 10*l*. and the master or mistress of the house where games of the above description were allowed, stood fined in 6000 livres or 240*l*. for each offence. One third of these penalties was applied to his Majesty's use, one third to the relief of the poor of the place where the offence was committed, and the other third was paid to the informer. It was further ordained, that in case the persons so discovered were unable to pay the fines, their persons

should be taken into custody. Those subjected to the penalty of 1000 livres were imprisoned four months, and those who incurred the fine of 6000 livres, without having the means to pay it, were imprisoned one year. The Intendants, or Lords-Lieutenants of the Provinces and Armies, the Police Magistrates, and the Military Provosts, were all and severally directed to see this edict put into execution; and by a circular letter, which in 1712, was written, in the king's name, by M. Voisin, to the different governors and lords lieutenants of provinces, the prohibitions were extended to the lansquenets, or private soldier.

On the 25th of August, 1698, Louis XIV. issued out an order, by which he rigorously forbade, under pain of death, every individual belonging to the French cavalry or infantry, (sutler and private soldier included) to keep any gaming table in camp or quarters. In consequence of these regulations, and with the view of introducing the strictest principles of honour and regularity in a profession which must be tarnished even by the breath of suspicion, on the 1st of July, 1727, Louis the XVth ordained, by the 43d article of war, that every soldier, horse or foot, who was convicted of cheating at play, should be punished with death. He further directed, that in case any hazard table should be set up in a camp, or garrison, the commanding officer or governor was to order the same to be broken forthwith, and to commit all persons concerned therein to prison.

*JEWELLER KHANNA*, *Ind.* the jewel office.

*HITIMANDAR*, *Ind.* a person appointed by the Hindoo magistrate, who has the superintending agency over several towns.

*IJELAS*, *Ind.* the general assembly of the court of justice in Bengal, is so called.

*To IMBODY*, in a military sense, implies to assemble under arms, either for defence or offence. This term is particularly applied to the meeting of the British and Irish militia.

*IMPETUS*, in mechanics, the force with which one body impels or strikes another. See GUNNERY. MOMENTUM.

*IMPOSTS*, that part of a pillar in vaults

vaults or arches, on which the weight of the whole rests.

**IMPREGNABLE**, any fortress or work which resists the efforts of attack, is said to be impregnable.

**To IMPRESS**, to compel any body to serve.

**IMPRESS-Service**, a particular duty which is performed by persons belonging to the navy. Soldiers, that behave ill, and from repeated misconduct are deemed incorrigible on shore, get frequently turned over to a press-gang. This does not, however, occur without some sort of concurrence on the part of the soldier, who is left to choose between the execution or continuance of a severe military punishment, or to enter on board one of his Majesty's ships.

**IMPRESS-Money**, all sums which are paid to men who have been compelled to serve, are so called.

**IMPRESSION**, the effect of an attack upon any place, or body of soldiers.

**IMPREST of Money**, a term not strictly grammatical, but rendered familiar by its official adoption, signifying sums of money received from time to time, by persons in public employment, for the current services of the year. Of this nature are the imprests which the Barrack-Master General receives upon estimates signed by him, and delivered into the office of the Secretary at War.

**To IMPUGN**, to attack, or assault.

**IMPULSE**, hostile impression.

**INACCESSIBLE**, not to be approached, in contradistinction to accessible.

**INATTAQUABLE**, *Fr.* not to be attacked. Monsieur A. T. Gaigue, in his *Nouveau Dictionnaire Militaire*, gives the following explanation of this term:—An inherent right and title cannot be attacked or disputed; but a military post may always be assailed when there are some physical defects.

**INCAPABLE**. A term of disgrace, which is frequently annexed to military sentences; as, such an officer has been cashiered by the sentence of a general court-martial, and rendered *incapable* of ever serving his majesty in either a civil or military capacity.

**INCH**, a well known measure in length, being the 12th part of a foot, and

equal to three barley-corns in length. See **MEASURE**.

**INCIDENCE**, the direction with which one body strikes another; the angle made by that line and the plane of the body struck, is called the Angle of Incidence.

**INCLINAISON**, *Fr.* See **INCLINATION**.

**INCLINATION**, in geometry, is the mutual leaning or tendency of two lines or planes towards each other, so as to make an angle.

**INCLINATION of a right line to a plane**, is an acute angle which that line makes with any line of the plane towards which it bears.

**To INCLINE**, in a military sense, means to gain ground to the flank, as well as to the front. According to the last printed Regulations for the Cavalry, page 27, S. 10, inclining is of great use in the marching of the line in front, to correct any irregularities that may happen. It is equivalent to the oblique marching of the infantry. It enables you to gain the enemy's flank without exposing your own, or without wheeling or altering the parallel front of the squadron.

**Right (or left) INCLINE**, a word of command in cavalry movements, when each man makes a half-face on his horse's fore feet, by which means each will appear to be half a head behind his flank leader; and the whole will look to the hand to which they are to incline. It must be generally observed, that the leading officer on the flank, with a glance of his eye ascertaining his points, marches steadily upon them, at whatever pace is ordered: every other man in the squadron moves in so many parallel lines, with respect to him, and preserves the same uniformity of front and files, as when he first turned his horse's head.

At no time of the incline ought the former front of the squadron, or distance of files to be altered.

In the incline, the rear rank moves in the same manner, and is, of course, regulated by the front rank, which it takes care to conform to.

Whenever a squadron inclines it must not pass an angle of 34° with respect to its former direction, unless it should be required to gain as much or more ground

to the flank as to the front. The distance of files at six inches allows the squadron to incline in perfect order, while its new direction does not go beyond the angle specified. When more is required to be taken, the squadron must either wheel up, and march upon the flank point, or it will fall more or less into file, according to the degree of obliquity required, by moving each horse retired, half neck, or head to boot.

**INCLINED Plane.** See GUNNERY.

**INCLUSIVE**, comprehended in the sum or number; thus, when the abstracts were made out for 60 and 61 days, they generally ran from the 24th of one month to the 24th of the second month, including the last 24th *only*. Since the new regulation, the muster, as also the abstract, is taken from the 25th of one month to the 24th of the following month, both days *inclusive*.

**INCOMMENSURABLE.** That cannot be measured, or be reduced to any proportion or equal measure with another.

**INCOMMODER l'ennemi**, Fr. to get possession of a fort, eminence, &c. from which the enemy may be harassed, or which is necessary to his security.

**INCOMPETENT**, incapable, unfit, unequal. No officer, be his situation what it may, (from a General inclusive to the lowest non-commissioned) can be said to be *competent* to command, unless he be not only willing and able to follow orders himself, but is also capable of seeing them strictly adhered to by others. His mind must be superior to partialities, and his judgment equal to discern real merit from ignorant assumption. Every soldier is incompetent to his profession who does not possess a spirit of subordination, and great natural or acquired bravery.

**INCOMPLETE**, opposed to complete, which see.

To **INCORPORATE**, in a military sense, is to add a smaller body of forces to a larger, and to mix them together. Independent companies are said to be incorporated, when they are distributed among different regiments, regiments among brigades, &c. &c. So that any lesser body may be incorporated in a greater. Thus after Lord Moira, by good generalship and uncommon activity, had landed at Ostend in 1794, and

marched up the country (within musquet shot of a superior enemy that hung upon his flank and rear) for the purpose of joining his Royal Highness the Duke of York, his gallant little army, consisting of 8000 men, was *incorporated* with the main body of the British and Hanoverian forces, and the different regiments were brigaded.

**INCURSION**, invasion without conquest; inroad; ravage.

**INDEMNIFICATION**, any reimbursement or compensation which is given for loss or penalty.

*Military* INDEMNIFICATION, a regulated allowance which is made by the king for losses sustained by officers or soldiers on actual service, viz.

#### *Infantry.*

1st. The whole of the personal baggage of a subaltern officer to be valued at 60*l.* and the camp equipage between two subalterns, 35*l.*

2d. The baggage of a captain to be valued at 80*l.* and the camp equipage, at 35*l.*

3d. Field officer's baggage, 100*l.* and the camp equipage 60*l.*

4th. Colonel's baggage 120*l.* and camp equipage 80*l.*

#### *Cavalry.*

5th. The whole of the personal baggage of a subaltern officer to be valued at 70*l.* and the camp equipage at 45*l.*

6th. Captain's baggage 90*l.* and camp equipage 45*l.*

7th. Field officer's baggage 120*l.* and camp equipage 90*l.*

8th. Colonel's baggage 140*l.* and camp equipage 90*l.*

9th. Officers giving certificates signed by themselves and the commanding officer of their regiments, that they have lost the whole of their baggage and camp equipage, and that at the time it was lost, they were in no respect deviating from the orders of the general officer commanding in chief relative to baggage, shall receive the whole of the sums above allotted, according to their ranks.

10th. Officers losing any part of their baggage, are to give in similar certificates, according to the best of their belief and judgment, without entering into particulars, but estimating their loss at one-fourth, one-half, or three-fourths of the whole value, according to which they

they shall be paid the like proportion of the above sums.

11th. The whole baggage of a quarter-master of cavalry shall be estimated at 40*l*. A quarter-master losing the whole or any part of his baggage, must produce certificates from the officer commanding, and from his captain, as to the quantity of his baggage, which to the best of their belief and judgment, has been lost, according to which he will receive the whole, or a proportion, of the above sum of 40*l*.

12th. The baggage and camp equipage of all staff officers of both cavalry and infantry, are to be valued as those of subaltern officers, except for such as are allowed a tent to themselves, whose camp equipage in that case will be valued as that of a captain.

13th. A serjeant of cavalry losing his necessaries, without any fault of his own, shall receive 2*l*. 15*s*.

14th. Corporal, trumpeter, or private, 2*l*. 10*s*.

15th. Serjeant of infantry 2*l*. 10*s*.

16th. Corporal, drummer, or private, 2*l*. 2*s*.

17th. A servant, not being a soldier, 3*l*. 8*s*.

The certificates in these five cases to be the same as in the case of the quarter-master.

The king has also been pleased to order, that the officers of his majesty's forces on actual service, whose horses shall be killed or taken by the enemy, or shall be shot for the glanders, shall receive allowances by way of indemnification for them, according to the following rates; viz.

#### *Cavalry.*

Heavy dragoons, first charger, 47*l*. 5*s*.

Light dragoons, first ditto, 36*l*. 15*s*.

Heavy or light ditto, second ditto, 31*l*. 10*s*.

Quarter-master's horse, 29*l*. 8*s*.

#### *Infantry.*

Field officer's charger, 31*l*. 10*s*.

Adjutant's ditto, 31*l*. 10*s*.

Chaplain's and subaltern's horses, each 18*l*. 18*s*.

Bat horses, (both cavalry and infantry) 18*l*. 18*s*.

General officer's first charger, 47*l*. 5*s*.

Second ditto, 31*l*. 10*s*.

Aids de camp, brigade majors, and other staff officers, whose situations re-

quire their keeping good horses, receive as the light dragoons.

Staff officers, for whom inferior horses are deemed sufficient, 18*l*. 18*s*.

Certificates, stating the particular circumstances and causes of the loss of the horses, are to be signed by the officers themselves, and by the commanding officers of their regiments.

And the general officers commanding in chief on the different foreign stations, are to decide on the claims preferred in their respective districts of command upon the ground of this regulation, and to grant payment accordingly.

**INDEMNITY**, a security or exemption from penalty, loss, or punishment. It is sometimes connected with amnesty. Thus Charles the Second, on his restoration, endeavoured to conciliate the minds of his subjects, by promising amnesty and indemnity to the different parties that had been directly active, indirectly instrumental, or passively the means of his father's death.

**To INDENT**, a word particularly made use of in India for the dispatch of military business. It is of the same import and meaning as to draw or value upon. It likewise means an order for military stores, arms, &c. As an indent for new supplies, &c.

**Indented line**, in fortification, is a line running out and in, like the teeth of a saw, forming several angles, so that one side defends another. They are used on the banks of rivers, where they enter a town; the parapet of the covert-way is also often indented. This is by the French engineers called *redans*. Small places are sometimes fortified with such a line, but the fault of such fortifications is, that the besiegers from one battery may ruin both sides of the *tenaille* of the front of a place, and make an assault without fear of being enfiladed, since the defences are ruined.

**INDEPENDENT**, in a military sense, is a term which distinguishes from the rest of the army, those companies that have been raised by individuals for rank, and are afterwards drafted into corps that may be short of their complement of men. At the commencement of the late war, letters of service were issued from the war-office, for the specific purpose of enabling professional and other gentlemen to answer their own wishes.

with respect to military situation; and at the same time to recruit the army. The system however was discontinued, when his Royal Highness the Duke of York was appointed commander in chief.

INDEPENDENT COMPANY, } is one  
INDEPENDENT TROOP, } that is  
not incorporated into any regiment.

INDIAN Camp. An Indian camp may be considered as one of the loosest assemblages of men, women, and children, that can perhaps be imagined.

Every common soldier in the army, is accompanied by a wife, or concubine; the officers have several, and the generals whole seraglios; besides these, the army is encumbered by a number of attendants and servants, exceeding that of the fighting men; and to supply the various wants of this enervated multitude, dealers, pedlars, and retailers of all sorts, follow the camp, to whom a separate quarter is allotted, in which they daily exhibit their different commodities, in greater quantities, and with more regularity, than in any fair in Europe; all of them sitting on the ground in a line, with their merchandises exposed before them, and sheltered from the sun by a mat supported by sticks.

INDIAN Engineers. Mr. Orme, in his history of the Carnatic, affords an instance of the art of engineering being known, and cultivated by the native Indians. In page 265, he gives the following account of a place called Chinglapet, which had been fortified by an Indian engineer. Chinglapet is situated about 30 miles west of Cobealong, 40 south-west of Madrass, and within half a mile of the northern bank of the river Pular. It was, and not without reason, esteemed by the natives, a very strong hold. Its outline, exclusive of some irregular projections at the gateways, is nearly a parallelogram, extending 400 yards from north to south, and 320 from east to west. The eastern and half the northern side, is covered by a continued swamp of rice-fields, and the other half of the north, together with the whole of the west-side, is defended by a large lake. Inaccessible in these parts, it would have been impregnable, if the south side had been equally secure; but here the ground is high,

and gives advantages to an enemy.—The Indian engineer, whoever he was, that erected the fort, seems to have exceeded the common reach of his countrymen in the knowledge of his art, not only by the choice of the spot, but also by proportioning the strength of the defences, to the advantages and disadvantages of the situation: for the fortifications to the south are much the strongest, those opposite the rice-fields, something weaker: and the part that is skirted by the lake, is defended only by a slender wall: a deep ditch 60 feet wide, and faced with stone; a *fausse braye*, and a stone wall 18 feet high, with round towers, on, and between the angles, form the defences to the land: nor are these all, for parallel to the south, east, and north sides of these outward works, are others of the same kind, repeated within them, and these joining to the slender wall, which runs to the west along the lake, form a second enclosure of fortification.

INDIAN Fortification. The entrance into an Indian fortification is through a large and complicated pile of buildings, projecting in the form of a parallelogram from the main rampart; and if the city has two walls, it projects beyond them both: this building consists of several continued terraces, which are of the same height as the main rampart, and communicate with it: the inward walls of these terraces, form the sides of an intricate passage, about twenty feet broad, which leads by various short turnings at right angles, through the whole pile, to the principal gate, that stands in the main rampart. We have extracted this passage from the history of the Carnatic, as affording a general outline of Indian fortification. In the same place may be seen, (page 320), the following description of a battery; which was built by the English in 1753, and contributed to the preservation of Trichinopoly, when the French attempted to storm that place.

This battery was called Dalton's battery, from an officer of that name, who, when intrusted with the command of the garrison, had converted that part of the gate-way which projected beyond the outward wall, into a solid battery, with embrasures: having the part between the two walls, as it stood with its windings.

windings and terraces: an interval was likewise left between the backside of the battery and the terrace nearest to it, which lay parallel to each other; so that an enemy who had gained the battery, could not get to the terrace, without descending into the interjacent area, and then mounting the wall of the terrace with scaling ladders: the battery, however, communicated with the rampart of the outward wall of the city, but being, as that was, only eighteen feet high, it was commanded by the terraces behind it, as well as by the rampart of the inner wall, both of which were thirty feet high; upon one of the inward cavaliers, south of the gateway, were planted two pieces of cannon, to plunge into the battery, and scour the interval between the two walls, as far as the terraces of the gateway; and two other pieces, mounted on the north-west angle of the inward rampart, commanded in like manner, both the battery and the interval to the north of the terraces.

*INDIAN Guides.* According to the ingenious author of the history of the Carnatic, these men are not to be depended upon. In page 217 he relates, that on the 1st of April, 1752, at night, a Captain Dalton was ordered with 400 men to march, and, by taking a large circuit, to come in at the eastern extremity of the enemy's camp, which he was to enter, beat up, and set fire to. The English Troops, from their long inactivity, knew so little of the ground about Trichinopoly, that they were obliged to trust to Indian guides; and these being ordered to conduct them out of the reach of the enemy's advanced posts, fell into the other extreme, and led them several miles out of their way, and through such bad roads, that when the morning star appeared, they found themselves between Eliniscram and the French rock, two miles from Chundasaheb's camp, and in the centre of all their posts.

*INDIAN Princes and their Troops.* Their military character may be collected from the following curious account, which is given of a circumstance that occurred in the Tanjore country, when the English obtained a signal victory over the French and

Mysoreans, in 1753. The presence of the nabob being thought necessary to facilitate a negotiation that was then judged expedient to undertake, he prepared to march with the English army; but on the evening he intended to quit the city, his discontented troops assembled in the outer court of the palace, and clamouring, declared, that they would not suffer him to move, before he had paid their arrears; in vain were arguments used to convince this rabble, (more insolent because they had never rendered any effectual service,) that his going to Tanjore was the only measure from which they could hope for a chance of receiving their pay: they remained inflexible, and threatened violence; upon which Captain Dalton, whom we have already mentioned, sent a messenger to the camp, from whence the grenadier company immediately marched into the city, where they were joined by 100 of the garrison of Trichinopoly, and all together forcing their way into the palace, they got the nabob into his palanquin, and escorted him to the camp, surrounded by 200 Europeans with fixed bayonets; the malcontents not daring to offer him any outrage as he was passing, nor on the other hand, was any injury offered to them: for notwithstanding such proceedings in more civilized nations rarely happen, and are justly esteemed mutiny and treason; yet in Indostan they are common accidents, and arise from such causes as render it difficult to ascertain whether the Prince or his army be most in fault. The nabob had certainly no money to pay his troops; so far from it, that the English had now for two years furnished all the expences of their own troops in the field: but it is a maxim with every prince in India, let his wealth be ever so great, to keep his army in long arrears, for fear they should desert. This apprehension is perhaps not unjustly entertained of hurelings collected from every part of a despotic Empire, and insensible of notions of attachment to the prince or cause they serve; but from hence the soldiery, accustomed to excuses when dictated by no necessity, give no credit to those which are made to them, when there is a real impossibility of satisfying their demands; and a practice common to most of the princes

princes of Indostan, concurs not a little to increase this mistrust in all who serve them: for on the one hand, the vain notions in which they have been educated, inspire them with such a love of outward shew, and the enervating climate in which they are born, renders them so incapable of resisting the impulses of fancy: and on the other hand, the frequent reverses of fortune in this empire, dictate so strongly the necessity of hoarding resources against the hour of calamity, that nothing is more common than to see a nabob purchasing a jewel or ornament of great price, at the very time that he is in the greatest distress for money to answer the necessities of the government. Hence, instead of being shocked at the clamours of their soldiery, they are accustomed to live in expectation of them, and it is a maxim in their conduct to hear them with patience, unless the crowd proceed to violence; but in order to prevent this, they take care to attach to their interest some principal officers, with such a number of the best troops, as may serve, on emergency, to check the tumult, which is rarely headed by a man of distinction. But when his affairs grow desperate by the success of a superior enemy, the prince atones severely for his evasions, by a total defection of his army, or by suffering such outrages as the Nabob Mahomed-Ally would in all probability have been exposed to, had he not been rescued in the manner we have described.

*Military INDICATIONS, (Indices Militaires, &c.)* Marshal Saxe very judiciously observes, that there are indications in war which every officer should attend to, and from which deductions and conclusions may be drawn with some degree of certainty. A previous knowledge of your enemy's national character and customs will contribute not a little towards the attainment of this object. Every country, indeed, has customs and usages which are peculiar to itself. Among various indications that we might adduce, let us suppose these leading ones, by which the intentions of an enemy may be discovered by the garrison of a besieged town. If, for example, towards the close of day, groupes or loose parties of

armed men should be discovered upon the neighbouring heights which overlook and command the town, you may remain assured, that some considerable attack is in agitation. Small detachments from the different corps are sent forward for this purpose, and the besieging army is thereby apprized of the business, as the heights are occupied in the evening by the parties in question, in order that they may be thoroughly acquainted with the leading avenues, &c.

When much firing is heard from an enemy's camp, and another army lies encamped near, the latter may conclude, that an engagement will take place the following day; for it must be evident, that the soldiers are cleaning and trying their muskets.

Marshal Saxe further remarks, that a considerable movement in an enemy's army may be discovered by any large quantity of dust, which is a sure indication of it. The reflexion of the sun upon the firelocks of an army will likewise lead to some knowledge of its position. If the rays are collected and perpendicular, it is a certain indication, that the enemy is advancing towards you; if they disappear at times and cast a broken radiance, you may conclude, that he is retreating. If the troops move from right to left, their line of march is towards the left: if from left to right, the line of march is towards the right. Should considerable clouds of dust be seen to rise from an enemy's camp, and it be ascertained, that he is in want of forage, it may fairly be inferred, that the train of wagoners and purveyors, &c. are moving, and that the whole will follow shortly.

If the enemy, observes the same writer, has his camp-ovens on the right or left, and you are covered by a small rivulet, you may make a flank disposition, and by that manœuvre, suddenly return and detach ten or twelve thousand men to demolish his ovens; and whilst you are protected by the main body of the army which is ordered to support the first detachment, you may seize upon all his flour, &c. There are innumerable stratagems of this sort which may be practised in war, and by means of which, a victory

may be obtained without much bloodshed on your part, and at all events with considerable disadvantage to the enemy.

**INDIES (EAST).** According to the geographical description of the East Indies, they must be considered as being divided into two principal parts, viz. India within the river Ganges, and India beyond the river Ganges.

**INDIA, within the river Ganges.**—This division consists of a country, which is situated between the latitudes of 6 and 34 degrees north, and between 33 and 91 degrees of east longitude. A great part of this space is covered with the sea. India within the Ganges is bounded on the north by Usbec, Tartary, and part of Thibet, by the Indian ocean on the south, by Great Thibet, India beyond the Ganges, and the Bay of Bengal on the east, and by Persia and the Indian ocean on the west. The chief mountains are those of Caucasus, Naugracut, and Balagate, which run almost the whole length of India from north to south.

**INDIA beyond the Ganges.** This division consists of a country, which is situated between the latitudes of one and 30 degrees north, and between the longitudes of 89 and 109 degrees east. Great part of these limits is covered by the sea. It is bounded on the north by Thibet and China, by China and the Chinesian sea on the east; by the same sea and the straits of Malacca on the south, and by the bay of Bengal and part of India on the west.

For the different establishments that constitute the Indian army, properly so called, we refer our readers to the *Oriental Register*, which is published annually.

**INDOSTAN.** According to Mr. Orme, this word ought properly to mean India. See Book I, Page 1, History of the Carnatic.

Unenlightened as the native inhabitants of India may appear in the eyes of a refined European, there is, nevertheless, one prevailing custom among the people of Indostan, which must be gratifying to every man of merit. We shall quote a passage out of the history of the Carnatic, as perfectly illustrative of our meaning.

There is no country, observes the ju-

icious author of that interesting work, in which the titles of descent are less instrumental to the fortunes of men, than they are in Indostan; none but those of royal blood are considered as hereditary nobility; to all others, the exclusion is so absolute, that a new act from the sovereign is necessary to enable even the son of the grand vizir of the empire. The field of fortune is open to every man who has courage enough to make use of his sword, or to whom nature has given superior talents of mind. Hence it happens, that half the grantees of Indostan, have arrived to the highest employments in the empire, from conditions not less humble than that of An'war-Odean Khan; against whose accession to the Nabobship of the Carnatic, the people had taken an aversion from causes independent of his personal character. See history of the Carnatic, Book I. Page 52, 53.

**INEXPUGNABLE.** See **IMPREGNABLE.**

**INFAMOUS Behaviour,** (*infamie*, Fr.) a term peculiarly applicable to military life when it is affected by dishonourable conduct. Hence the expression which is used in our articles of war, relative to *scandalous infamous behaviour*; on conviction of which, an officer is ordered to be cashiered. Infamy may be attached to an officer or soldier in a variety of ways; and some countries are more tenacious than others on this head. Among European nations it has always been deemed infamous and disgraceful to abandon the field of action, or to desert the colours, except in cases of the greatest emergency. In Germany a mark of infamy was attached to the character of every man that was found guilty of misbehaviour before the enemy. He could not assist at the public sacrifices, nor be present at a court martial. Many destroyed themselves in consequence of the ignominy they suffered on these occasions. According to the old French *salique* law, any person who should upbraid another with having fled from the field of battle, and not be able to prove it, was heavily fined.

Among the Romans the punctilious nicety of military fame was carried to a much higher pitch. It was considered

sidered as infamous and disgraceful to be taken prisoner, and a Roman soldier was impressed with the idea, that he must either conquer or die in the field. Regulus, the Roman general, was so much influenced by these high sentiments, that when the Carthaginians, by whom he had been taken prisoner, sent him to Rome, in order to arrange certain conditions of peace, he deemed himself unworthy to appear in the senate, notwithstanding that his fellow citizens invited him to the sitting. The advice which he gave his countrymen, and the punishment he suffered on his return to Carthage are well known.

Although these notions have considerably degenerated among the moderns, the military character is nevertheless so far elevated above every other profession in life, that the slightest imputation of cowardice or dishonour is sufficient to affect it. Among the French the most punctilious nicety is observed; so much so, that the common soldier considers himself superior to the lower orders of mankind, and will resent a blow or a lie, with a pertinacity of honour, that puts him upon a level with the most scrupulous duellist. How far this sense of honour ought to be encouraged in the ranks, we will not pretend to determine. But we shall scarcely be found fault with, or run the hazard of contradiction, when we assert, that no officer ought to hold a commission in any service, who can either take or give the lie, or receive a blow, without resenting the insult in the most summary manner. For we may pronounce that man incapable of doing justice to the service, who can be insensible to what is owing to himself. Nor does the term *infamous* apply in this instance only. There are various cases, in which the conduct of an officer may render him unworthy of the situation he fills: such as cheating at play, taking unfair advantages of youth, imposing upon the credulity or confidence of a tradesman, habitual drunkenness, flagrant breaches of hospitality, &c. Fortunately for all ranks in society, but most especially so, for the character of the British army, the present commander in chief is accessible to every complaint, which can justly be preferred against any man who bears a commission. A striking instance of this kind has occurred during the late war,

which reflects too much credit upon His Royal Highness the Duke of York, to omit a general mention of it in this place.

An officer having been detected by another, from whom he had won a considerable sum of money, in foul practices, at hazard or back-gammon, the latter exhibited a charge against him before the commander in chief, who instantly ordered a court of enquiry to sit upon the party. The accusation was substantiated, and the delinquent dismissed the service, without ulterior investigation, being declared guilty of *infamous scandalous behaviour, unbecoming the character of an officer and a gentleman*. In this case, the preceptory decision of martial law has a considerable advantage over the dull and tedious uncertainty of civil process. Nor is the influence of this laudable attention to the credit of the army, confined to military men. Every tradesman or private gentleman, on being dishonourably treated by an officer, may find redress by stating the case at head-quarters. If there be ought wanting to render the conduct of the commander in chief productive of every good effect, it is, that such a readiness to take cognizance of every flagrant instance of misbehaviour, is not generally known. \* Publicity might act as a preventive; and the younger part of the army would at least know, that the lowest and poorest subject in the kingdom can have justice done him at the Horse-guards, (should it be refused by the commanding officer of a corps,) without putting him to the expence of one shilling.

INFANTRY, (*infanterie*, Fr.) This term being little understood with respect to its derivation, and having by some writers been either vaguely interpreted or erroneously traced, we think it our duty to give the best, and we presume, the only correct explanation of the word. In so doing we should be unthankful to one of the most acute observers in life, and one of the closest reasoners, were we to omit acknowledging, that we have been favoured by the ingenious and learned author of the diversions of Purley, with the following account of its derivation.

Johnson generally states, that *infantry are foot soldiers belonging to the army*; and the compilers of other diction-

aries content themselves with assimilating the term infantry to the name of a Spanish princess, who marched at the head of a body of Spaniards on foot, and defeated the Moors. She was called Infanta. Our learned friend, on the contrary, traces it to the source of genuine etymology, and grounds his opinion upon the best authorities. His first root is from the Greek *pho-mi*, Latin, *Fa-ri*, participle *Fans*—*In-fans*; Italian, *Infante*, by abridgement, *Fante*; *Infanteria*, by abridgement, *Fanteria*; French, *Infanterie*; English, *Infantry*.

It is still in French and in English, a common expression to soldiers, *Allons mes enfans*, *Come on, my lads*, (or *my boys*.) So a servant is called a *lad* or a *boy* (and formerly a *knave* or a *page*), although a full grown man.

The military profession is still called *service*; and a soldier is said to *serve* in the army.

Skinner says well;—"The *Infantry*, Fr. *G. Infanterie*; Italian, *Fanteria*, *peditatus*: *Fante*, *pedes* et *famulus*; quia scilicet olim *pedites* equitum *famuli*, vel *pedissequi* fuerunt. *Fante* autem a Lat. *Infans*, manifeste ortum ducit. Et nos *Boy*, non tantum pro puero sed et pro *famulo*, *secundario sensu* usurpamus."

After which he refers us to *Lansquenect*,

A *Lansquenect*, a Fr. *G. Lansquenect*, *pedes*, *miles*, *gregarius*, utr. a Teut. *Lance*, *lancea*, et *Knecht*, *servus*: olim enim *pedites* equitum *lanceariorum* quasi *servi* erunt; et *quilibet* *eques* *quatuor* vel *quinque* *pedites*, tanquam *famulos* circumduxit. *Exercitus* autem *numero* *equitum*, non *peditum* *censebatur*.

Vide *Comincum* et alios illorum *seculorum* *Scriptores*.

It appears, that Machiavelli, in his *Arte della Guerra*, sufficiently points out what, and how considered, the infantry were in his time, when he says (*libro primo*) "*Venuta la pace, che i gentil huomini alla loro particolare arte.*"

It is plain, the *fanti* were *huomini bassi*, e *soldati gregarii*, i. e. hired *servants*, and therefore called *fanti*, and the *corps fanteria*. The term *infantry* was given to them when they were considered merely as *lads attending on the army*; and the term has continued, though their condition is altered."

From these sensible observations, it is evident, that although the primary sources of infantry are in the Greek and Latin languages, its modern derivation is from the Italian word *fante*, which signifies a follower. In the first stages of modern warfare, battles were chiefly fought by cavalry or horsemen; but in Italy, and afterwards in Spain, the bodies of horse were always attended by a certain number of squires or armed men on foot, who marched in the rear, and assisted their leaders.

Boccaccio mentions the latter under the term *fanteria*, and other Italian writers, (one of whom we have already quoted,) call it *infanteria*, both being derived from *fante*. Nothing can be more out of date, out of place and superficial than to imagine, that because the Spaniards have recorded a gallant action, which was performed by an *infanta* of that nation, the rest of Europe should bury the real etymology of infantry beneath the clumsy texture of court-adulation. It is, besides, extremely erroneous to state, that until that period men did not fight on foot. It is well known, that the Greeks and Romans frequently placed the greatest confidence in men of that description. The former had their *Hoplites*, their *Piloi*, and their *Peltastae*; and the latter their *Celeres*, *Velites*, *Hastati*, *Principes*, and *Triarii*, or *Pisarii*. The French word *Fantassin* which signifies a foot soldier, is manifestly derived from *fante*.

Until the reign of Charles the VIIIth, the French infantry were extremely defective; so much so, that Brantome says in one part of his works, the infantry could not be considered as essentially useful to the security of the state. For it consisted in those days, of *marauts*, *belistres mal armés*, *mal complexionnés*; *senéans*, *pillards* et *mangeurs du peuple*: which may be thus rendered in plain English: *lads*, *rascals* and *ragabonds*, *scoundrels*, *ill-equipped* and *ill-looking*; *filchers*, *plunderers* and *devourers of the people*.

Europe, however, is unquestionably indebted to the Swiss for a total change in the military system, particularly so with regard to foot soldiers.

Dr. Robertson, in the first volume of his history of Charles V. p. 105, observes, that the system of employing the Swiss

Swiss in the Italian wars, was the occasion of introducing a total innovation in the military custom. The arms and discipline of the Swiss were different from those of other European nations. During their long and violent struggles in defence of their liberties against the house of Austria, whose armies, like those of other considerable princes, consisted chiefly of heavy-armed cavalry, the Swiss found that their poverty, and the small number of gentlemen residing in their country, at that time barren and ill cultivated, put it out of their power to bring into the field any body of horse capable of facing the enemy. Necessity compelled them to place all their confidence in infantry: and in order to render it capable of withstanding the shock of cavalry, they gave the soldiers breast-plates and helmets, as defensive armour, together with long spears, halberds and heavy swords, as weapons of offence. They formed them into large battalions, ranged in deep and close array, so that they could present on every side a formidable front to the enemy. (See Machiavel's Art of War, b. ii. chap. ii. p. 451.) The men at arms could make no impression on the solid strength of such a body. It repulsed the Austrians in all their attempts to conquer Switzerland. It broke the Burgundian gendarmerie, which was scarcely inferior to that of France, either in number or reputation; and when first called to act in Italy, it bore down by its irresistible force, every enemy that attempted to oppose it. These repeated proofs of the decisive effect of infantry, exhibited on such conspicuous occasions, restored that service to reputation, and gradually re-established the opinion which had been long exploded, of its superior importance in the operations of war. But the glory the Swiss had acquired, having inspired them with such high ideas of their own prowess and consequence, as frequently rendered them mutinous and insolent, the princes who employed them became weary of depending on the caprice of foreign mercenaries, and began to turn their attention towards the improvement of their national infantry.

The German powers having the command of men, whom nature has endowed with that steady courage and persevering strength which form them to be sol-

diers, soon modelled their troops in such a manner, that they vied with the Swiss both in discipline and valour.

The French monarchs, though more slowly, and with greater difficulty, accustomed the impetuous spirit of their people to subordination and discipline; and were at such pains to render their national infantry respectable, that as early as the reign of Louis XII. several gentlemen of high rank had so far abandoned their ancient ideas, as to condescend to enter into their service.

The Spaniards, whose situation made it difficult to employ any other than their national troops in the southern parts of Italy, which was the chief scene of their operations in that country, not only adopted the Swiss discipline, but improved upon it, by mingling a proper number of soldiers armed with heavy muskets, in their battalions; and thus formed that famous body of infantry, which, during a century and a half, was the admiration and terror of all Europe. The Italian states gradually diminished the number of their cavalry, and, in imitation of their more powerful neighbours, brought the strength of their armies to consist in foot soldiers. From this period, the nations of Europe have carried on war with forces more adapted to every species of service, more capable of acting in every country, and better fitted both for conquest, and for preserving them. See Robertson's View of the State of Europe, Book I. pages 105 and 107.

*INFANTRIE aventurière*, Fr. a species of French infantry, which succeeded to the legions that were established under Francis I. in imitation of the Roman legions. This infantry was kept up as late as during the reign of Henry IV. when the whole of the foot establishment was reduced into regiments.

*Heavy-armed INFANTRY*, among the ancients, were such as wore a complete suit of armour, and engaged with broad shields and long spears. They were the flower and strength of the Grecian armies, and had the highest rank of military honour.

*Light-armed INFANTRY*, amongst the ancients, were designed for skirmishes, and for fighting at a distance. Their weapons were arrows, darts or slings.

*Light INFANTRY* have only been in use

use since the year 1656. They have no camp-equipage to carry, and their arms and accoutrements are much lighter than the common infantry, or battalion men. Wherever there is light cavalry, there should be light infantry to act in conjunction.

*Foreign INFANTRY (Infanterie étrangère, Fr.)* Foreign troops were taken into pay, during the old monarchy of France, at a very early period. In the reign of Philip, surnamed le Bel, or handsome, treaties and agreements were severally entered into, for this purpose, with John Baileul, king of Scotland, Eric, king of Norway, Albert, duke of Austria, and many other German princes, and with Humbert, duke of Viennois.

Philip of Valois, likewise made use of foreign troops; and under Louis XI. the Swiss were taken into French pay; since that period, and until the revolution, which was accomplished on the 10th of August, 1792, several regiments were maintained under the different denominations of Swiss, German, Italian, Catalonian, Scotch, and Irish corps, or brigades. During the present war the same system has been more or less adopted by the British government. Independent of foreign subsidies, it has been judged expedient to admit foreigners of rank, and, we presume, of military merit, within those native limits, from whence heretofore every stranger was jealously excluded. A reference to the official Army List will readily point out the corps that come under this description. With respect to the 60th, or Loyal American, it is necessary to observe, that the original principles upon which those battalions were established, have been totally altered. One battalion in particular, instead of being called American, should be named German. For the colonel is a German by birth and education, and the majority of the corps are from that country.

In thus adverting to the 60th regiment, we think it right to explain away an absurd and contradictory opinion, which has prevailed of late years to the prejudice of that gallant corps. It has been called the condemned regiment, from an idle, and unfounded notion, that the different battalions, though forming a considerable part of the Bri-

tish Infantry, were excluded from home service, on account of some imputed misconduct. Their uniform good behaviour is a sufficient refutation to the latter supposition; and when we state that at the close of the American war, the battalions of the 60th were formed for the express purpose of garrisoning our possessions in Canada, and as the means of providing for those Americans who had suffered by their attachment to the Royal Cause, we may leave the subject without further explanation; merely adding, that instead of being exiled from Europe, they have done duty in Ireland, and at the Isle of Wight. With respect to foreign troops in the pay of, and actually serving in Great Britain; there are five Dutch regiments under two Dutch Generals, which in every sense of the word, come under the description of foreign infantry. Indeed from the general convulsed state of Europe, and the gradual introduction of coercive measures, the business of arms seems necessarily to have taken an ascendancy over every other calling or profession.

The foreign infantry, in the service of Great Britain, according to the returns delivered in on the 1st of November 1800, consists of Loyal French Emigrants, Castries, Mortemart, Roll and Dillon; Meuron ditto; four ditto Dutch, each having a company of Artillery attached, and one Dutch Rifle with a company of Pioneers; Lowenstien's corps, which was not completed, and one corps of foreign invalids. Staff to a foreign hospital. There are besides sixteen unattached foreign officers who receive full pay, 166 ditto on half pay, 504 aged and wounded ditto, 46 foreign officers widows, 41 children of foreign officers who have died in the King's service. There is also a small corps of estafettes, which is attached to the wagon train, and consists wholly of foreigners. To these may be added the German or Hanoverian legion.

*The Turkish INFANTRY (Infanterie Turque, Fr.)* is generally composed of regiments that are chosen or select.—This body is first divided into two parts called *Capiculy* and *Serraculy*. The militia, which is named *Capiculy*, is subdivided into *Janizaries*, *Agemolans*, *Topeys*, *Gebegys* and *Sakkas*. The *Agemolans*

molans constitute the military school, in which young men, destined for the corps of Janizaries are educated; the *Topeys* are Turkish cannoniers, the *Gebegys* are armourers, and the *Sakkus* are water-carriers.

The *Serraculy* Infantry is composed of *Azapes*, *Izarelys*, *Siemenys*, *Lagumgys* and *Musellims*. Count de Massilly in his *Etat militaire* de l'Empire Ottoman, gives the following account of these corps.

The Porte being convinced, that the body of Janizaries was not sufficiently strong to garrison all the frontier places belonging to the Turkish Empire, established in the different provinces new corps of infantry, whose duty was similar to that of the Janizaries, in camp and garrison. These corps were maintained at the expence of each Beglierbat or principality. Some writers have inconsiderately confounded this corps with that of the Janizaries, merely distinguishing it by the name of *Capiculy*. It differs, however, very materially from them, being superior in the formation of its divisions, more celebrated for the valour of its troops, and in every respect better disciplined.

This corps is not upon the same footing as the militia called *Capiculy*. It is, in general under the direction of the *Bachas* of the different provinces, the command of which is given to those persons who are either the particular friends of the *Bachas*, or have the means of bribing handsomely for the appointments. This militia does not receive any pay, unless it be actively employed, and its subsistence in that case is drawn from the provinces, much in the same manner as British militia is from the different counties, at the monthly meetings. With regard to its institution, the principal object of it is to support the Janizaries, and to replace them, when vacancies occur.

The *Serraculy* infantry is divided into *Azapes*, *Izarelys*, *Seimenys*, *Lagumgys*, and *Musellims*.

The number of the *Azapes* is not particularly fixed. They consist chiefly of independent companies, which are distributed among the different departments of the Turkish Empire. They are distinguished among their own people by the different names of the week,

and they are divided into as many *odas* or companies.

These *odas* or companies are indiscriminately subject to the orders of two general officers, viz. the *Azape-Agasi* who is commander in chief of the *azapes*, and the *Azape-Kiatiby* their commissary general, who keeps a register of their names and countries.

They obey subordinate officers called *Derys*, *Oda-Bascys* and *Baitactars*. There are ten *Derys* attached to each company, who may be properly considered as corporals, entrusted with the discipline of the soldiers. The *Baitactars* are the standard-bearers. Each standard belonging to an *oda* or company consists of a horse's tail, which hangs from the end of a lance, that is capped with a gilt ball. The officers are moreover directed to superintend the messes belonging to their different companies.

It is usual for each *azape* to be a native of the province, in which he serves, and he is generally clothed after the fashion of the country. At *Buda* the *azapes* were ordered to be dressed in the Hungarian manner, which consisted in a cloth cap bordered with skin, a sabre, an arquebuse or fusil; which similarity of dress and accoutrement has frequently confounded the *azapes* with Hungarian Christians.

The *izarelys* are chiefly employed in the frontier towns, and have charge of the artillery in the room of the *topeys* or cannoniers. They are under the direction and command of an artillery officer, who is sent from Constantinople and is called *Topey-Agasi*.

Their number is uncertain, and they are not subdivided, as their employment depends wholly upon the quality and quantity of artillery that are used. One man is attached to small field pieces, and two to those of larger caliber; so that instead of being distributed by companies, they are ordered upon duty according to the nature and number of the ordnance.

They have no other officer, besides the one already mentioned, attached to them, which officer is subordinate to the *Bacha* of the province, as their service does not require subaltern officers. The *Bolukys-Bascys* are officers merely employed to bring orders from the general

neral officers, but they cannot interfere in the direction or management of the artillery.

The *Seimenys* are the least respectable body belonging to this national militia, being composed wholly of peasants, that are called out and enrolled, like the supplementary militia of Great Britain, in cases of extreme necessity. They are only in fact considered as a mass of people, serving to increase the number of better disciplined troops, without having any credit for military skill or valour. They consist of Turks, Greeks, and even of Roman Catholics, who enrol themselves in order to be exempted from the annual tax.

Their only chief or commanding officer, is the *bacha* of the province. The *Seimenys* belonging to Natolia are all Mahomedans. They are called *Jajas*, or *Men on foot*, and although they do not receive any pay, except when embodied, they are nevertheless divided into *Baitars* or Standards, which are similar to the *Odas*, and they obey their *Seimeny-Boluk-Bascy*, who commands sixty men that are attached to his standard, and to the *Baitactar*, who escorts the standard, which is generally red, and of a moderate size.

The *Seimenys* usually do duty in camp and garrison. For although the Turks place little confidence in Christians, yet there have been instances wherein their services have been required on very important occasions. At the Siege of Vienna they employed Christian troops, and increased their infantry by those means very considerably; they even formed a reserve from troops of that description; and their conduct was such, that they acquired a marked reputation by the obstinate resistance which they made at Colomberg.

These troops, however, are in general ill-armed; having only rough polished sabres, and very indifferent arquebusses with locks, or bad fusils of different sizes, and consequently of little use in the hands of such men.

The *Lagungys* are what we call miners. This body is chiefly composed of Armenians and Christians, out of Greece or Bosnia, who being in the habit of mining, are extremely serviceable in that line, and act under the immediate direction of some old officers called

*lagungys-bascys*, or chiefs of the miners. Some particular privileges are annexed to these appointments.

The *Musellims* are Christian tributaries, whose duty is to march before the advanced guard of the army, to clear the roads and to construct bridges for the passage of the troops. On this account they are called pioneers.

The *bachas* of the different Turkish towns pay great attention to these musellims or pioneers. They not only exempt them from all taxes, but even give them lands and freeholds. By a particular privilege which is attached to this corps, only five out of thirty are obliged to do duty on a march, and they are then joined to the carpenters, which renders the service less fatiguing. Their number is not fixed. It depends indeed, more or less, upon the population of the different provinces, and on the extent of land which may be disposed of in their favour.

They are commanded by a *bas-musellim*, or principal person belonging to the exempts, whose only duty is to superintend the regular discharge of their functions.

Those, however, belonging to Natolia are subject to the *Beg* or *Sangiah*, who superintends the distribution of their subsistence, &c. in the same manner that he does that of the cavalry which is attached to his department.

The only weapon they carry is a hatchet; but the neighbouring villages or the public magazines belonging to the artillery are obliged to supply them with pick-axes and other tools that may be wanted in their profession. They are strictly forbidden the use of a sabre or fusil.

Whenever the Turkish army is on its march, the musellims are obliged to go forward every preceding day, in order to prepare the way for its progress.

During a siege they are frequently attached to the garrison guns, which they work in the best manner they can; and when a town is besieged by the Turks, the musellims are employed in the trenches, from which duty they derive considerable profit; so much so, that the janizaries are extremely jealous of them on these occasions. They are, in a word, the most formidable body of infantry which the Turks possess; for

the groundwork of every species of attack or defence, and the management of all warlike machines rest upon their exertions.

*The INFERNAL.* Strada gives a very curious and interesting account of this machine, in his History of the Belgic War.

The Infernal was tried by the English at Dunkirk and St. Maloes, and by the Dutch and English under King William. It is likewise mentioned by Grose in his History of the English Army.

The only time during the late war at which its dreadful powers have been attempted, was in the month of December, 1800, when a conspiracy was formed to destroy Bonaparté, then first Consul of France. It failed as to its immediate object, but proved by its collateral effects, that the invention is as destructive as the most sanguine butcher of the human race could wish. See *Machines Infernales*.

*To INFEST, (infester, Fr.)* This word is more strictly applicable to places than to things.

*To INFEST a place (infester un lieu, Fr.)* signifies to frequent any particular spot for the evident purpose of doing damage, to create uneasiness and to commit depredations. Thus fire-boaters or thieves are said to infest places.

*INFINIMENT PETIT, Fr.* infinitely small. Modern calculators call, by this name, every thing which is so exiguous that it cannot be compared to any other quantity, or which is smaller than any other assignable quantity. The new calculation which has been adopted among geometericians respecting quantities that are infinitely small, is called the calculation of *infinitesimals*.

*INFIRMARY.* See *HOSPITAL*.

*INFLEXIBLE, (inflexible, inébranlable, Fr.)* not to be prevailed on, unmoveable. Every chief of an army that is solicitous to preserve good order and discipline, must not suffer the least deviations from established rules and regulations.

*INFLUENCE of example.* In a military sense the influence of example is of the greatest consequence. We have already spoken generally on the necessity of good example (see *EXAMPLE*); we think it proper further to observe, that the influence which every action of a commanding officer bears,

is of so much importance to the service, as to render it incumbent upon every superior person to consider its effects upon the mind and conduct of an inferior. A circumstance once occurred (we believe at Chatham) which is become current in the army, and is frequently quoted, even in the navy. It was briefly this: An officer happening to appear upon the parade without being strictly uniform as to dress, was ordered to fall out. Some little time after the commanding officer (by whom the subaltern had been noticed) was himself irregularly dressed; the latter availed himself of an opportunity to mention the circumstance in a familiar and good-humoured manner; upon which the former very shrewdly replied—*It is true, Sir, that I am not strictly uniform to-day, but you will be pleased to recollect, that I have the commanding officer's leave.* The repartee was not amiss, as it conveyed at the same time a sound piece of advice to every inferior officer; but it did not justify the deviation. Lord Duncan, from motives, we conceive, of duty, as well as principles of economy, was so tenacious of regularity, that rather than appear not strictly correct, he has been known to have a second naval uniform made of coarse flannel, which he constantly wore on board. Notwithstanding this laudable instance, it is well known, that both in the army and navy, the repartee of the commanding officer has been frequently used.

*INFORMERS, (denoncateurs, Fr.)* persons who inform in a court of judicature, before a magistrate, or commanding officer, &c. against such as transgress the law, &c. Soldiers who give information of false musters, or of pay illegally detained, are entitled to their discharge. See *Mutiny Act*, Sections 27 and 69.

*INGENIEUR, Fr.* See *ENGINEER*.

*INGENIEUR par rapport à l'Architecture civile, Fr.* an engineer, who may be properly called an adept in civil architecture. A person of this description was always employed among the French. He was a skilful and intelligent man, perfectly master of mechanics; by which means he could invent machines for the purpose of increasing propellents, so as either to draw or to raise heavy loads with facility, or to elevate and direct the course of waters.

**INGÉNIEUR en architecture militaire**, Fr. an engineer who is perfectly master of military architecture. The term itself points out, that the requisite qualifications are ingenuity, skill, and an apt talent at invention. All warlike machines, such as cannons, &c. were formerly called engines. The word *engin*, Fr. and *engine*, Eng. come from the Latin *ingenium*, or invention.—These machines were, indeed, frequently called, in bad Latin, *ingenia*. Hence the etymology of *ingénieur*. The situation of *ingénieur*, among the French, has always been deemed extremely honourable. They have always risen to the highest posts in the army, and their skill and judgment have always been thought indispensably necessary in all the operations of war. We have already pointed out, (under the article **ENGINEER**.) the outlines of this important character. We only regret, that the limits of our undertaking will not admit the very sensible observations which are to be found under the head **INGÉNIEUR** in several French publications.

**INGÉNIEUR Directeur**, Fr. A responsible person in the old French service, whose duty was to superintend and take charge of a certain number of fortified towns or places, and to transmit a regular account of the actual state of the works, and to represent whatever might appear defective, or stand in need of repair.

**INGÉNIEUR en Chef**, Fr. chief engineer. It was the business of this officer to superintend the construction of all sorts of military works, having several subordinate engineers under him to assist and put his plans into execution. In order to make some distinction between the man of skill and genius, and the mere pretenders to knowledge in this great branch of military acquirements, it was usual, during the monarchy of France, to call all engineers that were acknowledged by government, *ingénieurs ordinaires du Roi*, engineers in ordinary to the king.

The usual pay of the French engineers was, from *vingt écus* or two pounds ten shillings up to one hundred écus or four pounds ten shillings per month, according to each individual's length of service, peculiar talents or appointment.

Persons were received as engineers by the superintendant of the board of ordnance, after having passed a mathematical examination; and the situation was the more eagerly sought after, inasmuch as it led to the highest military post; as that of marshal of France, to which the celebrated Vanban was promoted.

In 1755, the French engineers were formed into one corps, under the name of the royal corps of artillery and engineers; the principal officers of which communicated with the secretary of war, and received through him the king's orders.

No country has ever paid so much attention to the art of engineering, as France has under all her vicissitudes; and this has arisen, not so much from a natural predilection to that peculiar study, as from a conviction of its utility in all warlike operations; but most especially in sieges. This class of military men was, however, extremely neglected, until the reign of Louis the XIVth. Few ever saw, or were present at, above five or six sieges; being either wounded at the beginning, or during the operations of a siege. They seldom indeed, witnessed the termination of it; and from the want of engineers, the investment of a town or fortified place became tedious, and many lives were unnecessarily lost. Louis the XIVth, by his personal appearance and attention, gave fresh life to his army, and instilled into every part of it a spirit of subordination, which had been hitherto unknown. He was actuated by a thorough conviction, that in every species of offensive and defensive operation the use of artillery, under the guidance of scientific men, was essentially requisite. In no instance, however, does the skill of an able engineer appear so much to advantage as in the attack of a fortified place. This the king witnessed himself, and on that account he considerably increased the number of engineers. Persons of the first birth and distinction became candidates for situations in that honourable body.

Whenever there was a deficiency during a siege of subordinate engineers or *ingénieurs en second*, it was usual among the French to select lieutenants, or sub-lieutenants from the different infantry corps to superintend the works, and

and to see that the workmen did their duty. They received an additional pay of ten écus, or one pound five shillings per month, in consideration of this extra service; and their being selected in this manner was a sure step to the rank and emoluments of an engineer. It has been very justly observed by a French writer, that every infantry officer should be acquainted with field fortification at least; for a thousand instances occur, in which the immediate assistance of an engineer is required, and to which, in actual service, it is impossible for the regularly bred officer of that establishment to pay personal attention. We allude, among other cases, to the temporary defence of outposts, to the laying and springing of fougasses, &c.

Before the revolution, the frontier towns and other fortified places belonging to France, were under the direction of 350 engineers, called *ingénieurs du Roi*, who were subordinate to one director-general.

All instructions relative to the fortifications passed through the latter officer to the king.

All engineers were subject to the orders that the commissary general thought proper to issue, with respect to the attack or defence of places, the construction of works, &c. and they were further directed to see, that all the necessary implements for a siege were duly provided. They gave in a weekly report to the director general of the progress and state of the works, and had authority to draw upon the treasurer for whatever sums were wanted to pay the contractors. Every engineer was particularly enjoined to see that the contractors furnished good materials.

*INGÉNIEUR géographe*, Fr. an individual attached to a general officer, for the purpose of drawing out plans, geographical charts, &c.

*INGREZ*, *Ind.* the English are so called by the natives of Bengal: they are frequently called *Wullaget*, which signifies the country.

*INHIBITION*. See *EMBARGO*.

*INHUMAN*, (*inhumain*, Fr.) insensible to the common dictates of humanity. We have already said, that the chief of an army must be *inflexible* and *immoveable* with respect to good

order and discipline; but on this very ground, neither he nor his followers can be inhuman.

*INJURE*, Fr. a particular phrase used by the French to signify contumelious or offensive language. In many instances, especially among military men, words have occasioned the most serious quarrels. On this account young officers should be particularly circumspect in their behaviour to one another.

*INIMICAL*, hostile.

*INLISTING*, the act of engaging soldiers to serve either in the cavalry, infantry, or artillery. For the regulations respecting the inlisting soldiers, see *RECRUITING*.

*INN-HOLDERS*, or *INN-KEEPERS*, persons who have a licence to enable them to sell spirituous liquors, beer, &c. and who are obliged, by the conditions specified in that licence, to provide victuals and beer for military men, under certain restrictions. See 39th and 40th Geo. III. Cap. 27. Art. XLII. XLIII. XLIII.

*INNOYER*, Fr. See *INUNDATE*.

*INQUIRY*. See *COURT of*

*INROAD*, incursion, sudden and desultory invasion.

*INCONSED*, in the military art. When any part of an army has fortified itself with a scow, or small work, in order to defend some pass, &c. it is said to be *inconsed*.

*INSIDE guard*, a guard with the broad sword, to secure the face and front of the body, from a cut made at the inside of the position above the wrist. See *BROADSWORD*.

*INSPECTEUR*, Fr. inspector. Military inspectors were originally instituted among the French, after the peace of Aix la Chapelle, in 1668. Two persons at that epoch occupied this important situation; one being called inspector-general of cavalry, and the other inspector-general of infantry. Louis XIV. under whom France assumed over the rest of Europe a preponderance of military character, increased the number of inspectors, and ordered them to be distributed in the different departments for the purpose of reviewing the troops every month, and of transmitting to him a regular statement of their effective force, &c.

It was the duty of these inspectors

to examine minutely at the commencement of every month the state of each regiment, to look at the books belonging to the several companies, and to mark out such men as did not appear fit for the service. Each inspector had a separate dwelling-house allotted to him in the garrison town of his department, and he had the power, on giving previous notice to the governor, of ordering the men under arms. A brigademajor delivered to him every evening the orders of the day.

Inspectors-general of this description ranked with the army, without bearing any direct commission, and in time of war, they were acknowledged as general officers, brigadiers or colonels.

Their inspection did not extend to the troops of the household, the French, or Swiss guards, nor to the regiment *du Roi infanterie*. The artillery were also out of their superintendence.

Previous to the French revolution, there were eleven inspectors of infantry, and eleven of cavalry attached to the French army. There was likewise one inspector-general of infantry, and one inspector-general of cavalry.

*INSPECTEUR de construction*, Fr. an officer in the French army, in whose presence all plans and profiles for fortification, &c. were drawn, before any work could be undertaken. An accurate estimate was made of the wood which would be required to complete it. It was likewise a part of his duty to point out to the carpenters the precise method by which ground plans and elevations, forts, batteries, and brigades, &c. were to be conducted. It was his business, in a word, to attend to the construction and repair of every part of a fortification.

*INSPECTING field officer of a district*, a responsible character, selected from the line, who is nominated by the War-office, to superintend and to vouch for the faithful distribution of monies which are issued to officers acting on detachment, or on recruiting parties, within the limits of his station.

All district pay-masters are strictly enjoined by the last General Regulations (Schedule A) to get their muster-rolls and pay-lists duly authenticated, not only before a justice of the peace, but to have them witnessed by the inspecting field

officer. All the recruiting officers &c. within the limits of the district are accountable and subordinate to the inspecting field officer. It is the duty of the latter to be particularly minute in his examination of every thing which appertains to the recruiting service. Inspectors have the command of all recruiting parties of regiments of cavalry and infantry in their districts; they are authorized to give an intermediate approval of the recruits whom they judge fit for service, except in cases where regiments are so quartered, as to render it, in point of distance, equally convenient for the recruits to be sent to their own head quarters. The senior officer in each quarter is ordered to report to the field officer of the district. "No officer is to leave his station even for one day, without reporting to the field officer who has the command of the recruiting parties in the district, or to be absent from it, for more than one day, without the previous permission of the field officer. The field officers in their districts, are to be responsible for the dress, regularity, and good conduct of the officers, non-commissioned officers and private men of the several recruiting parties under their command. They are constantly to wear their uniforms, whilst in their districts, and they are to see, that his Majesty's orders respecting the due observance of discipline, regularity, and uniformity, of appearance among the officers, non-commissioned officers, and privates, be strictly and unequivocally adhered to.

Field officers of districts may order detachment courts martial, to be composed of the recruiting officers in their districts, in the usual number and ranks, and they are to approve of every such court-martial, and to direct the punishment awarded thereby to be executed, mitigated, or remitted, as they shall think expedient. They are to receive orders from the inspector-general of the recruiting service, respecting the nature of their returns; and all returns and reports are to come to the inspector-general through them. Each district field officer has an allowance of ten shillings a day, in addition to the full pay of his respective regimental rank, and he is to be reimbursed for the actual expence he incurs for stationary and post-

age of letters; which charge must be accompanied by a certificate upon honour.

Each district field officer is allowed to appoint a subaltern officer (not employed upon the recruiting service) to act as adjutant in the district. The pay or allowance of such subaltern is three shillings a day in addition to his full regimental pay; he is also authorized to nominate two sergeants, with the additional pay of sixpence each, one to act as sergeant-major, and the other as clerk to the district.

Each field-officer may moreover give directions to the hospital mate, who is placed under his orders, to examine the recruits when brought for inspection, and to give such medical assistance as may be in his power, to the several recruiting parties in the district he belongs to.

When colonels of regiments take upon themselves the whole direction of the recruiting service for their own corps, they must conform to the regulations which require returns to be made to the inspector general of the recruiting service; and they must instruct their officers to send weekly returns to the regulating field-officer, in whose district they are stationed, of all the casualties that have occurred. See pages 105, 106, 127, and 108 of the General Regulations.

**INSPECTION**, a strict examination, a close survey. It likewise signifies superintendence. In a military sense it admits of both interpretations, and may be considered under two specific heads, each of which branches out into a variety of general, regimental, and company duties.

A *general* **INSPECTION** is made annually by the reviewing generals of districts. Every regiment, on this occasion, is minutely looked into, and a faithful account must be delivered by each commanding officer of the actual state of his regiment, together with all the casualties that have occurred during the current year. The interior economy of the corps is not only investigated to the bottom, but the discipline of the men is likewise examined. For a more particular explanation of the latter, see **REVIEW**.

*Regimental* **INSPECTION** is made once a month by the commanding officer.—The clothing, the necessities, arms, and

acoutrements belonging to the different companies are examined by the lieutenant colonel or major of the corps.—Specific returns are made by the officers commanding troops or companies, by whom the debts or credits of the men, which have been made up and accounted for on the 24th day in each month in infantry regiments, and on the 24th day in each second month in cavalry corps, are exhibited for examination at head quarters. This forms the groundwork or basis of the general inspection, at which the troop or company book should always be produced.

*Private* **INSPECTION** of companies is the first step towards the other two, and ought to be made every Monday morning, by each officer commanding a troop or company, or by his subaltern.

**INSPECTION** of necessities is an examination of the different articles which every soldier is directed to have in good repair. The regular or established proportion of necessities that each soldier of cavalry or infantry is to be in possession of on the 24th day of each month, to entitle him to receive the balance that may be then due to him, consists in the following articles.

*Cavalry*.—8 shirts, 2 pair of shoes, 3 pair of stockings, 1 pair of gaiters, 1 forage cap, 1 saddle-bag, 1 pair of canvas, or woollen over-hose, 1 canvas, or woollen frock or jacket, 1 stock, 1 black-ball, 2 brushes, 1 curry-comb and brush, 1 mane-comb and sponge, 1 horse-picker.

*Infantry*.—3 shirts, 2 pair of shoes, 2 pair of stockings, or 2 pair of socks, 1 pair of long gaiters, 1 forage cap, 1 pack, 1 stock, 1 black-ball, 2 brushes.

*Private* **INSPECTION** of arms. Twenty minutes or more before the general parade, every troop or company should be drawn up on its troop or private parade, and each man be narrowly inspected by an officer. When the dress and accoutrements have been looked at, the troop or company standing at open ranks, and with shouldered arms, will receive the following words of command from the senior officer.

*Open pans*—*slope*, or *port arms*—The pans and locks will be narrowly inspected.—*Carry arms*—*shut pans*—*order arms*—*draw ram-rods*—at which word the men draw and put them in the pieces, springing them successively as the

the officer comes up to them, but not returning them until the whole troop or company has been examined. The officer will carefully examine the nob of each ram-rod, and determine from its appearance whether the inside of the barrel be clean. On some particular occasions, especially when a party is ordered upon immediate duty with ball cartridges, a more minute examination of the musquet should take place. The prick is not always sufficient to ascertain the state of the interior part of the touch-hole, as it can only enter in one direction; it is therefore recommended to order the men *Butts to the front*, after which they are to blow down the barrels, by applying his hand to the touch hole, the officer will be able to know the real state of the vent. When the arms have been examined, the men will be ordered to *handle arms—fix bayonets*.—When the bayonets and slings will be inspected—*unfix bayonets—ease arms—stand at ease*.

*INSPECTION des gardes et détachemens*, Fr. Private inspection of guards and detachments. This is done, in the first instance, by the serjeants and corporals, and afterwards by the officers of troops or companies.

*INSPECTOR General of Cavalry*, a general officer, whose particular duty is to inspect all cavalry regiments, to report the state of the horses, and to receive specific accounts from the different corps of their actual state; he communicates with the commander in chief, and whenever a cavalry regiment is ordered to be disbanded, it must be looked at by the inspector general, before it is finally broken.

*INSPECTOR-general of the recruiting service*, an officer of rank through whom the field-officers of districts, and colonels of regiments (when they personally manage the recruiting service of their own corps) transmit their several returns to the adjutant general's office. All recruiting parties which are sent to the great manufacturing towns in England and Wales, as also to Scotland and Ireland, must be previously authorized so to do by the inspector general.

*INSPECTOR of clothing*. Two field-officers have lately been appointed as permanent inspectors of clothing. These inspectors, or the inspectors for the time being, are directed to view and

compare with the sealed patterns, the clothing of the several regiments of cavalry and infantry, as soon as the same shall have been prepared by the respective clothiers; and if the said clothing appear to be conformable to the sealed patterns, they are authorized to grant two certificates of their view and approval thereof; one of which certificates is to be delivered to the clothier, to be sent with the clothing to the head quarters of the corps, and the other to be lodged with the general clothing board, as the necessary voucher for passing the assignment of the allowance for the said clothing.

All clothing must be viewed, and certificates be signed by both inspectors, except in cases where the absence of one of them shall be unavoidable; in all which cases, the cause of such absence is to be stated by the other inspector, in his certificate of the view of the clothing.

Inspectors of clothing are to follow all instructions which may be transmitted to them from the commander in chief, the secretary at war, or the clothing-board.

*INSPECTOR of health*, a civil officer of professional knowledge and abilities, who is appointed by the Medical Board to visit the hospitals, military places of confinement, and ships allotted for the sick in the service. He likewise examines into the state of transports before troops are embarked. His pay during the late war was 3l. per diem.

*INSPECTOR of hospitals*, the next on the staff to the surgeon general.

*INSTALLATION*, the act of investing any one with a military order.

*INSTRUCTION des procès criminels*, Fr. A military form or process in criminal matters. In the old French service, when troops were in garrison, it was the duty of the town major to issue out the regular form of proceeding against all officers, serjeants, and soldiers who were accused of crimes or misdemeanours. The majors of corps exercised this function when troops were encamped. There was a specific form, subject only to a few alterations with respect to terms and expressions, by which all sorts of military crimes were investigated. Desertion was the chief and most prevalent crime among French soldiers. It became the peculiar business of the major, whether in garrison

or in the field, to explain and bring forward every thing that might establish the truth of the accusation; and he acted on this occasion, as the attorney-general does in civil matters; only with this difference, that the latter explained the grounds of his indictment before a judge, whereas the former, not only exposed the nature of the case, but drew his own conclusions and bounded his verdict.

Those officers who may be disposed to enter more largely into the subject of French military process, as conducted before the revolution, may be satisfied by perusing *Le Code Militaire, ou deuxieme volume du service de l'Infanterie*, page 123; and we refer all British officers in general to Mr. Tytler's late publication on English military law.

**Military INSTRUMENTS** (*instruments militaires*.) Fr. By the sound of military instruments, the troops belonging to the several armies in Europe, &c. are directed in their various movements.

The instruments which are peculiar to the cavalry of most nations are the trumpet and the cymbal. In France dragoon regiments in general adopted the drum in common with the infantry. A certain number of fifers are likewise allowed in foot regiments. Hautboys and clarinets do not form any part of the music which is sanctioned and paid for by the public. Colonels of corps, however, frequently entertain a band either at their own expense, or out of what is called the stock-purse.

The principal military instruments which were used among the ancients, whether for cavalry or infantry, consisted of the trumpet, the cornet, and the buccina or French horn.

**Warlike INSTRUMENTS used by the Turks.** The Turks make use of wind and clashing instruments of different shapes and sizes; all, except one wind-instrument, are better calculated for pomp and ceremony, than adapted to military service.

The clashing instruments, which the French call *instruments à choc*, consist of two sorts of drums, and an instrument which is made of two plates of metal.

Their wind-instruments consist of a winding or crooked trumpet, and of a wooden life.

The big drum, which they call *daul*, stands three feet high. It is carried by a mounted drummer, who makes use of a thick stick, with which he strikes the upper part, and a small one, with which he plays upon the under one; these he applies alternately, with much ingenuity of hand, and great gravity of countenance. This is the only instrument which the Turks use in military exercise or manœuvres. The big drums are constantly beat when the enemy is near, and round all the out-posts, in order to keep the sentinels upon the alert. On these occasions the drummers exclaim with a loud voice: *Jegder Allah!* that is, God is good! or as the French interpret it—*Dieu Bon*.

The two small drums, or the kettle drums, serve as marks of distinction for the bacha's family, and likewise as signals when the troops are to march.

They contribute greatly to the general harmony of a concert. The Turkish name for them is *Sadar Nagara*. The bachas, or bashaws with three tails are entitled to three kettle drums, which are fixed on each side of the saddle, and are beat in the same manner that those in other services are.

There is likewise another sort of Turkish instrument called *zill*, which consists of two hollow brass plates, on whose convex side is fixed a ring, sufficiently large to contain the grasp of three fingers. By clashing them seasonably together, an agreeable silvery sound is extracted. The bashaws with three tails are each entitled to two sets of these instruments.

There are two sorts of wind-instruments used among the Turks, they differ very much both with regard to the manner in which they are played, and to the materials with which they are made. The first is the trumpet, which is made of the same metal that ours are, but are somewhat longer; they are called *bori*. The man who blows this trumpet is always mounted on horseback, and every bashaw with three tails is entitled to have seven.

The second instrument is made of wood; it is a sort of pipe or flute with five holes; the Turks call it *zurnader*. The person who plays this instrument is on horseback, and every bashaw with three tails is entitled to five.

The

The sounds which issue from these different instruments would be extremely harsh to the ear, were they not in some degree harmonized by the great drum: when the whole is played together, the effect is both martial and pleasant.

*Surgical INSTRUMENTS directed to be provided for the use of regimental hospitals.* An amputating saw, with spare blade, 1 metacarpal saw, with ditto, 2 curved needles, 2 amputating knives, 1 catlin, 2 tenaculums, 1 bullet forceps, 1 pair of bone nippers, 2 screw tourniquets, 4 field tourniquets with handle, 2 calico compresses, 2 trephines, with sliding keys, 1 trephine forceps, 1 elevator, 1 laticular, a brush, key instruments for teeth, to fit trephine handle, 8 scalpels, 2 silver catheters, 1 trocar with spring and introductory canula, 1 ditto ditto, and canula for hydrocele, 1 probang, 1 long silver probe, 1 large bougie.

*Surgical INSTRUMENTS directed to be provided for the field.* An amputating saw, 1 metacarpal saw, 12 curved needles, 1 amputating knife, 1 catlin, 1 screw tourniquet, 1 silver catheter, 1 elastic ditto, 2 trephines to fit one handle, 1 trephine forceps, 1 elevator, 2 scalpels, 1 bullet forceps, 1 trocar with spring and introductory canula, 1 trocar with spring canula for hydrocele, a brush, a tenaculum, thread for ligatures.

To **INSULT**, (*insulter*, Fr.) in a military signification, is to attack boldly and in open day, without going through the slow operations of opening trenches, working by mines and saps, or having any recourse to those usual forms of war, by advancing gradually towards the object in view. An enemy is said to insult a coast, when he suddenly appears upon it, and debarks with an immediate purpose to attack. The British forces under the command of Sir Ralph Abercrombie, insulted the Dutch coast when they took possession of the Helder, in consequence of a bold descent. In attacking fortified places it is usual to insult the counterscarp, in order to avoid the destruction which would naturally follow, if the besieged had time enough allowed them to give effect to the different mines that must necessarily have been prepared beneath

it. The grenadiers are always employed on these occasions, accompanied by workmen and artificers to secure the post, after it has been taken by assault.

**INSULTE** (*meltre hors d'*, Fr.) to take such measures and precautions, either in a fortified town or camp, as to be able to resist an enemy's attack.

**INSURGENTS**, (*insurgens*, Fr.) All vassals in Hungary when assembled together in consequence of the general proclamation by Ban and Arrière Ban are so called. This, however, does not happen except in cases of great emergency, when they are headed by the Prince Palatine of Hungary, and march to the defence of their frontiers. The Hungarians have sometimes indeed gone beyond them, in order to support their sovereign's right, and have acted offensively in the neighbouring countries.

This term is also generally applied to any body of men that rise in open rebellion, against an established authority. Thus, the Americans when they first opposed the British troops, were insurgents, as they had formerly acknowledged the power that sent them over.

**INTELLIGENCE**, in a military sense, may be variously applied, and of course has different significations. No general can be said to be in any degree qualified for the important situation which he holds, unless, like an able minister of state, he be constantly prepared with the requisite means to obtain the best intelligence respecting the movements and the designs of the enemy he is to oppose. On the other hand, it is not possible to conceive a greater crime than that of affording intelligence to an enemy, and thereby bringing about the overthrow and destruction of a whole army. A French military writer, (to whose work we have the satisfaction of being frequently indebted for much general and useful knowledge) makes the following observations respecting the latter species of intelligence, which he classes under two specific heads.

He justly remarks, that to hold correspondence, or to be in intelligence with an enemy, (*être d'intelligence avec l'Ennemi*) is not only to betray your king, but likewise your country. Armies and fortified places are almost al-

ways surprized and taken by means of a secret intelligence, which the enemy keeps up with domestic traitors, acting in conjunction with commissioned spies and delegated hirelings.

A garrison town may be taken by surprize, under the influence of secret intelligence, in two different ways.—The one is when the assailant, to whom the place has been surrendered, is not bound to join his forces to those troops by whom he has been admitted; the other, when it is necessary that an assault should be made by openly storming, by throwing shells and by petards, or by stratagem.

The first species of intelligence may be held with a governor who has influence enough to direct the will and actions of the garrison; with a garrison which is indisposed towards the governor and the officers that command the troops; with the inhabitants who have undertaken to defend a place where no garrison is stationed, and lastly with the prevailing faction, where there are two parties that govern in a free town.

The other species of intelligence may be practised with a governor who either wants power, or is afraid to tamper with the fidelity of the garrison; with some particular officer, serjeants, or soldiers; with the body of inhabitants who think differently from the armed force that overawes them, or with active and shrewd individuals, who have access to the ruling party, and can skilfully combine *affected* loyalty with *secret* disaffection.

There is not, however, in human nature perhaps a more insidious, or a more dangerous ground to tread on, than that of secret intelligence; nor are the faculties of the mind ever so much put to the test, as when it is necessary to listen to the report of an individual, who, whilst he is betraying one side, may be equally disposed to dupe the other. A wise general will consequently hear every thing, and say nothing; and a wise man, let his secret wishes be what they may, will warily consider, whether the person who insinuates to him even the possibility of a plot, does not at that instant endeavour to get into his confidence, for the sole purpose of acting contrary to his supposed views, and of betraying the man who has unfolded other schemes. It is certainly

justifiable policy, either in the governor of a town, or in a general, to affect to give into the views of any man or party of men whom he has cause to suspect, and whose ultimate object he is determined to defeat. But he should be equally cautious, how he listens to the communications of spies or informers. The veil of honesty is often assumed to cover a deep-laid scheme of villainy; and apparent candour is the surtest path to unguarded confidence. When villains voluntarily unfold themselves in such a manner as to convince an able and penetrating officer, that their treachery can be depended upon, much blood may be spared by making a proper use of their intelligence. This axiom has prevailed in every civilized country; and should be well attended to by thinking men. For when a battle has been gained, it avails little to ask, whether the enemy owed his success to force or treachery? No treachery, however, is admissible, or should be sanctioned by belligerent powers, which militates against those laws of nations that are founded upon the wise basis of humanity. *Private assassinations, the use of poison, or the disregard of paroles of honour*, must be generally reprobated; and whatever general obtains his ends by any of these dark means, his name should be stamped with infamy, and he himself be exposed to all the melancholy casualties of retaliation.

**INTENDANT d'Armée**, Fr. under the old government of France, the intendants d'armées, or superintendants of the army, were principal inspectors of all sorts of stores, &c. that were necessary for the troops. The French general officers and governors of fortified towns, held continual intercourse with the intendants or supervisors, who directed every branch of the commissariat.

When the intendant d'armée was not likewise intendant de province, he was directed to accompany the troops, to visit their line of encampment or cantonment, and to require of all the subordinate *intendants*, the regular proportion of stores and provisions, and to see, that they were supplied according to contract, and with punctuality.

**INTERIOR**, (*interieur*, Fr.) inward; internal.

**INTERIOR Flanking Angle**, is formed by the curtain and line of defence.

**INTERIOR Radius**, the part of an *oblique radius* extending from the center of the polygon to the center of the bastion.

**INTERIOR Side**. The line of the curtain, produced to the two oblique radii of the front; or a line drawn from the center of one bastion to that of the next.

**INTERIOR Slope**. See **FALUS**.

**INTERMEDIATE** (*intermédiaire*, Fr.) any thing that is, or lies between. See *Intermediate Posts*.

**INTERSECTION**, the point where two lines cross each other.

**INTERVAL**, (*intervalle*, Fr.) any space between. A word variously applied in military dispositions and manœuvres, to denote any given distance or space.

**INTERVAL between two battalions**, the space which separates them when they are drawn up for action, or when they are encamped. This space is generally wide enough to admit the march of another battalion, that is to say, it is equal to the extent of its front when in line. When troops are encamped for the purpose of investing a town or fortified place, the interval is much greater, and seldom or ever less.

**INTERVAL between the line and the camp**. This comprehends the space which lies between the camp and the line of entrenchments. It is generally from one hundred and eighty to two hundred toises in breadth; so that the different battalions and squadrons which are necessary for the security of the camp may have room to move in, while sufficient ground is left in the rear for troops to pass and repass as occasion may require. The same observation holds good with respect to contravallation.

**INTERVALLE du Camp à la ligne**, Fr. See **INTERVAL** between the line and the camp.

**To INTRENCH**, to secure against the attack of an enemy, by digging a ditch or trench, &c.

**To INTRENCH upon**. To invade, to make incroachments upon the property or territories of another.

**INTRENCHMENT**, any work that fortifies a post against the attack of an enemy. The word is generally used

to denote a ditch or trench with a parapet. Intrenchments are sometimes made of fascines, with earth thrown over them, of gabions, hogsheads, or bags filled with earth, to cover the men from the enemy's fire. See **RETRENCHMENT**.

**INTREPIDITY**, (*intrépidité*, Fr.) an unqualified contempt of death, and indifference to fortune, as far as it regards personal safety; a fearlessness of heart, and a daring enterprize of mind. According to Rochefoucault, intrepidity, especially with regard to military daring, implies *firmness* of character, great *confidence* of mind, and extraordinary *strength* of soul. Buoyed up and supported by these qualities, (which are sometimes natural and sometimes acquired,) men become superior to every emotion of alarm, and are insensible to those perturbations of the heart which the prospect of imminent danger almost always engenders. Chevalier Folard defines it to be a settled *contempt* of death, a species of courage which so intoxicates the mind, as to make it leap over the sober bounds of judgment and discretion; an enthusiastic impulse, which urges us forward and renders danger imperceptible; or, if discovered, raises our sensations beyond the least impression of fear. This definition appears extremely just. Were we disposed to enter into instances of illustration, it would not be difficult to find them among our own countrymen, especially among the illustrious characters that have raised the British Navy to the highest pinnacle of human glory. The mention of the battle of the Nile will, however, be sufficient for our purpose. Lord Nelson, whether he be on his own element, or be destined to act on shore, seems to possess this quality to the full extent of its definition.

A general may be said to act with *intrepidity*, when, with forces inferior to those of his enemy, and under all the disadvantages of ground, &c. he hazards a general action, attacks his whole front, and finally defeats him. This hardiness and enterprize of character not only surprize an enemy, but likewise create emotions of wonder. If, on the contrary, a general at the head of a small army should be known to act against another that is superior to him in every point,

point, except that of talent and military skill, and if, by means of these qualities, the former should, by able manœuvres and well-concerted measures, render all the designs and attempts of the latter fruitless and abortive (at a time and under circumstances, which might dishearten almost any other general,) it is then fair to conclude, that the conduct of such a general is the consequence of great military knowledge; but it cannot, with propriety, be said to be the result of *intrepidity*; for it must be evident, that before any very dangerous step has been taken, most of the obstacles have been previously removed, or rendered practicable.

An officer, who is not under the influence of that species of *intrepidity* which we have described, when he has once got upon equal ground, or finds it necessary to risk an action, will, without hesitation, advance against his enemy, depending wholly upon military skill and the superior disposition of his line of battle. Full of resources, and with great presence of mind, he will march forward and obtain a victory, not by dint of courage, or by the mere favour of fortune, but through judgment, military ingenuity, and great tactical knowledge. And yet it would be an injustice done to the character of such an officer, were it imagined, that he could act in this manner without possessing great *intrepidity*. We are rather of opinion, that such a man must have the most undaunted courage, with the additional advantage of consummate prudence, founded upon military knowledge. The *intrepidity* of his soul is calmed by the cooler judgment of his head; he is aware of difficulties, but is not disheartened by their appearance; he is, on the contrary, encouraged to surmount them by that self-possession, and by that unshaken presence of mind, which enable him to execute what might seem impracticable to others.

Mere *intrepidity* is of a lively, impetuous nature, restless and impatient of restraint, which, though it may not degenerate into downright animal brutality, is nevertheless very far from being strictly rational or enlightened. If the person who acts under its immediate influence be quick in his perceptions, his conduct is generally marked by some

imprudent measure, some enterprize that bids defiance to reflection, and by some attempt that is as hastily executed as it has been inconsiderately planned. An *intrepidity* of this species is seldom found in the first class of military characters; sometimes indeed, but rarely, it has been accompanied by great prudence and foresight.

In this number may be considered some ancient and modern heroes, such as Alexander the Great, Charles King of Sweden, Henry IV. of France, and though last, not least, the brave and short-lived hero of Quebec—Immortal Wolfe! If instances be found in their histories where prudence and discretion have been overleaped by an *intrepidity* of soul that was too actively disposed on certain occasions, the effect was temporary, and easy to be traced to a cause which was too powerfully engrafted upon their nature, to be always subject to controul.

**INTRIGUANT**, *Fr.* a person who puts himself forward; an intriguer in politics, &c. a confined politician. Hence the French say, *ce n'est qu'un intrigant*—he is a mere schemer.

**INTRIGUER**, *Fr.* to embroil; to plot; to puzzle; as, *intriguer son ennemi*, to puzzle one's enemy.

**S'INTRIGUER**, *Fr.* to bustle about; to put one's self forward, &c.

**INVALID**, (*invalid*, *Fr.*) properly includes every soldier that has been wounded, or has suffered materially in his health, and in consequence of his good conduct, has been recommended to a certain provision for life. Chelsea hospital is the place allotted for the reception of such objects of public gratitude and benevolence in this country. Before the building of the *hotel des invalides* at Paris, all soldiers of the above description, who belonged to the French army, were distributed among the frontier towns, and enjoyed a certain allowance for life.

In England, and, we presume, the custom still exists under the new order of things in France, those invalid soldiers who are reported not wholly incapable of bearing arms, are occasionally sent into garrisoned places, and do duty with the regular army.

**INVALID-BATTALION**. See **VETERAN**.

**INVASION**, (*invasion*, *Fr.*) *in war*,  
3 D 2 the

the entrance or attack of an enemy on the dominions of another.

**INVENTAIRE des Effets des Officiers décédés, Fr.** Inventory of the effects of deceased officers. As the French regulations on this head were more specific than those expressed in our Articles of War, we shall premise the extract from the latter, by the following particulars which were in force during the old government of France.

When governors, commandants of places, staff officers, commissaries of war, engineers and officers entrusted with the care of artillery, died in their several provinces or allotted quarters, the judges or magistrates belonging to the spot where such deaths occurred, sealed up the effects of the deceased, and took an inventory of their property without being, in the least, controuled by any species of military authority. On the removal of the seals, the town-major or his adjutant received a specific statement of every thing which appertained to the situation or appointment of the deceased person or persons, which statement was transmitted to government.

The creditors of the deceased preferred a schedule of debts contracted in each place of residence, before any of the ordinary justices, which debts were discharged out of the personal property that was left. But all other creditors were obliged to have recourse to the judge or justice belonging to the precise spot where the deceased resided; applications respecting all debts, which exceeded the value of the personal effects, were directed to be made through the same channel.

When officers died in a garrison town, or upon a march, or when engineers, who had no particular fixed residence, or artillery officers that were upon leave, departed this life, the town-majors or aid-major of the towns or places, where such persons died, fixed their seals upon their effects. An inventory of these effects was afterwards taken, (provided they were not claimed by the next heir;) in which latter case, all the debts that had been contracted by the deceased in the place where he died, were ordered to be paid by the person who took possession of the property. Public notice was given by beat

of drum, that a military sale would be made, and one sol (equal to our half-penny) in the livre was charged on all that was disposed of in this manner.

The man who beat the drum, and the person who enregistered the minutes of the sale, were paid out of this sol; whatever surplus remained, after a reasonable deduction had been made for these purposes, became the town-major's property.

The produce of the sale was appropriated to the discharge of such debts as had been contracted in the garrison; and the judge or magistrate, whose particular province it was to take cognizance of all cases relating to property, placed his seal upon the remainder, which was deposited in a box! This box was delivered over to the person that had enregistered the effects and taken minutes of the sale; in whose hands it remained until claimed by the widow of the deceased, the residuary legatee, or by any creditors; except those who immediately belonged to the garrison.

When a captain in the French guards died, or was killed, his heirs or executors were not obliged to discharge any demands which his company might have had upon him. If the sale of his private property should not be sufficient to defray these debts, the officer who succeeded to the company was bound to make up the remainder, and the soldier's claim had the preference of all other demands. If there was an overplus, it was paid into the hands of the lawful heirs. The soldiers of the company received the moiety, of what was due to them, in ready money.

On the decease, or departure of the officers belonging to any of the detached companies of invalids, the superior officer of that detachment in which the death or dereliction happened, ordered every article belonging to the royal hospital of invalids to be sold in the presence of the several officers, without deducting the sol in the livre. The produce of this sale was placed to the credit of the detachment; and all other articles belonging to the deceased were disposed of by the town-majors in the manner already mentioned.

The powers which were vested in the town-majors and staff-officers belonging

to garrisoned places, were lodged in the hands of the majors or aid-majors of regiments, who upon the decease of an officer on service, or in a place where there was not any staff, took a regular inventory of his effects, &c.

Town-majors were not authorized to put their seals upon the effects of deceased officers belonging to the Swiss regiments, as these had a peculiar military jurisdiction of their own. But other foreign troops in the service of France were not entitled to these privileges.

**INVENTORY of deceased officers effects, &c.** In the British army, when any commissioned officer happens to die, or is killed on service, it is directed by the articles of war, that the major of the regiment, or the officer doing the major's duty in his absence, shall immediately secure all his effects or equipage then in camp or quarters; and shall before the next regimental court-martial make an inventory thereof, and forthwith transmit the same to the office of our secretary at war, to the end, that the executors of such officer may, after payment of his regimental debts and quarters, and the expences attending his interment, receive the overplus, if any be, to his or their use.

When any non-commissioned officer, or private soldier, happens to die, or is killed on service, the then commanding officer of the troop or company, shall, in the presence of two other commissioned officers, take an account of whatever effects he dies possessed of, above his regimental clothing, arms and accoutrements, and transmit the same to the office of the secretary at war. These effects are to be accounted for and paid to the representative of such deceased non-commissioned officer or soldier; and in case any of the officers, so authorized to take care of the effects of dead officers and soldiers, should, before they have accounted to their representatives for the same, have occasion to leave the regiment by preferment or otherwise, they are ordered before they be permitted to quit the same, to deposit in the hands of the commanding officer or of the agent of the regiment, all the effects of such deceased non-commissioned officers and soldiers, in order that the same may be secured for, and paid

to, their respective representatives. See Articles of War, Section XIX.

**To INVEST a place, (*investir une place*, Fr.)** A fortified town or place is said to be invested, when all the avenues leading to it have been seized upon by hostile troops, which are distributed and posted on the principal commands, to prevent any succour from being received by the garrison, and to keep the ground until the rest of the army, with the artillery, can arrive to form a regular siege. To invest a place is, in fact, to take preparatory measures for a blockade, or a close siege. In order to do this effectually, the general in chief of the approaching army must detach a large body of cavalry, together with the different corps of dragoons, under the command of a lieutenant-general, for the purpose of regularly investing the town. As secrecy is of the utmost consequence on this occasion, the troops belonging to the detachment must have their march so managed as to create an alarm and jealousy in some other quarter, by deviating from the road which leads directly to the proposed object of attack. The general, indeed, would act wisely, by giving written sealed orders to the commanding officer, with strict injunctions not to open them until the detachment should have reached a certain spot, and then only in the presence of some particular persons; by which means his real designs may be concealed. Sometimes a place is partially *invested*, for the sole purpose of diverting the enemy's attention from the real object, and of inducing him to weaken the garrison by detaching it to different quarters. Thus in 1710, the allied army suddenly appeared before the town of Ipres, and by threatening to besiege it, caused so many troops to be detached from Tournay to its relief, that the latter place, (which was the real object of attack, and was one of the strongest towns in the Low Countries,) afforded little or no resistance.

It is sometimes prudent to harass and perplex the enemy, that may be in the neighbourhood of the town which you propose to attack, by perpetually driving in his outposts, &c. and by forcing him to retire from the different avenues and commanding grounds. When the various objects which are to facilitate

tate the approaches of the besieging army, have been accomplished, the lieutenant-general who is entrusted with the investment of the town, must procure faithful and intelligent guides, advance by forced marches, halt as little as possible, and then only for the purpose of refreshing his men. He must studiously preserve the secret of his expedition, until he gets so near to the town, that the object of his approaches becomes manifest and unequivocal.\*

When he arrives within one day's march of the town, he must detach from his main body two or three parties of horse, (each party to be stronger than the garrison of the place) which must lie in ambush in the neighbourhood, for the purpose of carrying off cattle, or of making prisoners. The instant he reaches the town he must seize upon all the leading avenues, and draw his army up on some advantageous ground. He then goes out to reconnoitre, and to discover the most likely places by which succours might be conveyed into the town. He must have the precaution to post a strong guard in each of these places.

His next business will be to send out small scouting parties, in order to obtain correct intelligence respecting the enemy's motions. Every out-let is blocked up by some dragoons, for the purpose of hemming in the garrison as close as possible. He makes it his study moreover to acquire personal information by examining the prisoners, with regard to the nature of the country, the different fords, rivulets, points of entfilade, avenues, strong buildings, or commanding heights in the neighbourhood. He further enquires as to the strength of the garrison, and the number of officers; whether the governor suspects that a regular siege is intended: whether he expects succours, supplies of stores and ammunition, and from what quarter he is to be furnished; finally, whether the fortifications be in good repair, and the place equal to a defence.

At night he sends out advanced parties, with directions to bivouac within musquet shot of the town, and takes especial care always to post strong parties in those places and avenues by which succours and supplies might be easily conveyed to the garrison.\* He has likewise the precaution to have different

small guards, or out-lying and in-lying pickets, both in his front and rear, to prevent surprizes. On these occasions, the detachments are formed, half on foot, and half mounted; those on foot constantly remaining at their horses' heads, bridle in hand. These detachments are on the alert during the whole of the night, and only one half of the number is suffered to repose during the day. Whenever the commanding officer has received intelligence of the approach of a body of troops to relieve the garrison, he must make his dispositions in such a manner as to give them battle, before they get sufficiently near to throw themselves into the town, or scattered and divided parties. Great caution, however, must be observed under these circumstances, not to advance too far, lest it should only prove a feint on the enemy's part, in order to induce him to weaken some of his posts; and by taking advantage of their absence, to throw some succours into the town.

As the principal, indeed the only object which the lieutenant general can have, is to prevent any assistance being given to the garrison, whilst he invests the place, he must always be on horseback; he must incessantly visit the different posts, thoroughly reconnoitre the country, and minutely examine those quarters through which succours or supplies might be conveyed to the garrison, or which offer advantageous positions for his own troops to occupy. During the investment of the town, it will be his duty to collect all the intelligence and information he can, respecting the state of the works, and the adjacent points, in order to communicate fully with the general in chief, when he brings up the besieging army, and to put him in full possession of every thing, which may facilitate the object of his enterprize.

The chief engineers should always accompany the lieutenant general who is entrusted with the investing of a town, in order to get the necessary knowledge of the place before-hand, and to understand how the lines of circumvallation, &c. should be drawn three or four days before the main army arrives; they should, moreover, make several rounds, for the purpose of reconnoitring. These measures will conduce a great deal towards

wards a wise and effectual method of *investing* the place. To accomplish these ends, a correct plan of the town must be procured. This plan must be reduced, and a rough sketch taken of every thing within half a league of the circumference of the town; after which a small chart may be drawn of the lines, &c. which are to be made for the purpose of carrying on the siege. This must be done in concert with the lieutenant general, who ought to know better than any body what the order of battle will be, how much ground is to be occupied by the different brigades and regiments, and what the relative detail of the whole army will require.

From the day on which a town is *invested*, every thing is thrown into motion. The train of artillery is directed to be brought out with necessary stores and ammunition, and proper carriages, with their drivers, are impressed; every department, in a word, performs its allotted duty, and the board of ordnance, as well as the commissary general's office become subservient to the orders that are issued by the general in chief.

Whilst the necessary measures are adopted for the close *investing* of the town, the main army approaches by forced marches, and generally arrives before the place five or six days after it has been invested. The lieutenant general, or officer commanding the *investing* army goes out to meet the main body, when it is within half a league of the place, and communicates with the general; who, in consequence of the report he makes, gives directions respecting the line of circumvallation, &c.

For further particulars on this article, see *Traité de l'Attaque des Places par le Maréchal Vauban revue*, &c. P. P. Foissac *Chef de Brigade au Corps du Génie de la République Française*, vol. 1. page 69.

**INVESTISSEMENT.** (A French word, which is strictly military. The celebrated Vauban has erroneously used *investiture* to signify the same thing.) The act of investing any town or place in such a manner as to prevent the garrison or inhabitants from receiving succours or provisions.

**INVINCIBLE**, not to be overcome or conquered.

**Les INVINCIBLES**, *Fr.* a French regiment which accompanied Bonaparte when he invaded Egypt, and which had distinguished itself in several battles, during that general's campaigns in Italy. It was completely routed (leaving its famous standard in the field,) on the 21st of March, 1801, and at last surrendered, with the rest of the army, to General, now Lord Hutchinson, who had succeeded Sir Ralph Abercrombie in the command of the British troops.

**To INUNDATE**, in a military sense, is to overflow any part of a country, in order to prevent an enemy from advancing. Holland is particularly calculated for this species of defence.

**INUNDATION.** The act of letting water into a country, so that it shall be overflowed, to prevent the approach of an enemy.

In the *Instruction adressée aux officiers d'Infanterie pour tracer et construire toutes sortes d'Ouvrages de Campagne*, &c. par A. P. I. Belair, *Chef de Brigade*, may be found some very sensible observations on the means of making inundations to answer military purposes, see page 119, &c. *Chapitre Huitieme, Moyens de faire des Inundations.* We likewise refer our military readers to the *Elémens de Fortification*, published by the same author, see pages 75, 82, 83, and 84. In page 294 of his *Dictionnaire Militaire*, some excellent observations upon the same subject may be seen under the article *Architecture hydraulique*.

**INVULNERABLES.** During the American war, certain corps of loyalists were so called by the British.

**INVULNERABLES aux armées.** See *MONI-PIGNOTE*.

**JOAR**, *Ind.* A general massacre of the women and children, which is sometimes performed by the Hindoos, when they find they cannot prevent the enemy from taking the town. When this dreadful and unnatural ceremony is to take place, a spot is selected, which is filled with wood, straw, oil, &c. the victims are enclosed, and the whole is set on fire.

**To JOIN.** A technical word used in the British service, generally signifying to effect the junction of one military body with another. In a more limited sense, it means the accession of an individual

dividual voluntarily, or otherwise, to a corps or army. If an officer, on being ordered to join, omits to do so wilfully, he is liable to be tried by a general court-martial, or to be peremptorily suspended or dismissed by his Majesty, for being absent without leave.

**JOINT Bolts.** See **BOLTS**.

**JOLS**, *Fr.* Barges so called, are used in Denmark, and sometimes by the Russians.

**JONCTION**, *Fr.* See **JUNCTION**.

**JUNCTION de corps militaires**, *Fr.* The junction or assemblage of several military corps, so as to form one body, and thereby constitute an army.

**JOODAY PERRAPUT**, *Ind.* A term used in India to signify a slave taken in war.

**JOOMAN**, *Ind.* Friday so called in India.

**JOUE!** *Fr.* a word of command in the French service, answering to *Prescent!*

**Coucher en JOUE**, *Fr.* To aim with a musquet, or other fire-arm, which is used as such—as *je l'avois déjà couché en joue*, I had already taken my aim at him.

**JOUER**, *Fr.* In a military sense to put into motion or state of action.—Hence *faire jouer la mine*—To spring a mine. The French also say familiarly, *jouer des couteaux*—To fight sword in hand. It literally signifies to fight with knives.

**JOUES d'une embrasure**, *Fr.* The two sides of the epaulement in fortification, which form the opening of the *embrasure* from its utmost point of elevation to the *genouillère*.

**JOVES**, *Fr.* The two sides in the epaulement of a battery which form the *embrasure*, are so called.

**JOUR**, *Fr.* The tour of duty which is done in the course of a day and night.

**Etre de Jour**. To be officer of the day, or to command a body of troops at a siege, or otherwise in the capacity of a general officer, &c. The usual time was 24 hours, at the expiration of which another officer undertook the duty, and was relieved by one of his own rank.—See **OFFICER of the day**.

**Ordre du Jour**, *Fr.* Orders. See **General ORDERS**.

**JOURNAL Militaire**, *Fr.* A public record or general orderly book, which was formerly kept in the French service, and in which every transaction that oc-

curred during a siege was entered by the governor of the town, for the future inspection of a superior authority. The general officer who carried on the siege of a place, likewise kept a document of the sort, and minuted down every thing that happened under his command. So that the journal which was kept in this manner was a circumstantial detail of what occurred, day after day, during the attack and defence of a town.

**JOURNAL de l'armée**, *Fr.* See **RETURNS**.

**JOURNÉE**, *Fr.* A term used among the French, to express any particular engagement or battle, as *la journée de Marengo*, the battle of Marengo. We frequently adopt the word day in the same sense: thus a hard fought day signifies a hard fought battle.

**JOUTE**, *Fr.* A close fight between two individuals. It likewise means an engagement at sea.

**JOUTER**, *faire des joutes*, *Fr.* To run a tilt at one another with lances.

**JOUST**. See **JUST**.

**JOYEUSE**, *Fr.* The sword of Charlemagne was so called by the French; in which sense *joyeuse* probably meant lucky, fortunate.

**IRAN**, *Ind.* Persia.

**IRENARCH**, (*Irenarque*, *Fr.*) An officer, so called in the old Grecian empire, *irenarcha prefectus pacis*. His principal duty was to preserve public tranquillity, and his functions were nearly similar to those of the French *prévôts de maréchaussée*, or police magistrates. We read in the Justinian code of laws, that the *irenarchs* were sent into the different provinces, for the purpose of preserving peace and good order. They were therefore invested with authority to take cognizance of all crimes and misdemeanours, and to punish the delinquents. There was likewise an *irenarch* established in every town, to settle the disputes and differences which might arise between the inhabitants, and to secure public tranquillity. This person was anciently called *prefectus urbis*. The office of *irenarch* was abolished under the Emperors Theodosius and Honorius, it having latterly been found more productive of evil than good. The word itself is derived from the Greek, and signifies *Prince of Peace*.

**IRRE-**

IRON. *Guns.* See GUNS.

IRONS. See PRIMING IRONS.

IRONS, (*fers*, Fr.) fetters, or instrument made of iron, with which a prisoner is shackled.

*To be put in IRONS*, (*être mis aux fers*, Fr.) to be handcuffed and confined in fetters.

IRREGULAR Fortification. See FORTIFICATION.

ISLAND, *Ind.* A term to express slow music among the Indians.

ISLE OF WIGHT. This place, as subject to the militia laws, differs from the other counties in England in one material instance, viz. that the governor has the power of appointing the officers and deputy lieutenants, without transmitting their names to the secretary of state for his Majesty's pleasure. Their qualifications, &c. are the same as those in Wales. The militia, however, when embodied, or assembled for annual exercise, is to be deemed a part of the militia of the county of Southampton, and is to be raised in the same manner. It is to continue in the island, unless it be otherwise ordered by his Majesty.

ISOCLES, a triangle having only two sides which are equal.

ISOLE, *Fr.* This word is used among the French, to express any body or thing which is detached from another. It is variously applied in fortification. Thus a pavilion or barrack which is not joined to any other wall or building is called *isolé*, because it stands alone, and a person may walk entirely round it. A parapet is also said to be *isolé*, when there is an interval of four or five feet between the rampart and its wall; which interval serves as a path for the rounds.

ISOPERIMETRICAL *Figures.*—(*Figures Isoperimétriques*, Fr.) A term derived from the Greek to express all figures that have equal circumferences or perimeters.

ISSUE, event; consequence; the ultimate result of any undertaking; the termination of any contest.

*General Issue.* In matters of litigation with respect to the militia, it is enacted by the 26th of the King, that if any action shall be brought against any person or persons, for any thing done in pursuance of that act, such action or suit shall be commenced within six months next after the fact com-

mitted, and not afterwards, and shall be laid in the county or place where the cause of complaint did arise, and not elsewhere; and the defendant or defendants in every such action or suit may plead the general issue, and give this act and the special matter in evidence at any trial to be had thereupon: and if the jury shall find for the defendant or defendants in any such action or suit, or if the plaintiff or plaintiffs shall be non-suited, or discontinue his or their action or suit after the defendant or defendants shall have appeared; or if upon demurrer judgment shall be given against the plaintiff or plaintiffs, the defendant or defendants shall have treble costs, and have the like remedy for the same, as any defendant hath in other cases to recover costs by law.

ISSUES, In military finance, certain sums of money which are, at stated periods, given to public accountants for public service; and for the honest distribution of which, every individual so entrusted is responsible to Parliament.

*Regimental Issues.* Monies paid by regimental agents, acting under the authority of their respective colonels, for regimental purposes; the latter being accountable to the public for the proper distribution of all such monies, and the former being subject to specific rules and regulations which come from the secretary at war.

No clerk belonging to the war department can issue money to a regimental agent, or to any other person, without the express order and authority of the Secretary.

Balances of regiments cannot be struck within three months after the expiration of the year, as the paymasters object to say, that it is not in their power to collect their contingent disbursements before that period. This argument, or rather excuse, is totally unfounded.

The recruiting branch of service is similar to that of the pay of regiments, and is comprehended under the following heads:

Increased rates to innkeepers both in quarters and on the march, under two distinct heads; bounty or levy money.

The secretary at war, in the first instance, advances to the regimental agent a sum of money to enable the officer or officers to commence recruiting.

ing. This money must be accounted for by a regular return of the number of men who have been enlisted, before any more will be issued. The officer or officers on the recruiting service send their several accounts of monies paid or disbursed to the agent, who makes out a general return from the whole, and lays the same before the secretary at war, who orders a further sum to be issued to the agent; being governed by the prospect of success which may appear on the several returns already given in. When the levy is called in, or completed, each officer employed upon the recruiting service makes up his separate account. This account is accompanied by the attestations of the different recruits, as indispensable vouchers, from which the regimental agent makes out a general account, and transmits the same to the secretary at war; nor is anything allowed which is not confirmed or accompanied by a specific voucher for each charge against the public; the attestations answering to the amount of bounty. From these several documents, the secretary at war is enabled to form his army estimates, &c. which are annually laid before the House of Commons.

With respect to the issue of regimental monies, the following particulars relate to that head.—If the regiment is at home, the paymaster sends in to the secretary at war an estimate every month, for the sum which will be wanted for that month, ending the 24th inclusive. This estimate consists of pay to officers, issued both by regimental paymasters, agents, and district paymasters for the recruiting service; pay for non-commissioned officers and privates, (if for cavalry, pay of horses) increased rates to inn-keepers, extra-allowance for bread, ditto for meat, (when the price exceeds a given sum per lb.) contingencies, levy-money. The total amount of these several heads is issued on the 25th of every month to the agent, to enable him to answer the draughts of the respective persons for the current month; and on the first of the following month the agents send in a state of the drafts of their respective paymasters, together with such vouchers as may have been delivered for payments made to officers in their agency; as also such contingent charges as may have been paid by them. The regimental

paymaster is, of course, supposed to have transmitted, by this time, his general pay-list for the same period; and from this list, compared with the agent's account, it is immediately ascertained what sum may be left in the agent's hands, or disbursement made; as each month is brought forward under its respective head, with a general total of the whole sum that has been issued.—Should the agent have advanced more than he has received, he then makes a formal application to the secretary at war for the sum so advanced, under whatever head or heads of service it may really appear. All issues are now made according to specific estimates which are given in to the secretary at war. They were formerly granted on the application of a regimental agent; by which ill-judged system every colonel in the army, having a regiment, might have been ruined, as he was always at the mercy of his agent, especially if he was malicious enough to omit taking ample security.

**ISSUES, Fr.** outlets or passages from a fortified town, place, or camp.

**ISTHME, Fr. (Isthme, Fr.)** a neck of land which joins the peninsula to the Continent, and which separates two seas.

**ITINÉRAIRES, Fr.** Itinerary movements or days of march. A technical phrase among the French to denote the order and disposition which a body of men, or an army, is directed to observe in its march from one camp to another, or to any particular quarter of destination.

**ITMAMDAR, Ind.** a superintendent or lieutenant-governor in India.

**JUDGES** are authorized to take judicial notice of the Articles of War. Mutiny Act, Sect. 18.

**JUDGE-MARTIAL, or Advocate-General,** the supreme judge in martial law as to the jurisdiction and powers of military courts. It is incumbent upon this person, as well as upon his deputies, to be well acquainted with the laws of the land, that they may administer the court or president when their proceedings are tending to infringe the civil law. He is register of courts-martial, and should take down the evidence in the very words of the witness. He is neither a judge nor a juror as to the charge.

**JUGE, Fr.** a sort of judge or pro-  
vost

cost marshal. This term was particularly applicable to the interior government of the Swiss guards that were in the service of France. Each regiment of that description had one judge or provost marshal per company, and one superior to the rest, who presided over the regiment. The inferior judge was called *richter*, and the grand or superior judge *obster richter*. The inferior judges had the examination of petty crimes and offences which they reported to the captain of the company. If the crimes were of a serious or heinous nature, the inferior judges drew up a specific statement of them, and laid the whole before the *obster richter*, who communicated the circumstance to the colonel. Grounds for a general court-martial were generally established out of the latter report.

**JUGEMENTS Militaires**, Fr. the cognizance which is taken, and the sentences that are passed, for military offences.

**JUGES Militaires**, Fr. See JUDGE.

**JUGG**, *Ind.* an Indian sacrifice.

**JUGGUT GROW**, *Ind.* in Indian term which signifies *guardian of mankind*.

**JUMBAUN**, *Ind.* in Indian music, means *shake*.

**JUMBOO DEEP**, *Ind.* A word particularly used to signify India; it is derived from *jumboo* or *jumbhook*, a jaelal, and *deep*, any large portion of land which is surrounded by the sea. The inhabitants of India were so called before the introduction of the Tartar governments.

**JUMMA KERCH**, *Ind.* An account, stating the receipt and expenditure of the revenue.

**JUNCAN**, *Ind.* a toll or duty on every thing that passes.

**JUNGLE**, an Indian term for a wood, or woody country. It likewise means high grass, reeds, or thickets.

**JURISDICTION**, legal authority, extent of power. Officers not being liable to be tried by garrison or regimental courts-martial, may appeal from the jurisdiction of such courts; as may non-commissioned officers and soldiers in cases where their pay is concerned.

**JUST**, a sportive combat on horseback, man against man, armed with lances; called also *Joust*, *Tilt*, *Tournament*, &c.

**JUSTICES**. Military men are, in many instances, under the necessity of applying to justices in order to execute their several orders and instructions without infringing upon the civil authorities; and justices on their side are bound to aid and assist the military in conformity to established laws and regulations. As the functions of these gentlemen in a military way are pointed out in militia acts, and every thing relating to the army is comprized under the different heads, we shall give the following brief abstract for the information of military men in general.

Justices are directed to grant warrants for impressing carriages for the use of the regular army and militia, when any part of either of those establishments is on its march. They may grant warrants for the apprehending of deserters, and must pay 20s. to the person who brings a deserter, and has him sworn in before them.

They may billet officers and men upon the different public-houses, and when the militia is disembodied, they provide in the same manner for that establishment, during the annual exercise. With regard to the militia, it is the particular province of each justice to order costs for making distress on quakers for rates for raising volunteers, and to grant warrants in general for levying by distress the regulated rates under that head. They may likewise determine disputes respecting wages under 20/ between masters and their servants, who have been enrolled as militiamen, and may order the same to be levied by distress. They may likewise order relief to be given to disabled militia-men, &c. and may commit militiamen for not paying the penalty they might have incurred for selling their arms, and either commit the purchasers of them, or cause them to be whipped at the cart's tail, &c.

At the quarter session after Christmas in every year, justices are to assess 3/ per man on every place that does not return an annual state of its militia when disembodied; and at Midsummer quarter session they are to order the overseers of the poor to certify the quota paid to the land tax by places not rated to the county rate, and which have not paid their assessments for not having raised their militia.

JUSTICES of the peace being military officers, cannot grant warrants for quartering their own soldiers in England. See 37, 40, of the King. cap. 27, art. xxx.

Military JUSTICE, (*Justice militaire*, Fr.) That species of justice which prevails in the army, and corresponds with the Articles of War.

## K

**K**ABBADE or CABADE, *Fr.* A military dress which is worn by the modern Greeks. According to Tzetzes it derives its name from Cabades, a Persian king. Codinus, on the other hand, asserts, that the Greeks in Constantinople adopted it in imitation of the Assyrians. Others again maintain, that it owes its appellation to the resemblance which it bears to a Greek letter. Father Goar, the author, very justly ridicules this etymology. We are, however, authorized to say, that be the derivation of the word what it may, the dress itself consists of a short garment which was worn underneath another. It had not any folds, but sat close to the body, being buttoned with large buttons, and reaching down to the calves of the legs. It was fringed round the edges, and was usually worn with a girdle; such is the description which Father Goar has given of the kabbades in his notes upon Codinus. He concludes by observing, that in his opinion it is what the Romans called *sagum*, and the modern Greeks afterwards corrupted into *kab-lade*.

**KABEL-JAUW**, *Fr.* a name formerly given to a faction in the low countries, which constantly opposed the *Houckins*.

**KAJANA**, *Ind.* a collection of treasure under the immediate control of a Jaghirdar, or military chief, in the Indian empire. This treasure, to use the words of the editor of the Asiatic Register, consists of specie and jewels, which are lodged in a secret depository within the walls of a strong fortress, often erected for the purpose, on one of the most inaccessible mountains in the dominions of a Mahratta prince.

**KAK TOWDA**, *Ind.* fine mould

heat strongly in between two walls, for the purpose of shooting arrows into, when the walls are taken away.

**KALAI**, a term used among the Turks to signify fort or fortress; a species of defence which they particularly adopt when they construct their Palanquins.

**KALEE**, *Ind.* an Hindoo deity, to whom human beings are sacrificed.

**KALLAAT** or **KELAUT**, *Ind.* a dress which is given to any person invested with a new office.

**KALMUCS**, (*Kalmouques*, Fr.) This word is generally written *Calmacs*. They are wandering tribes of Tartars, who inhabit the parts north of the Caspian sea. These hordes frequently put themselves under the protection of the court of Russia. A French writer describes the Kalmucs to be a sort of militia, which is established between Siberia and the Caspian sea. There are generally some regiments of them attached to the Russian armies in common with the Cossacks. They are armed with a lance iron pointed, about six feet long, and carry a bow with a quiver upon their backs, containing ten arrows. They never serve on foot, and are only formidable by name.

**KAISA**, *Ind.* the king, the head.

**KAISA CUTCHEERY**, *Ind.* the room of business, where the king sits in person.

**KAM**, (*Kam*, Fr.) an elective prince belonging to one family, who has full power over the small states of Tartary; subject only to the Grand Signor.

**KAN**, an officer in Persia, who is invested with the same powers that are entrusted to an European governor.

**KANAUTS**, *Ind.* a term used in India, to express the walls of a canvas tent.

**KARKI-MESRAC**, a sort of lance

## K E E

or javelin used by the Turks in Asia, and by the cavalry called *Crepiculy* and *Scrafaly*.

**KATA**, the Indian name for China.

**KATH**, an Indian month, which, in some measure, coincides with our month of October.

**KAULAUBHAJE**, the Indian term for message.

**KAYMETAN**. See **SEYMENY-BASSY**.

**KECHERKLECHI**, guards attached to the person of the king of Persia; they are armed with a musquet of an extraordinary size and caliber. They were raised and formed into a regular corps about the middle of the last century.

**KEELS**, the long boats in which the Saxons successfully invaded England were so called.

**KEEP**, in ancient military history, a kind of strong tower which was built in the center of a castle or fort, to which the besieged retreated and made their last efforts of defence. Of this description is the keep of Windsor Castle.

**King's KEEP**, a fort built by King Henry II. in the interior part of Dover Castle is so called.

**To KEEP off**, in a military sense, is either to deter your enemy from approaching close to the lines or fortifications by inducing him to suspect a superior force, an ambuscade, or a mine, or by openly galling his advanced posts in such a manner as to beat him in detail. Infantry may keep off cavalry by hot firing, or by a compact intrepid direction of the bayonet.

**To KEEP up**, in military movements, is to preserve that regular pace, by which a line or column, on a march, or in manœuvring, advances towards any given point without any elations or fluctuations. When a regiment marches by files, it is almost impossible for the rear to keep up. On this account, divisions, subdivisions, and even sections, are best calculated to preserve a regular depth and continuity of march.

**To KEEP up**, likewise signifies to attend to the interior management and discipline of a corps, so as to prevent the least deviation from established rules and regulations. Thus commanding officers are said to keep up good order and discipline, who (whether absent or present) provide against the least insubordination, &c.

## K E R

**To KEEP up a heavy fire**, is to play with heavy ordnance against a fortified place, or body of men, by a calm and well-directed succession of shot. In musketry, sergeants commanding battalions, companies, or platoons, should be very particular in giving the word in order to keep up the different *ranges*.

**KEEPAU**, *Ind.* expect or changes.

**KEEN**. It is the peculiar duty of the county lieutenant, or of three county lieutenants belonging to this county, to issue orders to the chief constables of the several hundreds to send out precepts to the churchwardens and overseers to return a list of men liable to serve. The churchwardens and overseers of the county of Kent are, by act of parliament, invested with the power of constables, to put in force the militia acts.

**KENTASSI**, a range of mountains in Tibet, in which are the sources of the Ganges. This river, formed from several sources, passes successively two great lakes, and flows to the west, until the opposition of a part of the Indian Caucasus turns it to the south, and having completed in these various directions a course of two hundred leagues, it enters India by forcing its passage through the mountains of the frontier.

**KERANA**, a long trumpet, similar in shape and size to the speaking trumpet. The Persians use it whenever they wish to make any extraordinary noise, and they frequently blow it with hunt-boys, kettle drums, and other instruments at sunset, and two hours after midnight.

**KERAGEE**, *Ind.* one of the two seasons into which the year is divided in India.

**KERIMCHARRY**, *Ind.* an inferior officer under the Zemindar, who collects from the villages, and keeps the accounts.

**KERN**. The Irish infantry were formerly distinguished by this appellation. The men in those days were armed with a sword, and a dark javelin, which was tied to a small cord, so that, after they had thrown it at the enemy, they could instantly recover it, and use it in any way they thought proper. The javelin was called *skene*.

**KERUI**, *Ind.* a village or parish.

**KETTLE**,

**KETTLE**, a vessel used to boil composition for fire-works.

**KETTLE-Drums**. See **DRUMS**.

**KETTLE-drum cart**, a four wheel carriage which is drawn by four horses, and is used exclusively by the royal artillery.

The ordnance flag is planted on the fore part, and the drummer with two kettle drums is seated, as in a chair of state, on the back part. This cart is finely engraven and richly gilt. It has not been in the field since the year 1743, when the King was present. It is kept in the tower.

**KEY**, in a general sense, is an instrument with which locks are opened.

**KEYS**, in artillery carriages, may be considered under three specific heads, viz.

**Fore-lock KEYS**, which serve to pass through the lower end of bolts, in order to fasten them.

**Spring KEYS** may be used in the same manner, but are differently made, for instead of being of one single piece, they are of two, like two springs laid one over the other. When they are put into eye-bolts, they are pinched together at the ends; and when they are in, they open again; so that the motion of the carriage cannot disturb or shake them out. Spring keys are peculiarly useful in travelling carriages.

**KEYS with chains and staples** fixed on the side pieces of a carriage or mortar bed. They serve to fasten the cap-squares by passing through the eyes of the eye-bolts.

**KEY Stone**, in architecture, is the middle stone of an arch, by which the sweep of an arch is bound together.

**KEY**, is also used in a figurative sense, to signify any important outlet of a kingdom. Thus Luxemburg is called the key of the German empire towards France. The French use the word in the same sense, *Calais est une des clefs de la France*, Calais is one of the keys of France. Dover may also be so called, with respect to England. **KEY** also means a haven for ships to ride in. See **QUAY**.

**Gold KEY**, (*cléf d'or*, Fr.) a key which is worn by the lords of the bed-chamber in England, and in most European courts.

**KEYSERLICKS**, or *imperialists*, the

Austrian troops are frequently called so. The term was indeed common among the British soldiers, when they did duty together, and invaded France in 1791. It is derived from *keyser*, which in German signifies emperor.

**KHAN**, *Ind.* signifies lord or chief-tain. This title is given by the king of Delhi, for which it is supposed, the person maintains 250 horse soldiers, which he commands and disciplines for the king's service.

**KHIEET**, *Ind.* a fortified city, which is four coss or English miles in length and breadth, and not so much as eight.

**KHODA**, *Ind.* God.

**KHODADAUD SHICAR**, *Ind.* Tip-po Sultan, the sovereign of the kingdom of Mysore, who fell in defence of his capital, Seringputtam, or Seringapatam, when it was stormed, May the 4th, 1799, by the British forces under the command of lieutenant general Harris.

**KID**. This appellation was formerly given to any person that was trapped by kidnappers.

**KIDNAPPER**, a man who by improper means decoys the unwary into the king's service.

**KIEU**, the Indian term for any bridge under which water flows.

**To KILL**, (*Tuer*, Fr.) To deprive of life. A power arrogated by the strong over the weak, without any other principle to justify it than the usage of mankind.

**To KILL according to law**, to take away life in consequence of judicial investigation, and for a breach of some known rule. Under these circumstances the execution of the culprit takes place in open day-light.

**To KILL privately**, and *with malice prepense*, to murder in the dark or by secret means. Hence, to *assassinate*, which is derived from the word *assassin*; a modern term, taken from a set of miscreants who formerly inhabited a part of Asia, and were under a petty prince called *the Old Man of the Mountain*. This man, according to Hume, had acquired such an ascendancy over his fanatical subjects, that they paid the most implicit deference to his commands; esteemed assassination meritorious when sanctified by his mandate;

date: courted danger, and even certain death, in the execution of his order; and fancied, that when they sacrificed their lives for his sake, the highest joys of Paradise were the infallible reward of their devoted obedience.

The greatest Monarchs stood in awe of this prince of the *Assassins*, (for that was the name of his people) whence the word has passed into most European languages.) vol. II. Hume's History of England, p. 18.

**KILLA**, *Ind.* a castle, fort, or fortress.

**KILLADAR**, *Ind.* the governor or commandant of a fort.

**KIND**, (*genre, sorte, Fr.*) natural state of any thing.

*In Kind*, (*en espèce; en nature, Fr.*) as the thing is. Thus in military distributions, rations are ordered to be supplied *IN KIND*, (*en nature*) and not paid for or compounded in *money*.

**KINDALAHIS**, a vagabond, outcast set of people in India, originally belonging to the Hindoo tribe. By such proscription and disgrace are these miserable creatures marked, that the people of other casts not only will not visit them, but if any one of them should presume to approach a person of the Nair tribe, it is lawful for the latter to put him to instant death.

To **KINDLE**, in a military sense, is to excite mankind to arms. To kindle the flames of war is a familiar expression.

The **KING**, a person in whom a supreme or qualified authority is vested by the consent of a nation. The chief magistrate, and one of the three integral parts of the British constitution.

In a military acceptance of the term, the King of Great Britain is constitutionally, and in his own proper right, captain-general of the British army, the primary source from which all appointments in it are derived, and the last resort of naval and military jurisdiction. With him, as principal magistrate in the state, and head of the executive power, all the arrangements of the British army finally rest, as from him they primarily issued. From him all the effective forces derive energy and effect, and when war has been declared, to him only does the army look for the immediate application and general exercise of its powers, through the medium of

the ministers he appoints, who are responsible to parliament for the manner in which the authority they have received has been executed. English kings have sometimes fought at the head of their armies, and the next heir to the crown has often exposed himself in common with his father's subjects, to all the casualties of war.

The **KING** is supreme head of the militia, and has the power of appointing or dismissing lieutenants of counties. His majesty may likewise order three deputy lieutenants to act, when the lieutenant is abroad, or when there is a vacancy. He may join independent companies into a battalion, or incorporate them with any other regiment; and by him only can adjutants be appointed to act in the militia. If they are selected from the regular army, they preserve their rank, and their new commission bears the sign manual.

In case of an invasion or rebellion, the King has the power to order the county lieutenants to embody the militia, and to put it under general officers from the regular army. On these occasions he may issue a proclamation for the meeting of parliament in fourteen days.

**KING of Arms**. See **HERALD**.

**KIOSQUE**, *Fr.* a sort of garden pavilion which is open on all sides. It is used in the Levant, particularly in Turkey, and at Constantinople.

**KISSELBACHES**, *Ind.* soldiers are so called in India.

**KIST**, *Ind.* the amount of a stated payment.

**KISTYBUNDY**, the Indian term for a monthly payment.

**KIT**, in laboratory works, a composition, made of rosin 9lb. pitch 6lb. bees-wax 6lb. and tallow 1lb. used for the last covering of carcases. In order to apply it properly, it must first be broken into small pieces, and put into an iron pot over the fire, where it must be kept in agitation until it be thoroughly dissolved. When rendered very hot, and completely liquid, it may be used.

**KIT** is likewise used among dragoons, to signify their lot of necessaries, which is packed up in a very small compass. The term has found its way in the infantry, and frequently means the contents of a soldier's knapsack.

**KITSBUNDY**, a contract or agreement

ment for the discharge of any debt or obligation by stated payments.

**KLINKERS**, in fortification, are small gates made through palisades for the purpose of sailing.

**KNAPSACK**, a rough leather or canvas bag, which is strapped to an infantry soldier's back when he marches, and which contains his necessaries. Square knap sacks are supposed to be most convenient. They should be made with a division to hold the shoes, blacking-balls and brushes, separate from the linen. White goat-skins are sometimes used, but we do not conceive them to be equal to the painted canvas ones. Soldiers in the British service, are put under stoppages for the payment of their knapsacks, which, after six years become their property. See list of necessaries, according to the last regulations, under the article NECESSARIES.

**KNAPSACK**, is said to have been originally so called from the circumstance of a soldier making use of a sack, which had been full of corn, &c. In those days there were no roads, and every thing was carried on packhorses. When the soldiers reposed, they hung up the empty sacks and slept in them. The word should be napsack, from napping, &c.—to slumber. The army was supplied by packhorses, and all things were in sacks, so that every soldier had his sack. Such is the account given to us by a very worthy and respectable friend; but we are inclined to think, that knapsack comes from the Saxon word *Snapsack*, a bag to carry food.

**KNAVE**, for its military acceptation, see **ISRAIRY**.

**KNIGHT**, a person who, on account of some eminent service, civil or military, is singled out from the common class of gentlemen, &c. and is personally invested with a title. This word, which was originally derived from the German and Dutch *knecht* or *knecht*, signifies a servant, in which sense it is applied when we speak of the knight of a shire: it likewise means a military man, or rather a horseman, from the Latin *eques*, a soldier, or horseman; knights of this description having been either the king's domestic servants, or of his life-guards.

In common law they are called *milites*, usually holding lands by knight's service, to serve the king in his wars.

**KNOT**, the wing or epaulettes, which is commonly made of worsted, of a non-commissioned officer or corporal. When sergeants and corporals are sentenced to be reduced to the ranks, the knot is generally cut off by the drum-major in the presence of the battalion, as a mark of infamy.

**KNOTS**, the division of the log-line. Each knot is equal to an English mile.

**KNOCK**, a Russian punishment.

**KOHISTAN**, *Ind.* properly means a province. It likewise signifies a rocky or mountainous country.

**KOLLE**, *Jap.* *Ind.* is the fourth of the four aras or periods of Indian chronology. It is the present ara, in which all mankind are corrupted or rather lessened; it is supposed to be ordained to subsist four hundred thousand years, of which near five thousand are already expired, and the life of man, in that period is limited to one hundred years. *Colonel Dow* says this age is to last thirty-six thousand years; the age which preceded it, is called the *darapaur jogue*.

**KOOLOO**, *Ind.* the cocoa-tree.

**KOONAR**, an Indian month, which partly coincides with our month of September.

**KORUNJY**, *Ind.* a measure of about eight handfuls.

**KOONWUR**, *Ind.* prince, highness.

**KOREISH**, *Ind.* an Arabian tribe.

**KORTCHI-BACHI**, the chief or commanding officer of the Kortchis. In former times he was the first military character in Persia, at present he is only the second in command. He never leaves the court except upon extraordinary occasions, when his presence is required at the army. This, however, rarely happens, as the king is obliged to furnish him with an household service of plate, and to detach a part of his own guards for the protection of his person. The Kortchi Bachi is generally entrusted with one of the chief governments belonging to Persia.

**KORTCHIS**, a body of Persian cavalry, which is stationed along the frontiers of the country. Every individual belonging to this corps, receives fifty crowns for his annual pay. The children of the Kortchis succeed their fathers, with the consent and approbation of the general. The Kortchis are descended from a race of foreigners, who  
used

used to live under tents, and were always distinguished for their courage.

**KOSSACKS**, (*Kosaques*, Fr.) See **COSSACKS**.

**KOTE**, *Ind.* a warehouse.

**KOULIE**, *Ind.* a courier, a porter.

**KOULS**, a corps of Persian soldiers who rank as a third body among the five that constitute the king's household troops; they mount guard under the portico which stands between the first and second gate leading to the palace. The Kouls are men of birth and rank; no person can arrive at any considerable post or situation, who has not served among the Kouls. Their number is computed at 4000 men.

**KOULS-AGASI**, a distinguished military character in Persia, who has the command of a body of men called *Kouls*. He is usually governor of a considerable province.

**KOURIE**, *Ind.* a sea-shell used as money in many parts of India.

**KOYAL**, *Ind.* a weighman.

**KOYALEE**, *Ind.* fees for weighing.

**KRAMA**, *Ind.* wooden sandals which are worn by the natives of India during the wet season.

**KUFFEET**, *Ind.* an Indian term for security.

**KUL**, the Turkish word for slave to the prince. The grand vizier, the baches, the beiglebeys, and all persons who receive pay or subsistence from situations dependant upon the crown, are so called. This title is in high estimation among the Turkish military, as it authorizes all who are invested with it, to insult, strike, and otherways ill use the common people, without being responsible for the most flagrant breaches of humanity. Horrid pre-eminence, and fitted only to Mahometan civilization!

**KULIUR**, the governor of a fortified town in Turkey is so called.

**KULIASTAUNS**, *Ind.* Christians.

**KUNDNEE**, *Ind.* a sum of money which is annually paid by an inferior governor to his superior.

**KUPELE**, Straights so called in India, through which the Ganges disembogues itself into Indostan. They are distant from Delhi about 30 leagues, in the longitude of 96, and in the latitude of 30. 2. These straights are believed by the Indians, who look very little

abroad, to be the sources of the Ganges; and a rock 15 miles distant from them, bearing some resemblance to the head of a cow, has joined in the same part of the kingdom, two very important objects of their religion: the grand image of the animal which they almost venerate as a divinity, and the first appearance of that immense body of holy water which washes away all their sins. It was at these straights that the Indians made some shew of resistance, when the famous Tamerlane invaded India. The field of this victory is the most distant term of that Emperor's conquests in India and on the globe. See Dissertation on the establishments made by Mahomedan Conquerors in Indostan, in Orme's History of the Carnatic, page 14 and 15.

**KURROL**, *Ind.* the advanced guard of a main army.

**KURTCHI**, a militia is so called in Persia. It consists of one body of cavalry, which is composed of the first nobility belonging to the kingdom, and of the lineal descendants of the Turkish conquerors, who placed Ismael Sophi on the throne. They wear a red turban, made of particular stuff into twelve folds. This turban was originally given them by Ismael, in consideration of their attachment to the religion and family of Ali. The twelve folds are in remembrance of the twelve Imams or Mahometan preachers who descended in a direct line from Ali, and distinguished themselves so much in that sect. The turban is red, for the purpose of provoking those who wear it to avenge upon the Ottomans, the deaths of Ali and Hussein, who were murdered by the chief of Sunnis, to whose sect the Turks belong. In consequence of their wearing this turban, the Persians are always called by the Turks *Kitil-Baschi* or *Red-heads*. The noblemen in Persia have adopted the term, with a slight alteration, and call themselves *Kesil-Baschis* or *Golden-Heads*. The Kurtchi form a body of nearly eighteen thousand men. The chief or commanding officer is called *Kutchi-Baschi*. This was formerly the most distinguished situation in the kingdom, and the authority annexed to it was equal to what the constable of France originally possessed. At present

sent his power does not extend beyond the Kurdhis.

**KUSH-BASCH**, *Ind.* persons who enjoy lands rent-free, upon condition of serving government in a military capacity when called upon. The term also signifies people of middling circum-

stances, who do not cultivate their lands themselves, but hire servants to do it while they hold other employments.

**KUTTY**, *Ind.* Closets.

**KUVVAUS**, *Ind.* servants attending on the King's person.

**KUZANA**, *Ind.* a treasury.

## L

**LAACK**, *Ind.* One hundred thousand.

**LABARUM**, a celebrated standard which was used among the Roman emperors, and frequently means any imperial or royal standard. The original one, so called, consisted of a long lance, at the top of which was fixed a stick that crossed it at right angles, and from which hung a piece of rich scarlet cloth, that was sometimes ornamented with precious stones. Until the days of Constantine the Great, the figure of an eagle was placed upon the top of the labarum; but that prince substituted in its room a cross, with a cypher expressing the name of Jesus.

**LABORATORY**, (*laboratoire*, Fr.) signifies that place where all sorts of fireworks are prepared, both for actual service, and for pleasure; viz. quick-matches, fuses, portfires, grape-shot, case-shot, carcasses, hand-grenades, cartridges, shells filled, and fuses fixed, wads, &c. &c.

*Agrettes.* See **MORTARS**.

**Balls** are of various sorts, shapes and forms; as

**Chain-shot**, are two shot linked together by a strong chain of 8 or 10 inches long: they are more used on board men of war, than in the land service. The famous M. de Witt was the first inventor, about the year 1665.

**Light-balls**, of which there are several sorts: the best composition is mealed powder 2, sulphur 1, rosin 1, turpentine  $2\frac{1}{2}$ , and saltpetre  $1\frac{1}{2}$ . Then take tow, and mix and dip it in this composition, till of a proper size, letting the last coat be of mealed powder. Or take thick strong paper, and make a shell the size of the mortar you intend to throw it out of, and fill it with a composition of an equal quantity of sulphur, pitch,

rosin and mealed powder; which being well mixed, and put in warm, will give a clear fire, and burn a considerable time.

The composition for fire-balls that are intended to set fire to magazines is, mealed powder 10, saltpetre 2, sulphur 4, and rosin 1; or mealed powder 4, pounded glass 1, antimony  $\frac{1}{2}$ , camphire  $\frac{1}{2}$ , sal-ammoniac 1, common salt  $\frac{1}{2}$ ; or mealed powder 18, saltpetre 32, sulphur 16, rosin 1, steel or iron filings 2, fir-tree saw-dust boiled in saltpetre ley 2, and birchwood charcoal 1. With any of these compositions fill the sack, and run it, if possible, as hard as a stone, putting in the opening a fuse, and about the same an iron ring  $\frac{1}{5}$ th of the ball's diameter wide; and on the opposite end, another ring  $\frac{1}{6}$ th of the ball's diameter; then with a strong cord of  $\frac{1}{4}$ th of an inch diameter, lace round the hoops, or rings, from one end of the ball to the other, as often as is requisite; this is called the ribbed coat: then lace it again the contrary way, which is called the check coat.

Between each square cord, iron barrels are driven in,  $\frac{1}{3}$ d of which are filled with powder, and a bullet; at the end of each a small vent is made, that the composition may inflame the powder, and drive the balls out on every side, which not only kill numbers of people, but prevent any one from extinguishing the fire-ball. When finished, they must be dipped in melted pitch, rosin, and turpentine oil; which composition fastens the whole together.

**Smoke-balls**, are made and contrived to give an uncommon smoke, and thereby prevent the enemy from seeing what you are about. They are prepared as above, only the composition must be 5 to 1 of pitch, rosin, and saw-dust; the ingre-

ingredients are put into iron shells, having 2 holes each, to let out the smoke, and are driven out of mortars.

Stang-  
Anchor-  
} Balls. See BALLS.

Message-Balls. See SHELLS.

*Fire-sharks* are at present not much used: they were of different sorts; some mounted on two wheels. The inside of the barrel is loaded with powder, and the outside full of sharp iron points, intermixed with grenades loaded, and fuses fixed. Sometimes they are placed under ground, and made use of to annoy the enemy's approach.

*Carcass*, in military affairs, was formerly of an oval form, made of iron bars, and filled with a composition of meal powder, saltpetre, sulphur, broken glass, shavings of horn, pitch, turpentine, tallow, and linseed oil, covered with a pitched cloth; it is primed with meal powder and quick match, and fired out of a mortar. Its design is to set houses on fire, &c. See CARCASS.

None but *round carcasses* are used at present, the slight of the oblong ones being so uncertain. The composition is, pitch 2, saltpetre 4, sulphur 1, and corned powder 3. When the pitch is melted, the pot is taken off, and the ingredients (well mixed) put in; then the carcass is filled with as much as can be pressed in.

*Cartridges* are made of various substances, such as paper, parchments, bladders, and flannel. When they are made of paper, the bottoms remain in the piece, and accumulate so much, that the priming cannot reach the powder; besides other inconveniences. When they are made of parchment or bladders, the fire shrivels them up, so that they enter into the vent, and become so hard, that the priming iron cannot remove them so as to clear the vent. Nothing has been found hitherto to answer better than flannel, which is the only thing used at present for artillery cartridges of all sorts; because it does not keep fire, and is therefore not liable to accidents in the loading: but, as the dust of powder passes through them, a parchment cover is sometimes made to put

over them, which is taken off when used.

The best way of making flannel cartridges, is to boil the flannel in size; which will prevent the dust of powder from passing through, and render it stiff, and more manageable; for without this precaution cartridges are so pliable, on account of their size, and the quantity of powder they contain, that they are put into the piece with much difficulty.

The loading and firing guns with cartridges is done much sooner than with loose powder, and fewer accidents are likely to occur. The heads of cartridges, especially for musquetry, are sometimes wrapped in coarse cotton.

In quick firing, the shot is fixed to the cartridge by means of a wooden bottom, hollowed on one side so as to receive nearly half the shot, which is fastened to it by two small slips of tin crossing over the shot, and nailed to the bottom; and the cartridge is tied to the other end thereof. They are fixed likewise in the same manner to the bottoms of grape shot, which are used in field pieces.

*Grape-shot*, in artillery, is a combination of small shot, put into a thick canvas bag, and corded strongly together, so as to form a kind of cylinder, whose diameter is equal to that of the ball which is adapted to the cannon.

To make *grape shot*, a bag of coarse cloth is made just to hold the bottom which is put into it; as many shot are then thrown in as the grape is to contain; and with a strong packthread the whole is quilted to keep the shot from moving. The bags, when finished, are put into boxes for the purpose of being conveniently carried.

The number of shot in a grape varies according to the service or size of the guns: in sea service 9 is always the number; but by land it is increased to any number or size, from an ounce and a quarter in weight, to four pounds. It has not yet been determined, with any degree of accuracy, what number and size answer best in practice; for it is well known that they often scatter so much, that only a small number take effect.

Of the three different sorts of cannon which are used for throwing grape shot, the

the 3-pounder seems rather the best; especially when two are used, as the effect of two 3-pounders, is much greater than that of one 6-pounder. But the 8-inch howitzer, which can be made to throw in from 3 to 5 of its charge (from 12 to 20lb. of shot) becomes thereby a very formidable piece, when it can be used for grape shot.

*Proper charges for grape shot* have never yet been effectually determined: we can only give our advice from some experiments; that for heavy 6-pounders 1-3d of the weight of the shot appears to be the best charge of powder; for the light 6-pounders, 1-4th of the weight of the shot; and for howitzers, 1-8th or 1-10th answers very well.

This kind of fire seems not yet to have been enough respected, nor depended on. However, if cannon and howitzers can be made to throw 1-3d or 1-4th, and sometimes half their charge of grape shot into a space 50 × 12 feet, at 200 and 300 yards distance, and those fired 10 or 12 times in a minute; it surely forms the thickest fire that can be produced from the same space.

*Tin-case shot*, in artillery, is formed by putting a great quantity of small iron shot into a cylindrical tin box, called a canister, that just fits the bore of the gun. *Lead bullets* are sometimes used in the same manner; and it must be observed, that whatever number or sizes of the shots are used, they must weigh, with their cases, nearly as much as the shot of the piece.

*Case shot*, formerly, consisted of all kinds of old iron, stones, musket balls, nails, &c.

*Tubes*, in artillery, are used in quick firing. They are made of tin: their diameter is 2-10ths of an inch, being just sufficient to enter into the vent of the piece; about 6 inches long, with a cap above, and cut slanting below, in the form of a pen; the point is strengthened with some solder, that it may pierce the cartridge without bending. Through this tube is drawn a quick-match, the cap being fitted with meal powder, moistened with spirits of wine. To prevent the meal powder from falling out by carriage, a cap of paper or flannel, steeped in spirits of wine, is tied over it.

*Flambeau*, a kind of lighted torch,

used in the artillery upon a march, or the park, &c.

*Formers*, are cylinders of wood, of different sizes and dimensions, used in the laboratory, to drive the composition of fuzes and rockets.

*Funnels*, of various sorts, used to pour the powder into shells, and the composition into fuzes, and rocket-cases.

*Fire ship*, a vessel filled with combustible materials, and fitted with grappling irons, to hook, and set fire to the enemy's ships in battle, &c.

From the bulk head at the fore-castle to a bulk head to be raised behind the main chains, on each side and across the ship at the bulk heads, is fixed close to the ship's sides, a double row of troughs, 2 feet distance from each other, with cross troughs quite round, at about 2½ distance; which are mortised into the others. The cross troughs lead to the sides of the ship, to the barrels, and to the port-holes, to give fire both to the barrels and to the chambers, to blow open the ports; and the side troughs serve to communicate the fire all along the ship and the cross troughs.

The timbers of which the troughs are made, are about 5 inches square; the depth of the troughs, half their thickness; and they are supported by cross pieces at every 2 or 3 yards, nailed to the timbers of the ship, and to the wood work which incloses the fore and main-masts. The decks and troughs are all well paved with melted rosin.

On each side of the ship 6 small port holes are cut, from 15 to 18 inches large, (the ports opening downwards,) and are close caulked up. Against each port is fixed an iron chamber, which, at the time of firing the ship, blows open the ports, and lets out the fire. At the main and fore chains, on each side, a wooden funnel is fixed over a fire barrel, and comes through a scuttle in the deck, up to the shrouds, to set them on fire. Both funnels and scuttles must be stoped with plugs, and have sail-cloth or canvass nailed close over them, to prevent any accident happening that way; by fire, to the combustibles below.

The port-holes, funnels, and scuttles, not only serve to give the fire a free passage to the outside and upper parts of the ship and her rigging, but also for the

the inward air (otherwise confined) to expand itself and push through those holes at the time of the combustibles being on fire, and prevent the blowing up of the decks, which otherwise must of course happen, from the sudden and violent rarefaction of the air as will then be produced.

In the bulk head behind, on each side, is cut a small hole, large enough to receive a trough of the same size of the others: from which, to each side of the ship, lies a leading trough, one end coming through a sally port cut through the ship's side, and the other fixing into a communicating trough that lies along the bulk-head, from one side of the ship to the other; and being laid with quick match, at the time of firing either of the leading troughs, communicates the fire in an instant to the contrary side of the ship, and both sides burn together.

*Fire-barrels*, for a fire-ship, are cylindrical, on account of that shape answering better both for filling them with reeds, and for stowing them between the troughs: their inside diameters are about 21 inches, and their length 33. The bottom parts are first filled with double-dipt reeds set on end, and the remainder with fire-barrel composition, which is, corned powder 30lb. Swedish pitch 12, saltpetre 6, and tallow 3, well mixed and melted, and then poured over them.

There are 5 holes of 3-quarters of an inch diameter, and 3 inches deep, made with a drift of that size in the top of the composition while it is warm: one in the centre, and the other four at equal distances round the sides of the barrel. When the composition is cold and hard, the barrel is primed by well driving those holes full of fuze composition, to within an inch of the top; then fixing in each hole a strand of quick-match twice doubled, and in the centre-hole two strands the whole length; all which must be well driven in with mealed powder; then lay the quick-match all within the barrel, and cover the top of it with a dipped curtain, fastened on with a hoop to slip over the head, and nailed on.

*Bavins*, for a fire-ship are made of birch, heath, or other sort of brush-wood, that is both tough and quickly fired: in length 2.5, or 3 feet; the bush-

ends all laid one way, and the other ends tied with two bands each. They are dipped, and sprinkled with sulphur, the same as reeds, with this difference, that the bush-ends only are dipped, and should be a little closed together by the hand as soon as done, to keep them more compact, in order to give a stronger fire, and to preserve the branches from breaking in shifting and handling them. Their composition is, rosin 120lb. coarse sulphur 90, pitch 60, tallow 6, and mealed powder 12, with some fine sulphur for salting.

*Iron-chambers*, for a fire-ship, are 10 inches long, and 3.5. in diameter; breeched against a piece of wood fixed across the holes. When loaded they are almost filled full of corned powder, with a wooden tampion well driven into their muzzles. They are primed with a small piece of quick-match thrust through their vents into the powder, with a part of it hanging out; and when the ship is fired they blow open the ports, which either fall downwards, or are carried away, and so give vent to the fire out of the sides of the ship.

*Curtains*, for a fire-ship, are made of barras, about 3-quarters of a yard wide, and 1 yard in length: when they are dipped, 2 men, with each a fork, must run the prongs through the corner of the curtain at the same end: then dip them into a large kettle of composition (which is the same as the composition for bavins) well melted; and when well dipped, and the curtain extended to its full breadth, whip it between 2 sticks of about 5.5 feet long, and 1.5 inches square, held close by 2 other men to take off the superfluous composition hanging to it; then immediately sprinkle sawdust on both sides, to prevent it from sticking, and the curtain is finished.

*Reeds*, for a fire-ship, are made up in small bundles of about 12 inches in circumference, cut even at both ends, and tied with two bands each; the longest sort are 4 feet, and the shortest 2.5; which are all the lengths that are used. One part of them are single-dipped, only at one end; the rest are double-dipped, i. e. at both ends. In dipping, they must be put about 7 or 8 inches deep into a topper kettle of melted composition (the same as that for bavins;) and when they have drained a little over it, to carry off the superfluous composition,

## L A B

tion, sprinkle them over a tanned hide with pulverised sulphur, at some distance from the copper.

### STORES for a FIRE-SHIP of 150 tons.

	No.
Fire-barrels - -	8
Iron chambers - -	12
Priming composition barrels	3½
Quick-match barrels - -	1
Curtains dipped - -	30
Long reeds single dipped	150
Short reeds } double dipped	75
} single dipped	75
Bavins single dipped - -	209

### Quantity of COMPOSITION for preparing the stores of a FIRE-SHIP.

For 3 barrels, corned powder 960lb. pitch 480lb. tallow 80lb.

For 3 barrels of priming composition, salt-petre 175lb. sulphur 140lb. corned powder 350lb. rosin 21lb. oil-pots 11.

For curtains, bavins, reeds, and sulphur to salt them, sulphur 200lb. pitch 350lb. rosin 175lb. tallow 50lb. tar 25lb.

Total weight of the composition 3017 pounds, equal to C. 96 : 3 : 21.

Composition allowed for the reeds and barrels, 1-fifth of the whole of the last article, which is equal to 160lb. making in the whole 3177 pounds, or C. 28 : 1 : 13.

*Port-fires in artillery*, may be made any length: however, they are seldom made more than 21 inches. The interior diameter of port-fire moulds should be  $\frac{1}{8}$  of an inch, and the diameter of the whole port-fire about  $\frac{1}{2}$  an inch. The paper cases must be rolled wet with paste, and one end folded down. They are used instead of matches to fire artillery. The composition of wet port-fire is, salt-petre 6, sulphur 2, and meal-powder 1; when it is well mixed and sieved, it is to be moistened with a little linseed oil: the composition for dry port-fire is, salt-petre 4, sulphur 1, meal-powder 2, and antimony 1.

*Rockets in pyrotechny*, an artificial firework, consisting of a cylindrical case of paper, filled with a composition of certain combustible ingredients; which being tied to a stick, mounts into the air to a considerable height, and there bursts: they are frequently used as signals in war time.

## L A C

Composition for sky-rockets in general is, salt-petre 4lb. brimstone 1lb. and charcoal 1½lb: but for large sky-rockets, salt-petre 4lb. meal-powder 1lb. and brimstone 1lb; for rockets of a middling size, salt-petre 3lb. sulphur 2lb. meal-powder 1lb. and charcoal 1lb.

*Quick-match in artillery*, is of 2 sorts, cotton and wetted: the first is generally made of such cotton as is put in candles, of several sizes, from 1 to 6 threads thick, according to the pipes it is designed for. The ingredients are, cotton 1lb. 12 oz. salt-petre 1lb. 8 oz. spirits of wine 2 quarts, water 2 quarts, singlass 3 gills, and meal-powder 10lb. It is then taken out hot, and laid in a trough, where some meal-powder, moistened with spirits of wine, is thoroughly wrought into the cotton. This done, they are taken out separately, and drawn through meal-powder, and hung upon a line to dry. The composition for the second is, worsted 10 oz. meal-powder 10lb. spirits of wine 3 pints, and white-wine vinegar 3 pints.

*LABOUREUR, Fr.* literally to remove earth with a plough, spade, &c. Figuratively, to belabour, which, according to Johnson, is to beat, thump, &c. The French use it, in a military sense, to express any direct and concentrated effort which is made to destroy a fortification.

*LABOUREUR un rampart, Fr.* to bring several pieces of ordnance discharged from two oblique directions to bear upon one center. Shells and hollow balls are generally used on these occasions, and the chief design is to second the operations of the miner in some particular part from whence the explosion is to take place.

*Labourer* likewise applies to the working of a bomb or shell, which excavates, ploughs up, and scatters the earth about wherever it bursts.

*LACAY or LAQUET, Fr.* An old French militia was formerly so called. The name is found among the public documents which were kept by the treasurers belonging to the Dukes of Brittany in the fifteenth century.

*LACE, (passement, galon, Fr.)* a line of silk, thread, intermixed with gold or silver; also a border or edging. The uniform of many regiments is distinguishable only by the lace and buttons.

**LACER-**

**LACERNA**, *Fr.* a garment which was used by the ancients. It was made of woollen stuff, and was only worn by men; originally indeed by those alone that were of a military profession. It was usually thrown over the toga, and sometimes indeed over the tunica. It may not improperly be considered as the surtout or great coat of the ancients, with this difference, that there was a winter lacerna and a summer one.

The lacerna was adopted by the Romans towards the close of their republic. Even so late down as the days of Cicero, it was unknown amongst them, or if known, censured as a mark of disgraceful effeminacy. During the civil wars that occurred in the triumvirate of Augustus, Lepidus, and Anthony, the lacerna became familiar to the people, and by degrees was adopted as common apparel, by the senators and knights of Rome, until the reigns of Gratian, Valentinian, and Theodosius, who enjoined the senators not to wear it.

The lacerna is the same as the *chlamys* and the *birrus*.

**Un LACHER**, *Fr.* A familiar phrase among the French to signify a coward, &c.

**LACHER**, *Fr.* to go off. *Son pistolet ou son fusil, vint à lâcher*; his pistol or his musquet went off of itself.

**LACHER pied**, *Fr.* to run away.

**LACHER un prisonnier**, to let a prisoner escape, or go away unmolested.

**LACHER un coup**, in speaking of fire arms, signifies to discharge a pistol or musquet. *Il lui lâcha un coup de pistolet dans la tête*; he lodged a bullet in his head. *Le vaisseau lâcha toute sa bordée à la portée de mousquet*; the ship fired a whole broadside within musquet shot.

**LACHETÉ**, *Fr.* An opprobrious term which is frequently used among the French, and is applied, in all instances of cowardice, want of spirit or dishonourable conduct. One of their writers emphatically observes, that in a military sense of the word it cannot be misunderstood, as the least imputation of cowardice or want of spirit, is sufficient to destroy the entire character and fame of every officer and soldier whom it may affect. As it is the direct opposite to courage, the person who enters into the profession of arms, should weigh well within himself, whether he

possesses that indispensable quality, which is above all the temptations of pleasure or the effeminacy of life, and is only alive to the glorious impulse of military animation. He only, in fact, is fit for arms, whose spirit is superior to every sordid view, who knows no personal fear, and who can encounter the greatest difficulties and dangers with an inward placidity of soul, and an outward indifference to life. In order to illustrate this article, we shall quote some ancient and modern instances of that species of cowardice or *lâcheté* which affects the military character.

Euripidas, chief of the Eléans, having imprudently advanced too far into a long and narrow defile, and learning that Philip of Macedon was on his march to block up the passage through which he had entered, instead of manfully waiting the issue of an engagement, abandoned his army in the most cowardly manner. It does not appear, says the Chevalier Folard, that Euripidas possessed those talents which are necessary to form a great general; for instead of meanly stealing off by a bye road, and leaving his army to its fate, he would have remained at its head, and either have fought his way through, honourably have capitulated, or have died combating with his men.

Base and inglorious as this conduct of Euripidas most unquestionably was, the behaviour of Perseus king of the Macedonians exceeded it in cowardice and degradation. This infamous prince did not wait to be visited by misfortune or to lose a battle; he had on the contrary, obtained a signal victory over the Romans, and when Paulus Emilius marched against him, the army he commanded was not inferior to that of his opponent in discipline and valour, and had the advantage in point of numbers. Yet, strange to relate! the engagement was no sooner begun, than he rode off full gallop, and repaired to the town of Pydna, under the flimsy pretext of sacrificing to the God Hercules; as if Hercules, to use Plutarch's expression, was the deity to whom the prayers and offerings of Cowards were to be preferred!

Mark Anthony, on the other hand, after having acquired the reputation of a brave and distinguished general, submitted to the allurements of sensual gratification,

tification, and buried all his glory in the meretricious embraces of an *Ægyptian* strumpet. We have had a striking instance, during the late war, of the superiority which a real military thirst for glory will always have over private indulgence. When the French army was very critically situated in Germany, General Hoche, who commanded it, became exposed one evening to the allurements of a most beautiful woman, who by design or accident got placed near the general at a public supper. Aware of the weakness of human nature, and full of his own glory, as well as conscious of the critical state of the army entrusted to his care, he suddenly rose, ordered his horses, and left the place at midnight.

We might enumerate a variety of cases, in which the greatest heroes have fallen victims to human weakness; and few, alas, in which a sense of public duty, and a regard for the opinion of posterity have got the ascendancy.—History, however, saves us that trouble, and we shall remain satisfied with having explained under the word *Lâcheté*, what we conceive disgraceful in an officer or soldier, who suffers personal fear, passion, or interest to get the better of public character.

The French say, *la trahison est un lâcheté*; treason is infamous in its nature.

**LACUNETTE**, *Fr.* a term in fortification. A small fosse or ditch was formerly so called. The word *Cunette* has since been adopted.

**LADAVEE**, *Ind.* a release or acquittance from any demand.

**LADLES**, in *gunnery*, are made of copper, to hold the powder for loading guns, with long handles of wood, when cartridges are not used.

**LADLES**, in *laboratory business*, are very small, made of copper, with short handles of wood, used in supplying the fuses of shells, or any other composition, to fill the cases of sky-rockets, &c. There is another kind of ladle, which is used to carry red hot shot. It is made of iron, having a ring in the middle to hold the shot, from which 2 handles proceed from opposite sides of the ring.

**Scaling-LADDERS**, (*échelles de siege*, *Fr.*) are used in scaling, when a place is to be taken by surprize. They are made

several ways; sometimes of flat staves, so as to move about their pins and shut like a parallel ruler, for conveniently carrying them: the French make them of several pieces, so as to be joined together, and to be capable of any necessary length: sometimes they are made of single ropes knotted at proper distances, with iron hooks at each end, one to fasten them upon the wall above, and the other in the ground; and sometimes they are made with 2 ropes, and staves between them, to keep the ropes at a proper distance, and to tread upon. When they are used in the action of scaling walls, they ought to be rather too long than too short, and to be given in charge only to the stoutest of the detachment. The soldiers should carry these ladders with the left arm passed through the second step, taking care to hold them upright close to their sides, and very short below, to prevent any accident in leaping into the ditch.

The first rank of each division, provided with ladders, should set out with the rest at the signal, marching resolutely with their firelocks slung, to jump into the ditch; when they are arrived, they should apply their ladders against the parapet, observing to place them towards the salient angles rather than the middle of the curtain, because the enemy has less force there. Care must be taken to place the ladders within a foot of each other, and not to give them too much nor too little slope, so that they may not be overturned, or broken with the weight of the soldiers mounting upon them.

The ladders being applied, they who have carried them, and they who come after should mount up, and rush upon the enemy sword in hand; if he who goes first, happens to be overturned, the next should take care not to be thrown down by his comrade; but on the contrary, immediately mount himself, so as not to give the enemy time to load his piece.

As the soldiers who mount first may be easily tumbled over, and their fall may cause the attack to fail, it would perhaps be right to protect their breasts with the fore parts of cuirasses; because if they can penetrate, the rest may easily follow.

The success of an attack by scaling

is infallible, if they mount the 4 sides at once, and take care to shower a number of grenades among the enemy, especially when supported by some grenadiers and piquets, who divide the attention and share the fire of the enemy.

The ingenious Col. Congreve of the royal artillery, has very much improved upon the construction of these ladders. As the height of different works vary, and the ladders, when too long, afford purchase to the besieged, he has contrived a set of ladders having an iron staple at the lower part of each stem, so that if 1, 2, or 3, should be found insufficient to reach the top of the work, another might with facility be joined to the lowest, and that be pushed up until a sufficient length could be obtained.

**LAI Frère**, Fr. lay-brother. This term was originally given to an invalid soldier, whom the heads of religious houses and monasteries in France were obliged to receive and to support during the remainder of their days. The monks generally agreed to take one; but the number seldom exceeded two. To use a French writer's expression, these living remains of military glory led a melancholy life in the midst of their fat and pampered masters. They were obliged to clean the courts in front of the monasteries, and to do all the drudgery within doors. Louis XIV. rescued them from these disgraceful occupations, by establishing the *Hôtel des Invalides*, in Paris.

**LAITON**, sometimes written LETTON, Fr. a metallic composition which is made of copper, and the lapis calaminaris. See LETTON.

**LALA**, Ind. lord; sir; master; worship.

**LAMA**, Ind. A chief priest, whose followers suppose him immortal. They imagine, that on the dissolution of his mortal frame, his spirit enters the body of a new-born child. He is also monarch of Thibet.

**LAMBREQUINS**, Fr. small mantles or ribbons which were twisted round the hood or top of a helmet at the bottom of the crest, and kept the whole together. These ornaments fell into disuse when the helmet was laid aside. In

former times, when the cavaliers, or persons who wore them, wished to take breath, and to be relieved from the weight of the helmet, they untied the mantles, and let them float about their shoulders suspended from the hood only. Hence the appellation of *valets* as hanging behind.

**LAMPION à parapet**, Fr. a lamp, generally used on the parapet or elsewhere in a besieged place. It is a small iron vessel filled with pitch and tar which the garrison light as necessity may require. The *lampion* is sometimes confounded with the *rechaud de rampart*, or chaffing dish, which is used upon the rampart on similar occasions.

**LANCE**, (*lanc.*) Fr. This offensive weapon was much used by the French in former times, particularly by that class of military gentlemen called chevaliers, and by the gendarmes. It has also been used by the English and other nations. Lances were made of ash, being a wood of tough quality, and not so liable to break as another species. Before the reign of Philip de Valois, the chevaliers and gendarmes fought on foot, armed with lances only, both in battles and at sieges. On these occasions they shortened their lances, which were then said to be *retailles* or cut again. A sort of banderole or streamer, ~~lanc~~ from each lance, and was attached to the bottom of the sharp iron or blade which was fixed to the pole. Lances were used in this manner as far back as during the crusades.

**LANCE**, Fr. This word formerly signified, among the French, a gendarme, who carried a pike or lance. Hence *une compagnie de cent lances*, a company consisting of one hundred gendarmes.

**LANCE fournie**, Fr. an old expression, signifying a knight or squire who was completely equipped, and had his complement of archers, &c.

**Rompre la LANCE**, Fr. to break a lance. This was a phrase peculiar to any assaults which were given at tilts or tournaments, and signified to engage or come to close combat. The French say: *rompre des lances pour quelqu'un*, to defend another:—*rompre une lance avec quelqu'un*, to enter into any warm dispute or controversy with another.

*Main de la Lance*, Fr. A figurative expression, to signify the right hand of a cavalier or horseman.

*Lance de drapeau*, Fr. the staff to which regimental colours are attached.

*Lances levées*, Fr. uplifted lances, indicated that the enemy was beaten, and that the Chevaliers or Gendarmes should close the day by giving a final blow to the disordered ranks. The use of the lance was discontinued in France some time before the *compagnies d'ordonnance* or independent companies were reduced and formed into the *gendarmerie*. Little or no use indeed, was made of them during the reign of Henry IV. But the Spaniards still retained that weapon as low down as the days of Louis XIII.

*Lance*, means likewise an earthen rod which is fixed across the earthen mould of a shell, and which keeps it suspended in the air when it is cast. As soon as the bomb or shell is formed, this rod must be broken, and carefully taken out with instruments made for that purpose. Shells ought to be scrupulously examined with respect to this article, as they could not be charged, were the lance or any part of it to remain within. *Lance* is also an instrument which conveys the charge of a piece of ordnance, and forces it home into the bore. See HAMMER of a GUN.

*Lance à feu*, Fr. a squib. A species of artificial fire-work which is made in the shape of a fuse, and is used for various purposes. According to the author of *Ouvrages Militaires*, tom. 11. p. 208, the composition of the *lance à feu* consists of three parts of the best refined saltpetre, two parts of flour of sulphur, and two of antimony; the whole being pounded and mixed together.

The chief use which is made of the *lance à feu* is to throw occasional light across the platform, whilst artificial fire-works are preparing. They likewise serve to set fire to fuses, as they can be taken hold of without danger.

*Lance à feu puant*, Fr. Stink-fire lances prepared in the same manner that stink-pots are, and particularly useful to miners. When a miner or sapper has so far penetrated towards the enemy as to hear the voices of persons in any place contiguous to his own excavation, he first of all bores a hole with his

probe, then fires off several pistols through the aperture, and lastly forces in a *lance à feu puant*; taking care to close up the hole on his side to prevent the smoke from returning towards himself. The exhalation and stinking hot vapour which issue from the lance, and remain confined on the side of the enemy, infect the air so much, that it is impossible to approach the quarter for three or four days. Sometimes, indeed, they have had so instantaneous an effect, that in order to save their lives, miners who would persevere, have been dragged out by the legs in an apparent state of suffocation.

*Lance de feu*, Fr. a species of squib which is used by the garrison of a besieged town against a scaling party.

*Lance-gaie*, Fr. an offensive weapon formerly so called in France.

*Lance spezzate*, Fr. a reduced officer. In former times it signified a dismounted gendarme who was appointed to an infantry corps, with some emolument attached to his situation. The word *anspessade*, a non-commissioned officer who acts subordinate to the corporal, is corrupted from this term. Besides the three hundred Swiss guards which were constantly attached to the palace, the Pope maintained twelve *lance-spezzates* or reduced officers.

*LANDING Troops*. See DEBARKATION.

*LAND FORCES*, troops whose system is calculated for land service only, in contradistinction to seamen and marines. All the land forces of Great Britain are liable to serve on board the king's ships.

*LANE*, in a military sense, is where men are drawn up in two ranks facing one another, as in a street, for any great person to pass through, or sometimes for a soldier to run the gantelope.

*LANGUE*, Fr. a term peculiarly connected with the order of Malta. The eight nations of which this celebrated order consisted, were distinguished by the appellation of *Langue*. There were three of this description in France, viz. *la Langue de France*, *la Langue de Provence*, et *la Langue d'Auvergne*; two in Spain, viz. *la Langue d'Arragon*, et *la Langue de Castile*; and three indiscriminate ones, viz. *la Langue d'Italie*,  
• la

*la Langue d'Allemagne, et la Langue d'Angleterre.* The head of each langue was called *Grand Priem*, or *Grand Prior*.

*LANGUE de terre*, Fr. a tongue of land.

*LANSQUENETS*, Fr. the German mercenaries which Charles VII. of France first added to his infantry, were so called. They continued in the French service until the reign of Francis I, who consolidated all the foot establishments into a certain number of legions.

*LANS-PESATE*, } a soldier that  
*LANCE-PESADE*, } does duty as a corporal, especially on guards and detachments; a lance corporal.

*LANTERN*, } commonly called  
*LANTHORN*, } Muscovy lanterns, being a kind of dark lantern, used in the field, to light the gunners in the camp to prepare the stores, &c.

*LANTERNE*, Fr. A word used in the French navy to signify any wooden case or box in which cartridges are brought out of the powder-magazine for the purpose of serving the guns.

*LANTERNE*, Fr. it is sometimes called *culler* or ladle, and serves to convey gunpowder into a piece of ordnance. It is made of copper, and resembles a round spoon or ladle, which is fixed to a long pole.

*LANTERNE à mitraille*, Fr. A round piece of concave wood, something like a box, which is filled with case shot, and is fired from a piece of ordnance when the enemy is near.

*To LAPSE*, to fall in, or belong to. This expression is used in military matters, to signify the reversion of any military property. Thus upon the sale or purchase of one commission at the regulated difference, another (where there are two), is said to lapse to government. Commissions lapse, or fall into the patronage of government when vacancies happen by death, by officers being superseded, or where officers apply to sell who have only purchased a part of their commissions, and have not served long enough to be entitled to sell the whole; in which case they are only permitted to sell what they actually purchased, and the remainder is in the gift of government.

*LASCARS*, or *Laskars*. The native seamen of India; the native gunners are

sometimes so called. They are often employed to tend and serve the artillery on shore, and are attached to corps as pioneers or tent-pitchers.

*LASING RINGS*, } in artillery  
*LASHING RINGS*, } with hoops, fixed on the side-pieces of travelling carriages, to lash the tarpauling, as also to tie the sponge, rammer, and ladle. See *CARRIAGE*.

*LATH*, in building, a long, thin, and narrow slip of wood, nailed to the rafters of a roof or ceiling, in order to fasten the covering. Laths are distinguished into three kinds, according to the different kinds of wood of which they are made, viz. heart of oak, sap-laths, deal-laths, &c.

*LATHIE*, a division of some extent in a county, which generally contains three, four, or five hundreds.

*LATHE Reeve*, an officer during the Saxon government, who held a certain jurisdiction over that part of the county which was called a tithing.

*LATTIE*, an Indian term for warehouse.

*LATITUDE*, in geography, the distance of any place from the equator, measured in degrees, minutes, seconds, &c. upon the meridian of that place; and is either north or south, according as the place is situated either on the north or south side of the equator.

*LATRINES*, Fr. privies or holes which are dug at the back of a camp for the convenience of soldiers. The pioneers are generally employed to make them.

*LATRO*. This word which in Latin signifies a thief, was also used among the Romans, to mark out a soldier who served for pay.

*LATROCINARI*. Among the Romans, to bear arms for pay or money.

*LAVEI*, *LAVIS*, Fr. a wash, or superficial stain or colour! it is particularly made use of in all sketches, plans, and drawings; the different intervals or spaces of which are slightly shaded or coloured. This kind of painting is stiled *lavis*, or water-colouring. The difference between miniature painting and washing, or drawing in water colours, consists in this, that the former is dotted and worked up into light and shade; the latter is barely spread with a brush. There are, besides, other marks of distinction;

## L A W

tingtion; those colours which more immediately resemble nature, are always used in the lavs or water-painting; the spaces that represent a fosse or ditch, which is supposed to be full of water, must be distinguished by a sky blue; brick and tiles by red; roads by a dun colour, and trees or turf, &c. by green.

**LAVIS**, *Fr.* generally means every sort of simple colour which is diluted with water.

**LAUNCEGAYS**, according to Bailey, offensive weapons prohibited and disused.

**LAUREL**, a shrub which is always green.

*To be crowned with laurel*, a figurative expression, signifying that a man has achieved glorious actions, and is entitled to marks of public distinction. In antient times heroes and conquerors had their heads encircled with a wreath of laurel.

**LAURES**, gold coins which were issued from the mint in 1619, representing the head of King James I. encircled with laurel.

**LAVURE**, *Fr.* the grains, dust, or detached pieces of metal which fall in casting cannon.

**LAW**, in its general acceptation, a certain rule, directing and obliging a rational creature in moral actions; forbidding some things and enjoining others.

**Common Law**, a judicial process; against which every officer and man of honour should be particularly guarded; as it is morally impossible for a liberal and high-spirited character to cope with the quicks and quibbles of a set of men, whose livelihood depends upon the feuds and quarrels of their fellow-creatures. On this account officers should be scrupulously correct in all money transactions, for from them originate actions at common law, costs of suits, and generally imprisonment, &c. &c.

**LAW** (*Loi*, *Fr.*) The genuine and fundamental principles upon which the government of an empire, a kingdom, or a republic, is founded, are comprehended under this term. Its subordinate branches consist of rules and regulations made for the maintenance of good order in a state, for an observance of mutual compacts between nations at war with each other, and for the due

## L A W

preservation of the ties of amity, that keep peace among mankind.

**LAW of arms**, certain acknowledged rules, regulations, and precepts, which relate to war, and are observed by all civilized nations.

**LAWS of arms** are likewise certain precepts shewing how to proclaim war, to attack the enemy, and to punish offenders in the camp; also restricting the contending parties from certain cruelties, &c.

**Military LAW**, a prompt and decisive rule of action, by which justice is done to the public or to individuals, without passing through the tedious and equivocal channels of legal investigation. The persons who are subject to military law, and are amenable to trial by court martial, are, in the terms of the mutiny act, all persons commissioned or in pay, as officers, non-commissioned officers, private soldiers, and all followers of an army. Half-pay officers are not subject to military law, whilst civil justice can be resorted to.

**Laws relating to martial affairs.**—The following laws existed during the most flourishing state of the Roman commonwealth. We insert them in this place as by no means being inapplicable to the present times.

*Secreta Lex Militaris*, which was promulgated about the year 411, ordained, that no soldier's name which had been entered in the muster roll, should be struck out, unless by the party's consent; and that no person who had been military tribune should execute the office of *ductor ordinum*. *Sempronia lex*, which appeared in the year 630 ordained, that the soldiers should receive their pay gratis at the public charge, without any diminution of their ordinary pay; and that none should be obliged to serve in the army, who was not full seventeen years old. *Salpicia lex*, which was made in 665, ordained, that the chief command in the Mithridatic war, which was then enjoyed by L. Sylla, should be taken from him, and conferred on C. Marius.

*Gabinia lex* appeared in 685, ordaining that a commission should be granted to Cn. Pompey, for the management of the war against the pirates for three years, with this particular clause, that upon all the sea on this side Hercules's pillars,

pillars, and in the maritime provinces, as far as 100 stadia from the sea, he should be empowered to command kings, governors, and states, to supply him with all the necessaries in his expedition.

*Manilia lex*, published in 687, ordained, that all the forces of Lucullus, and the province under his government, should be given to Pompey; together with Bithynia, which was under the command of Glabrio, and that he should forthwith make war upon Mithridates, retaining still the same naval forces, and the sovereignty of the seas as before.

*Moria Porcia lex* appeared in 1691, ordaining, that a penalty should be inflicted on such commanders as wrote falsely to the senate, about the number of the slain, on the enemy's side, and of their own party; and that they should be obliged, when they first entered the city, to take a solemn oath before the quaestors, that the number which they returned was true, according to the best computation. See Kennett's Ant. of Rome, page 163.

It will be seen by these laws, particularly by the last, that the most minute military operation was subservient to the senate. The French seem, in this respect, to have imitated the Romans very closely, but they do not appear to have adhered, so strictly as they might, to the law which regards the loss of men, nor are their neighbours more correct.

*Laws of Nations*, such general rules as regard embassies; the reception, and entertainment, of strangers, intercourse of merchants, exchange of prisoners, suspension of arms, &c.

*Law of marque*, or *letters of marque*, that by which persons take the goods or shipping of the party that has wronged them, as in time of war, whenever they can take them within their precincts.

*LAY*. *To lay down*, implies to resign, as, the enemy laid down their arms; he means to lay down his commission.—*To lay for*, is to attempt something by ambuscade.

*LAZARET*, *Fr.* those large houses are so called, which are built in the neighbourhood of some sea-ports belonging to the Levant, for the purpose of

lodging the people that are ordered to perform quarantine.

*LAZARETTO*, a pest-house.

*LAZARUS*, } a military order instituted at Jerusalem by the Christians of the west, when they were masters of the Holy Land, who received pilgrims under their care, and guarded them on the roads from the insults of the Mahometans. This order was instituted in the year 1119, and confirmed by a bull of Pope Alexander IV. in 1255, who gave it the rule of St. Augustine.

*LEAD*, a metal well known. It is employed for various mechanic uses; as in thin sheets for covering buildings, for pipes, pumps, shot, bullets, windows, for scouring iron bars in hard stones, for sundry kinds of large vessels for evaporation, and many other purposes.

*LEADER*. See *COMMANDER*.

*File LEADER*, the front man of a battalion or company, standing two deep.

*LEADING-COLUMN*, the first column that advances from the right, left, or center, of an army or battalion.

*LEADING-FILE*, the first two men of a battalion or company, that marches from right, left, or center, by files.

*Flank LEADING-FILE*, the first man on the right, and the last man on the left of a battalion, company, or section, are so called.

*Center LEADING-FILE*, the last man of the right center company, division, or section; and the first man of the left center company, division, or section, are so called, when the line files from the center to the front or rear. At close order, the colours stand between them.

*LEAGUE*, in *military history*, a measure of length, containing more or less geometrical paces, according to the different usages and customs of countries. A league at sea, where it is chiefly used by us, being a land-measure mostly peculiar to the French and Germans, contains 3000 geometrical paces, or 3 English miles.

The French league sometimes contains the same measure, and, in some parts of France, it consists of 3500 paces: the mean or common league consists of 2400 paces, and the little league of 2000. The Spanish leagues are larger than the French, 17 Spanish leagues making a degree,

degree, or 20 French leagues, or 69 and  $\frac{1}{2}$  English statute miles. The German and Dutch leagues contain each 4 geographical miles. The Persian leagues are pretty near of the same extent with the Spanish; that is, they are equal to 4 Italian miles, which is pretty near to what Herodotus calls the length of the Persian parasang, which contained 30 stadia, 3 whereof, according to Strabo, make a mile.

LEAGUE also denotes an alliance or confederacy between princes and states for their mutual aid, either in attacking some common enemy, or in defending themselves.

LEAVE, indulgence, licence, liberty.

LEAVE of absence, a permission which is granted to officers, non-commissioned officers, and soldiers, to be absent from camp or quarters for any specific period.

General LEAVE, an indulgence which is annually granted on home service, by the commander in chief, to a certain proportion of the army, to be absent from military duty. This generally occurs in the winter months, and ends on the 10th of March.

LECTURE, *Fr.* see READING.

LECTURES. Lectures are read at Woolwich to the officers of artillery, and engineers, and ~~and~~ on chemistry: lectures upon topography and upon other essential parts of military science are given at High Wycombe.

LEEK'K, *Ind.* a secretary or writer.

LEFT *give point.* See SWORD EXERCISE.

LEFT protect. See SWORD EXERCISE.

To put on the LEFT, among cavalry, is to press the inside of the foot and leg against the horse's flank. It is always used in passing to direct the horse which way to passage, and again on the opposite flank to stop him after he has passed to his place.

LEGATUS, in *Roman antiquity*, a military officer who commanded as deputy of the chief general.

Kennet, in his *Antiquities*, observes, that the design of the legati, at their first institution, was not so much to command as to advise. The senate selecting some of the oldest and most prudent members to assist the general in his councils.

Dionysius calls this the most honour-

able and sacred office among the Romans, bearing not only the authority of a commander, but withal, the sanctity and veneration of a priest.

Under the emperors there were two sorts of *legati*, *consulares*, and *prætorii*; the first of which commanded the whole armies, as the emperor's lieutenant-generals, and the other only particular legions.

Machiavel highly extols the wisdom of the Romans, in allowing their generals unlimited commissions.

LEGER. This word, although it be not strictly military, is in some degree connected with the profession, as diplomacy is not wholly foreign to military negotiation. A leger ambassador, or resident, signifies any person acting in that capacity, who remains stationary.

*Cavalerie légère*, *Fr.* Light horse.

*Un Cheval léger à la main*, *Fr.* A horse which is easily managed, or is not hard mouthed.

*Troupes légères*, *Fr.* light troops, or such as act in desultory warfare.

*Armée à la légère*, *Fr.* light-armed.

LEGION, in *Roman antiquity*, a body of foot, which consisted of ten cohorts, or 5000 men.

The exact number contained in a legion, was fixed by Romulus at 3000; though Plutarch assures us, that, after the reception of the Sabines into Rome, he increased it to 6000. The common number afterwards, in the first times of the free state, was 4000; but in the war with Hannibal, it rose to 5000; and after that, it is probable that it sunk again to 4200, which was the number in the time of Polybius.

In the age of Julius Cæsar, we do not find any legions exceeding the Polybian number of men; and he himself expressly speaks of two legions, that did not make above 7000 between them. (*Commentar. lib. 5.*)

The number of legions kept in pay together was different, according to the various times and occasions. During the free states, four legions were commonly fitted up every year, and divided between the consuls: yet in cases of necessity, we sometimes meet with no less than 16 or 18 in Livy.

Augustus maintained a standing army of 23 (or as some will have it) of 25 legions;

legions; but in aftertimes we seldom find so many.

They borrowed their names from the orders in which they were raised, as *prima, secunda, tertia*, &c. but because it usually happened, that there were several *prima, secunda*, &c. in several places, upon that account they took a sort of surname besides, either from the emperors who first constituted them, as Augusta, Claudiana, Galbiana, Flavia, Ulpia, Trajana, Antoniana, or from the provinces which had been conquered chiefly by their valour, as Parthica, Scythica, Gallica, Arabica, &c. or from the names of the particular deities for whom their commanders had an especial honour, as Minervia and Appollinaris; or from the region where they had their quarters, as Cretensis, Cyrenaica, Britannica, &c. or sometimes upon account of the lesser accidents, as Adjutrix, Martia, Fulminatrix, Rapax, &c.

The whole Roman infantry, which was divided into four sorts, Velites, Hastati, Principes and Triarii, consisted of Manipuli, Cohorts and Legions. So that legion was considered as the largest establishment for foot soldiers. See Kennet's Ant. of Rome, pages 190, 191.

Marshal Saxe has written at some length, respecting legion.

LEGION, in a general acceptation of the term, signifies any large body of men. In a more confined one, among the moderns, it applies to a specific number of horse or foot, who are distinguished by that name, and do duty with the rest of the army. Such, for instance, was the British legion which served in America; and of this description are the Polish and Belgic legions, that form part of the French army.

LEGIONARY, any thing appertaining to a legion, or containing an indefinite number.

LEGUMES, *Fr.* vegetables, roots, grain, &c. Every species of subsistence, which, under the old government of France, was not provided for the troops by direct instructions from the war-office, and at the expence of the public, was called *legumes*. Subsistence of this sort, however, may more properly be called that diet which soldiers got for themselves in foreign countries during actual hostilities.

*Légumes*, or vegetable food, &c. was classed under two specific heads. That which grew in consequence of the ground having been tilled and sowed, and that which rose spontaneously from the earth. Beans, peas, carrots, &c. may be considered as belonging to the first class, and those herbs or wild roots which have been cultivated in gardens, or are to be found in woods, &c. may come under the second. The latter sort, indeed, was frequently resorted to by the soldier, in order to give a seasoning to his mess. Parties under the command of subaltern officers were permitted to accompany the foragers for the purpose of procuring this wholesome and pleasant addition to the regulated subsistence; and when there were not any foraging days, soldiers were permitted to gather roots and vegetables within the limits of the outermost house, or vedette quarters, or of the regular outposts of the infantry.

LEMBARII. Among the Romans, soldiers that did duty on board of ships, or in barges, either at sea or on rivers.

To LENGTHEN *out*, in a military sense, to extend, by increasing the distances between files, &c.

To LENGTHEN the *step*. See *STRUT out*. LESKAR, the camp of the Great Mogul.

To LET *in*, to admit; as he *let* some of the enemy's advanced parties in, or into the camp, &c.

To LET *off*, to discharge.

To LET *off a pistol or musquet*, to fire either of those fire-arms.

LETTER, in its general acceptation, a character such as forms the alphabet, or any thing written, such as an epistle, &c.

LETTER of *mark*, } a letter granted to one of the king's subjects under the privy seal, empowering him to make reprisals for what was formerly taken from him, by the subjects of another state, contrary to the law of mart. See *MARQUE*.

LETTER of *mark*, a commission granted by the lords of the admiralty, or by the vice-admiral of any distant province, to the commander of a merchant ship or privateer, to cruize against, and make prizes of the enemy's ships and vessels, either at sea, or in their harbours.

## L E T

**LETTER of service**, a written order or authority issued by the secretary at war, empowering any officer or individual to raise a certain body of men to serve as soldiers, within a given time, and on special conditions.

**LETTER of attorney**, an instrument in writing, authorizing an attorney, or any confidential person, to take the affairs of another in trust. A letter or power of attorney is necessary to empower a person to receive the half-pay of an officer. This paper did cost six shillings, but now fifteen, and must be accompanied by a certificate sworn to by the half-pay officer before some magistrate or justice of the peace.

**LETTER of credit**, a letter which is given from one merchant or banker to another, in favour of a third person, enabling the latter to take up money to a certain amount. Sometimes a letter of credit is given without any specific limitation.

**LETTER of licence**, a deed signed and sealed by the creditors of a man, by which he is allowed a given period to enable him to discharge his debts by instalments, or by a certain proportion in the pound.

**Military LETTER or dispatch**. The French use the word *dépêche*. A letter of this description should be clear, and as brief as possible; containing in few words all that is necessary to be known, without endangering the object of its communication, through a want of sufficient explanation. We have a remarkable instance in history of this species of writing. When Spinola, who was originally a Genoese merchant, appeared unwilling to undertake the siege of Breda, the king of Spain's laconic letter determined him.

*Marquis,*

*Take Breda.*

*I the King.*

Spinola did so; and, in recompence for that, and other brilliant services, he was afterwards abandoned by his master, and died of a broken heart. *Proh pudor!*

We also find, in the history of Gustavus Adolphus, two other instances of the same laconic style.

General Kniphausen being anxious to preserve the pass and fortress of *Schiffelbein*, wrote to lieutenant-colonel

## L E T

Monro, who commanded the garrison, a short billet to this effect: *Maintain the town as long as you can, but give not up the castle whilst a single man continues with you.*

This place, observes the historian, was not defensible for a longer time than twenty-four hours; yet Monro, having the possession of it three days before Montecuculi's arrival, made a good appearance of resistance; and when the imperial general had ranged his army round the walls, in order to give one united assault, and sent a trumpeter to propose a treaty, the brave Scot replied, with great plainness, *that the word TRATY, by some chance had happened to be omitted in his instructions, and that he had only powder and ball at the count de Montecuculi's service.* Upon this, orders were given to commence a general storm; but the Scottish troops behaved to admiration; and having laid the town in ashes, retired with great regularity into the castle. The Imperialists perceiving the governor to be a man of resolution, broke up their encampment, and quitted the siege. H. G. Ad. page 217.

**Circular letters**, (*lettres circulaires*, Fr.) documents (which, in official language, and for the sake of abbreviation, are generally called *circulars*,) that are sent to several persons upon the same subject.

**LETTER-men**, certain pensioners belonging to Chelsea Hospital, are so called.

**LEITON**, Fr. a metal composed of molten copper, called *rosette*, and of *lapis calaminaris*, a yellow mineral, of which quantities may be found in the neighbourhood of Liege.

LEITON is used in cannon-foundries. The best practical mode of digesting and mixing the materials, is to put 11 or 12,000 weight of metal, 10,000 weight of rosette, or molten copper, 900 pounds of tin, and 600 pounds of leiton. There are various opinions respecting the mixture of these several ingredients.

**LETTRE de cachet**, Fr. an infamous state paper, which existed before the French revolution, differing in this essential point from an order of our privy council, that the former was sealed, and the person upon whom it was served, carried into confinement, without even seeing

seeing the authority by which he was hurried off in so peremptory a manner, or being tried afterwards for any specific offence; whereas the latter is an open warrant, which, (except when peculiar circumstances occasion a suspension of the *habeas corpus* act,) has its object closely investigated before an English jury. The French *lettre de cachet* was written by the king, countersigned by one of his principal secretaries of state, and sealed with the royal signet.

*LETTRES de service*, Fr. See *LETTERS of service*.

*LETTRES de passe*, Fr. a paper signed by the kings of France, authorizing an officer to exchange from one regiment into another.

*LETTRE de créance, ou qui porte créance*, Fr. A letter of credit. It likewise signifies the credentials which an ambassador presents from his sovereign to a foreign court.

*LETTRE de récréance*, Fr. a letter which an ambassador receives from his sovereign, by which he is recalled from a foreign court.

*LETTRES en chiffre*, Fr. Cyphers. Baron Espagnac in the continuation of his *Essai sur l'opération de la guerre*, tom. 1, page 269, gives the following instructions relative to this acquirement. He observes that cyphering may be practised in two different ways. First by means of distilled vinegar, which is boiled with silver litharge, one ounce of the latter to a pint of the former. When this mixture has stood some time, it must be carefully poured off from the sediment, and it will appear as clear as rock water. Intelligence or information may be conveyed by writing with this water in the blank spaces of an ordinary letter, on wrapping paper, or on the blank leaves of a book. The instant the writing dries, not the least trace appears of what has been marked. To render the writing legible, you must make use of a water in which quick lime has been dissolved with a mixture of orpiment. This water is as clear as rock water; and if you steep a sheet of paper in it, and lay it upon the letter, book, &c. on which any thing has been written, the different characters will instantly appear.

The first of these distilled liquids is so powerful and searching, that by putting the written letter upon several other

sheets of paper, after having rubbed the top sheet with the second water, the writing will be clearly seen in almost all of them. The same circumstance will occur, if you rub the leaf of a book or any piece of paper which you may spread upon it. These waters, especially the last, should be kept in bottles that are well corked up, to prevent the spirituous particles from evaporating. A fresh composition must, indeed, be made, if the old one should seem weakened. The letters that are written must likewise be carefully penned, and kept free from blots, &c. The paper must not be turned nor rubbed with the hand until the writing be thoroughly dry. This is the author's first proposed mode of writing in cyphers, the second may be seen in page 270 of the work already quoted.

*LETTRES de représailles*, Fr. reprisals. See *LETTERS of marque*.

*LETTRES de santé, patentes de santé*, Fr. letters of health.

*LEVANT*, the countries bordering upon the Mediterranean are so called.

*LEVANTIN*, Fr. a word generally used among the French to distinguish any person from the Levant.

*LEVANTINE nations*, (*Nations Levantines*, Fr.) nations belonging to the East, or to those countries which border on the Mediterranean. The French likewise say, *Peuples Levantins*.

*LEVANTIS*, Fr. The soldiers belonging to the Turkish galleys are so called.

*LEVÉE des troupes*, Fr. See *LEVY*.

*LEVÉE en Masse*, Fr. a general rising of the people of any country, either for the purposes of self-defence, or to answer the intentions of its governing powers.

*LEVÉE d'une siege*, Fr. the raising of a siege. See *SIEGE*.

*LEVEL*, an instrument to draw a line parallel to the horizon, whereby the difference of ascent or descent between several places may be found, for conveying water, draining fens, &c.

*Air-LEVEL*, that which shews the line of level by means of a bubble of air, inclosed with some liquor in a glass tube of an indeterminate length and thickness, whose two ends are hermetically sealed. When the bubble fixes itself at a certain mark, made exactly in the centre of the tube, the plane or ruler wherein it is

fixed is level: when it is not level, the bubble will rise to one end. This glass tube may be set in another of brass, having an aperture in the middle, whence the bubble of air may be observed. There is one of these instruments with sights, being an improvement upon the last-described, which by the addition of more apparatus, becomes more commodious and exact: it consists of an air-level about 8 inches long, and 7 or 8 lines in diameter, set in a brass tube, with an aperture in the middle: the tubes are carried in a strong straight ruler, a foot long, at whose ends are fixed two sights, exactly perpendicular to the tubes, and of an equal height, having a square hole, formed by two fillets of brass, crossing each other at right angles, in the middle whereof is drilled a very little hole, through which a point on a level with the instrument is described; the brass tube is fastened on the ruler by means of two screws, one whereof serves to raise or depress the tube at pleasure, for bringing it towards a level. The top of the ball and socket is riveted to a little ruler that springs, one end whereof is fastened with screws to the great ruler, and at the other end is a screw, serving to raise and depress the instrument when nearly level.

*Artillery-foot-LEVEL*, is in form of a square, having its two branches or legs of an equal length, at the angle of which is a small hole, whence hang a line and plummet, playing on a perpendicular line in the middle of a quadrant: it is divided into twice 15 degrees from the middle.

*Gunner's-LEVEL*, for levelling pieces of artillery, consists of a triangular brass plate, about 4 inches, at the bottom of which is a portion of a circle divided into 45 degrees; which angle is sufficient for the highest elevations of cannons, mortars, and howitzers, and for giving shot and shells the greatest range: on the centre of this segment of a circle is screwed a piece of brass, by means of which it may be fixed or screwed at pleasure; the end of this piece of brass is made so as to serve for a plummet and index, in order to shew the different degrees of elevation of pieces of artillery. This instrument has also a brass foot, to set upon cannon or mortars, so that when these pieces are horizontal,

the instrument will be perpendicular. The foot of this instrument is to be placed on the piece to be elevated, in such a manner, as that the point of the plummet may fall on the proper degree, &c.

The most curious instrument for the use of the artillerist, has been invented by the very ingenious Colonel Congreve, of the royal artillery; having the following qualifications, viz. 1. It will find the inclination of any plane, whether above or below the horizon. 2. By applying it either to the cylinder, or outside of any piece of ordnance, angles of elevation or depression may be given to the 60th part of a degree, with less trouble than the common gunner's quadrant, which only gives to the 4th part of a degree. 3. It will give the line of direction for laying either guns or mortars to an object above or below the horizon. 4. It will find the centre of metals of any piece of ordnance. 5. With it, a point may be found in the rear of a mortar-bed, in the vertical plane of the mortar's axis; consequently a longer line of sight is given for directing them to the object than the usual way. 6. It answers all the purposes of a pair of callipers, with the advantage of knowing (to the 100th part of an inch) diameters, whether concave or convex, without the trouble of laying the claws upon a diagonal scale. 7. On the sides of the instrument are the following lines, viz. equal parts, solids, planes, and polygons, logarithms, tangents, versed sines, sines and numbers, plotting scales, and diagonal scales of inches for cutting fuzes by. 8. In the lid of the instrument-case is a pendulum to vibrate half seconds. It is likewise of singular use in surveying; as, 1. It takes horizontal angles to the 60th part of a degree. 2. Vertical angles. 3. Levels. 4. Solves right-angled plane triangles. 5. Oblique-angled plane triangles. 6. Answers all the purposes of a protractor, with the advantage of laying down angles exactly as taken in the field. N. B. Captain Jordane's ingenious instrument answers nearly the same purposes.

*Spirit-LEVEL. SEC AIR LEVEL.*

By the term *level* is also to be understood the line of direction in which any missile weapon is aimed.

*LEVELLER, (Niveleur, Fr.)* a term

not known in military phraseology, as far as it relates to rank and situation. See *LEVELLING system*.

**LEVELLING**, the finding a line parallel to the horizon at one or more stations, and so to determine the height of one place in regard to another.

A truly level surface is a segment of any spherical substance, which is concentric to the globe of the earth. A true line of level is an arch of a great circle which is imagined to be described upon a truly level surface.

The apparent level is a straight line drawn tangent to an arch or line of true level. Every point of the apparent level except the point of contact, is higher than the true level.

The common methods of levelling are sufficient for laying pavements of walks, for conveying water to small distances, for placing horizontal dials, or astronomical instruments; but in levelling the bottoms of canals or ditches in a fortification, which are to convey water to the distance of many miles, the difference between the apparent and true level must be taken into the account.

Dr. Halley suggests a method of levelling, which is performed wholly by the barometer, in which the mercury is found to be suspended to so much the less height, as the place is more remote from the centre of the earth. Hence it follows, that the different height of the mercury in two places gives the difference of level.

Mr. Derham, from some observations at the top and bottom of the monument in London, found that the mercury fell 1-10th of an inch at every 82 feet of perpendicular ascent, when the mercury was at 30 inches. Dr. Halley allows of 1-10th of an inch for every 50 yards; and considering how accurately barometers are now made, we think this method sufficiently exact to take levels for the conveyance of water, or any other military purposes, and indeed less liable to errors than the common levels. Mr. Derham also found a difference of 8 inches 8-10ths between the height of the mercury at the top and bottom of Snowdon-hill, in Wales.

For the common occasions of levelling, set a pole upright in a spring, pond, &c. and mark how many feet and inches are above water; then set up another

pole, of equal length with the other, in the place to which the water is to come. Place the centre of a quadrant on the top of this last pole, the plummet hanging free; spy through the sights the top of the pole in the water, and if the thread cuts any degree of the quadrant, the water may be conveyed by a pipe laid in the earth. If you cannot see from one extreme to the other, the operation may be repeated.

*LEVELLING staves*, instruments used in levelling, that carry the marks to be observed, and at the same time measure the heights of those marks from the ground. These usually consist of two wooden square rulers that slide over one another, and are divided into feet, inches, &c.

**LEVELLING** has two distinct applications in the art of war, in the one case it implies the reduction of an uneven surface to that of a plane, so that the works of a fortification may be of a correspondent height or figure throughout. The other is the art of conveying water from one place to another; in this process, it is found necessary to make an allowance between the true and apparent level, or in other words, for the figure of the earth, for the true level is not a straight line, but a curve which falls below the straight line about 8 inches in a mile, 4 times 8 in two miles, 9 times 8 in 3 miles, 16 times 8 in 4 miles, always increasing with the square of the distance.

*LEVELLING system*, (*système des niveaux*, Fr.) a term which since the commencement of the French revolution has been grossly misinterpreted, and cannot be found in any civilized country to answer any other purpose than that of delusion; such was the proposed agrarian system of the Romans; and such the absurd suggestion of the sanguinary Marat in the height of the French mania. The present government has, however, sufficiently proved the absurdity of its doctrine; which is to make all things common among men.

**LEVER**, a balance which rests upon a certain determinate point, called a fulcrum.

**LEVER**, in *mechanics*, an inflexible line, rod, or beam, moveable about, or upon a fixed point, called the prop or fulcrum, upon one end of which is the

weight to be raised, at the other end is the power applied to raise it; as the hand, &c.

Since the momentum of the weight and power are as the quantities of matter in each, multiplied by their respective celerities; and the celerities are as the distances from the center of motion, and also as the spaces passed through in a perpendicular direction in the same time, it must follow, that there will be an equilibrium between the weight and power; when they are to each other reciprocally as the distances from the centre, or as the celerities of the motions, or as the perpendicular ascent or descent in the same time; and this universally in all mechanical powers whatsoever, and which is therefore the fundamental principle of all mechanics. See MECHANICAL POWERS.

LEVET, a lesson on the trumpet.

LEVIER, *Fr.* Lever. The French writers having been more explicit on this head than any of our lexicographers, we shall extract the following passages as conducive to general information.—The *levier* or lever is an instrument made of wood or iron, by whose means the heaviest weights may be raised with few hands. When the lever is made of iron, it is called pince or crow. The lever may be considered as the first of all machines. Wheels, pulleys, capstan, &c. act only by the power it possesses. The lever must be looked upon as a straight line, which has three principal points; namely, the one on which the load is placed, and which is to be raised, the appui or rest which is the center round which it turns, and which the French mechanics call *orgueil*, and lastly, the human arm, which is the power that puts the lever into motion. The different arrangements or dispositions which are given to these three points, or rather the unequal distances at which they are placed, occasion the force that is collectively displayed.

Belidor makes the following remarks on this useful machine. It is an inflexible bar which must be considered as having no weight in itself, upon which three powers are made to act, in three different points, in such a manner, that the action of two powers must be directly opposed to the one that resists them. The point where the opposing power acts is called the *point d'appui*.

LEVIER, in artillery, a wedge.

LEVIER *de pointage*, *Fr.* a wedge to assist in pointing pieces of ordnance.

LEVIER *de support*, *Fr.* a wedge by which cannon is raised to a certain line of direction.

To LEVY, has three distinct military acceptations, as to *levy* or *raise* an army; to *levy* or make war; and, to *levy* contributions.

LEVY, the levying or raising troops, by enregistering the names of men capable of bearing arms for the common defence and safety of a country, has from time immemorial been a leading principle among men.

There are indeed some people still existing, who indiscriminately go to war; leaving, for the immediate security of their huts or habitations, only their old men, their wives and children.

Among the Romans, however, and in some other civilized countries, it was a prevailing maxim never to employ above a certain proportion of matured population, and that proportion consisted uniformly of men who were expert at arms. National assemblies were called together, whenever the situation of the country required, that the senate's decree should be published and put into effect.

The levying or raising of troops for service was regulated in the following manner, under two specific heads, called ordinary and extraordinary levy. The ordinary levy took place in consequence of a decree from the senate, by which all males of a certain age were called out to do military service; the extraordinary levy was enforced, when a deficiency was found in the ordinary levy to answer the immediate exigencies of the state.

The extraordinary levy, which was further distinguished by the word evocation, (see *evocati*) was performed as follows. A public orator mounted the rostrum, and after having expatiated upon the urgency of the case, and paid a handsome tribute of commendation to all who should voluntarily step forward to defend their country, he entrusted the conclusion of the business to two superior officers who were to command the new levies.

These officers instantly unfurled two flags, and emphatically exclaimed, *Set all those brave men who have the safety*  
of

of the Republic at heart, flock to our standards! A red flag was the rallying mark for all who were to serve on foot, and a blue flag pointed out the rendezvous for cavalry. Every one was at liberty to choose the service he liked best.

With respect to the ordinary levy by which every citizen was liable to be called upon for personal service, it was conducted in the following manner.

All the different tribes into which the inhabitants of the country were divided, assembled in places marked out for that purpose, and as soon as a whole tribe, consisting of males only, had entered, the public crier called over, in a distinct and audible manner, the names of four persons, after which the first military tribune (from among those of that rank who were to command the intended legion) selected one out of the four, and had him enrolled.

The crier then called over the names of four others belonging to the same class, and the second tribune selected one from the four in the same manner as the first had done. This selection went on through the different classes, until the whole tribe was decimated, and another tribe was then subjected to the same rotation. Legions were formed out of these levies, and completed to so effective a strength, that three of them generally composed a Roman army. The Romans readily submitted to these calls of the state; and they did so the more cheerfully, because it was a fundamental rule amongst them, that no man could be provided for, in a military or civil way, unless he had served a prescribed number of years.

Kennett, in his *Antiquities of Rome*, gives the following account, which the reader will perceive differs in some particulars from the former.

“At the same time of the year as the consuls were declared *elect* or *designated*, they chose the military tribunes; fourteen out of the body of the *Equites* who had served in the army five years, and ten out of the commonalty, such as had made ten campaigns. The former they called *tribuni juniores*, and the latter *seniores*.

The consuls having agreed on a levy (as, in the time of the common-wealth, they usually did every year,) they issued

out an edict, commanding all persons who had reached the military age (about seventeen years) to appear (commonly) in the capitol or in the area before the capitol, as the most sacred and august place, on such a day. The people being come together, and the consuls who presided in the assembly having taken their seat, in the first place the four and twenty tribunes were disposed of according to the number of legions they designed to make up, which was generally four. The *junior* tribunes were assigned, four to the first legion, three to the second, and last. After this, every tribe, being called out by lot, was ordered to divide into their proper centuries; out of each century were soldiers cited by name, with respect had to their estate and class; for which purpose, there were tables ready at hand, in which the name, age, and wealth of every person were exactly described. Four men, as much alike in all circumstances as could be pitched upon, being presented out of the century, first the tribunes of the first legion chose one, then the tribunes of the second another, the tribunes of the third legion a third man, and the remaining person fell to the tribunes of the fourth. Then four more were drawn out; and now the right of choosing first belonged to the tribunes of the second legion; in the next four to the tribunes of the third legion, then to the tribunes of the fourth legion, and so round; those tribunes choosing last the next time, who chose first the time before; the most equal and regular method imaginable.

Cicero has remarked a superstitious custom observed in these proceedings; that the first soldiers pitched upon should, for the omen's sake, be such as had fortunate names, as *Salvius*, *Valerius*, and the like. *Cic. de Divinat. lib. 1*

There were in those times, (as in the present with respect to the British militia) many legal excuses which might keep persons from the list; as, in case they were fifty years old, for then they could not be obliged to serve; or if they enjoyed any civil or sacred office, which they could not conveniently relinquish; or if they had already made twenty campaigns, which was the time required for every foot soldier; or if, upon account of extraordinary merit, they had been

by

by public authority, released from the trouble of serving for such a time; or if they were maimed in any part, and so ought not to be admitted into the legions; as Suetonius tells us of a father who cut off the thumbs of his two sons, on purpose to keep them out of the army (Sueton. August. chap. 24.) and Valerius Maximus gives a relation of the like nature. (Val. Max. lib. 6. cap. 3.) Hence the Roman phrase *pollice trunci* signified cowards or poltroons, having cut off their thumbs to avoid military service.

Otherwise they were necessitated to submit, and in case of a refusal, were usually punished either with imprisonment, fine, or stripes, according to the lenity or severity of the consul. And therefore it seems strange, that Machiavel should particularly condemn the Roman discipline, upon account of forcing no one to the wars, when we have in all parts of history, such large intimations of a contrary practice. Nay, we read too of the *conquisitores* or impress-masters, who were commissioned upon some occasions, to go about, and compel men to the service of the state.

Valerius Maximus (lib. 6. chap. 3.) gives one example of changing this custom of taking out every particular soldier by the tribunes, for that of choosing them by lot. And Appianus Alexandrinus (in Iberic.) acquaints us, that in the Spanish war, managed by Lucullus, upon complaint to the senate of several unjust practices in the levies, the fathers thought fit to choose all the soldiers by lot. Yet the same author assures us, that within five years time the old custom returned of making the levies in the manner already described.

However, upon any extraordinary occasion of immediate service, they omitted the common formalities, and without much distinction, listed such as they met with, and led them out on an expedition. These they called *Milites Subitarii*. Kennett's Ant. Page 183. B. 4.

The French followed the example of the Romans with regard to the first principles of levying men, which was effected by a proclamation from the court called the *ban*. This ban was addressed to the principal person belonging to a province, who, in pursuance to its instructions, assembled his vassals,

and got them fit and ready for immediate service.

In England a similar rotation took place; and the balloting for militia-men still exhibits some remains of that feudal system. But when regular armies became necessary in Europe (necessary only from the ambition of contiguous and rival nations!) a different system was adopted, and the natural strength of the country was made a secondary object. Disposable means of offence and defence were resorted to by crowned heads; and as war became a science, permanent bodies of armed men were kept on foot to answer the purposes of prompt and vigorous decision.

Charles VIII. was the first monarch among the French who dispensed with the service of his noblemen, in themselves and vassals; these he replaced by raising regular companies of gendarmes, who were paid out of his privy purse; in process of time cavalry and infantry regiments, with appropriate trains of artillery, &c. were formed into military establishments, which have continued ever since.

During the existence of the old government in France, it was customary for the King to issue orders that a certain bounty should be offered to all recruits who would enlist; and when regiments, in time of war, suffered materially, men were frequently draughted out of the militia, to complete their establishment.

With respect to the standing or permanent army of England, the first traces of it are to be found during the reign of Henry VII.; from that period until the present time the military establishment of Great Britain has been progressive. Levies have been made in various ways, upon various principles, and the system itself has, during the last year, assumed a more regular form than can be found in the history of this country. England however, has so far preserved its attachment to a constitutional force, as never to have witnessed a coercive draught from the militia. Levies have been made, and the line has been completed from this nursery; but these levies have uniformly answered the ends of government, by voluntarily joining the standard of invitation. We do not, however, hesitate to repeat, (what is stated in the Regimental Companion), that

that the militia should be rendered subservient to the line in the most unqualified manner.

**LEVY**, likewise means inlisting money, as *levy-money*.

**LIBRARY** *Regimental*. A collection of military books, charts, and plans, necessary to be studied by every officer who wishes to be acquainted with his profession. They are placed in boxes, which being set one upon the other, in a room or tent, and having their upper lid taken off, present the appearance of a book-case, and in a few minutes each box can be separated from the other, and the whole may be stowed away with the rest of the baggage. A day's pay from every officer yearly, and a small present on every promotion is sufficient for the establishment, and the junior officer in quarters might be librarian. None but military books should be admitted, and the selection of them should be left to those above the rank of lieutenant.

General Wolfe having shown some general officers how expert his men were at a new mode of attacking and retreating upon hills, stepped up to one of them, and asked him what he thought of it. I think, said he, I see something here of the history of the Carduchi, who harassed Xenophon, and hung upon his rear in his retreat over the mountains. *You are right*, said Wolfe, *I had it thence: but our friends here are surprised at what I have shewn them, because they have read nothing.*

**LICE**, *Fr.* List for combats.

**LICENCIEMENT** *des troupes*, *Fr.* an order to go into winter quarters. At the end of a campaign this generally happened in France, when troops could not any longer keep the field owing to the severity of the weather. In former times it was usual, during the continuance of a war, for the French army to retire into winter quarters, about the latter end of October. But since the revolution, hostilities have been carried on at all seasons, and under the most disheartening pressure of the atmosphere.

**LICENCIEMENT** *des équipages des vivres*, *Fr.* It was usual in the old French army, for an order to be issued by which the contractors and commissaries for the time being were discharged at the close of a campaign. The director general of the stores always preserved this or-

der, as it formed the only final voucher, upon which the contractors could receive any demand against government. The greatest attention was paid to this important branch of military economy; and, if at the conclusion of a campaign, it was found necessary to retain any part of the establishment for the immediate subsistence of the troops in winter quarters, that part was minutely noticed in the order.

**LICENCIER**, *Fr.* to discharge.

**LIDE**, *Fr.* a warlike machine, which was formerly used to throw large stones against a fortified place, or upon an enemy.

**To LIE**, in a military acceptance of the term, to be in quarters, in cantonments, or to be in camp: the 29th regiment of foot, for instance, *lies* encamped between Richmond and Windsor; or it *lies* at Windsor. The light dragoons *lie* along the coast.

**To LIE in ambush**, to be posted in such a manner as to be able to surprise your enemy, should he presume to advance, without having previously cleared the woods, hedges, &c.

**To LIE under cover**, to be under the protection of a battery, or to be sheltered by a wood, &c.

**To LIE in wait**, to take a position unobserved by the enemy, and to remain under arms, in expectation of suddenly falling upon his flanks or rear.

**To give the LIE**. See **DÉMENTI**, *Fr.*

**LIEU**, *Fr.* League. There are three sorts of lieues or leagues in France, the great, middling, and small. The great French league contains three thousand geometrical paces, or two thousand five hundred toises; and the small league two thousand geometrical paces, that is, twice the extent of the Italian mile: which is so called, because it contains one thousand geometrical paces. According to an old existing regulation, the leagues of France were directed to contain two thousand two hundred toises, and two thousand six hundred and forty geometrical paces.

**In LIEU**. In the room, place, or stead of.

**LIEUTENANCY**, (*Lieutenance*, *Fr.*) the post, station, &c. of a lieutenant.

**LIEUTENANT**. This word is originally derived from the Latin *legatus*, *locum tencns*, and comes immediately to us from the French *lieu-tenant*, supplying

plying or holding the place of another. In a military sense it means the second person or officer in command. As *lord lieutenant*, one who represents the person of the prince, or others in authority; *lieutenant-general*, the next in command to a general; *lieutenant-colonel* the next to a colonel; *captain-lieutenant*, an intermediate rank; and *lieutenant* the next to a captain, in every company of both foot and horse, and who takes the command upon the death or absence of the superior officer. Fusileer corps, grenadiers, and light infantry, have second lieutenants and no ensigns.

**LIEUTENANT of Artillery.** Each company of artillery has 4; 1 first and 3 second lieutenants. The first lieutenant has the same detail of duty with the captain, because in his absence he commands the company; he is to see that the soldiers are clean and neat: that their clothes, arms, and accoutrements are in good and serviceable order; and to watch over every thing else which may contribute to their health. He must give attention to their being taught their exercise, see them punctually paid, their messes regularly kept, and visit them in the hospitals when sick. He must assist at all parades, &c. He ought to understand the doctrine of projectiles and the science of artillery, with the various effects of gunpowder, however managed or directed. He should likewise be able to construct and dispose batteries to the best advantage; to plant cannon, mortars, and howitzers, so as to produce the greatest annoyance to an enemy. He is to be well skilled in the attack and defence of fortified places, and to be conversant in arithmetic, mathematics, and mechanics, &c.

**Second LIEUTENANT**, in the *artillery*, is the same as an ensign in an infantry regiment, being the youngest commissioned officer in the company. It is his duty to assist the first lieutenant in the detail of the company. His other qualifications should be the same as those required in the first lieutenant.

**LIEUTENANT of Engineers.** See **ENGINEERS**.

**LIEUTENANT Colonel.** See **COLONEL**.

**LIEUTENANT General.** See **GENERAL**.

**LIEUTENANT du Roi**, Fr. During the monarchy of France there was a de-

puty governor in every fortified place, or strong town, who commanded in the absence of the governor, and was a check upon his conduct when present. This person was called **LIEUTENANT du Roi**.

**LIEUTENANT Reduced**, (*Lieutenant Reformé*, Fr.) he whose company or troop is broke or disbanded, but who continues on whole or half pay, and still preserves his right of seniority and rank in the army.

**LIEUTENANT de la Colonelle**, Fr. the second officer, or what we stile the captain lieutenant of the colonel's company of every infantry regiment was so called in France.

**LIEUTENANS des Gardes Françaises et Suisses**, Fr. lieutenants belonging to the French and Swiss guards. During the existence of the monarchy in France they bore the rank of lieutenant-colonel, and took precedence of all captains.

**LIEUTENANS Provinciaux d'Artillerie**, Fr. were certain officers belonging to the old French service, and immediately attached to the artillery, who bore the title or name of the particular province in which they were stationed.—The majority of this description were employed in the ordnance department; another part superintended different artillery departments upon the frontiers. Some were excused from all duty on account of their age and seniority.

Several provincial lieutenants, who had military employments under the board of ordnance, received the rank of lieutenant general in the army from the king, and could rise to the most exalted stations in common with other officers.

**LIEUTENANT Général**, Fr. The title and rank of lieutenant general, was of a less confined nature in France under the old government of that country than it is with us. High officers of justice were distinguished by the name; and all governors of provinces, as far as their jurisdiction extended, together with the person who acted under them, were called *lieutenants-généraux*. There were likewise persons who bore the title of lieutenant-general of the kingdom at large. Every officer, moreover, that acted immediately under a general, and was next to him in rank, was stiled lieutenant-general. It is the same,

saine, in this respect, amongst us. In both countries, however, (considering the subject as appertaining to a monarchical institution) the title of general was only ostensible and honorary, as his functions were delegated to him by his sovereign, the real general and head of the army. So that intrinsically a general can only be considered as lieutenant-general to the king; but a lieutenant-general who acts under him, must be viewed as holding a relative rank inferior to both. The words of the two commissions sufficiently explain our observation. They are as follow, for a lieutenant-general with the nominal rank of general:—*We have made and constituted N. our lieutenant-general, &c. and for those acting under him:—We have made and constituted N. one of our lieutenant-generals.* Which plainly indicates, that of the first class there can only be one who represents his sovereign; whereas there are, and may be many of the other description. Lieutenant-generals, in the French service, did not receive any pay, in consequence of the rank they bore, unless they actually commanded some part of the army, and received a commission from the king for that purpose. This commission was renewed annually, according to his Majesty's pleasure.

**LIEUTENANT-Général d'Artillerie.** See *Lieutenant-general of the ORDNANCE.*

**LIEUTENANT-Général des armées Navales du Roi,** Fr. an officer in the old French service, belonging to the naval department. He took rank of all chefs d'escadre, or commodores, and issued orders through them to inferior officers.

**LIFE-GUARDS.**—See **GUARDS.**

**LIGE homme,** Fr. a person on whom the lord of the manor had more ascendancy than over a common vassal.

**LIGHT BOBS,** a familiar term used for the light infantry.

**LIGHT HORSE.** All mounted soldiers, that are lightly armed and accounted for active and desultory service, may be considered under this term. Thus light dragoons, fencible cavalry, mounted yeomanry, &c. are, strictly speaking, light-horse.

The *city* **LIGHT-HORSE** is a particular body of men, consisting chiefly of rich

merchants belonging to the city, who first formed themselves into a corps in 1779. Great attention has been paid during the late and the present war to the discipline of these gentlemen. They have frequently been honoured with his Majesty's presence; and if their capability of service be viewed through the influence they possess from immense wealth and credit, aided by an esprit de corps, which makes them sacrifice private convenience for public duty, the city light horse must be allowed no inconsiderable weight in the scale of metropolitan defence. They are now called the **Light Horse Volunteers.**

**LIGHT INFANTRY,** a body of active, strong men, selected from the aggregate of battalion companies, and made up of the most promising recruits that are occasionally enlisted.

When the light infantry companies are in line with their battalions, they are to form and act in every respect as a company of the battalion; but when otherwise disposed of, they may loosen their files to six inches.

The open order of light infantry is usually two feet between each file.

The files may be extended from right, left, or center; in executing it, each front rank man must carefully take his distance from the man next to him on that side from which the extension is made: the rear rank men conform to the movement of their file-leaders.

When light infantry men fire in extended order, it is to be a standing rule, that the two men of the same file are never unloaded together; for which purpose as soon as the front rank man has fired, he is to slip round the left of the rear rank man, who will take a short pace forward, and put himself in the other's place, whom he is to protect while loading.

The extended order of light infantry varies according to circumstances and situations. They may sometimes loosen their files to three times the distance of open order. But the general rule is to allow convenient intervals for the rear rank men to slip by, and return after they have fired.

All movements of light infantry, except when firing, advancing, or retreating, are to be in quick time.

The officer commanding the company will

will be on the right, covered by a serjeant; the next on the left also covered by a serjeant, and the youngest officer in the rear. In extended order the post of the officers and serjeants is always in the rear at equal distances.

In marching by files the officer commanding leads: by divisions, each officer leads one. The supernumerary officer, if there be one, is in both cases with the officer commanding, ready to obey any directions he may receive from him.

The arms of light infantry in general will be carried sloped, and with the bayonets fixed. Flanking or advanced parties, however, or parties in particular situations, may carry them trailed, and without bayonets, for the purpose of taking a more cool and deliberate aim.

When the light infantry is ordered to cover the line to the front, the divisions will move from their inner flanks round the flanks of the battalions, and when at the distance of fifty paces, the leading flanks will wheel towards each other, in order to meet opposite the center of the battalion, opening their files gradually from the rear, so as to cover the whole extent of the battalion.

The files are not to wait for any word of command, but to halt and front themselves. In this position, and in all positions of extended order, the post of the officer commanding is in the rear of the center, and the movements are to be regulated by the company belonging to the battalion, which governs those of the line. For a fuller explanation of light company manœuvres, see page 273 to page 281 of Infantry Regulations.

Light infantry men, like hussars, are frequently detached to act as scouts on the flanks, in the front, or with the rear guard of the body of troops to which they belong. They then acquire the appellation of skirmishers, and being previously told off for that specific duty, they advance and form in the front in rank entire; which is effected by each man from the rear rank placing himself on the left of his file leader. The rank entire may be resorted to for various purposes during the movements of one or more battalions, since it may serve not only to cover them from the enemy's observation, but in some cases, especially in foggy weather, will itself

appear a larger body than it really is. Too much attention cannot be given to the organization of light troops on foot. They are very properly called the eyes of an army, and ought always to be considered as indispensably necessary.

**LIGHT TROOPS**, (*troupes légères*, Fr.) By light troops are generally meant all horse and foot which are accoutred for detached service.

**LIGNE**, Fr. See **LINE**.

**LIGNE d'Eau**, Fr. a term used in aquatics. It is the hundred and fortieth portion of an inch of water, and furnishes or supplies one hundred and four pints of water, Paris measure, in twenty-four hours.

**LIGNES en forme de Crémaillère**, Fr. *indented lines, or lines resembling the teeth of a saw, or pot-hook*: they are connected with one another like crochets; or united by small flanks comprising fourteen or fifteen toises each. M. de Clairac has given a particular account of their construction in his *Ingénieur de Campagne*. The effect, observes that writer, which is produced by the concentrated fire that may be poured from these lines, is perhaps unexampled. One advantage is certain, that of being able to increase your efforts of defence, in proportion as the enemy advances; since it must be evident, that constructed as the flanks are, and enclosing one another, the execution becomes multiplied in every quarter. It may moreover be stated among other advantages, that as the salient points are double in number, and are flanked within half a distance of musket-shot, without stretching far into the country, they must, of course, be less exposed to the enemy's approaches. From the figure of these lines the troops are enabled to keep up an uninterrupted and regular direct fire; and it is the only construction from which an equal discharge of ordnance or musketry may be served in every quarter at once.

**LIMBER**, in *artillery*, a two-wheel carriage with shafts to fasten the trail of travelling carriages by means of a pintle or iron pin, when travelling, and taken off on the battery, or when placed in the park of artillery; which is called unlimbering the guns.

*To LIMBER up*, to make every thing ready in a gun-carriage, either for the purpose.

purpose of retreating or advancing. For the manner in which this is done, in the exercise of a light 6-pounder without drag-rope-men, see Regimental Companion.

**LIME**, (*Chaux*, Fr.) in *military architecture*, is made of all kind of stones, that will calcine: that which is made of the hardest stone is the best, and the worst of all is that which is made of chalk.

Different counties in England produce different kinds of lime-stones. In Kent, abounding with chalk pits, the lime is very bad. There are some rocks near Portsmouth, that make exceeding good lime. The best lime in England is that made of the marble in the neighbourhood of Plymouth. Before the stones are thrown into the kiln, they are to be broken into small pieces; otherwise the air contained in their cavities, being too much expanded by heat, makes them fly with so much violence as to damage the kilns. Lime will not be sufficiently burnt in less than 60 hours. The signs of well burnt lime are, that its weight is to that of the stone in a sequialterate proportion; that it be white, light, and sonorous; that when slaked, it sticks to the sides of the vessel, sending forth a copious thick smoke, and requires a great deal of water to slake it.

In some foreign countries they make good lime of shells of fish, which dries and hardens in a very short time; and when it is mixed with Dutch terras, is fit for all kind of aquatic works.

Lime should always be burnt with coals, and never with wood; the coals being strongly impregnated with sulphureous particles, which, mixed with the lime, make it more glutinous. See **MORTAR**.

**LIMNARQUE**, Fr. an office of distinction, which existed in the Roman empire. The persons invested with it were directed to watch the frontiers of the empire, and they commanded the troops that were employed upon that service.

**LIMITARY**, a guard or superintendent, placed at the confines or boundaries of any kingdom or state.

**LIMITS**, in a military sense, is that distance which a sentry is allowed on his post, namely, 50 paces to the right, and as many to the left.

**LINCH-pin**, in artillery, that which passes through the ends of the arms of an axle-tree, to keep the wheels or trucks from slipping off in travelling.

**LINCH-clout**, in artillery, the flat iron under the end of the arms of an axle-tree, to strengthen them, and to diminish the friction of the wheels.

**LINDEN TREE**, the wood used in artificial fireworks, &c.

**LINE**, in geometry, signifies length, without any supposed breadth or depth. A *straight or right line* is the shortest way from one point to another. A *curved or crooked line* is that which deviates from the shortest way, and embraces a greater space between one point and another. A *perpendicular line* is a straight line, which falling upon another line does not incline either to one side or the other. *Parallel lines* are lines which are at equal distances from one another, in such a manner, that although they may be prolonged ad infinitum they never can meet.

Euclid's second book treats mostly of lines, and of the effects of their being divided, and again multiplied into one another.

**Horizontal LINE**, (*ligne horizontale*, Fr.) is that which is spread upon the plane of the horizon; such, for instance, are those lines that may be supposed to form the level surface of a plain.

**Inclined LINE**, (*ligne inclinée*, Fr.) is that line which leans or is raised obliquely upon the plane of the horizon, and which might resemble the sloping or declivity of a hillock.

**Oblique LINE**, (*ligne oblique*, Fr.) a straight line which leans more to one side than another the instant it is brought into contact with any other line.

**LINE tangent**, (*ligne tangente*, Fr.) a straight line, which, without intersecting it meets a *curve* at one point, and does not enter, but barely touches it.

**Vertical LINE**, (*ligne verticale*, Fr.) a line which is raised perpendicularly above or below the horizon. Of this description are all lines that express height or depth.

**The LINE**, (*la ligne*, Fr.) this term is frequently used to distinguish the regular army of Great Britain from other establishments of a less military nature. All numbered or marching regiments are called

called the line. The guards are an exception to this rule. The marines, fencible, militia, volunteer, and yeomanry corps, together with the life-guards, do not come under the term. It is, however, a corruption and misapprehension of the word amongst us, since the true import of line in military matters, means that solid part of an army which is called the main body, and has a regular formation from right to left. Thus in the seven years war, when Prince Ferdinand commanded the allied army, the British troops under the Marquis of Granby did not belong to the line, because they were always detached and acted in front of the main body. Grenadiers and light infantry, when from their several corps, cannot be called the line, but the instant they are incorporated they become so. According to this explanation, and we think it a correct one, the word is generally misapplied amongst us, as it cannot strictly be used to distinguish any particular establishment from another. The French say *troupes de ligne*, which term corresponds with our expression, Army of the Line, or Regulars.

*Vaisseau de ligne*, Fr. line of battle ship.

**LINE**, or *line of battle*, (*ligne*, or *ordre de bataille*, Fr.) is the arrangement or disposition of an army for battle: its front being extended along a straight line as far as the ground will permit, in order that the several corps of cavalry and infantry which compose it, may not be cut off or flanked by the enemy.

The Ottoman troops are generally drawn up on a curve line, or half-moon, for the purpose of surrounding their enemies by superior numbers. European armies are usually drawn up in three lines; the first being named the *van*, (*avant-garde*, Fr.) the second, *main body*, (*corps de bataille*, Fr.) and the third, which is always the weakest, is called the *reserve*, or *rear-guard*, (*Corps de réserve*, or *arrière-garde*, Fr.) Each of these lines is so drawn up, that the wings or extremities are always composed of some squadrons of horse, whose intervals are likewise supported by infantry platoons. The battalions are posted in the center of each line; sometimes they are intermixed with squadrons of horse, when there is a considerable body of cavalry attached to the army.—

The space of ground, which in each line separates the different corps from one another, is always equal in extent to the front that is occupied by them. These intervals are left in order to facilitate their several movements, and to enable them to charge the enemy without being exposed to confusion and disorder. It must be observed, as a general rule, that the intervals or spaces which are between each battalion and squadron belonging to the second line, should invariably correspond with the ground that is occupied by the battalions and squadrons, which constitute the first line; in order that the first line, on being forced to fall back, may find sufficient ground to rally upon, and not endanger the disposition of the second line, by precipitately crowding on it.

It is particularly specified in the Regulations published by authority, that all great bodies of troops are formed in one or more lines.

Each line is divided into right and left wings. Each wing is composed of one or more divisions. Each division is composed of one or more brigades. Each brigade is formed of two, three, or four battalions.

Battalions are formed in line at a distance of twelve paces from each other, and this interval is occupied by two cannon, which are attached to each battalion. There is no increased distance betwixt brigades, unless particular circumstances attend it. In exercise, should there be no cannon betwixt the battalions, the interval may be reduced to six paces.

**LINE**, *how regulated*. Its regulating body in movement is, in general, the battalion of that flank which is nearest to, and is to preserve the appui, or which is to make the attack. There are very few cases in which the center ought to regulate, although the direct march of the line in front appears to be the easiest conducted by a battalion of the center. It is the flank, however, that must preserve the line of appui in all movements in front. If the line is thrown backward or forward, it is generally on a flank point.

It may not be superfluous to remark, that the term *line*, as expressing a military disposition for battle, was not known until the sixteenth century.—Before that period, when armies were ranged

ranged in order of battle upon three lines, the first line was called *advanced guard*, (*avant garde*;) the second, *main body only*, (*corps de bataille*;) and the third, *rear guard*, (*arrière-garde*.)—These terms are never used in modern times, except when an army is on its march. When drawn up for action, or in the field for review, *lines* are substituted.

*Lines of support*, are lines of attack, which are formed to support one another. Where there are several, the second should outflank the first, the third the second; the advanced one being thereby strengthened and supported on its outward wing.

*Line of March*, the regular and tactical succession of the component parts of an army that is put in motion.

*Lines of March*, are bodies of armed men marching on given points to arrive at any straight alignment on which they are to form. The general direction of such alignment is always determined before the troops enter it, and the point in that line at which their head is to arrive, must next be ascertained. See Infantry Regulations, page 293.

The line is said to be well dressed, when no part is out of the straight alignment. That this may be effected, at the word *dress*, which is given by the commander, it is immediately to commence from the center of each battalion, the men looking to their own colours, and the correcting officers lining them upon the colours of their next adjoining battalion.

*Line-firings* are executed separately and independently by each battalion.

*Inversion of the line, in formation.* This is a manœuvre which ought only to be resorted to on the most urgent occasions, as it is prudent to avoid the inversion of all bodies in line. The inversion is effected by facing a battalion or line to the right about, instead of changing its position by a countermarch; sometimes, indeed, it may be necessary to form to a flank with its rear in front. The column with its right in front may arrive on the left of its ground, and be obliged immediately to form up and support that point, so that the right of the line will become the left. Part of a second line may double round on the extremity of a first line, thereby to outflank an enemy,

These, and various other movements, may be found necessary, and they can only be practised with safety and expedition by the inversion of the line. See Infantry Regulations, page 286.

*Lines advancing to engage an enemy.* (*Lignes marchant à l'ennemi*, Fr.) According to Marshal Puysegur, all lines should take the center for the regulating point of movement, and not the right, as many have maintained. He grounds his opinion upon a known fact, that the more extended a line is, the more difficult it must prove to march by the right. By making the center the directing portion of the line, more than half the difficulty is removed. To which it may be added, that the center is more easily discernible from the right and left, than the right is within the just observation of the left, or the left within that of the right.

When the *line* advances it must uniformly preserve a convexity from the center, so that when it halts, the right and left may have to dress up; but this convexity must be scarcely perceptible. Were the line to be concave on approaching the enemy, a necessity would occur of throwing the wings back, perhaps even of putting several corps to the *right about*; during which operation the whole army might be endangered.

When lines are marching forward they must be occasionally halted: in which cases the center halts first, and when the line is ordered to advance again, the center steps off, though in an almost imperceptible manner, before the right and left.

Each commanding officer must place himself in the center of that proportion of the line which he has under his immediate orders, unless he should be otherwise directed. The center is always the most convenient point, from whence every thing that passes on the right and left may be observed. When the line advances in charging order, he must march at the head of his battalion or squadron; the captains of troops or companies taking care, that he is followed with an equal cadenced step, and regulating their own movements by that of the divisions which are formed on their right and left.

The greater the extent of line proves, which is composed of several battalions and squadrons that advance forward with  
the

the same front, the more difficult will be the movement of the several bodies; but as we have already observed, a great part of this difficulty is overcome when the center is made the directing body. The right and left must be invariably governed by it.

*Retiring LINE*, a body of armed men that has advanced against an opposing enemy in order of battle, withdrawing itself with regularity from the immediate scene of action. On this occasion it is of the greatest importance, that the line should be correctly dressed before it faces to the right about; and the battalions will prepare for the retreat in the manner prescribed for the single one by receiving the caution, that the *line will retire*. See page 213, Infantry Regulations.

*To form the LINE*, in land tactics, is to arrange the troops in order of battle, or battle array.

*To break the LINE*, to change the direction from that of a straight line, in order to obtain a cross fire.

*To break the LINE*, (*percer en confusion la ligne*, Fr.) to attack an opposing front, so as to throw it into confusion.

*Turning out of the LINE*, in a military sense. The line turns out without arms whenever the general commanding in chief comes along the front of the camp.

When the *line* turns out, the private men are drawn up in a line with the bells-of-arms; the corporals on the right and left of their respective companies; the piquet forms behind the colours, with their accoutrements on, but without arms.

The serjeants draw up one pace in the front of the men, dividing themselves equally.

The officers draw up in ranks, according to their commissions, in the front of the colours; two ensigns taking hold of the colours.

The field officers advance before the captains.

The camp colours on the flanks of the parade are to be struck, and planted opposite to the bells-of-arms. Formerly the officer spontoons were planted between the colours, the serjeants pikes are now placed in their stead, and the drums piled up behind them; the halberts are to be planted between, and on

each side the bells-of-arms, and the hatchets turned from the colours.

*Full or close LINES*, (*lignes pleines*, Fr.) Marshal Puysegur in his *Art de la Guerre* is a strong advocate for full or close lines, in his disposition of the order of battle, provided the ground will admit it. He proposes, in fact, that the battalions of infantry and the squadrons of horse should form one continuity of line, without leaving the least interval between them. Warnery, in his treatise on cavalry, differs materially from the French tactician. See page 38 on this subject.

*Lines that are close and open*, (*lignes tant pleines que vuides*, Fr.) When troops are drawn up in order of battle with intervals between the battalions and squadrons, the lines are said to be close and open.

*LINE, or Camp Courts Martial*. These courts martial are not frequently resorted to, and differ from regimental ones, inasmuch as they are composed of the officers belonging to different corps, and the ratification of the sentence is vested in the general or commanding officer of the camp. So that no time is lost in waiting for the king's pleasure, or for the commander in chief's approbation, when he is delegated by him; nor has the colonel or commanding officer of the regiment to which the offender may belong, any power to interfere. The sentences of line or camp, field and garrison courts martial, are confined to corporal punishments, but they can neither affect life, nor occasion the loss of a limb. The proceedings are read by the adjutant of the day; the surgeon is from the regiment to which the prisoner belongs, and the punishment is inflicted in front of the piquet by the drummers of the different corps under the direction of the drum-major, who is from the regiment to which the adjutant of the day belongs. Field and drum-head courts-martial, may be considered in the same light, when an army is on its march; with this difference, that the prisoner is tried either by officers belonging to his own corps, or by a mixed roster. A circle is formed at a short distance from the men under arms, and the sentence is written upon a drum-head; whence the appellation of drum-head courts martial is derived. When there are sev-

veral

veral regiments present, the same forms are attended to in punishing prisoners as are observed in line or camp courts-martial; and when there is only one regiment, the examination and the punishment of the prisoner or prisoners take place within itself.

LINES, in fortification, bear several names and significations; such as,

LINE of	<div style="display: inline-block; vertical-align: middle;"> <i>defence s'chant</i>  <i>defence ruzant</i>  <i>counter-battery</i>  <i>counter-approach</i>  <i>defence prolonged</i> </div>	<div style="display: inline-block; vertical-align: middle; font-size: 2em;">}</div>	<div style="display: inline-block; vertical-align: middle;">             See              FORTIFICATION.           </div>
---------	--	---	---

LINE Capital - - - -

LINE of communication, (*Ligne de communication*, Fr.) that space of ground in a fortified place which joins the citadel to the town.

LINES of communication, are trenches that unite one work to another, so that men may pass between them without being exposed to the enemy's fire: thence the whole intrenchment round any place is sometimes called a *line of communication*, because it leads to all the works.

Inside LINES, are a kind of ditches towards the place, to prevent sallies, &c.

Outside LINES, are a kind of ditches towards the field, to hinder relief, &c.

Capital LINE of the half moon, (*Ligne capitale de la demi-lune*, Fr.) that which is drawn from the flanked angle of a half moon, to the reentrant angle of the counterscarpe on which it is constructed.

LINE of counter-approach, (*Ligne de contre-approche*, Fr.) See APPROACHES.

LINE of Defence, (*Ligne de défense*, Fr.) See FORTIFICATION.

Ligne magistrale, Fr. See Capital line in Fortification.

LINE of circunvallation, (*Ligne de circunvallation*, Fr.) See FORTIFICATION.

LINE of direction in gunnery, is a line formerly marked upon guns, by a short point upon the muzzle, and a cavity on the base ring, to direct the eye in pointing the gun.

LINE of distance, the interval between two things, either in regard to time, place, or quantity.

LINE of gravitation, of any heavy body, is a line drawn through its center of gravity, and according to which it tends downwards.

LINE of swiftest descent, of a heavy body, is the cycloid. See CYCLOID.

LINE of projectile. See PROJECTILES.

LINE of the least resistance, (*ligne de moindre résistance*, Fr.) that line, which being drawn from the center of the furnace or the chamber of a mine, takes a perpendicular direction towards the nearest superficial exterior.

LINE of fire, (*ligne de feu*, Fr.) in fortification. This term admits of two distinct acceptations; first, when it is found necessary to give an idea of the manner in which a rampart, or an entrenchment overwhelm and crosses any space of ground by the discharge of ordnance or musquetry, lines must be drawn to express the distances which have been traversed by the shot, &c. These lines are called lines of fire, being an abbreviation of those lines of direction which have been given to the shot.

In order to convey a more just and accurate conception of this species of line of fire, it is recommended to give a profile, which shall not only shew the curves of the trajectories, but likewise point out the intersections and impressions which have been made by such fire upon a rampart, entrenchment, ground, or fortification, of any description.

In the second place, all that extent of a rampart or entrenchment, from whence the shot of ordnance or musquetry is discharged, is understood to be a line of fire.

If, for instance, it were to be said that a reserve or oblique direction was taken against a long extent of rampart or entrenchment, by means of a *jettée* or any great work thrown up, so as to outflank or take it in the rear, it might be concluded, that those points would be supplied with a long line of fire.

LINE of direction, (*Ligne de direction*, Fr.) In mechanics any straight line down which a heavy body descends. There are likewise lines of direction which relate to powers; they are then straight lines by means of which a power draws or urges on a weight for the purpose of supporting or moving it.

Capital LINE of the bastion, (*Ligne capitale du bastion*, Fr.) a line which is drawn from the center angle of a bastion to its flanked angle. In regular fortification this line cuts the bastion in two equal parts.

LINES of intrenchment, (*Lignes retrenchées*,

*trenchés*, Fr.) all lines which are drawn in front of a camp, &c. to secure it from insult or surprize are so called. Whenever an army is not sufficiently strong to run the hazard of being attacked, the general who commands it must have the precaution to dig a ditch in front measuring three toises at least in breadth, and two in depth. He must likewise throw up a parapet with redans, or have it flanked at intermediate distances by small bastions two toises thick, made of strong close earth, and get it covered and supported by fascines, with a banquette behind sufficiently high to cover the soldiers tents. If water can be got into the ditch from a neighbouring stream or rivulet, an additional advantage will be derived from that accession. When the *lines* are constructed for any space of time, it will then be proper to make a covert-way in the usual manner.

Other *lines* are likewise constructed for the purpose of communicating with different quarters; great care must be taken lest any of them be exposed to the enemy's enfilade. To prevent this they must be supported by redoubts, or by works belonging to the neighbouring forts; for the enemy might otherwise make good his ground within them, and use them as a trench.

If an army is so weak as to be within *lines*, you take care to have communications between the villages, and small parties of light horse patrolling towards the enemy, and to have videttes and sentries posted so near one another, that you may have intelligence of all their transactions.

*LINE in fencing*, that part of the body opposite to the enemy, wherein the shoulders, the right arm, and the sword, should always be found; and wherein are also to be placed the two feet at the distance of 18 inches from each other. In which sense, a man is said to be in his line, or to go out of his line, &c.

*LINE*, also denotes a French measure, containing 1-12th part of an inch. It is of late frequently made use of in calculations.

To *LINE*, from the French *aligner*, is to dress any given body of men, so that every individual part shall be so disposed as to form collectively a straight continuation of points from center to flanks.

To *LINE men*. Officers, and non-commissioned officers, are said to line the men belonging to their several battalions, divisions, or companies, when they arrive at their dressing points, and receive the word *dress* from the commander of the whole.

When a single battalion halts, it is dressed or lined on its right center company, and must, of course, be in a straight line. When several battalions dress from the center of each on its next colour, the general line will be straight, provided all the colours have halted regularly in a line. On these occasions every thing will depend upon the two center dressers of each battalion. See Regulations, page 341.

To *LINE a Coast*. To line a coast well under the immediate pressure of invasion, requires not only great ability and exertion in the commanding officer of the particular district against which an insult may be offered, but it is moreover necessary, that every individual officer in the different corps should minutely attend to the particular spot on which he may be stationed. The English coast, especially where there are bays, is almost always intersected by narrow passes through the rocks or sandhills. On this account, when any body of men receives orders to line a specified extent of ground, the officers who are entrusted with the several parts of a battalion or brigade, should take care to make the most of their men, and to extend their files in such a manner, as not only to present an imposing front from the crown of the hill, but to be able, at a moment's warning, to carry their whole strength to prevent the enemy from getting upon the flanks by suddenly rushing up the gap. Much coolness is required on these occasions.

To *LINE hedges*, &c. to plant troops, artillery, or small arms, along them under their cover, to fire upon an enemy that advances openly, or to defend them from the horse, &c.

To *LINE a street or road*, is to draw up any number of men on each side of the street or road, and to face them inwards. This is frequently practised on days of ceremony, when some distinguished person is received with military honours on his way through places where troops are stationed.

The

The road from Colchester to Lexden-heath was lined in this manner to receive the Duke and Duchess of Wirtemberg on their departure from England, in 1797. On this occasion the artillery fired a salute, the cavalry headed the infantry regiments, and each of the latter (facing inwards) presented arms successively as the Duke and Duchess passed.

To *LINE*, in fortification, is nothing more than to environ a rampart, parapet, or ditch, &c. with a wall of masonry or earth.

*LINGE et chaussure du soldat*, Fr. necessities belonging to a soldier. During the monarchy of France, a sol, or one English half-penny per day, was added to the pay of each serjeant, and about six deniers, or three English farthings, to that of each corporal, anspesade or lance-corporal, grenadier, private soldier and drummer, to enable them to keep up a certain list of necessities. On any deficiency being discovered, it was in the power of the commanding officer of the regiment to reduce the soldier's subsistence to four sols, or two-pence English per day, until the full complement was made up.

*LINGERER*, (*longis*, Fr.) one who pretends to be indisposed, in order to avoid his tour of duty—a skulker. Hence the term malingering, or a soldier who avoids duty in a disreputable manner.

To *LINK together*, to tie together. Cavalry horses are frequently linked together when it is found necessary for the men to dismount. When the word of command *link your horses* is given, the right hand files are to move up into the intervals, slip their bradoons, and dress by their right, standing in front of their own horses' heads; the left files slipping the bradoons in their hands at the same time, and stepping to the front of their horses' heads. As soon as up and dressed, the whole advance their left feet by a motion from the right, and by another motion from the right, the whole go to the left about together, and link; as soon as done linking, the left hand man of each rank falls back two paces from his horse, and the whole dress well to him, with the musquet in the trailing position. But before they do this, they must put their belts and plates in order.

It ought to be recollected, that when

the right hand files come up, they must take care not to bring their horses past the others; and, in order to dress with the left files, they must slip the bradoon in the left hand, leaving the horse in his place in the rank.

When dragoons are ordered to dismount, and are to mount again immediately, without moving from their horses, the word of command *unlink your horses* is made use of; in which case the dragoon drops his musquet or carbine, which is then in the trailing position, on his left arm, and unlinks: as soon as that is done, he takes his musquet in his left hand, the horse in the right, by the right bradoon-rein, waiting for the word *prepare to mount*.

*LINKS*, in the art of war, are distinct reins, or thongs of leather used by the cavalry to link their horses together, when they dismount, that they may not disperse. Every tenth man is generally left to take care of them.

*LINS-pins*. See *LINCPINS*.

*LINSTOCK*. (*Boute-feu*, Fr.) In gunnery, a short staff of wood, about three feet long, having at one end a piece of iron divided into two branches, each of which has a notch to hold a lighted match, and a screw to fasten it there; the other end being shod with iron to stick in the ground.

*LIS*, Fr. A warlike machine was formerly so called: it consisted of a piece of wood or stake, about the size of the human body, which was made smaller at the top than at the bottom, and resembled a lily not yet blown. Several of these were tied together with osier or willow twigs, and were used for the security of a camp. They were not unlike the palisades of the present day.

*Fleur de Lis*, (*Luce*, Fr.) a flower borne in the ancient arms of France, and adopted by our kings until the late union with Ireland. The Electoral Cap, as emblematic of Hanover, and the shamrock for Ireland, have been substituted in their stead.

*Fleur-de-Lis*, during the French monarchy, signified also a mark of infamy, which was made with a hot iron, upon the back of a malefactor.

*LISSE*, Fr. any smooth and unornamented piece in architecture is so called by the French.

*LISSOIRE*, Fr. from *lisser* to smooth.

## L I S

This word was particularly applied in France, to an operation which gunpowder went through, in order to make coarse grains smooth and round. This was effected by tying several barrels together, and by means of a mill, turning them round, so as to occasion considerable friction within.

LISTS, in a military sense, a place inclosed, in which combats are fought.

To enter in the LISTS, is to contend with a person.

To LIST soldiers, { to retain and enroll  
To enlist, { soldiers, either as  
volunteers, or by a kind of compulsion.

LISTING. Persons listed are to be carried within four days, but not sooner than twenty-four hours, after they have enlisted, before the next justice of peace of any county, riding, city, or place, or chief magistrate of any city or town corporate (not being an officer in the army); and if, before such justice or magistrate, they dissent from such listing, and return the listing money, and also 20 shillings in lieu of all charges expended on them, they are to be discharged.

But such persons, refusing or neglecting to return and pay such money within 24 hours, shall be deemed as duly listed, as if they had assented thereto before the proper magistrate; and they will, in that case, be obliged to take the oath, or, upon refusal, they shall be confined by the officer who listed them, till they do take it.

Persons, owning before the proper magistrate, that they voluntarily listed themselves, are obliged to take the oath, or suffer confinement by the officer who listed them, till they do take it.

The magistrate is obliged, in both cases, to certify, that such persons are duly listed; setting forth their birth, age, and calling, if known; and that the 2d and 6th sections of the Articles of War against mutiny and desertion were read to them, and that they had taken the oath.

Officers offending herein are to be cashiered, and displaced from their office; to be disabled from holding any post, civil or military; and to forfeit 100*l*.

Persons receiving inlisting money from any officer, knowing him to be such, and afterwards absconding, and refusing

## L O A

to go before a magistrate to declare their assent or dissent, are deemed to be inclined to all intents and purposes, and may be proceeded against as if they had taken the oath. See ATTESTATION.

LIT de CAMP, Fr. a camp bed, which takes to pieces, and is portable. The French frequently call it *lit brisé*, or a bed taken to pieces. The Turks never use these beds: they always carry mattresses, which they spread upon sofas when they halt at night.

LITTER, a sort of hurdle bed, on which wounded officers or men are carried off the field.

LITTLE fortification. The first division of the first system of M. de Vauban, and is so called when the exterior side of a fortification does not exceed 175 toises, or 350 yards. It is used in the construction of citadels, small forts, horn, and crown works.

LIVERY. This word is only known in military matters by its prohibition. It is particularly specified in the Articles of War, that if any officer shall presume to muster any person as a soldier, who is at other times accustomed to wear a livery, or who does not actually do his duty as a soldier, he shall be deemed guilty of having made a false muster, and shall suffer accordingly. See Section IV. Art. V.

LIVRE, a French money of account, consisting of 20 sols, about 18*d*. English; each sol containing 12 deniers. The livre is of two kinds, Tournois and Paris.

LIVRE Tournois contains 20 sols Tournois, and each sol 12 deniers Tournois.

LIVRE Paris is 12 sols Paris, being worth 12 deniers Paris, or 15 deniers Tournois; so, that a livre Paris is worth 25 sols Tournois. The word Paris is used in opposition to Tournois, because of the rate of money, which was one-fourth higher at Paris than at Tours.

LIVRE bataille, Fr. To deliver, give or join battle.

LIVRE assaut, Fr. To storm.

LIVRE une ville au pillage, Fr. to give a town up to plunder.

LOAD, a word of command given, when men are to charge their guns or muskets.

LOCHABER-

**LOCHABER-AXE**, a tremendous Scotch weapon, now used by none but the town guard of Edinburgh; one of which is to be seen among the small armoury in the tower of London.

**LOCKS**, in gunnery, are of various sorts; common for lockers in travelling carriages, or for boxes containing shot, powder or cartridges. Also locks for fire-arms, being that part of the musket, by which fire is struck and the powder inflamed.

**LOCK-STEP**. This step was first introduced into the British service by the late Lord Heathfield, when he commanded the garrison at Gibraltar; and is the same that General Saldern (from whose works all our regulations have been almost literally selected) calls the *deploy step*. This step consists in the heel of one man being brought nearly in contact with the joint of the great toe of another, so that when men step off together, they constantly preserve the same distance. The lock or deploy step is always practised when a battalion marches in file or close column; and the great advantage to be derived from it is, that the last file gains ground at the same time that the front advances.

*To Lock*, is to fasten one or more of the wheels of a carriage from going round, in going down a hill, &c.

*To lock up*, to take the closest possible order in line or in file. The expression is derived from the lock-step.

*Lock up!* a word of command which is frequently used in the British service, to direct soldiers to take or preserve the closest possible order, especially in *file-marching*.

**LOCKER hinges**, serve to fasten the cover of the lockers in travelling carriages.

**LOCKING plates**, in artillery, are thin flat pieces of iron, nailed on the sides of a field carriage, where the wheels touch it in turning, to prevent the wearing the wood in those places. See **CARRIAGE**.

**LOCKSPIT**, in field fortification, a small cut or trench made with a spade, about a foot wide, to mark out the first lines of a work.

*To LODGE ARMS*. A word of command which is used on guards and pickets. When a guard has closed its

ranks, and the men are to place their arms in front of the guard-house or quarter-guard, according to circumstances, the commanding officer gives the words *port arms, to the right*, or *right about*, (as the case may be) *face*.  
*Lodge Arms*.

**LODGING-MONEY**. When a regiment is quartered in a town, and there are not sufficient accommodations to answer the required number of billets, an allowance is made to the officers according to rank. The gross amount is charged in the paymaster's abstract. For particulars, see **MILITARY FINANCE**.

**LODGINGS**. Officers billeted in the suburbs of Edinburgh, pay for their lodging, but no where else in Scotland.

**LODGMET**, in military business, is a work made by the besiegers in some part of a fortification, after the besieged have been driven out, for the purpose of maintaining it, and to be covered from the enemy's fire. It also means possession of an enemy's work.

When a *lodgment* is to be effected on the glacis, covert-way, or in a breach, there must be a great provision made of fascines, sand bags, gabions, wool packs, &c. in the trenches; and during the action, the pioneers (under the direction of an engineer) with fascines, sand bags, &c. should be making the lodgment, in order to form a covering, while the grenadiers are storming the covert way, &c.

**LOGARITHMS**, the indexes of the ratios of numbers, one to another.

**LOGEMENT**, *Fr.* means generally any place occupied by military men, for the time being, whether they be quartered upon the inhabitants of a town, or be distributed in barracks. When applied to soldiers that have taken the field, it is comprehended under the several heads of huts, tents, &c.

*LOGEMENT d'une attaque*, *Fr.* See **Lodgment in Fortification**.

*SELOGER*, *Fr.* to take up one's quarters. It likewise signifies to take a position in the neighbourhood of an enemy's camp; or to make a lodgment in the outworks of a besieged place.

**LOGIS**, *Fr.* Quarters.

*Marquer les Logis*, *Fr.* to mark the officers' rooms according to their respective ranks.

## L O N

**LONDON**, the capital of the British empire, and the emporium of the world.

**LONDON**, *City of*, exempt from the billeting of soldiers by the 31st section of the mutiny act.

**LONDON Military District**. The bounds or extent of a military command, in and about the capital of Great Britain. It is commanded at present by one general, one lieutenant-general, six major-generals, three brigadier-generals, with a proportionate staff: the whole being subject to the commander in chief.

**LONDON Militia**, two regiments called the East and West London Militia, were raised during the late war, for the immediate security of the city and its environs. The officers are appointed by the lieutenants commissioned for the militia of the city.

**LONG BOAT**, the largest boat belonging to a ship: it serves to bring goods, provisions, &c. to or from the ship, to land men, to weigh the anchor, &c.

**Le long de la Côte**, Fr. Along the coast.

**Tout du long de l'année**, Fr. all the year round.

**Long à la guerre**, Fr. an expression used in the French service, to express a circuitous march. It also signifies to leave a considerable opening between the ranks, and is the same as *faire long bois*.

**Prendre le plus long**, Fr. to go the furthest way about, as *l'armée fut obligée de prendre le plus long pour éviter les défilés*; the army was under the necessity of going the furthest way about in order to avoid the defiles.

**LONGER**, Fr. a French military phrase. *Longer la rivière*. To move up or down the river. It is frequently found necessary to attack an enemy's post in order to have a free passage on the river, *pour longer la rivière*.

**Longer le bois**, Fr. to march by the side of a wood.

**Longer l'ennemi**, Fr. to follow the movements of an enemy, so as to prevent his crossing a river; or to march upon his flank, in front or rear, that you may defeat his plans, or attack him with advantage.

**Faire une LONGUE marche**, Fr. to make a long march.

## L O O

**Epée de longueur**, Fr. a sword of a proper length to serve as a weapon of defence. This term is used to distinguish it from the short swords, which are worn for mere dress or parade.

**Longs côtés**, Fr. those sides are so called, which belong to places that are irregularly fortified, and contain indiscriminately eighty toises and upwards. In which cases they are usually strengthened by a flat bastion in the center, or by several flat bastions, which are constructed, according to the extent of the sides, at intermediate distances.

**LONGIMETRY**, (*Longimétrie*, Fr.) the art of measuring lands and distances, whether the extent or space be accessible as in a road, or inaccessible as in a river or branch of the sea.

**LONGITUDE of the earth**, denotes its extent from west to east, according to the direction of the equator.

**Longitude of a place**, in *geography*, its distance from some first meridian, or an arch of the equator intercepted between the meridian of the place, and the first meridian. See **GEOGRAPHY**.

**Longitude of motion**, according to some philosophers, is the distance which the center of any moving body runs through, as it moves on in a right line. See **MOTION**.

**LONGRINIS**, Fr. pieces of wood or branches, which are laid along the extent of a sluice, and make part of its grating.

**To LOOK**, a word frequently used in the British service, to express the good or bad appearance of a corps, &c. viz. such a regiment looks well or ill under arms.

**To LOOK at**, to go down the front of a regiment, &c. without requiring that the troops should be put through the different evolutions. A General officer frequently looks at a regiment in this manner. Sometimes indeed the expression bears a more extensive meaning: it is usual, for instance, to say—It would be ridiculous to think of looking at a strong place for the purpose of attacking it, without having sufficient force to carry its works.

**To be LOOKED at**, in a military sense, to be distantly observed by an enemy who has a design of attacking you; or to be seen by a General officer, whose duty is to enforce any established system.

tem. The latter must be considered as a mere cursory inspection. It is common to say—We are to be seen or looked at, but not regularly reviewed.

LOOP, in a *ship-carriage*, a ring made of iron, fastened one on the front of a fore axle-tree, and two on each side, through which the ropes or tackle pass, whereby the guns are moved backwards and forwards on board of ships.

Loop, a small iron ring or staple, by which the barrel of a gun is affixed to the stock.

Loop is likewise used to signify an ornamental part of a regimental hat.—Every officer in the British service, when dressed in his uniform, is directed to wear a hat, the loop of which is made of scaled silver or gold, if in the cavalry; and of gold lace if in the infantry. General officers wear the scaled loop.

Loop-holes, (*Créniaux*, Fr.) in fortification, are small holes in the walls of a castle or fort, through which the garrison may fire. In field fortification, loop-holes are frequently resorted to.

To LOOSEN, to separate, to make less coherent. In a military sense it implies to open ranks or files from close order. In marching by files, the officers and non-commissioned officers should be very attentive to their men, especially when any particular manœuvre requires a compact and solid movement. To loosen is, in fact, to lose that firm continuity of line, or perpendicular adherence, which constitutes the true basis of military operations. The lock-step was introduced for the purpose of counteracting the mischievous effects of loose marching.

LOOT, Indian term for plunder or pillage.

LOOTICS, *Ind.* a term in India to express a body of irregular horsemen, who plunder and lay waste the country, and harass the enemy in their march. They may be compared to the Hulus of Europe, and other free-booters.

LOOTYWALLOW, *Ind.* a term of the same import as Lootics.

To LOT for Men, a phrase peculiar to military arrangements. When recruits join, they should be lotted for with the strictest impartiality. If some troops or companies should be less effective than others, they must be first completed to the strength of other

troops or companies, and then the whole must lot equally.

LOUIS, or *Knight of St. Louis*, the name of a military order in France, instituted by Louis XIV. in 1693. Their collars are of a blue-colour, and pass from left to right: the king is always grand master.

LOUIS D'OR, a French coin first struck in the reign of Louis XIII. in 1640; but lost as it is since the revolution. Its original value about eighteen shillings.

LOUP, Fr. literally signifies a wolf.

*Trou de Loup*, Fr. See WOLF-HOLE.

LOUP des anciens was an iron instrument, made in the shape of a tenaille, by means of which they grappled the battering rams, and broke them in the middle.

LOYAL, true to the king or state. Hence, during the last war a regiment of these were formed, called *Loyal American*.

LOYALISTS. During the last war, several American loyalists served in the British army; and at the conclusion of it many came over to this country, and received compensations for the losses they had sustained. The allowances made on this occasion were not, however, confined to those that had served: several families had their cases taken into consideration, and were provided for by the British government. These compensations did not however give any right to a military man to avail himself of the allowance on the score of half-pay.

LUMIERE, Fr. vent; touch-hole; aperture.

LUMIERE des pièces d'artillerie, des armes à feu, et de la plupart des artifices, Fr. the vent, or aperture through which fire is communicated to cannon, fire-arms, and to almost every species of artificial fire-works. In the making of cannon, it is of the utmost consequence to pay minute attention to the vent or touch-hole. It is in this part that pieces of ordnance are generally found defective, from the vent being too much widened by repeated firing, and the explosion of the gunpowder being necessarily weakened.

LUNETTE d'approche, Fr. a telescope. The French sometimes call them *Lunettes de Galilée*, from the perspective

**tive glass** or telescope having been invented by Galileo.

**LUNETTE à facettes**, Fr. a multiplying glass.

**LUNETTE polyèdre**, Fr. a magnifying glass.

**LUNETTE à puce**, Fr. a microscope.

**LUNETTES**, in *fortification*, are works made on both sides of the ravelin: one of their faces is perpendicular to half or two thirds of the faces of the ravelin; and the other nearly so to those of the bastions.

**LUNETTES**, are also works made beyond the second ditch, opposite to the places of arms; they differ from the ravelins only in their situation. See **FORTIFICATION**.

**LUNETTIONS**, are a smaller sort of *lunettes*.

**LUNGER-CONNA**, a poor-house or hospital is so called in India.

**LUNTY**, the matchcord with which cannon, &c. are fired.

**LUNULÆ**, (*Lunules*, Fr.) in geometry a half moon or crescent, which is made by the arcs of two intersecting circles. If you inscribe a triangle-rectangle within a half circle, the diameter of which becomes the hypotenuse; and if upon each side that compresses the right angle, as its diameter, you describe a half circle, the space, in shape of a half moon, closed in by the circumference of each of these two circles, and by a part of the circumference of the great half circle, will form the figure called *Lunule*.

**LUTTE**, Fr. struggle. An exercise of the body, which consists in a full exertion of all its muscular powers, to overcome another body, that resists with equal force and pertinacity. This sort of exercise was much encouraged among the ancients. The wrestlers or *lutteurs*, were distinguished by the name of *athletics*.

**Mèner les choses de haute LUTTE**, Fr. to carry things by force, or with a high hand.

**LUTTER**, Fr. to struggle with; as *lutter contre la fortune*, to struggle with adverse fortune.

**LUXHEBAR**, the Indian name for Thursday.

**LUZERNE**, Fr. Spanish trefoil, called likewise in English *Lucerne*. A species of hay, which is cultivated for the

subsistence of horses. It bears a violet coloured flower.

**LYCANIANS**, (*Lycaniens*, Fr.) a militia that was formerly raised in Sclavonia, the troops of which resemble the *Pandours* and *Warasdins*. It derives its name from being quartered in the neighbourhood of the lordship of *Lyka*.

**LYING**, to be actually stationed or quartered in a given place.

*In-LYING*. This term is peculiarly applicable to pickets. A picket is said to be an *In-lying Picket* when it is confined within the immediate lines of entrenchments belonging to a camp, or within the walls of a garrisoned town.

*Out-LYING Picket*, is that which does duty without the limits of a camp or garrisoned town; that is, beyond the immediate sentries belonging to either. Those pickets are likewise called *In-line* and *Out-line* Pickets.

*Out-LYERS*, the same as *faggots*. The term *Out-lyers*, was, however, peculiarly understood among the guards; and consisted of a certain number of men from each company, who were permitted to work on condition that the whole of their pay was left in the hands of the captain, for the time they were so employed. This sum the officer appropriated to his own use, and was thereby enabled not only to increase his pay, but to keep a handsome table whenever he mounted guard. During the winter months, the money arising from *Out-lyers* amounted to a considerable sum. This was allowed as a sort of compensation for the expence the captain incurred by the dinner he gave to his subalterns; and for his contribution to the support of a regimental hospital. The custom is now abolished, as a table is kept by the king, and copiously paid for out of the civil list. The following anecdote, which is related to have occurred in the company that once belonged to General Gansell (whom Junius notices in his letters) will shew the absurdity of the old custom, and the wisdom of its abolition: A general muster being ordered, it was remarked, that a soldier dressed in new regimentals, and perfectly unknown to every man in the company, stood to have his name called over: on being asked to whose company he belonged, he replied, to General Gansell's: (it must be here observed, that the

the General had quitted the guards some time.) Who is the present captain? was the next question, or who are the other officers? To which he briefly replied,

I only know the pay-serjeant. The fact was, that he had been some years in the guards, and had constantly been an out-lyer.

## M

**MAALER, Ind.** A certificate which is attested by the principal inhabitants of a town or village.

**MACE.** A heavy blunt weapon, having a metal head; a club.

**MACHICOLATIONS, MACHICOU LIS, or Masse-coulis, Fr.** In ancient, and sometimes in modern fortification, that upper part of the wall which is sustained by brackets or corbels, juts out, and overlooks the gate or ditch.

When a place is besieged, detached parties of the garrison may be posted in the several machicolises. Through the intervals of the corbels, or supporting brackets, they may easily observe every thing that passes at the foot of the wall; and if the besiegers should be hardy enough to penetrate as far, they may easily overwhelm them by throwing down large stones, melted lead, combustible materials, hand-grenades or bombs. The besieged likewise let down large weights fastened to ropes or chains, by which they were retracted after they had taken effect. These brackets or supporters, which in ancient fortification were of a slight construction, might be made of solid materials. The machicoulis, in fact, is susceptible of great improvement; and in many instances might be adopted in order to defend the lower parts of angular forts or turrets.

**MACHINES. Machines, Fr.**

**MACHINES used in War by the Ancients.** (*MACHINES Militaires des Anciens.*) Every species of instrument or machine, which was employed before the invention of fire-arms, for the purpose of demolishing the fortifications of

an enemy, or of rendering them accessible to the besieger, came under the denomination of machine. For a full and elaborate explanation of the different machines that were adopted by the ancients, we refer our military readers to the second volume of the *Recueil Alphanétique*, page 73.

**Infernal MACHINES, (Machines Infernales, Fr.)** Although the first idea of these machines has been attributed to France, the invention, nevertheless, is by no means new. Frederic Jambelli, an Italian engineer, was the first that used them, when Alexander of Parma, besieged Antwerp. The Prince of Orange likewise had recourse to the destructive effects of an infernal machine, in order to bombard Havre-de-Grace, and to set it on fire. The Dutch and English in conjunction, attempted to destroy St. Malo by the same means. The first instance, however, upon record, in which the French made use of this machine, was when Lewis the XIVth ordered a vessel carrying an enormous shell, full of every species of combustible matter, to be dispatched to Algiers, for the purpose of demolishing its harbour. This probably suggested to other nations the adoption of fire-ships, and other destructive machines, which have frequently been used against maritime places.

The author of *Oeuvres Militaires*, tom. xxii. page 222, speaking of the infernal machines, observes, that if he were to be in a situation which required the use of so dreadful an explosion, especially to destroy a bridge, he would prefer having the machine made simply with different strong pieces of wood joined

joined together, so as to be in the shape of an egg, or of a cone reversed. The whole must then be made compact with cords twisted round it. This method, in his opinion, is not only the best, but can be executed in the most easy and expeditious manner. He further adds, that in order to burn and blow up wooden bridges, and even to destroy such as are constructed upon arches, several sorts of barges or boats might be used, which should be filled with fire-works, bombs, petards, &c. It would likewise be extremely easy to construct these machines upon floating rafts, carrying several thousand pounds weight of gunpowder, which might be confined within strong pieces of wood, put together in the manner already described.

These machines should be piled one above the other, and long iron bars must be thrown across the floats, or be fixed like masts, so that when the whole of the combustible materials is beneath the center of the bridge, the rafts may be stopped. Great care must be taken to dispose the matches in such a manner, that no fire may be communicated to the gunpowder before the machine reaches the exact spot which is to be destroyed.

The infernal machine which was used at Boulogne in 1804, is described as follows:

This machine appears to be as simple in its construction as it is calculated to be effectual in its operations. It is composed of two stout planks seventeen feet long, which form its sides, and are distant from each other about seven feet. These planks are connected by transverse timbers, screwed to the planks, so as to keep the whole firm and compact and to prevent the danger of their being separated at sea. Of these transverse timbers two are at the fore extremity, and three behind. This may be called the frame or hull of the machine, the remainder of the work being either for the stowage of the combustible matter, or for the accommodation of the seamen, who row the machine. Along the transverse timbers at both extremities are laid parallel to the sides, five longitudinal bars of nearly the same strength as the transverse timbers, which form a kind of grate, on which the coffers containing the combustible

matter are placed. The grate behind is double the size of the one before, on the principle of giving facility to the motion of the whole by making the machine lighter at the head. In the centre, between the planks forming the sides from the inner extremity of the grate behind, to the outer extremity of the grate before, there is fixed a plank somewhat broader than the side planks, which is well secured to them by three stout transverse timbers, which pass under this center plank to prevent its giving way to pressure. In this plank two triangular apertures are cut for the men who row, to dispose of the lower extremities whilst they ply the machine. Their seats, however, are so contrived, that each man's pressure is directly over that part of the plank which is supported by the transverse timbers. The seats lie nearer to the head than to the hind part of the machine, perhaps to be some counterpoise for the greater weight of the combustible matter behind. Near each seat are fastened by rings to the sides two oars, one on each side, and each man plies a pair. When the machine is worked to its destination, the men set combustibles in a train for explosion, and abandon their posts. The whole is so regulated as to the weight of the materials, that the machine floats, or more properly moves under the surface of the water, so that little more than the heads of the men are extant. This secures the men and the machine from the fire of the enemy, and as the oars must consequently be plied under water, there is less danger of their being discovered by their noise on their approach.

**MACHINE**, in general, whatever hath force sufficient to raise or stop the motion of a heavy body.

**MACHINES**, are either simple or compound: the simple ones are the seven mechanical powers, viz. lever, balance, pulley, axis and wheel, screw, and inclined plane. See **MECHANICAL POWERS**.

If the given power is not able to overcome the given resistance when directly applied, that is, when the power applied is less than the weight or resistance given; then the thing is to be performed by the help of a *machine*, made with levers, wheels, pullies, screws, &c. so adjusted,

justed, that when the weight and power are put in motion on the *machine*, the velocity of the power may be at least so much greater than that of the weight, as the weight and friction of the *machine* taken together, is greater than the power; for on this principle depends the mechanism or contrivance of all mechanical engines used to draw or raise heavy bodies, or overcome any other force; the whole design of these being to give such a velocity to the power, in respect of the weight, as that the momentum of the power may exceed the momentum of the weight: for if *machines* are so contrived, that the velocity of the agent and resistant are reciprocally as their forces, the agent will just sustain the resistant, but with a greater degree of velocity will overcome it. So that if the excess of motion or velocity in the power is so great as to overcome all that resistance which commonly arises from the friction or attrition of contiguous bodies, as they slide by one another, or from the cohesion of bodies that are to be separated, or from the weights of bodies that are to be raised; the excess of the force remaining, after all these resistances are overcome, will produce an acceleration of motion thereto, as well in the parts of the *machine*, as in the resisting body.

*Compound MACHINES*, are formed by various combinations, and serve for different purposes; in all which the same general law takes place, viz. that the power and weight sustain each other, when they are in the inverse proportion of the velocities they would have in the directions wherein they act, if they were put in motion. Now to apply this law to any compound *machine*, there are four things to be considered: 1. the moving power, or the force that puts the *machine* in motion; which may be either men or other animals, weights, springs, the wind, a stream of water, &c. 2. The velocity of this power, or the space it moves over in a given time. 3. The resistance or quantity of weight to be removed. 4. The velocity of this weight, or the space it moves over in the same given time.

The two first of these quantities are always in the reciprocal proportion of the two last; that is, the product of the first two must always be equal to that of

the last: hence, three of these quantities being given, it is easy to find the fourth; for example, if the quantity of the power be 4, its velocity 15, and the velocity of the weight 2, then the resistance, or quantity of the weight will be equal to  $\frac{4 \times 15}{2} = \frac{60}{2} = 30$ .

The following rules will direct the mechanic how he may contrive his *machine*, that it may answer the intended purpose to the best advantage.

1. Having assigned the proportion of your power, and the weight to be raised, the next thing is to consider how to combine levers, wheels, pulleys, &c. so that working together they may be able to give a velocity to the power, which shall be to that of the weight something greater than in the proportion of the weight to the power. This done, you must estimate your quantity of friction; and if the velocity of the power be to that of the weight still in a greater proportion than the weight and friction taken together are to the power; then your *machine* will be able to raise the weight. And note, this proportion must be so much greater, as you would have your engine work faster.

1. But the proportion of the velocity of the power and weight must not be made too great; for it is a fault to give a *machine* too much power, as well as too little; for if the power can raise the weight and overcome the resistance, and the engine perform its proper effect in a convenient time, and work well, it is sufficient for the end proposed: and it is in vain to make additions to the engine to increase the power any farther; for that would not only be a needless expence, but the engine would lose time in working.

3. As to the power applied to work the engine, it may either be a living power, as men, horses, &c. or an artificial power, as a spring, &c. or a natural power, as wind, water, fire, weights, &c.

When the quantity of the power is known, it matters not, as to the effect, what kind of a power it is; for the same quantity of any sort will produce the same effect; and different sorts of powers may be applied in an equal quantity a great variety of ways.

The most easy power applied to a *machine*

*chine* is weight, if it be capable of effecting the thing designed. If not, then wind, water, &c. if that can be conveniently had, and without much expence.

A spring is also a convenient moving power for several *machines*: but it never acts equally as the weight does; but is stronger when much bent, than when but a little bent, and that in proportion to the bending, or the distance it is forced to; but springs grow weaker by often bending, or remaining long bent: yet they recover part of their strength by lying unbent.

The natural powers, wind and water, may be applied to vast advantage in working great engines, when managed with skill and judgment.—The due application of these has much abridged the labours of men; for there is scarce any labour to be performed, but an ingenious artificer can tell how to apply these powers to execute his design, and answer his purpose; for any constant motion being given, it may, by due application, be made to produce any other motions we desire. Therefore these powers are the most easy and useful, and of the greatest benefit to mankind. Besides they cost nothing, and do not require any repetition or renewing, like a weight or a spring, which require to be wound up. When these cannot be had, or cannot serve our end, we have recourse to some living power, as men, horses, &c.

4. Men may apply their strength several ways in working a *machine*. A man of ordinary strength, turning a roller by the handle, can act for a whole day against a resistance equal to 30lb. weight; and if he works ten hours in a day, he will raise a weight 30lb.  $3\frac{1}{4}$  feet in a second; or if the weight be greater, he will raise it so much less in proportion.

But a man may act, for a small time, against a resistance of 50lb. or more.

If two men work at a windlass or roller, they can more easily draw up 70lb. than one man 30lb. provided the elbow of one of the handles, be at right angles to that of the other: and with a fly or heavy wheel applied to it, a man may do 1-3d part more work; and for a little while act with a force, or overcome a continual resistance of 80lb.

and work a whole day when the resistance is but 40lb.

Men used to carrying, such as porters, will carry some 150lb. others 200lb. or 250lb. according to their strength.

A man can draw but about 70 or 80lb. horizontally; for he can apply but half his weight.

If the weight of a man be 140lb. he can act with no greater force in thrusting horizontally at the height of his shoulders than 27lb.

A horse draws to greatest advantage, when the line of direction is a little elevated above the horizon, and the power acts against his breast: and can draw 200lb. for eight hours in a day, at two miles and a half an hour. If he draws 240lb. he can work but six hours, and not quite so fast; and, in both cases, if he carries some weight he will draw better than if he carried none. And this is the weight a horse is supposed to be able to draw over a pulley out of a well. In a cart a horse may draw 1000lb.—The most force a horse can exert is when he draws something above a horizontal position.

The worst way of applying the strength of a horse is, to make him draw or carry up a hill: and three men with 100lb. on their backs, will climb up a steep hill faster than a horse with 300lb.

A round walk for a horse to draw in at a mill, &c. should not be less than 40 feet diameter.

5. Every machine should be made of as few parts, and those as simple as possible, to answer its purpose; not only because the expence of making and repairing will be less, but it will also be less liable to be put out of order.

6. If a weight is to be raised but a very little way, the lever is the most simple, easy, and ready machine; or, if the weight be very great, the common screw is most proper; but if the weight is to be raised a great way, the wheel and axle is a proper power, but blocks and pulleys render the labour still more easy: the same may be done by the perpetual screw.

Great wheels, to be wrought by men or cattle, are of most use and convenience when their axles are perpendicular to the horizon; but if by water, &c. then it is best to have their axles horizontal.

7. As to the combination of simple *machines* to make a compound one, though the lever when simple cannot raise a weight to any great height, and in this case is but of little service; yet it is of great use when compounded with others. Thus the spokes of a great wheel are all levers perpetually acting; and a beam fixed to the axis to draw the wheel about by men or horses, is a lever. The lever also may be combined with the screw, but not conveniently with pulleys or with the wedge. The wheel and axle is combined to great advantage with pulleys; but the perpetual screw, with the wheel, is very serviceable. The wedge cannot be combined with any other mechanical power; and it only performs its effect by percussion; but this force of percussion may be increased by engines.

Pulleys may be combined with pulleys, and wheels with wheels. Therefore, if any single wheel would be too large, and take up too much room, it may be divided into two or three more wheels and trundles, or wheels and pinions, as in clock work, so as to have the same power, and perform the same effect.

In wheels with teeth, the number of teeth that play together in two wheels, should be prime to each other, that the same teeth may not meet at every revolution; for when different teeth meet, they by degrees wear themselves into a proper figure: therefore they should so be contrived that the same teeth meet as seldom as possible.

8. The strength of every part of the *machine* should be made proportional to the stress it is to bear: and therefore let every lever be made so much stronger, as its length and the weight it is to support are greater; and let its strength diminish proportionally from the fulcrum, or point where the greatest stress is, to each end. The axles of wheels and pulleys must be so much stronger, as they are to bear greater weight. The teeth of wheels, and the wheels themselves, which act with greater force, must be proportionally stronger; and in any combination of wheels and axles, make their strength diminish gradually from the weight to the power, so that the strength of every part be reciprocally as its velocity. The strength of ropes must be according to

their tension; that is, as the squares of their diameters: and, in general, whatever parts a *machine* is composed of, the strength of every particular part of it must be adjusted to the stress upon the whole; therefore in square beams the cubes of the diameters must be made proportional to the stress they bear: and let no part be stronger or bigger than is necessary for the stress upon it; not only for the ease and well-going of the *machine*, but for diminishing the friction; for all superfluous matter in any part of it is a dead weight upon the machine, and serves only to impede its motion; hence he is the most perfect mechanic, who not only adjusts the strength to the stress, but who also contrives all the parts to last equally well, so that the whole *machine* may last together.

9. To have the friction as little as possible, the *machine* should be made of the fewest and simplest parts. The diameters of the wheels and pulleys should be large, and the diameters of the arbors or spindles they run on, as small as can be consistent with their strength. All ropes and cords must be as pliable as possible, and for that end rubbed with tar or grease; the teeth of wheels must be made to fit and fill up the openings, and cut into the form of epicycloids. All the axles, where the motion is, and all teeth where they work, and all parts that in working rub upon one another, must be made smooth, and when the machine goes, must be oiled or greased.

10. When any motion is to be long continued, contrive the power to move or act always one way, if it can be done, for this is better and easier performed than when the motion is interrupted, and the power is forced to move first one way, and then another; because every change of motion requires a new additional force to effect it. Besides, a body in motion cannot suddenly receive a contrary motion, without great violence: and the moving any part of the *machine* contrary ways by turns, with sudden jerks, tends only to shake the *machine* to pieces.

11. In a *machine* that moves always one way, endeavour to have the motion uniform.

12. But when the nature of the thing  
3 L 2 requires

requires that a motion is to be suddenly communicated to a body, or suddenly stopped: to prevent any damage or violence to the engine by a sudden jolt, let the force act against some spring, or beam of wood, which may supply the place of a spring.

13. In regard to the size of the *machine*, let it be made as large as it can conveniently; the greater the machine, the more exact it will work, and perform all its motions the better; for there will always be some errors in the making, as well as in the materials, and consequently in the working of the *machine*. The resistance of the medium in some *machines* has a sensible effect; but all these mechanical errors bear a less proportion in the motion of great machines than in that of little ones; being nearly reciprocally as their diameters, supposing they are made of the same matter, and with the same accuracy, and are equally well finished.

14. For engines that go by water, it is necessary to measure the velocity and force of the water. To get the velocity, drop in pieces of sticks, &c. and observe how far they are carried in a second, or any given time.

But if it flows through a hole in a reservoir, or standing receptacle of water, the velocity will be found from the depth of the whole below the surface.

Thus let  $s = 16\frac{1}{2}$ ;  $v =$  velocity of the fluid per second;  $B =$  the area of the hole;  $H =$  the height of the water; all in feet. Then the velocity of  $v = \sqrt{2sH}$ ; and its force  $=$  the weight

of the quantity  $\frac{77}{2s}B$  or  $11B$  of water, or

$= \frac{62\frac{1}{2}}{112}HB$  hundred weight: because a cubic foot  $= 62\frac{1}{2}$  lb. avoirdup. Also a hogshhead is about  $8\frac{1}{2}$  feet, or 531 lb. and a tun is 4 hogshheads.

When you have but a small quantity of water, you must contrive it to fall as high as you can, to have the greater velocity, and consequently more force upon the engine.

15. If water is to be conveyed through pipes to a great distance, and the descent be but small, much larger pipes must be used, because the water will come slow.

Water should not be driven through pipes faster than four feet per second, by

reason of the friction of the tubes; nor should it be too much wire-drawn, that is, squeezed through smaller pipes, for that creates a resistance, as water-way is less in narrow pipes.

16. When any thing is to be performed by a water-wheel, moved by the water running under it and striking the paddles or ladle-boards, the channel it moves in ought to be something wider than the hole of the adjutage, and so close to the floats on every side as to let little or no water pass; and when past the wheel, to open a little, that the water may spread. It is of no advantage to have a great number of floats or paddles; for those past the perpendicular are resisted by the back water, and those before it are struck obliquely. The greatest effect that such a wheel can perform, in communicating any motion, is when the paddles of the wheel move with one-third the velocity of the water; in which case, the force upon the paddle is four-ninths only; supposing the absolute force of the water against the paddle, when the wheel stands still, to be 1: so that the utmost motion which the wheel can generate, is but  $\frac{4}{27}$ th of that which the force of the water against the paddles at rest would produce.

Where a great power is required, it is, in general, obtained from steam with more certainty and less expence, upon the whole, than from any of the preceding modes.

**MACHINER**, *Fr.* to plot; to conspire; to enter into secret cabals.

**MACHINISTE**, *Fr.* an engine-maker; one who assists the natural strength of man by the inventions of art. A person of this description must be well versed in mathematics, and be thoroughly versed in the knowledge of propellents and powers of resistance.

**MACHRONTICOS**, an extensive wall, such as was built round Athens, &c. There were two large piers erected at each end, with arched galleries under for a garrison of soldiers.

**MADRASS**. Fort St. George. A town and fort on the Coromandel coast, in the East Indies, belonging to the English. The town is called Madrass by the inhabitants, but by the natives, Chilipatam. It is divided into two towns, the one called the White, and the

the other the Black Town; the former being inhabited by Europeans, and the latter by Gentoos. The diamond mines are only a week's journey from this place. The town is governed by a mayor and aldermen, with other officers. It is 63 miles north of Pondicherry, lat. 13, 5, N. long. 80, 3, E. It may not be irrelevant to state, that the establishments belonging to Great Britain, in the kingdom of Indostan, are divided into three governments, independent of each other. Bombay commands the factories on the western side of the peninsula, commonly called the Malabar coast; together with those in Persia: the establishments and possessions on the eastern or Coromandel coast, are under the government of Madras; and those in Bengal depend on Calcutta.

**MADRIERS**, are long planks of broad wood, used for supporting the earth in mining, carrying on a sap, making coffers, caponiers, galleries, and various other purposes at a siege; also to cover the mouths of petards after they are loaded, and are fixed with the petards to the gates or other places designed to be forced open. When the planks are not strong enough, they are doubled with plates of iron.

**MAGAZIN**, *Fr.* magazine.

**Petit-MAGAZIN**, *Fr.* This was a sort of intermediate building, called entrepot, where stores, provisions, &c. to answer daily consumption were deposited.

**MAGAZIN d'approvisionnement**, *Fr.* magazine of stores.

**MAGAZIN d'artillerie**, *Fr.* a powder-

**MAGAZIN à poudre**, *Fr.* magazine.

**MAGAZINS généraux de guerre**, *Fr.* all sorts of buildings in which military stores are placed.

**MAGAZINE**, a place in which stores are kept, or arms, ammunition, provisions, &c. Every fortified town ought to be furnished with a large magazine, which should contain stores of all kinds, sufficient to enable the garrison and inhabitants to hold out a long siege, and in which smiths, carpenters, wheelwrights, bakers, &c. may be employed in making every thing belonging to the artillery, as carriages, waggons, &c.

**Powder-MAGAZINE**, is that place where the powder is kept in very large quantities. Authors differ greatly both

in regard to situation and construction; but all agree, that they ought to be arched, and bomb-proof. In fortifications they are frequently placed in the rampart; but of late they have been built in different parts of the town. The first powder magazines were made with gothic arches; but M. Vauban, finding them too weak, constructed them in a semicircular form, whose dimensions are, 60 feet long, within; 25 broad; the foundations are eight or nine feet thick, and eight feet high from the foundation to the spring of the arch; the floor is 2 feet from the ground, which keeps it from dampness.

One of our engineers of great experience some time since, had observed, that after the centers of semicircular arches are struck, they settle at the crown and rise up at the hances, even with a straight horizontal extrados, and still much more so in powder magazines, whose outside at top is formed like the roof of a house, by two inclined planes joining in an angle over the top of the arch, to give a proper descent to the rain; which effects are exactly what might be expected agreeable to the true theory of arches. Now, as this shrinking of the arches must be attended with very ill consequences, by breaking the texture of the cement, after it has been in some degree dried, and also by opening the joints of the voussours, at one end, so a remedy is provided for this inconvenience, with regard to bridges, by the *arch of equilibration* in Mr. Hutton's book on bridges; but as the ill effect is much greater in powder magazines, the same ingenious gentleman proposed to find an arch of equilibration for them also, and to construct it when the span is 20 feet, the pitch or height 10, (which are the same dimensions as the semicircle) the inclined exterior walls at top forming an angle of 113 degrees, and the height of their angular point above the top of the arch, equal to seven feet: this very curious question was answered in 1775 by the Rev. Mr. Wildbore, to be found in Mr. Hutton's *Miscellaneous Mathematica*.

**Artillery-MAGAZINE**, in a siege, the magazine is made about 25 or 30 yards behind the battery, towards the parallels, and at least 3 feet under ground, to hold the powder, loaded shells, portfires, &c.

Its

Its sides and roof must be well secured with boards, to prevent the earth from falling in; a door is made to it, and a double trench or passage is sunk from the magazine to the battery, one to go in and the other to come out at, to prevent confusion. Sometimes traverses are made in the passages to prevent ricochet shot from plunging into them.

**MAGNA CHARTA**, the great charter of liberties granted to the people of England in the 9th year of Henry the Third, and confirmed by Edward the First. It is so called on account of the excellence of the laws therein contained; or according to some writers, because another lesser charter, called Charter de Foresta, was established with it; or because it contained more than any other charter, &c. or in regard of the remarkable solemnity in the denouncing excommunications against the infringers of it.

**MAGNANIMOUS**, (*Magnanime*, Fr.) great in sentiment; elevated in mind; brave. When a general, during a long course of campaigns and victories, has proved himself *just, benevolent, and humane*; he will then deserve the appellation of *magnanimous*, and will, in fact, be a real hero.

**MAGNITUDE**, or quantity, any thing locally continued, or that has several dimensions. Its origin is a point, which, though void of parts, yet its flux forms a line, the flux of that a surface, and of that a body, &c.

**MAHEUTRE**, an old French term signifying *soldat de la ligne*, a regular soldier, or soldier belonging to the army of the line.

**MAHONNE**, Fr: a species of galeas or double galley which the Turks use. The Venetian galeasses are larger and stronger built.

**MAHRATTA Empire**. As every thing which relates to this country must be extremely interesting to every British officer, since it may be his lot to serve in that quarter of the globe; we have extracted the following geographical account of it from the last volume of the Annual Asiatic Register.

The Empire of the Mahrattas comprehends all the western provinces of the Deccan which lie between the rivers Nartudda and Krisna; the province of

Berar in the interior; that of Cuttack on the eastern coast of the peninsula; and the whole of the western Hindostan, excepting Moultan, the Punjab, and Sirhind. These extensive territories are bounded on the north by the mountains of Lewalic, which separate them from Sirnayar and Cashmir; on the north-east by Rohilcund and Oude; on the east by the British provinces of Benares, Behar, Bengal, part of Orissa, the Bay of Bengal, and the northern Sircars; on the South by the dominions of the Subahdar of the Deccan, the rivers Krisna and Tumbudra; on the west by that part of the Indian Ocean which divides India from Africa; and on the north-west by the sandy deserts of Moultan, the river Sursootée, and the province of Sirhind. The greatest length of the Mahratta dominions, from Delhi in the Northern, to Tumbudra in the Southern extremity, is 970 British miles; and the extreme breadth, from east to west, where they stretch across the peninsula, from the Bay of Bengal to the Gulph of Cambey is 900 British miles. This immense tract of country contains the provinces of Delhi, Agra, Ajmere, Malwa, Gujerat, Condeis, Baglana, Visiapur, the Konkar, Berar, Cuttack, and part of Dowlatabad. Of these provinces Delhi, Agra, part of Malwa, Gujerat, Baglana, and Visiapur, are highly fertile and populous; yielding abundance of the finest grain, thronged with towns and villages, and enriched by a busy internal commerce. The other provinces of the empire are not less productive, but much less disposed, by nature, for cultivation and improvement. Lofty ridges of mountains and vast sterile vales, sometimes covered with wood, form the most prominent features of their local scenery. They are consequently thinly inhabited; but the inhabitants, partaking of the nature of the soil, are hardy, robust, and intrepid. The whole population of the Mahratta empire may be computed at about forty millions. The population is composed of different nations and of various tribes, of whom nine-tenths are Hindus, and the rest Mussulmans. The nation from which the empire derived its origin and takes its name, occupies the province of

of Baglana, the northern part of Visapur, and the mountainous districts of Dowlatabad and Berar.

**MAHRATTA tribes.** In the last volume of the Asiatic Annual Register we find the following account of these tribes.—The Mahratta tribes were first formed into a nation between the years 1660 and 1670, by Levajee, a man of an enterprising and aspiring mind, who was a descendant of the Rajahs of Chittore, the most ancient of the Hindu princes in the Deccan. The father of this celebrated chief was a general in the service of the Mussulman prince Ibrahim Adil Shah, sovereign of Beejapur, from whom he had obtained, in perpetual sovereignty, the principality of Sattarah, besides a valuable jaghire in the Carnatic.

**MAHRATTAS, Ind.** descendants of a pastoral people who formerly inhabited one of the grand divisions of ancient Hindustan, described by the Hindu geographers, and called in Puranas, *Maharashtra*; by which name its inhabitants are likewise designated. The ancient Maharastras, like the Tartar hordes, united the business of war and plunder to the occupation of shepherds; and the modern Mahrattas, though in some respects more civilized, still inherit the warlike and predatory spirit of their ancestors. This spirit (we quote from the editor of the Asiatic Register), directed by the talents of some distinguished chieftains, has, in the course of one hundred and sixty years, raised them from the obscurity of free-booters to be one of the most powerful nations in Asia.

Were it not for a manifest disunion among the Mahratta princes, their collective military strength and resources would be extremely formidable.

The efficient force of their combined armies amounts to 210,000 cavalry and 96,000 infantry; of this force the whole of the infantry, and about three-fourths of the cavalry, are kept in a constant state of readiness to march against an enemy. The infantry is chiefly officered by European adventurers; and in the service of Scindiah, the battalions are accoutred, formed, and brigaded, nearly in the same manner as the native regiments in the British Indian army. To the different bo-

dies of infantry there are attached very large trains of artillery, well appointed and served; and, at the commencement of the late war, the pieces of ordnance attached to Scindiah's brigades amounted to 464.

The cavalry is divided into four distinct classes, namely, the body guards of the princes; the troops furnished by the Silladars; the volunteers, who find their own horses, arms, and accoutrements; and the Pindarees or Marauders, who serve without pay, and subsist entirely by plunder. This last class, however, is composed of so licentious and ungovernable a rabble, that it is not now employed in the armies of the principal chieftains. None of the classes, except the body-guards, are under any regular discipline; the troopers are not enlisted for any stated period; and, except mounting the piquet guards in camp, the cavalry do no duty but in the day of battle. These irregularities, together with the circumstance of the whole of the cavalry being very badly paid, encourage the native predatory disposition of the Mahratta people, and obstruct their advancement in civil life, as well as in military discipline. Their horses, which are partly reared in their own provinces, and partly brought from Candahar and Tibet, are remarkable for their hardihood, activity, and speed; and there are no people in the world who are more skilful in the breeding of that animal, or who attend to it with such unremitting industry. The Mahrattas are thus accustomed, from their infancy, to the use and management of horses; and hence arises that extraordinary dexterity in horsemanship, which their troopers so often display.

We refer our readers to an interesting paper on the military institutions of the Mahrattas in the Asiatic Annual Register, vol. I. Miscellaneous Tracts, p. 121. and for farther particulars respecting the Mahrattas in general, to the introduction of the last volume published in 1804.

**MAIDEN**, an edged instrument used at Edinburgh in former times for the decapitation of criminals. The original invention is by some attributed to an inhabitant of Halifax, in Yorkshire. The guillotine, so called from a French physician

sician of that name, and by which the unfortunate Louis the Sixteenth was executed, January 21st, 1793, owes its origin to the Maiden.

**MAJESTAS**, a Latin word, from whence are derived *Majesté*, Fr. and *Majesty*. It was originally used among the Romans to signify the power which was vested in the Roman people, when they had the exclusive privilege of making laws, creating their chief magistrates, and of determining upon Peace or war. Hence also our antiquitated term majesty or sovereignty of the people, signifying that right of electing their representatives which Englishmen possess.

**MAIL**, primarily denotes the holes or meshes in a net: it likewise signifies a round iron ring. Hence

*Coat of MAIL*, a coat of armour or steel net-work, anciently worn for defence.

**MAILLET**, Fr. a mallet. The French formerly made use of this instrument as an offensive weapon in their engagements.

In 1351 the mallet was used at the famous battle *des Trente* (of thirty) which derived its name from the number of combatants that fought on each side.

This extraordinary combat holds a distinguished place in the history of Brittany, and was entered into by the partisans of Charles of Blois, and the King of France on one side, and by the Count Montfort and the King of England on the other.

Under the reign of Charles VI. a Parisian mob forced the arsenal, took out a large quantity of mallets, with which they armed themselves for the purpose of murdering the custom-house officers. The persons who assembled on this occasion were afterwards called *Mailloins*.

In the days of Louis XII. the English archers carried mallets as offensive weapons.

**MAILLOTIN**, Fr. an old French term; which signified, an ancient weapon that was used to attack men who wore helmets and cuirasses. A faction in France was distinguished by the appellation of *Mailloins*.

**MAILS** ou *Maillets*, Fr. See **MAILLET**. **MAIN-BATTLE**. See **BATTLE-ARRAY**.

**MAIN-BODY** of the army, the body of troops that march between the ad-

vance and rear-guards. In a camp, that part of the army encamped between the right and left wings.

**MAIN-GUARD**, or grand-guard, a body of horse posted before a camp for the security of an army. In garrison, it is a guard generally mounted by a subaltern officer and about 24 men. See **GUARD**.

**MAIN-Guard**. The French observed the following general maxims, with respect to their *grandes-gardes* or main-guards. In the first place, every main-guard on foot or horseback, must be so posted as to remain secure of not being surprized and carried off, nor easily forced to abandon its position. In order to accomplish these two objects, it must constantly be within the reach of the different piquets; and, if necessary, those piquets should be readily supported by the army itself.

**MAIN**, Fr. hand.

**MAIN armée**, Fr. armed force.—*Entrer à main armée dans un pays*, is to enter into a country with arms.

**Coup de MAIN**, Fr. a bold action; the sudden execution of any military enterprize.

*Venir aux MAINS*, Fr. to come to close action.

*Avoir les armes bien belles à la MAIN*, Fr. an expression used in fencing, signifying, that the person who handles the sword or foil does it gracefully.

*Mettre l'épée à la MAIN*, Fr. to draw one's sword, either for the purpose of falling in, giving a word of command, (when troops are under arms), or of fighting a duel.

*Faire MAIN-basse*, Fr. to put to the sword; to give no quarter.

**MAINTAIN**, when any body of men defend a place or post, against the attacks of an adverse party, they are said to *maintain* it.

**MAJOR**, a superior officer in the army, whose functions vary according to the nature of the service on which he is employed.

*Major of a regiment of foot*, the next officer to the lieutenant-colonel, generally promoted from the eldest captain: he is to take care that the regiment be well exercised, to see it march in good order, and to rally it in case of being broke in action: he is the only officer among the infantry that is allowed to

be

be on horseback in time of action, that he may the more readily execute the colonel's orders.

*The MAJOR of a regiment of horse*, as well as foot, ought to be a man of honour, integrity, understanding, courage, activity, experience, and address: he should be master of arithmetic, and keep a detail of the regiment in every particular: he should be skilled in horsemanship, and ever attentive to his business: one of his principal functions is, to keep an exact roster of the officers for duty: he should have a perfect knowledge in all the military evolutions, as he is obliged by his post to instruct others, &c.

*Town-MAJOR*, the third officer in order in a garrison, and next to the deputy-governor. He should understand fortification, and has a particular charge of the guards, rounds, patrols, and sentinels.

*Brigade-MAJOR*, is a particular officer appointed for that purpose, only in camp, quarters, or barracks: he goes every day to head-quarters to receive orders from the adjutant-general: from thence he goes and gives the orders, at the place appointed for that purpose, to the different majors or adjutants of the regiments which compose his brigade, and regulates with them the number of officers and men which each are to furnish for the duty of the army; taking care to keep an exact roster, that one may not give more than another, and that each march in their tour: in short, the major of brigade is charged with the particular detail in his own brigade, in much the same way as the adjutant-general is charged with the general detail of the duty of the army. He sends every morning to the adjutant-general an exact return, by battalion and company, of the men of his brigade missing at the retreat, or a report expressing that none are absent: he also mentions the officers absent with or without leave.

As all orders pass through the hands of the majors of brigade, they have infinite occasions of making known their talents and exactness.

*MAJOR of artillery*, is also the next officer to the lieutenant-colonel. His post is very laborious, as the whole detail of the corps particularly rests with him; and for this reason all the non-

commissioned officers are subordinate to him, as his title of serjeant-major imports: in this quality they must render him an exact account of every thing which comes to their knowledge, either regarding the duty or wants of the artillery and soldiers. He should possess a perfect knowledge of the power of artillery, together with all its evolutions. In the field he goes daily to receive orders from the brigade-major, and communicates them with the parole to his superiors, and then dictates them to the adjutant. He should be a very good mathematician, and be well acquainted with every thing belonging to the train of artillery, &c.

*MAJOR of engineers*, commonly with us called sub-director, should be very well skilled in military architecture, fortification, gunnery, and mining. He should know how to fortify in the field, to attack and defend all sorts of posts, and to conduct the works in a siege, &c. See *ENGINEER*.

*Aid-MAJOR*, is on sundry occasions appointed to act as major, who has a pre-eminence above others of the same denomination. Our horse and foot-guards have their guidons, or second and third majors.

*Serjeant-MAJOR*, is a non-commissioned officer, of great merit and capacity, subordinate to the adjutant, as he is to the major. See *SERGEANT*.

*Drum-MAJOR*, is not only the first drummer in the regiment, but has the same authority over his drummers as the corporal has over his squad. He instructs them in their different beats; is daily at orders with the serjeants, to know the number of drummers for duty. He marches at their head when they beat in a body. In the day of battle, or at exercise, he must be very attentive to the orders given him, that he may regulate his beats according to the movements ordered.

*Fife-MAJOR*, is he that plays the best on that instrument, and has the same authority over the fifers as the drum-major has over the drummers. He teaches them their duty, and appoints them for guards, &c.

*MAJOR-General*. See *GENERAL*.

*MAJOR, Fr.* The French considered this term, in a military sense, under the following heads:—

3 M

MAJOR-

**MAJOR-Général d'une Armée, Fr.** Major-General generally so called, which see.

**MAJOR-Général de l'Infanterie Francoise, Fr.** Major-General of the French infantry. This appointment was made under Francis I. in 1515.

**MAJOR-Général des Dragons, Fr.** a major-general of dragoons. His functions were similar to those exercised by the *Maréchal-général des logis de la Cavalerie*; and nearly the same as those of the major-general of infantry.

**MAJOR de Brigade, Fr.** Brigade-major.

**MAJOR d'un Régiment de Cavalerie, Fr.** major of a regiment of cavalry.

**MAJOR d'un Régiment d'Infanterie, Fr.** major of a regiment of infantry. Under the old government of France all majors of infantry regiments were stiled sergent-majors, or serjeant-majors in their commissions. They were not permitted to have any company of their own: because it was reasonably judged, that their own interest might render them more partial to that company, and the service be thereby injured.

**MAJOR d'une place de guerre, Fr.** town-major.

**MAJOR des quatre compagnies des Gardes du Corps, Fr.** a rank which was exclusively given to an officer belonging to the old French guards. This was an appointment of considerable trust under the old government of France. He was lieutenant in each of the companies, and had the right of seniority over all lieutenants younger than himself in date of commission.

**MAJOR sur un vaisseau de guerre, Fr.** An officer on board a king's ship, whose duty it was to see the guard regularly mounted, and the sentries posted.

**Etat-Major, Fr.** a comprehensive French term, in which is included every thing that can be conveyed under the word Staff, as applicable to the British service. In a very recent publication, intituled, *Manuel des Adjudans-Généraux et leurs Adjoints*, the particular duties of the Etat-Major are accurately explained.

**MAJOR-Domc, Fr.** an officer belonging to the galleys, who has the chief superintendence of provisions.

**MAJORITY, the office, charge, or appointment of a regimental major.**

**MAJORITY, (Majorité, Fr.)** the rank or situation of the junior field officer, or major of a regiment.

**MAIRE, Fr.** Under the old government of France the person so called was invested with the first dignity of the kingdom. Charles Martel, of whom so much is said in the history of the French kings, was *Maire* of the palace. He was, in fact, Grand Master of the king's household, and had an entire controul over the officers belonging to that establishment. The appellation of *Maire du Palais*, or Mayor of the Palace, was given in lieu of *Maitre du Palais*, or Master of the Palace. This name was borrowed from the Roman Emperors, who had each a grand master of the palace. Du Tillet, a French author, in page 12 of his book, pretends that the word is derived from *Mec*, which signifies *Project*. At first he had only the care and superintendence of the king's household, so that his functions were nearly similar to those that were exercised by the grand master of the king's household previous to the revolution. During the reign of Clotaire the Second, the power of the *Maires* increased very considerably.— Their influence grew greater through the weakness and effeminacy of the last kings of the second race; so much so, that they maintained an uncontrouled power over the royal expenditure, and had the sole management of the king's affairs. Pepin added the dignity and functions of *Maire* to the royal prerogative; but he did not suppress them wholly. He merely limited his functions to what they were originally; which however were soon restored, in consequence of the fall and extinction of the second race. As the *Maires* possessed an unlimited controul over the finances and judicature of the country, and had moreover the entire management of the war department, they found little difficulty in assuming a superiority over all the officers belonging to the crown.— They took precedence of all dukes and counts who were the governors of provinces; on which account they were called *Ducs des Ducs*, or Dukes of France. Hugh Capet was Duke of France at the time he proclaimed himself king of the country; but the kings belonging to the third race, being convinced, that the authority which was thus

thus vested in one person, must eventually prove extremely dangerous, abolished the office of *Maire du Palais*, or Duke of France. They divided the functions, and created the four great officers that were immediately attached to the crown. The command and superintendence of the army were entrusted to the constable; the administration of civil justice was vested in the chancellor; the management of the finances was given to the grand treasurer, and the care of the king's household devolved upon the seneschal, who was afterwards stiled grand master.

**MAISON-du-Roi**, Fr. the king's household. Certain select bodies of troops were so called during the Monarchy of France, and consisted of the *gardes du corps*, or body guards; the *gendarmes, chevaux légers*, or light horse; *mousquetaires*, or musketeers; *le gendarmier, grenadiers à cheval*, or horse grenadiers; the regiments belonging to the French and Swiss guards, and the *cent Suisses*, or hundred Swiss guards. The *Maison-du-Roi*, or King's household, was not considered as a separate establishment from the rest of the army, until the reign of Louis XIV. This establishment was successively formed by different kings out of militia companies, which they took into their body-guard.

**MAISON-Maîtrière**, Fr. this term was formerly given to casemates.

**MAÎTRE**, Fr. this word (which signifies, in a literal sense, *master* or *superior*) was formerly attached to every trooper belonging to the heavy French cavalry. Among the Romans, the term *magister* (master) was used to mark out different officers who held situations of trust. Hence the *Dictator* was called *Magister Populi*, the master or leader of the people. The Romans likewise applied the word to the leading officers of their infantry.

**MAÎTRE des armes**, Fr. master at arms. An officer, during the existence of the Grecian empire, who took precedence of the *Maître de la milice*, or master in the militia.

**MAÎTRE d'armes**, Fr. a term in general use among the French, signifying a fencing-master. Every regiment has a *maître d'armes* attached to it.

**MAÎTRISE**, Fr. a place of rank and

dignity; as *la Grande Maîtrise de Malte*, the situation of Grand Master of Malta.

**MAÎTRISER**, Fr. to overcome; to get the better.

**MAÎTRISER les Evénemens**, Fr. to get the better of apparent obstacles, by anticipating events.

**MAKE Ready**, a word of command in the firing, on which the soldier brings his piece to the *recover*, at the same time cocking it ready for firing.

**MAL d'armée**, Fr. a sort of contagious disorder which sometimes rages in an army, and is occasioned by too much fatigue, or by bad food.

**MAL-de-Mer**, Fr. sea-sickness.

**MAL-de-Terre**, Fr. the scurvy is so called by the French.

**MALABAR GUNS**, *Ind.* heavy pieces of ordnance, which are made in the Malabar country, and are formed by means of iron bars joined together. They are very long, and extremely unwieldy.

**MALADES**, Fr. the sick.

**Soldats-MALADES**, Fr. soldiers on the sick list.

**MALANDRINS**, Fr. a set of freebooters, who, under the reign of Charles V. infested France. During the last century these plunderers made their appearance twice in considerable bodies. They consisted chiefly of discharged soldiers, who formed themselves into marauding parties, and pillaged with impunity all the travellers they met. *Abbé de Choisi* relates, that it was extremely hazardous to oppose them in their first ascent. These pillagers, whom the inhabitants called *Malandrins*, assembled in different cantons, chose their own leaders, and observed a sort of discipline in their depredations.

They usually contrived to station themselves in such a manner, that it was impossible to attack them.

They plundered or destroyed many places and buildings through which they passed, and paid no regard to church or state. Their principal and most notorious leaders were, the Chevalier de Vert, brother to the Count D'Auxerre, Hugues de Caurelce, Mathieu de Gournar, Hugues de Varennes, Gauthier Huet, and Robert Lescot, who all belonged to some order of knighthood. Bertrand du Guesclin cleared the country of these dangerous and unprincipled

men, by leading them into Spain under a pretence of fighting the Moors, when in reality his object was to attack Peter the cruel. See French Hist. de Charles V. liv. 1. page 86.

**MALINGERER**, (from the French) one who feigns illness to avoid his duty.

**MALINGRE**, *Fr.* peaking, sickly.

**MALL**. See **MAUL**.

**MALLET**, a wooden hammer, to drive the pegs into the ground; by which a tent is fastened; it is likewise used on various other occasions, especially in fortification and artillery.

**MALLEABLE**, in the art of founding, a property of metals, whereby they are capable of being extended under the hammer.

**MALTA**, the strongest place in the Mediterranean, taken by the French troops during the late war, from the Knights of that order, and since retaken by the British. The island of Malta may be considered as a key to the Levant. See **MILITARY** orders.

**MAMMILLARIA**, (*Mammelière*, *Fr.*) a word corrupted from the Latin, signifying a sort of armour, or that part of armour which formerly covered the chest and nipples. *Etienne de la Fontaine*, who was silver-smith to the French court, mentions, among other articles, two sets of *Mammelières*, in an account which was delivered in the year 1352.

**MAMALUKES**, (*Mammelus*, *Fr.*) Some writers assert, that they were Turkish and Circassian slaves, originally purchased from the wandering Tartars by Meliesahéh, and amounting in number, to one thousand men. They were trained and disciplined to war, and some were raised to the first places of trust and empire. Other writers say, that the Mamalukes were generally chosen out of Christian slaves, and may be considered in the same light as the Turkish Janizaries are: others again assert, that they originally came from Circassia, and attracted public notice by their valour, &c. in 869. See *D'Herbelot*, page 545. The Mamalukes made a considerable figure during the late war, especially in their contest against Bonaparte, for the defence of Egypt. They afterwards joined the French, and formed a considerable part of their cavalry.

**MAN**, to *man the works*, is to post

the soldiers on the lines so as to be ready for their defence, &c. In the plural number it means soldiers, as an army consisting of 12,000 men.

**Flank-front-rank-MAN**. Each soldier upon the right and left extremity of the first line or rank of any given body of troops is so called.

**Flank-rear-rank-MAN**. Each soldier upon the right and left extremity of the last line or rank of any given body of troops.

When a company or battalion is drawn up three deep, the two men who stand at the extremities of the center line may be called *flank-center-rank-men*.

**MAN**, *Isle of*, the mutiny act extends thither in many instances. See Sect. 78.

**MANCELLE**, *Fr.* a small chain which is fixed to the collars of carriage or dray horses, and which terminates in a large iron ring, that is attached to the shaft. It likewise means the ring itself.

**MANCHE d'un Bataillon**, *Fr.* literally means the sleeve of a battalion. This word originally signified any small body consisting of 40 or 60 men, which were drawn out of the main-body of a battalion, and were posted by files upon the corners or angles of the same battalion.

At present the word *manches* means the wings of a battalion, the center of which was composed of pikemen, whilst pikes were in use. Thus there were right and left wings, which were again divided into half-wings, quarter-wings, and half-quarter wings.

Any battalion may *decile* or break off by wings, half-wings, or by the other proportions.

The term *manche*, or wing, was undoubtedly adopted for the express purpose of distinguishing several small corps, which, though at times connected and standing together, could suddenly detach themselves, and act against the enemy without occasioning the most trifling fluctuation or movement in the main-body. The Greeks and Romans must have had a term synonymous to *manche*, in order to shew the several little portions into which the phalanx of the former, and the legion of the latter, were at times divided, when there was occasion for either to manœuvre upon

upon the same principles that we do by wings.

*Cardes de la Manche*, Fr. men belonging to the old French body guards, who on particular occasions, as at the Royal Chapel, &c. stood on each side of the king, dressed in hoquetons, and armed with pertuisances or lances.

*La MANCHE*, Fr. the channel.

*La MANCHE Britannique*, Fr. the British channel.

*La MANCHE de Bristol*, Fr. the Bristol channel.

*MANCHE d'outil*, Fr. the handle of any utensil.

**MANDARIN**, a name which the Portuguese originally gave to the Chinese nobility. According to a French author, the Mandarins are divided into nine orders, each having a peculiar mark of distinction to ascertain its rank.

*Civil MANDARINS*, (*Mandarins lettrés*, Fr.) these were able and scientific men who had the management of the different branches belonging to civil government.

*Military MANDARINS*, (*Mandarins militaires*, Fr.) a certain proportion of the body of mandarins is selected by the Emperor of China, to superintend and command the militia of the country, these are called military mandarins.

The mandarins are considered as noblemen, but their rank is not hereditary. Every mandarin undergoes a severe and close examination respecting his natural and acquired talents, before he receives a civil or military appointment; and there are public schools or seminaries to which the natives of the empire may repair to obtain the requisite qualifications for such important and honourable stations.

**MANDILION**, (*Mandille*, Fr.) the soldier's coat is so called by the Italians. It does not, however, bear that meaning either amongst us or among the French; *Mandilion* and *Mundille* signifying a footman's great coat.

**MANDRIN**, Fr. a small bowl or wooden cylinder which is used in making up cartridges.

**MANÈGE**, in horsemanship, the exercise of riding the great horse, or the ground set apart for that purpose; which is sometimes covered, for continuing the exercise in bad weather; and sometimes

open, in order to give more liberty and freedom both to the horseman and horse.

**MANGAN**, Fr. This word is sometimes written **MANGON**, (see **GUN**), a warlike machine which was formerly used. The term itself, indeed, was generally adopted to signify any species of warlike machine. But it more particularly meant the largest and most powerful machine that could be used for warlike purposes; whether it was practised to throw enormous stones against besieged places, or to cast javelins, &c. It was likewise called *balista*, from the Greek, *tormentum* from the Latin *à torquendo*; and sometimes *petraria*, because stones weighing upwards of three hundred and sixty pounds, were thrown from it. This machine answered the double purpose of defending or attacking fortified places, and it was sometimes used at sea. According to a French writer, one of these machines may still be seen at Basle.

**MANGANELLE**, Fr. See **MANGONNEAU**.

**MANGONNEAU**, Fr. a word originally derived from the Greek, which, according to Potter, seems to signify any engine designed to cast missive weapons. With respect to that particular engine, which the French have called *mangan*, *mangellet*, and *mangonneau*, our ingenious countryman observes, there is not any proper term, he knows of, for that famous engine, out of which stones, of a size not less than mill-stones, were thrown with such violence, as to dash whole houses in pieces at a blow. It was called indeed by the Romans, *balista*; but this name though of Grecian original, appears not to have been used in Greece; this engine, however, was known there, and was the same with that used by the Romans, the force of which is thus expressed by Lucan:—

*At saxum quoties ingenti verberis ictu  
Excutitur, qualis rupes, quam vertice montis  
Abscidit impulsu ventorum adjecta vetustas;  
Frangit cuncta ruens, nec tantum corpora pressa  
Exanimat totos cum sanguine dissipat artus.*

**MANTE**, Fr. madness; excessive fondness. This word has been used by the French, to express an attachment to national manners, &c. Hence, *Anglo-*

*glo-manie*, Fr. a predilection for, or attachment to English principles, &c. They also say, *Gullo-manie*, or *Franco-munie*, a similar likeness of French manners.

**MANIEMENT des armes**, Fr. manual exercise. Although it might be thought superfluous to enter into a minute explanation of the manual as practised by the French, it will not be deemed entirely useless to the British officer, to make him master of the different terms. With this view, we shall likewise give the words of command used in the platoon exercise, &c. The advantage proposed to be derived from a technical knowledge of them, will be considerably felt should the two countries come into close warfare. Under such circumstances, a distinct possession of the several words of command, especially in outpost and detached services, may lead the British officer to a discovery of the enemy's movements, without any ulterior knowledge of the French language. It will be remarked, that the French manual differs from the English in many points; essentially so in the commencement of it, as, (extreme bad weather excepted) the soldiers in the former service, regularly appear upon parade with fixed bayonets; so that the first word of command is,

*Présentez vos armes*.—Present arms.  
*Portez vos armes*.—Shoulder arms.  
*Reposez sur vos armes*.—Order arms.  
*Posez vos armes à terre*.—Ground arms.  
*Relevez vos armes*.—Take up arms.  
*Portez vos armes*.—Shoulder arms.  
*L'arme au bras*.—Support arms.  
*Portez vos armes*.—Carry arms.  
*Présentez la baïonnette*. Charge bayonet.  
*Portez vos armes*.—Shoulder arms.

The other words of command which do not belong to the manual, but are occasionally practised, consist of

*Baïonnette au canon*.—Fix bayonet.  
*Tirez la baguette*.—Draw ramrod.  
*Baguette dans le canon*.—Spring ramrod.  
*L'arme à volonté*.—Slope arms.  
*L'arme au bras gauche*.—Secure arms.  
*Armes au faisceau*.—Pile arms.  
*Repos*.—Stand at ease.  
*Portez les armes comme sergent*.—Advance arms.

*Remettez la baguette*.—Return ramrod.  
*Remettez la baïonnette*.—Return or unfix bayonet.

*Ouvrez le bassinet*.—Open pan.

*Fermez le bassinet*.—Shut pan.

*Portez arms* is not practised among the French. When a guard is dismissed, instead of *porting arms*, the soldier receives the following word of command, *haut les armes!* which is somewhat similar to *recover arms*.

**MANIEMENT des armes**, Fr. the platoon exercise is also so called in the French service, and is distinguished from their manual by the additional caution of *charge en douze tems*, or prime and load in twelve motions.

*Chargez vos armes*.—Prime and load.

*Ouvrez le bassinet*.—Open pan.

*Prenez la cartouche*.—Handle cartridge.

*Amorcez*.—Prime.

*Fermez le bassinet*.—Shut pan.

*L'arme à gauche*.—Cast about.

*Cartouche dans le canon*.—Load.

*Tirez la baguette*.—Draw ramrod.

*Bourez*.—Rain down cartridge.

*Remettez la baguette*.—Return ramrod.

*Portez vos armes*.—Shoulder arms.

#### FIRING AFTER THE MANUAL.

*Apprêtez vos armes*.—Make ready.

*Jeue*.—Present.

*Feu*.—Fire.

*Chargez*.—Prime and load.

*Le chien au repos*.—Half-cock firelock.

*Portez vos armes*.—Carry arms.

*Présentez vos armes*.—Present arms.

*Portez vos armes*.—Shoulder arms.

*Reposez vous sur vos armes*.—Order arms.

*Repos*.—Stand at ease.

#### INSPECTION D'ARMES.—INSPECTION OF ARMS.

*Baïonnette au canon*.—Fix bayonet.

*Baguette dans le canon*.—Spring ramrod.

In the British service the ramrod is rammed down the barrel without any further word of command.

*Vos armes à terre*.—Ground arms.

*Relevez vos armes*.—Take up arms.

*Portez vos armes*.—Shoulder arms.

*L'arme au bras*.—Support arms.

*L'arme à volonté*.—Slope arms.

*L'arme au bras*.—Support arms.

*Portez vos armes*.—Carry arms.

*L'arme sous le bras gauche*.—Secure arms.

*Portez vos armes*.—Shoulder arms.

*Croisez la baïonnette*.—Charge bayonet.

*Croiser la baïonnette* likewise signifies to cross bayonet in such a manner as to form a sort of *cheval de frise* to resist the attack of cavalry from either flank.

This

This has been adopted since the revolution.

*Portez vos armes.*—Carry arms.

*Charge précipitée.*—Prime and load in four motions.

*Chargez vos armes.*—Load.

*Deux.*—Go.

*Trois.*—Go.

*Quatre.*—Go.

*Charge à volonté.*—Independent or running fire.

*Charge à volonté.*—Independent firing.

*Chargez vos armes.*—Prime and load.

#### PLATOON FIRING.

*Peloton.*—'Toon.

*Armes.*—Ready.

*Jour.*—'Psent.

*Feu.*—Fire.

*Chargez.*—Prime and load.

*Roulement.*—Roll.

*Fin de Roulement.*—Cease to roll.

*Feu à volonté.*—Independent firing.

• *Peloton.*—'Toon.

*Armes.*—Ready.

*Commencez le feu.*—Commence firing.

*Roulement.*—Roll.

It is here necessary to explain to the English reader, that the words of command *Roulement* and *Fin de Roulement*, are only used in the drill, or when there is not any drum to beat the prescribed roll.

**MANIER, Fr.** to handle. This word is generally used among the French in a military sense, whenever they speak of portable fire-arms, &c.

**MANIER les armes, Fr.** to handle the fire-lock, or handle arms.

**MANIER la hallebarde, Fr.** to handle, or salute with the halbert.

**MANIER le sponton, Fr.** to handle, or salute with the spontoon.

**MANIER l'épée, Fr.** to be a swordsman, or to handle the sword.

**MANIER le drapeau, Fr.** to furl or unfurl the colours.

**MANIER l'épée à deux mains, Fr.** to be able to use your sword with either hand.

**MANIFESTO** (*manifeste*, Fr.) a public declaration which is made by a prince or state, containing its reasons for entering into a war. The formality of a *manifesto* has been considerably reduced in modern times. Among the ancients, on the contrary, it was particularly attended to. Potter, in his Grecian Antiquities, observes, that invasions with-

out notice, were looked upon rather as robberies than lawful wars, as designed rather to spoil and make a prey of persons innocent and unprovided, than to repair any losses or damages sustained, which, for aught the invaders knew, might have been satisfied for an easier way. It is therefore no wonder, what Polybius (lib. iv.) relates of the Ætolians, that they were held for the common out-laws and robbers of Greece, it being their manner to strike without warning, and to make war without any previous and public declaration, whenever they had an opportunity of enriching themselves with the spoil and booty of their neighbours. Yet there want not instances of wars begun without previous notice, even by nations of better repute for justice and humanity: but this was only done upon provocations so great and exasperating, that no recompence was thought sufficient to atone for them: whence it came to pass, that such wars were of all others the most bloody and pernicious, and fought with excess of rage and fury; the contesting parties being resolved to extirpate each other, if possible, out of the world.

Before the Grecians engaged themselves in war, it was usual to publish a declaration of the injuries they had received, and to demand satisfaction by ambassadors: for however prepared, or excellently skilled they were in the affairs of war, yet peace, if to be procured upon honourable terms, was thought more eligible: which custom was observed even in the most early ages, as appears from the story of Tydeus, whom Polynices sent to compose matters with his brother Eteocles, King of Thebes, before he proceeded to invest that city, as we are informed by Statius, (*Thebaid.* lib. ii. v. 368.) and several others. See Potter, p. 64 and 65.

The Romans, on the other hand, used abundance of superstition in entering upon any hostility, or closing in any league or confederacy; the public ministers, who performed the ceremonial part of both these, were the *Feciales*, or heralds. The ceremonies were of this nature: When any neighbouring state had given sufficient reason for the senate to suspect a design of breaking with them; or had offered any violence or injustice to the subjects of Rome, which

which was enough to give them the repute of enemies; one of the *feciales*, chosen out of the college upon this occasion, and habited in the vest belonging to his order, together with his other ensigns and habiliments, set forward for the enemy's country. As soon as he reached the confines, he pronounced a formal declaration of the cause of his arrival, calling all the gods to witness, and imprecating the divine vengeance on himself and his country, if his reasons were not just. When he came to the chief city of the enemy, he again repeated the same declaration, with some addition, and with all desired satisfaction. If they delivered into his power the authors of the injury, or gave hostages for security, he returned satisfied to Rome; if otherwise, they desired time to consider; he went away for ten days, and then came again to hear their resolution; and this he did, in some cases, three times: but, if nothing was done towards an accommodation in about thirty days, he declared that the Romans would endeavour to assert their right by their arms. After this, the herald was obliged to return, and to make a true report of his embassy before the senate, assuring them of the legality of the war, which they were now consulting to undertake; and was then again dispatched to perform the last part of the ceremony, which was to throw a spear into, or towards the enemy's country, in token of defiance, and as a summons to war, pronouncing at the same time a set form of words to the like purpose. Kennett's Roman Antiquities, book iv. page 229.

**MANIGLIONS**, the two handles on the back of a piece of ordnance. See CANNON.

**MANIPLE**. See **MANIPULUS**.

**MANIPULARIS**, (*manipularis*, Fr.) from **MANIPLE**, a handful or bottle of straw. The chief officer in a part of the Roman infantry called *Manipulus*, was so called.

**MANIPULE**, Fr. See **MANIPULUS**.

**MANIPULE Pyrotechnique**, Fr. a certain quantity of iron or brass petards, which may be thrown by the hand upon an enemy. These petards and the method of making them are particularly described by Casimi in his work on artillery. See **PETARDS**.

**MANIPULUS**, (*manipule*, Fr.) a small body of infantry, originally so called among the Romans during the reign of Romulus.

It consisted of one hundred men, and in the days of the Consuls and first Cæsars, of two hundred. Three *Manipuli* constituted a Roman cohort. Each *Manipulus* was commanded by two officers called *centurions*, one of whom acted as lieutenant to the other. A centurion among the Romans, may be considered in the same light, as we view a captain of a company in modern service. Every *Manipulus* made two centuries or *Ordines*. This, however, cannot be said to have been the uniform establishment or formation of the *Manipulus*; for according to Varro and Vegetius, it was the smallest body of men employed in the Roman armies, and composed the tenth part of a century. Spartian in his life of Sexennius Niger, says it consisted only of ten soldiers. We have already observed, that it takes its name from *Manipulus*, which signifies a handful of straw; the latter having been fixed to a long pole to serve as a rallying signal, before the eagles were adopted. This circumstance has given rise to the modern expression, a handful of men, *une poignée de gens*. Vegetius, on the other hand, says it comes from *manus*, which signified a small body or handful of men collected together, and following the same standard: and Modestus as well as Varro, state it to have been so called, because, when they went into action, they took one another by the hand, or fought all together. A French writer conceives, that *Manipulus* may be considered as one of those parts of a modern battalion, which are distributed in different rooms, &c. and which is called *une chambre*, or a company that messes together.

According to some writers, the handful of straw seems to have been succeeded by a small flag of cloth, to which latter the term *manipulus* was also applied.

**MANOEUVRE**, (*Manoeuvre*, Fr.) manœuvres of war consist chiefly in habituating the soldier to a variety of evolutions, to accustom him to different movements, and to render his mind familiar with the nature of every principle of offensive or defensive operation.

The

The regular manœuvres which are ordered to be practised throughout the British army, at review, are nineteen: they are detailed in the Rules and Regulations for the Formations, Field Exercise, and Movements of his Majesty's Forces, with appropriate references to the several sections of that work, which elucidate the mode of performing them.

The word manœuvre is frequently used in the French artillery to express the method with which a piece of ordnance or mortar is raised and placed upon its carriage by several hands, assisted by the crab or any other machine. In a general acceptation of the term, *manœuvre* means that mechanical process by which any weight is lifted.

To MANŒUVRE, is to manage any body or armed force in such a manner as to derive sudden and unexpected advantages before the enemy, from a superior talent in military movements. It consists in distributing equal motion to every part of a body of troops, to enable the whole to form, or change their position, in the most expeditious and appropriate method, to answer the purposes required of a battalion, brigade, or line of cavalry, infantry, or artillery. It has always been lamented, that men have been brought on service without being acquainted with the uses of the different manœuvres they have been practising; for having no ideas of anything but the uniformity of the parade, they instantly fall into disorder and confusion when they lose the step, or see a deviation from the straight lines they have been accustomed to at exercise. It is a pity to see so much attention confined to show, and so little given to instruct the troops in what may be of use to them on real service.

No manœuvre should be executed in the presence of an enemy, unless protected by some division of the troops.

*Grand MANŒUVRE de guerre*, Fr. this expression is peculiarly French, and may be said to signify the dispositions of war upon a large scale. According to Marshal-Saxe these dispositions consist chiefly in drawing troops up in such a manner, that the cavalry and infantry may support each other; but he objects to that arrangement by which companies or platoons of infantry are intermixed with squadrons of horse; for, as

he justly observes, if the latter should be beaten, the foot soldiers must unavoidably be thrown into confusion by the enemy's cavalry, and be cut to pieces. For further particulars on this important article, see Saxe's *Reveries*, where he treats of *La Grande Manœuvre de Guerre*, and the Supplement to them by Baron d'Espagnac, page 69.

*Warlike MANŒUVRES*, (*manœuvres de guerre*, Fr.) warlike manœuvres, or the different exercises, &c. by which men are taught the military profession: these exercises, from the earliest periods of history, have been infinitely diversified. Vegetius, an ancient writer, remarks, that the Romans, in order to enure their raw troops to the fatigues of war, had specific regulations drawn up, by which every recruit was regularly practised in martial exercises. These regulations were originally formed during the existence of their republic, and were afterwards confirmed by the emperors Augustus and Adrian.

It was particularly ordained, that the cavalry as well as the infantry should be *walked out* (*être mener à la promenade*) three times every month. The foot were obliged to go ten miles beyond the lines of their encampment. On these occasions they were regularly drawn up. But their movements both in going and returning were frequently altered; being sometimes obliged to march at a moderate rate, and at others to increase their pace, and run. The same regulation held good with respect to the cavalry, which was armed and divided into certain proportions called *Turmae*. The troops on horseback went the same distance, and practised different evolutions on the road. Sometimes advancing to attack, and at others suddenly wheeling round, to return to the charge with greater impetuosity. These exercises were not, however, confined to open roads, or a level country: both horse and foot were frequently ordered to make their way through intricate passes, over craggy hills, &c. and to accustom themselves to every possible obstacle that might occur in military movements.

This species of *manœuvre* or *ractising* exercise, has not obtained in modern times. It is now thought sufficient to teach a raw recruit the use of the fire-

lock, and to make him master of a certain number of movements, by the knowledge of which he may be able to make part of a well disciplined corps. How to march against and attack an enemy, or to meet his attack with skill and steadiness; these principally constitute the system of modern manœuvres, and are better understood by the name of evolutions. In the British service there is a specific number of manœuvres or evolutions to which every regiment must conform, and with the particular practice of which every officer and soldier must be made intimately acquainted. As these are detailed in the General Rules and Regulations, published by Authority, we shall content ourselves with referring to them.

**MANŒUVRER**, *Fr.* to manœuvre. This verb, in the French language, may be applied two ways; as, *Manœuvrer les voiles*, to manage the sails and tackle of a vessel.

*Manœuvrer des Troupes*, to make soldiers go through their different manœuvres. *Ces troupes ont bien manœuvré*, those soldiers have ably manœuvred.

*Bien ou mal MANŒVRER*, *Fr.* signifies to manœuvre well or ill; as, *un tel général ou officier a bien manœuvré à tel passage, à tel endroit*, such a general manœuvred well at such a passage or quarter; *mais un tel à mal manœuvré à la défense ou à l'attaque de tel poste*, but such an officer manœuvred extremely ill in his defence or attack of such a post. The word manœuvre is originally derived from the Latin *Manūs Opus*.

**MANŒUVRIER**, *Fr.* any officer who is perfectly acquainted with the art of manœuvring.

**MANŒVRIER** is also applied to a troop or company, and even to a whole army, whose evolutions are done with correctness.

**MANŒVRER**, *Fr.* a sea phrase, which is frequently used among the French, to signify that an officer not only understands all the different words of command, but can thoroughly manœuvre his ship. It is common to say, *il est un des meilleurs manœuvriers qui soient sur mer*, he is one of the ablest sea officers in the service.

**MANQUER**, *Fr.* to miss; to be deficient in any thing; as *manquer à sa parole*, to break one's parole.

*Une arme à feu MANQUER*, *Fr.* a fire-arm, or musquet misses fire.

**MANQUER de munitions**, *Fr.* to be in want of stores and ammunition.

**MANQUER de cœur**, *Fr.* to be irresolute; to want courage.

**MANQUER de foi**, *Fr.* to break one's word; to be guilty of a breach of faith.

**MANQUER une occasion**, *Fr.* to let slip an opportunity.

**MANQUER belle**, *Fr.* to escape narrowly.

**MANTEAU**, *Fr.* This word, which literally signifies a cloak, is frequently used among the French to express the covering that hussars or light infantry troops carry for the double purpose of shielding their bodies from the inclemencies of the weather in outposts, &c. and for spreading over their heads, by means of poles, when they occasionally halt, and take a position.

**MANTEAU d'armes**, *Fr.* a piece of ticking made in the form of a cone, with which a stand of arms is secured against the rain. This case is sometimes made with straw, or the branches of trees.

**MANTEAU d'honneur**, *Fr.* In the days of chivalry the *Manteau d'honneur*, or robe of honour, was the greatest ornament that could be worn, by a knight, when he was not armed. It was of a bright scarlet dye, very long, and lined with ermine. When any gentleman was knighted he received this robe of honour from the king himself.

**Garder les MANTEAUX**, *Fr.* a figurative expression used among the French to signify a bye-stander.—It is more immediately applicable to seconds in a duel.

**MANTELETS**, in a military sense, are either single or double, composed of great planks of wood, of about 5 feet high, and 3 inches thick. The single ones are sometimes covered with tin, made musket-proof, which the pioneers generally roll before them, being fixed upon wheels, to cover them from the enemy's fire, in opening the trenches, or carrying on the sap, &c. The double ones form an angle, and stand square, making two fronts, which cover both the front and flank of the sappers, &c. when at work: these have double planks, with earth rammed in between them: they are 5 feet high and 3 in breadth,

and

and are sometimes covered with plates of iron. They may with propriety be called a moving parapet, having a shaft to guide them by.

**MANTONET**, *Fr.* a small piece of wood or iron, which is notched, for the purpose of hanging any thing upon it. The pegs in soldiers rooms are sometimes so called.

**MANUAL**.—In a general acceptation of the word, means any thing done by the hand.

**MANUAL exercise**, a regulated method which officers and soldiers are taught, for the purpose of rendering them familiar with the musquet, and of adapting their persons to military movements under arms. This exercise has lately undergone some alteration: the words of command are—*Secure arms—Shoulder arms—Order arms—Fix bayonets—Shoulder arms—Present arms—Shoulder arms—Port arms—Charge bayonets—Shoulder arms—Advance arms—Shoulder arms—Support arms—Carry arms*; which being severally explained under their alphabetical arrangement, it is unnecessary here to trouble the reader with further detail.

**MANUBALISTE**, *Fr.* from the Latin, manubalista. A cross bow.

**MANUFACTURES d'armes**, *Fr.* places appropriated for the manufacturing of arms. During the old government of France, three places were appropriated for the manufacturing of arms; one at Maubeuge, one at Charleville and Nontron, and the third at St. Etienne en Foret. These were called Royal manufactories of arms for public service. A director-general superintended the whole, to whom every person concerned in the undertaking was subject, and who was himself subordinate to those artillery inspectors and comptrollers, that were severally appointed by the grand master of the ordnance and the secretary at war.

**MAP**, in a military and geographical sense, is a plane figure, representing the surface of the earth, or a part thereof, according to the laws of perspective; distinguishing the situation of cities, mountains, rivers, roads, &c.

In maps these three things are essentially necessary. 1. That all places have the same situation and distance from the great circles therein, as on the globe, to shew their parallels, longitudes, zones,

climates, and celestial appearances. 2. That their magnitudes be proportionable to the real magnitudes on the globes. 3. That all places have the same situation, bearing, and distance, as on the earth itself.

Mars are either universal, which exhibit the whole surface of the earth; or partial, which exhibit some particular part thereof: each kind is called geographical or land maps, in contradistinction to hydrographical or sea maps, representing the seas, and sea-coasts, properly called charts.

As a map is a representation of some part of the surface of the earth delineated upon a plane, the earth, being round, no part of the spherical surface of it can be accurately exhibited upon a plane; and therefore some have proposed globular maps. For this purpose a plate of brass might be hammered, or at a less expence a piece of paste-board might be formed into a segment of a sphere, and covered on its convex side with a map projected in the same manner as the papers of the common globe are. A map made in this method would show every thing in the same manner, as it would be seen upon a globe of the same diameter, with the sphere upon the segment of which it was delineated: and, indeed, maps of this sort would in effect be segments of such a globe; but they are not in common use.

The ancients described all parts of the known earth in one general map. In this view one of them compares the shape of the earth to the leather of a sling, whose length exceeds its breadth: the length of the then known parts of the earth from east to west was considerably greater than from north to south; for which reason, the former of these was called the longitude, and the other the latitude.

The modern general maps are such as give us a view of an entire hemisphere, or half of the globe; and are projected upon the plane of some great circle, which terminates the projected hemisphere, and divides it from the other half of the globe, at the equator, the meridian, or horizon of some place. From the circle the projection is denominated, and said to be equatorial, meridional, or horizontal.

Particular maps are such as exhibit

to us less than an hemisphere: of this sort are maps of the great quarters into which the earth is divided, as Europe, Asia, Africa, and America; or maps of particular kingdoms, provinces, countries or of lesser districts.

A particular map is a part of a general one, and may be made upon the same principles, as by projecting a large hemisphere, and taking so much of it as the map is designed to contain. When we are to delineate a map of the smaller part of the earth, if it be near the equator, the meridians and parallels may be represented by equi-distant straight lines; if at some distance from the equator, the parallels may be equi-distant straight lines, and the meridians straight lines, a little converging towards the nearest pole; or the meridians may be straight lines converging towards the nearest pole, and the parallels circular.

When we are to make a map of a very small district, as of a county or hundred, whatever part of the earth it be in, the meridians and parallels may be equi-distant straight lines, drawn through every minute, &c. of longitude, in proportion as the largeness of the map will allow. See PLOTTING and SURVEYING.

The use of maps is obvious from their construction. The degrees of the meridians and parallels shew the longitude and latitude of places; their bearings from each other appear from inspection; and their distances from each other may be measured by the divisions on the meridian, equator, or scales. See GEOGRAPHY.

MARATS, *Fr.* a marsh. This species of soil affords great defence and security to any strong fort, which is surrounded by it.

To MARAUDE, to plunder. This word is, by respectable authority, suggested to have been derived from a proper name. We read in Gustavus Adolphus, that one Merodé, a bold and enterprising Spanish partisan of some distinction, was in the habits of making depredations and incursions, at the head of a party, which disregarded the common laws and regulations of war. He afterwards fell a victim to his own rashness. In confirmation of this opinion, Harte, in his history of the life of Gustavus Adolphus, makes the following observations: vide page 70, vol. ii,—

“According to strict orthography, we ought to write *merodours*, and not *marauders*. The truth is, these partisans took their name from a Count de Merodé, a brutal and licentious officer in these wars, who was killed in a drunken quarrel by *John de Wert*. From this man's practice, a plunderer and a ravisher was surnamed *merodista*, by the Spanish and Italian soldiers, who served then under the emperor: from whence came the French word MARAUDEUR, which the Maréchal de Luxembourg always spelt MARODEUR. *Réflexions Militaires et Politiques de Santa Cruz*. Tom. iii.

This word is, however, to be found in Gombauld, a French writer of high fashion in his time; who was near 30 years old before *Gustavus* was born; whose chief patrons (except Madame de Rambouillet,) Henry the Fourth, and Marie de Medici, died before *Gustavus* was king; and who was near sixty before *Gustavus* went to war!

The word in Gombauld (as it is also in Moliere) is *maraud* (now more usually *marauder*) to express the perpetrator of the act; the man who goes à la maraude, viz.

*Voyant la splendeur, non commune,  
Dont ce MARAUD est revêtu,  
Qui ne droit, que la Fortune  
Veut faire envager la Vertu!*

Hearing what wealth, wealth hardly heard!

This vile *Marauder* dares to steal,  
One almost thinks Chance thus has err'd,  
That Virtue's temper she might feel!

On the other hand, it is asserted by a correspondent that the word has been long since traced to *Maroud*, which in *Hebrew* also expresses a man guilty of fraud and rapine. From thence it has passed, with deflections, not very violent in language, through the *Greek* and *Latin*.

The word is *not* in *Johnson*, though it might have indulged him in his fine manner, as a moralist, and as an anti-gallican too, on the horrible enormity of a *marauder*; for which we have no word but what we must borrow from the *Frenchman* or the *Jew*!

MARAUDE, *Fr.* the act of marauding. This word specifically means the theft or depredation which a soldier commits against the peasantry of the country,

country, and for which offence he is punished with death in all foreign services.

*Aller en MARAUDE*, to go out marauding.

**MARAUDER**, (*maraudeur*, Fr.) a marauder. This term is not strictly English. Its signification, however, is generally the same in all services. Any soldier that steals out of camp, armed or unarmed, for the purpose of pillaging the country, is a marauder, and is liable, upon conviction, to be punished with death, or such other punishment as by a general court-martial shall be awarded.

**MARAUDING**, in a *military sense*, the act of plundering, which is generally committed by a party of soldiers, who, without any order, go into the neighbouring houses or villages; when the army is either in camp or in garrison, to piller and destroy, &c. Marauders are a disgrace to the camp, to the military profession, and deserve no better quarters from their officers than they give to poor peasants, &c. The crime of marauding is indeed provided against by Sect. xiv. Article xviii. of the Articles of War.

**MARC**, *Fr.* a weight equal to eight ounces. In France, it is usual for silver-smiths and jewellers, to take a marc at that standard, but when articles of greater bulk and grosser quality than those they deal in, are brought to the scale, the marc contains 16 ounces to the pound. All stores and ammunition were appreciated by this measure.

A **MARCH**, (*une marche*, Fr.) is the moving of a body of men from one place to another. Care must be taken in marching troops, that they are not liable to be flanked or intercepted; for of all operations none is more difficult, because they must not only be directed to the objects they have in view, but according to the movements the enemy may have made.

Of all the mechanical parts of war, none is more essential than that of marching. It may be justly called the key which leads to all important motions and manœuvres of an army; for they depend entirely on this point. A man can be attacked in four different ways; in the front, on both flanks, and in the rear: but he can defend himself, and annoy the enemy, only when placed

with his face towards him. Hence it follows, that the general object of marching is reduced to three points only; to march forwards, and on both sides, because it is impossible to do it for any time backwards, and by that means face the enemy wherever he presents himself. The different steps to be made use of are three: slow, quick, and oblique. The first is proper in advancing, when at a considerable distance from the enemy, and when the ground is unequal, that the line may not be broken, and that a regular fire may be kept up without intermission. The second is chiefly necessary, when you want to anticipate the enemy in occupying some post, in passing a defile, and, above all, in attacking an intrenchment, to avoid being a long while exposed to the fire of the artillery and small arms, &c. The third step is of infinite consequence, both in the infantry and cavalry; columns may be opened and formed into lines, and, *vice versa*, lines into columns, by this kind of step, in a lesser space, and consequently in less time, than by any other method whatsoever. In coming out of a defile, you may instantly form the line without presenting the flank to the enemy. The line may be formed though ever so near to the enemy, with safety, because you face him, and can with ease and safety protect and cover the motion of the troops, while they are coming out of the defiles and forming. The same thing may be equally executed, when a column is to be formed, in order to advance or retreat; which is a point of infinite consequence, and should be established as an axiom.

The order of *march* of the troops must be so disposed, that each should arrive at their rendezvous, if possible on the same day. The quarter-master-general, or his deputy, with an able engineer, should sufficiently reconnoitre the country, to obtain a perfect knowledge both of that and of the enemy, before he forms his routes.

Before a *march*, the army generally receives several days bread. The quarter-masters, camp-colour-men, and pioneers, parade according to orders, and march immediately after, commanded by the quarter-master-general, or his deputy. They are to clear the roads, level the

the ways, make preparations for the march of the army, &c. The *general*, for instance, beats at 2, the *assembly*, at 3, and the army to march in 30 minutes after. Upon beating the *general*, the village and general officer's guards, quarter and rear-guards, join their respective corps; and the army pack up their baggage. Upon beating the *assembly*, the tents are to be struck, and sent with the baggage to the place appointed, &c.

The companies draw up in their several streets, and the rolls are called. At the time appointed, the drummers are to beat a march, and fifers play at the head of the line; upon which the companies march out from their several streets, form battalions as they advance to the head of the line, and then halt.

The several battalions will be formed into column by the adjutant-general, and the order of march, &c. be given to the general officers who lead the columns.

The cavalry generally march by regiments or squadrons. The heavy artillery always keep the great roads, in the center of the columns, escorted by a strong party of infantry and cavalry.—The field-pieces move with the columns.

Each soldier generally marches with 60 rounds of powder and ball, and three good flints; one of which is to be fixed in the cock of his firelock. The routes must be so formed, that no column may cross another on the march.

**MARCH!** (*marche*, Fr.) as a word of command, whenever it is given singly, invariably denotes that *ordinary* time is to be taken; when the *quick* march is meant, that word will precede the other. The word *march*, marks the beginning of movements from the *halt*; but it is not given when the body is in previous motion. It should be sharp, clear, and distinct.

In **MARCHING**, every soldier must be well balanced on his limbs: his arms and hands, without stiffness, must be kept steady by his sides, and not suffered to vibrate. He must not be allowed to stoop forward, still less to lean back. His body must be kept square to the front, and thrown rather more forward in marching than when halted, that it may accompany the movement of the leg and thigh: the ham must be stretch-

ed, but without stiffening the knee: the toe a little pointed, and kept near the ground, so that the shoe-soles may not be visible to a person in front: the head to be kept well up, straight to the front, and the eyes not suffered to be cast down: the foot, without being drawn back, must be placed flat on the ground. Page 6, Sect. 5, Rules and Regulations.

With deference to the prevailing mode of drilling, we cannot help observing, that the object so generally recommended, of keeping the body erect, and the legs well stretched and pointed, would be effectually gained, were recruits, when they are first placed under the moulding hand of the drill sergeant, taught and gradually accustomed to step well out from the haunches. This method is invariably practised among the French, who are unquestionably not only the best dancers, but the most expert movers on foot in the world.

**Quick-MARCH**, a movement by which troops advance at the rate of 108 steps in the minute, each of 30 inches, making 270 feet in a minute.

**Quick-MARCH**, as a word of command, signifies, that the troops should move in quick time.

**Slow-MARCH**, a movement by which troops advance at the rate of 75 steps in the minute.

In order to teach a recruit the just length of pace, accurate distances must be marked out on the ground, along which he should be practised.

**Wheeling-MARCH**, or *quickest time*, is 120 steps of 30 inches each, or 300 feet in the minute.

This is the most rapid movement by which men under arms, or otherwise when formed, go from line into column, or come from column into line. The regulation prescribes 120 steps of 30 inches each, or 300 feet in the minute. This is applied chiefly to the purpose of wheeling, and is the rate at which all bodies accomplish their *wheels*, the outward file stepping 33 inches, whether the wheel be from line into column, during the march in column, or from column into line. In this time also should divisions double and move up, when passing obstacles in line; or when in the column of march, the front of divisions is increased or diminished.

**A MARCH**, (*la marche*, Fr.) a certain

tune or concord of notes, which is adapted to the movement of any particular body of troops, as the grenadier's march, the march of the Marsellois, *la marche des Janissaires*, the march of the Janizaries.

**MARCHING to the front or rear.** As this is confessedly one of the most difficult operations in military movements, we shall extract from pages 34 and 35, of the Rules and Regulations, as published by authority, the first principles by which men are taught to march together, referring the reader, at the same time, to page 21 for a more minute instruction as far as it regards the individual.

"The person instructing a platoon will, before he puts it in motion to front or rear, indicate which flank is to direct, by giving the word *Eyes Right!* or *Eyes Left!* and then *March*. Should the right be the directing flank, the commander of the platoon himself will fix on objects to march upon, in a line truly perpendicular to the front of the platoon; and when the left flank is ordered to direct, he and his covering sergeant will shift to the left of the front rank, and take such objects to march upon.

The conductor of the platoon, before the word *march* is given, will endeavour to remark some distant object on the ground, in his own front, and perpendicular to the directing flank, he will then observe some nearer and intermediate point, in the same line, such as a stone, tuft, &c. these he will move upon with accuracy, and as he approaches the nearest of these points, he must from time to time chuse fresh ones, in the original direction, which he will by these means preserve, never having fewer than two such points to move upon. If no object in the true line can be ascertained, his own squareness of person must determine the direction of the march.

The same observations hold good in all movements to front or rear, or from either flank; and the only way to execute them with accuracy, is for the leader to look out for small intermediate points of march. See page 87, Part III. of Rules and Regulations.

**MARCH of a battalion in File,** is to advance from the right, left, or center of any given number of men, for the

purposes of countermarching, or of closing, or opening an interval in line. On these occasions the whole step off together, at the word *march*, and halt at the word *halt*. At the word *front*, the whole front, and the officers and sergeants resume their several posts in line. Whenever more than one company march in file, the officers are out of the ranks during the march, on the left of the leading file, when the right is in front, and on the right when the left is in front. They are of use in preserving the line and step, as the rear officer necessarily keeps the pace, and marches on the exact perpendicular line of his coverer. When a company is marched off singly, or files into or out of column, the officer is invariably to be in front. It sometimes happens, that a battalion standing in narrow ground, may be obliged to form open column from its leading flank, either before or behind that flank, before or behind its other flank; or, before or behind any central part of the line.

**To MARCH in File before the Right Flank.** When the right platoon or company has moved on, the rest of the battalion face to the right, and march in line; the divisions then successively front, following each other, and taking the leading one for their regulating company.

**To MARCH in File behind the Right Flank.** The whole face to the right, and march by word of command; at which instant the right division countermarches to the rear, fronts, and moves forward; whilst every other division successively moves on in the same manner (having previously countermarched) and continues till the whole is in column.

**To MARCH before any central Point or the Left Flank.** The battalion makes a successive countermarch, from the right flank towards the left, and when the right division is arrived at the point from whence it is to advance in column, it again countermarches to its right, a space equal to its front, then faces, moves on, and is thus successively followed by part of the battalion. The other part of the battalion, beyond the point of advancing, faces inwards, when necessary makes a progressive march in file, and then fronts. Each division belong-

belonging to this part of the battalion follows successively till the whole stand in column.

*To MARCH by Files behind the Center or Left Flank.* The right proportion of the battalion *countermarches* from the right by files successively by the rear, and the other proportion of the battalion, according to circumstances makes a progressive march by files from its right to the central point, and there begins to countermarch; at that point the leading or head division *fronts* into column, and moves on, each successive division doing the same. When the left of a battalion is to be in front, the same operations take place by an inverse march of the several divisions.

This method, however, of marching by files into open column, should be resorted to as little as possible, and never when it can be conveniently avoided. The formation of open column from battalion and line is better done by the wheelings of companies, subdivisions, or sections. See page 123 Infantry Regulations.

*To MARCH up in charging order*, is to advance towards the enemy's line with a quick but firm and steady pace, till you get within a few paces of the opposing body, when an increased rapidity must be given to the whole, so that the men may be said to run; but the officers on this occasion must be particularly attentive to their several divisions, keeping them well dressed to their centre, and thereby preventing dangerous openings, and consequent confusion. The French call this the *pas de Charge*, which see under PAS.

*Points of MARCH*, are two objects which ought always to be prepared for the direction of any considerable body, every leader of which who moves directly forward in front, must take care to conduct it in a line perpendicular to that front. But should a leader either in file or front, have only one marked point of march ascertained to him, he will himself instantly look out for his small intermediate points.

*To MARCH in file to a flank*, is to reduce a line by marching out from its several divisions towards a given flank, there to remain in close or open column, of brigades, regiments, grand divisions, companies, &c. According to the regulations, nothing is more essential in all

deployments into line, and in the internal movements of the divisions of the battalion, than the accuracy of the march in file. After facing, and at the word *march*, the whole are directed to step off at the same instant, each man replacing, or rather overstepping the foot of his preceding comrade; that is, the right foot of the second man comes within the left foot of the first, and thus of every one, more or less overlapping, according to the closeness, or openness of the files and the length of step. The front rank will march straight along the given line, each soldier of that rank must look along the necks of those before him, and never to right or left. The center and rear-ranks must look to, and regulate themselves by their leaders of the front rank, and always dress in their file. Although file-marching is generally made in quick time, it must also be practised in ordinary time. See General Regulations, part 1st, page 27.

*MARCH of a battalion in line*, is a regular continuity of files advancing forward in two or three ranks, each rear file preserving a perpendicular direction to its leader, and the ranks being kept parallel to each other at given distances; so that the whole line shall continue straight, without being deformed by a concavity or convexity of figure. In the last printed regulations, it has been observed, that the *march* of the battalion in line, either to front or rear, being the most important and most difficult of all movements, every exertion of the commanding officer, and every attention of officers and men, become peculiarly necessary to attain this end. The great and indispensable requisites of this operation are, that the direction of the march be perpendicular to the front of the battalion as then standing; that the shoulders and body of each individual be perfectly square, that the files touch lightly, and finally, that an accurate equality of cadence and length of step be given by the advanced serjeants, whom the battalion in every respect must cover, and which equality of cadence and length of step every individual must follow and comply with. If these essential rules are not observed, its direction will be lost, the different parts will open and attempt to close, and by so doing, a spot-

a floating of the whole will ensue, and disorder will arise at a time when the remedy is so difficult, and perfect order so imperiously wanted.

In order to ensure these essential requisites, and to produce perfect correctness, two or more directing serjeants must be trained to this peculiar object, on whose exactness of cadence, regularity of step, squareness of body, and precision of movement, the greatest dependance can be placed. The habitual post of the two directing serjeants in the battalion, is to be in the center of the battalion, betwixt the colours. One of them is posted in the front-rank, and one in the rear, that they thereby may be ready to move out when the battalion is to march; another also covers them in the supernumerary rank.

Whenever the battalion is formed in line and halted, the front-directing serjeant, after having placed himself perfectly and squarely in the rank, must instantly cast his eyes down the centre of his body, from the junction of his two heels, and by repeated trials endeavour to take up and prolong a line perpendicular to himself, and to the battalion; for this purpose he is by no means to begin with looking out for a distant object, but if such by chance should present itself in the prolongation of the line, extending from his own person, he may remark it. He is therefore rather to observe and take up any accidental small point on the ground, within 100 or 150 paces. Intermediate ones cannot be wanting, nor the renewal of such as he afterwards successively approaches to in his march. In this manner he is prepared, subject to the future correction of the commanding officer, to conduct the march.

To MARCH forward or advance in line, when the battalion has been halted and correctly dressed, is to step off, according to any given word of command, in quick or ordinary time, and to march over a perpendicular line of direction, without deviating to the right or left, or unnecessarily opening or closing during the movement. According to the last printed regulations, the commanding officer having previously placed himself 10 or 12 paces behind the exact line of the directing serjeant, will, if such file could be depended on, as standing

truly perpendicular to the battalion, (and great care must be taken to place it so,) remark the line of its prolongation, and thereby ascertain the direction in which it should march; but, as such precision cannot be relied on, he will, from his own eye, and from having the square of the battalion before him, with promptitude make such correction, and observe such object to the right or left, as may appear to him the true one; and in doing this, he will not at once look out for a distant object, but will hit on it, by prolonging the line from the person of the directing serjeant to the front: or he will order the covering serjeant to run out 20 paces, and will place him in the line in which he thinks the battalion ought to advance. The directing serjeant then takes his direction along the line which passes from himself, betwixt the heels of the advanced serjeant, and preserves such line in advancing, by constantly keeping his object in view.

When the commanding officer gives the caution (*the battalion will advance*) the front directing serjeant moves out 6 accurate and exact paces in ordinary time, halts; the two other serjeants, who were behind him, move up on each side of him, and an officer from the rear, replaces in the front rank, the leading serjeant. The center serjeant, in moving out, marches and halts on his own observed points, and the two other serjeants dress and square themselves exactly by him. If the commanding officer is satisfied, that the center serjeant has moved out in the true direction, he will intimate as much; if he thinks he has swerved to right or left, he will direct him to bring up the shoulder on that side, the smallest degree possible, in order thereby to change his direction, and to take new points on the ground, towards the opposite hand. The line of direction being thus ascertained, at the word *march*, the whole battalion instantly step off, and without turning the head, eyes are glanced towards the colours in the front-rank; the replacing officer betwixt the colours, preserves, during the movement, his exact distance of 6 paces from the advanced serjeant, and is the guide of the battalion. The center advanced serjeant is answerable for the direction, and the equal cadence

and length of step; to these objects he alone attends, while the other two, scrupulously conforming to his position, maintain their parallelism to the front of the battalion, and thereby present an object, to which it ought to move square: they are not to suffer any other considerations to distract their attention. They must notice and conform to the direction of the commander only, and if any small alteration in their position be ordered, that alteration must be gradually and coolly made.

These are the essential points, which the leading sergeants must be rendered perfect in, and to which every commanding officer will pay the most minute attention. With respect to the officers in the ranks, they can only be observant of their own personal exactness of march, and must consider themselves, as forming part with the aggregate of the men, subject to the same principles of movement, and in no shape or sense independent of them. They are not to attempt to dress their companies by looking along the front, or by calling to the individuals who compose it. By so doing, they must naturally destroy the exact parallelism of the rank they stand in, and by degrees, effectually derange the march: the care of correcting any errors in the front line, belongs to the officers in the rear.

Well-trained soldiers, indeed, know the remedy that is required, and will gradually apply it.

The colours, as far as their natural weight and casualties of the weather will admit, must be carried uniformly and upright, thereby to facilitate the moving and dressing of the line. But it frequently happens in windy weather, and in movement over rough ground, that very little dependence can be placed on the officer who carries them, for a true direction, or an equal and cadenced step. On these occasions, and indeed on all others, the men must on no account turn their heads to the colours. They must, on the contrary, keep their shoulders square to the front, and depend principally on the light touch of the elbow, together with an occasional glance of the eye, and the accuracy of step, for their dressing. On the light touch of the elbow, and a regular cadenced step, the chief dependance must

be placed: for if the men be often permitted to glance at the center, they will, by so doing, insensibly contract that habit, abandon the touch of the elbow, shorten or perhaps lose the cadenced step, and, in proportion as the files which are removed from the centre adopt that method, the line itself will gradually assume a concave form, by the flanks bending inwards. This fault, as General Dundas has judiciously remarked, would originate in the principle, and not in the soldier.

When any waving or fluctuation in the march, is produced by an inequality of step, the major and adjutant, who from their situation are particularly calculated to correct the irregularity, will immediately apprise the companies in fault, and coolly caution the others that are well in their true line, not to participate of the error.

When a company has lost the step, (a circumstance which frequently happens) the supernumerary officer of that company must watch a seasonable moment to suggest a change of step, in which operation, he will be assisted by the supernumerary sergeants. For it must be an invariable rule among officers in the ranks, never to deviate from their own perpendicular line of march, to correct the errors of their several companies. That business belongs entirely to the major and adjutant, who are occasionally assisted by the supernumeraries, in the manner just mentioned.

It very often happens, that a central division, by bulging out, may make a flank of a battalion appear to have lost ground, when the fault in reality arises from that division either stepping out too far, or from it being warped towards the colours, and thereby preventing the flank from being seen.

All changes and corrections that are judged necessary to be made in any part of a battalion, during its march in line, must be effected gradually. Any abrupt alteration would unavoidably produce a waving, which must be felt in every part. The mounted officers only, with the imperceptible aid of the supernumeraries, can alone point out and correct such faults.

The flanks are not, on any account, to be kept back; much less are they to be

be advanced before the center, since in either case, the distance of files must be lost, and the battalion will not be covering its true ground. The commanding officer of every battalion will easily perceive this defect, by casting his eye along the line, which must soon acquire a concave or convex shape, unless the beginning of each inaccuracy be studiously attended to, by the necessary officers. The two officers who are on the two flanks of the battalion, being unconfined by the ranks, and not liable to be influenced by any floating that may arise, by preserving an accurate step, and having a general attention to the colours, and to the proper line which the battalion should be in, with respect to the advanced directors, will very much contribute towards preserving the flanks in their due position. When either of them observes that a line, drawn from himself, through the center of the battalion, passes considerably before the other flank, he may conclude, that he is himself too much retired; when such line passes behind that flank, he may be certain that he is too much advanced; he will, therefore, regulate himself accordingly.—When the battalion in march is convex, the wings must gain the straight line of the center, by bringing up the outward shoulder; and it must be strongly impressed upon the soldier's mind, that in all situations of movement, by advancing or keeping back the shoulder as ordered, the most defective dressing will be gradually and smoothly remedied; whereas sudden jerks and quick alterations break the line, and eventually produce disorder.

It must be generally remarked, that the rear ranks which were closed up before the march began, are to move at the lock step, and not be allowed to open during the march. The correct movement of the battalion depends much on their close order.

In the march in line, arms are always to be carried *shouldered*. Supported arms are only allowed, when the battalion is halted, or advancing in column; but if this indulgence were allowed in line, when the most perfect precision is required, the distance of files would not be preserved, and slovenliness, inaccuracy, and disorder, must inevitably take place.

*To change direction on the center in*

**MARCH**, is to correct any floating of the line, occasioned by the opening or closing of the flanks, by ordering the directing serjeant *right shoulder forward*, if the opening is on the left of the battalion, or *left shoulder forward*, if the opening is on the right. At this command, the serjeant making an almost imperceptible change of his position, (by bringing up one shoulder) and of his points, and the colours in the battalion, when they have advanced 6 paces to his ground, conforming to it, the whole will, by degrees, gain a new direction. Every change of direction made in this manner, must produce a kind of wheel of the battalion, on its center, one wing gradually giving back, and the other as gradually advancing, an attention which the commander must be careful to see observed.

When the battalion which has marched in perfect order, arrives on its ground, and receives the word *halt*, the step which is then taking is finished, and the whole halt. Eyes are cast to the center, and the commanding officer places himself close to the rear rank, in order to see whether the battalion be sufficiently dressed, and in a direction perfectly parallel to the one it quitted. No preparatory caution is to be used before halting. At the word *halt*, the whole halt firmly, or, as the French term it, *à plomb*.

When the battalion is advancing in line for any considerable distance, or moving up in parade, the music may be allowed at intervals, to play for a few seconds only, and the drums in two divisions to roll, but the wind instruments are alone permitted to play. When the line is retiring, the music are never to play. See Infantry Regulations, page 220 to 226.

*To march by any one face, the square or oblong having previously been formed by the 4th, 5th, and 6th companies of a regular battalion standing fast.* Under these circumstances, the side which is to lead is announced; the colours move up behind its center; the opposite side faces about: and the two flank-sides wheel up by sub-divisions, so as to stand each in open column. The square marches, two sides in line, and by their center; and two sides in open column, which cover, and dress to their inward flanks

flanks on which they wheeled up, carefully preserving their distances. The square halts, and when ordered to front square, the sub-divisions in column immediately wheel back, and form their sides, and the side which faced about again faces outwards.

*To MARCH by the right front angle.—*

When the perfect square is to march by one of its angles, in the direction of its diagonal, a caution is given by which angle the movement is to be made, and the two sides that form it stand fast, while the other two sides face about.—The whole then, by sub-divisions, wheel up one-eighth of a circle, two sides to the right, and two sides to the left, and are thus parallel to each other, and perpendicular to the direction in which they are to move, the pivot-flanks being in this manner placed on the sides of the square. Each side being thus in echelon, and the colours behind the leading angle, the whole are put in march, carefully preserving the distances they wheeled at, and from the flanks to which they wheeled.

When the oblong marches by one of its angles, its sub-divisions perform the same operation of wheeling up, each the eighth of the circle; but its direction of march will not be in the diagonal of the oblong, but in that of a square, viz. of the line which equally bisects the right angle. It will be remembered, that the angular march of the square or oblong, may be made in any other direction, to the right or left of the above one; but in such case, the sub-divisions of the two opposite sides, will have to wheel up more than the eighth of the circle, in order to stand as before, perpendicular to the new direction. The sum of these two wheels will always amount to that of a quarter circle, and their difference will vary as the new line departs, more or less, from the equal bisecting line; this will be known by first wheeling up the two angular divisions, till they stand perpendicular with the new direction, and then ordering all the others to conform accordingly. This movement is very difficult in the execution, and cannot be made with any degree of accuracy, unless the perpendicular situation of the division is correctly attained, and carefully preserved. See Rules and Regulations for the Infantry, page 247 and 248.

*To MARCH in open ground, so as to be prepared against the attack of cavalry.—*

In order to execute this movement, with some degree of security, one or more battalions may move in column of companies at quarter distances, one named company in the center of each being ordered to keep an additional distance of 2 files; in which shape a battalion is easily managed, or directed upon any point. When the column halts, and is ordered to form the square, the first company falls back to the second, the last company closes up to the one before it: the whole companies make an interval of 2 paces in their center, by their sub-divisions taking each one pace to the flanks; 2 officers with their serjeants, place themselves in each of their front and rear intervals; two officers, with their serjeants, also take post in rear of each flank of the company, from which the additional interval has been kept; and a serjeant takes the place of each flank front rank man of the first division, and of each flank rear rank man of the last division; all other officers, serjeants, the 4 displaced men, &c. assemble in the center of the companies, which are to form the flank faces. Those last named companies having been told off, each in 4 sections, wheel up by sections, 2 to the right, and 2 to the left; (the 2 rear companies at the same time closing up, and facing outwards), the inner sections then close forward to their front ones, which dress up with the extremities of the front and rear companies, and 4 files on each flank of the second companies, from the front and from the rear, *face outwards*!—The whole thus stand faced outwards, and formed 6 deep, with two officers and their serjeants in the middle of each face, to command it; all the other officers, as well as serjeants, &c. are in the void space in the center, and the files of the officers in the faces, may be completed from serjeants, &c. in the interior, in such manner as the commandant may direct. The mounted field-officers must pass into the center of the column, by the rear face, if necessary, opening from its center 2 paces and again closing in.

When ordered, the 2 first ranks all round the column, will kneel and slope their bayonets, the 2 next ranks will  
fire

fire standing, and all the others will remain in reserve; the file coverers behind each officer of the sides will give back, and enable him to stand in the third rank.

*MARCH resumed under the same circumstances.* On receiving the cautionary word of command, the several sections that had closed up, fall to their distances; the sections then wheel back into column; the officers, serjeants, &c. take their places on the flanks; and when the column is again put in motion, the companies that closed up, successively take their proper distances.

It will be remembered, that unless the companies are above 16 file, they cannot be divided into 4 sections; (so that in this case, a section may consist of 4 file or eight men, although it is expressly said, page 33, that a section should never be less than 5 files or 10 men,) if therefore, they are under 16 file, and told off in 3 sections, the column will march at the distance of a section; and in forming the square, the 2 outward sections will wheel up, but the 3d one will stand fast, and afterwards, by dividing itself to right and left, will form a 4th rank to the others; in resuming column, the outward sections wheel back, and the rear of the center sections easily recover their places: as to all other circumstances, they remain the same.—See General Rules and Regulations for the Infantry, page 250, 252.

*The March*, when applied to the movement of an army, consists in its arrangement with respect to the number and composition of columns, the precautions to be taken, the posts to be seized upon to cover it, &c. which arrangement must depend upon circumstances. The following general rules have been published by authority:—

The routes must be constantly opened to the width of 60 feet.

If the march be through an open country, without defiles, the cavalry march by divisions of squadrons, and the infantry by platoons or half companies.

In an inclosed country, or such as is intersected by hollow ways, or other defiles, the march must be by sections of 6 or more files in the infantry, and ranks by threes or by twos in the cavalry, and the artillery must move in a single file, because the frequent breaking off and forming up again, retards the march, and fatigues the troops.

In marches made parallel to, or with a view of gaining the enemy's flank, divisions must preserve their wheeling distances, and the column must cover the same length of ground which it would occupy in line of battle; in marches directly perpendicular to the enemy's position, the column must be closed up to half or quarter distance, in order to move in as compact a body as possible.

The pivot files must attend to preserve their distances exactly, each following precisely the path pointed out by the one before him; and keeping the regular marching step, by which means, upon a signal being given, the division is in a moment in order. The leader of this pivot file may be occasionally changed.

At the head of every column, whether composed of infantry or cavalry, a well-instructed non-commissioned officer must march. He must carefully keep the regular step of the slow march, to which the troops are drilled, and upon this man the regular pace of the column will depend; by this method two essential points are ensured; one, that every column moves in exactly the same time, and of course enables the officer commanding to calculate the march with certainty; another, that it ensures the troops not being over hurried, which they are more especially liable to be when cavalry leads the column; two non-commissioned officers should be appointed for this purpose, who must relieve each other.

At the head of every column of march, there must be a considerable number of pioneers to clear the route.

Guns or carriages breaking down and disabled, are immediately to be removed out of the line of march, so as not to interrupt its progress.

Officers are most positively enjoined at all times to remain with their divisions, whether marching or halted.

The commanding officers of regiments must pay the greatest attention to their corps while passing a defile, and proper officers should be left to assist in this most essential part of the conduct of marches.

It is a standing rule in column, that every regiment should march with the same front, that the regiment does which precedes it.

No alteration should be made in any circum-

circumstance of the march, which is to be taken up from the regiment in front, until arrived exactly upon the same ground upon which that regiment made the alteration.

No officer must ride between the divisions on a march, except General and Staff officers, the execution of whose duty renders it necessary for them to pass in all directions.

When a battalion passes a *defilé*, and there is no room for the officers to ride on the flanks of their divisions, half of those who are mounted pass at the head of the battalion, and half in the rear.

All breakings-off to enter a *defilé*, and all formations again when passed through it, must be done extremely quick, by the parts that double, or that form up.

A sufficient number of faithful and intelligent guides must always be ready to march at the head of the battalions and columns.

*March of the line*, in a collective sense of the word, is a military movement, executed upon established principles, governed by local circumstances, and influenced by the nature of the service for which it is performed. After a General has obtained an accurate knowledge of the country through which his army is to move, his next care must be the arrangement of all its different component parts, with which he will form his column of route.
